ROYAL COMMISSION ON CONGESTION IN IRELAND.

WARRANT APPOINTING THE COMMISSION.

EDWARD *R. & I.*

EDWARD THE SEVENTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, to

Our right trusty and right well-beloved Cousin and Councillor WILLIAM HUMBLE, EARL OF DUDLEY, Knight Grand Cross of Our Royal Victorian Order;

Our right trusty and well-beloved Councillor SIR ANTONY PATRICK MACDONNELL, Knight Grand Commander of Our Most Exalted Order of the Star of India, Knight Commander of Our Royal Victorian Order, Under Secretary to Our Lieutenant-General and General Governor of that part of Our United Kingdom of Great Britain and Ireland called Ireland;

Our right trusty and well-beloved Councillor SIR JOHN CHARLES READY COLOMB, Knight Commander of Our Most Distinguished Order of Saint Michael and Saint George;

Our right trusty and well-beloved Councillor SIR FRANCIS MOWATT, Knight Grand Cross of Our Most Honourable Order of the Bath, Companion of Our Imperial Service Order; and

Our trusty and well-beloved :—

The Most Reverend PATRICK O'DONNELL, Doctor in Divinity;

JOHN ANNAN BRYCE, Esquire;

WALTER INCH KAVANAGH, Esquire;

CONOR O'KELLY, Esquire; and

ANGUS SUTHERLAND, Esquire; Chairman of the Fishery Board for Scotland;

GREETING!

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas.

Now know ye that We, reposing great trust and confidence in your knowledge and ability, have nominated, constituted and appointed, and do by these Presents nominate, constitute and appoint you the said William Humble, Earl of Dudley (Chairman); Sir Antony Patrick MacDonnell; Sir John Charles Ready Colomb; Sir Francis Mowatt; Patrick O'Donnell; John Annan Bryce; Walter Inch Kavanagh; Conor O'Kelly; and Angus Sutherland to be Our Commissioners for the purposes of the said Inquiry.

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all such books, documents, registers and records as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these Presents authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid, and to employ such persons as you may think fit to assist you in conducting any inquiry which you may hold.

And We do by these Presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

Given at Our Court at *St. James's*, the 20th day of July, 1906, in the sixth year of Our Reign.

By His Majesty's Command.

H. J. GLADSTONE.

Appointment of Secretary.

DUBLIN CASTLE,
July 24, 1906.

WALTER ERNEST EVERARD CALLAN, Esquire, B.L., The Castle, Dublin, has been appointed to be Secretary of the Royal Commission appointed to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

EIGHTH REPORT.

TO THE KING'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

We, the Commissioners appointed by Your Majesty on the 20th July, 1906,

> "To inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas,"

Availing ourselves of Your Majesty's permission to report our proceedings from time to time, desire to submit to Your Majesty, as an Appendix to this eighth preliminary Report, minutes of the evidence taken in the Counties of Kerry and Cork during the months of July and August, and statements and returns in writing that have been furnished to us in connection therewith.

We think that the immediate publication of these documents is desirable.

All of which we humbly submit for Your Majesty's most gracious consideration.

DUDLEY, *Chairman.*
A. P. MACDONNELL.
JOHN C. R. COLOMB.
FRANCIS MOWATT.
✠ PATRICK O'DONNELL.
JOHN ANNAN BRYCE.
WALTER KAVANAGH.
CONOR O'KELLY.
ANGUS SUTHERLAND.

WALTER CALLAN,
Secretary.

DUBLIN. Dated this 30th day of October, 1907.

DIGEST OF EVIDENCE—VOL. VIII.

O'CONNELL, Mr. M.

See pp. 1-5.

Scheduling Two-thirds of Listowel Union Proposed.—Definition of Congestion No Guide.

In district of Listowel there were ten electoral divisions congested; population 10,784, or about one-third of population and area of entire Union; Rural Council thought remaining two-thirds should be scheduled, seeing that average valuation per head was £1 19*s.* 3*d.*, and of congested divisions £1 3*s.* 2*d.*, 42129.—The 30*s.* or under per head rule should be abolished, and Board should have discretion to schedule a townland as it saw fit; present method no guide; scheduled division of Kilshenane had valuation of 16*s.* 3*d.* per head; cause of its low valuation of £486 was that land which was nearly all reclaimed bog land was of little value in 1852, when valuation was made; holding in Kilshenane which was only £5 or £6 valuation might have ten to fifteen cows; Lisloughtin, Tarmons, Liselton, Urlee, etc., were more congested, 42129A.—If revaluation was made valuation would be higher than at present, 42130.

Untenanted Lands.

Schedule of untenanted lands in the district submitted to Commission last October, also replies received from some of the owners of the land; since then townlands of Baunacaulig, Coolagown and Ennismore had been sold to Estates Commissioners, and holding at Gurtereen had been sold to a tenant; there were 846 acres of very good tillage land in Kilehenny; letter from Messrs. Reeves and Sons, solicitors to Scottish Provident Institution, stated that they were in communication with Congested Districts Board as to sale; demesne lands were excluded, 42130.—It was almost all grazing and tillage land, 42131, 42132-3.—Where there was bog it had been indicated in the schedule, 42132.—About fifteen to twenty acres of the 846 acres were under tillage, 42134, 42135-6.—Only holding in the schedule that was farmed in mixed way, including tillage, grazing, and dairying, 42134.—It was situated near Ballybunion, and in season from June to October there was a good market for milk; farm supplied the whole village, which was the reason that more land was not tilled, 42137.—Farm was all in one hand, 42138.—It probably paid better to use it as dairy farm rather than have it tilled, 42139.—Local market for milk necessitated a large dairy farm, 42140.—Scottish Provident Society were the owners and occupiers of the farm, 42143-4.—They held a mortgage of it, and it came into their possession, 42145, 42147.—A caretaker occupied it for them, 42146-7.—Head office was in Edinburgh, 42149.

Cottiers and Milk Supply.

Part of the farm mentioned might be given for holdings, and part might be vested permanently in the Board, 42141.—In the event of buying any lands it might be desirable to vest a portion in the Board, to permit of letting of grazing to cottiers; the labouring classes could get very little milk; it was all sent to creameries or kept for feeding calves; condensed milk was imported for feeding young children; establishment of creameries had intensified the lack of milk; appearance of children showed they were not well nourished, 42149-60.—Seeing that there was not enough land to go round, there would be number of small occupiers who would not have sufficient means of feeding cows in winter, it would be well to give them grazing somewhere, 42141, 42143, 42161.—Congested Districts Board should let land at so much a year, 42162.—That contemplated the permanent control of Congested Districts Board or some similar institution, possibly of a Rural District Council, 42163-4.—They would be willing to undertake the duty, 42165-6.—The class of people was the same as those for whom labourers' cottages were provided, 42167-8.—Common grazing would be a very popular

O'CONNELL, Mr. M.—*continued.*

thing, and would be very satisfactory, 42171.—Having number of labourers' cottages built, provision for communal grazing for the cows belonging to these people was needed; project was distinct from the labourers' cottages, 42172-5.—Witness had never known cases where people had been inclined to live on the acre of land and tillage and not work as labourers, 42176.—He had known cases where tenants of Union cottages who had succeeded chiefly by their own industry, and they were just as willing to work as labourers as they were before, 42177-9.—Object was to try to get sound milk for the children of these people, who had, as a rule, very large families, and when they had a cow it was generally an old hard-skinned, probably tuberculosis cow, 42180.

Questions of Loans for Purchase of Cows.

If land was obtained near congested places, how were the people to purchase a cow, and if they got a loan to buy or to replace cow, what security could they offer for repayment of loan? 42160.—Extract from previous report of witness's showed that out of a seed loan of about £2,000 in rural district, out of first instalment over 99 per cent. was collected, and in not one case out of over 1,800 recipients of seed potatoes was any attempt made to repudiate the debt; large number of these poor people were too poor to offer any security; they were trusted, and proved themselves worthy of trust, and they would also repay a loan to buy a cow, 42160.—There was no way at present where people could borrow at a reasonable rate of interest for purchase of a cow, 42182.—There was no co-operative bank, 42183.—If there were one it would be a great improvement, but question of security would arise, 42184.—In the seed loan instance the security was their own character, 42185-6, 42188.—In case of the bank it would be their own character, backed by personal guarantee of two others, 42187.—It would be well to try if self-help could provide the necessary capital; it would be a great improvement if there were such banks in the district, 42189.—Congested Districts Board should provide the land, and then let their successors administer the estate afterwards, 42190.—It would come largely to personal character of people, and Board would not be troubled much, but they would have to get the land, 42191.—Great improvement if they got land independently; it would do away with question of loan, 42192.—Their relations in America helped them, but in a large number of cases, when they did possess a cow it was a bad one; probably a menace to public health, 42193.—If they could get a loan to purchase a cow they would get a much better one, 42194.

Supply of Milk in Tenanted Localities.

If Parish Committees could make arrangements for a contract with a local farmer for supply of milk to the poor throughout the year in localities situated near tenanted land; it was possible that there would be no economic or other difficulty about the matter, as it would be worth farmer's while to enter into these contracts for a continuous supply, and portion of money paid for dear tea would be diverted for supply of milk, 42195.—It was possible to organise such a system; there could be a weekly collection of the debt; in a townland where there were perhaps twenty-five to thirty farmers, if one farmer was selected, a contract might be made with him to supply milk at a reasonable rate throughout year, at 7*d.* per gallon, 42196.—Organisation was required, 42197.—All the farmer wanted was a price for his milk; any individual could set up as a kind of middleman, and enter into contract with farmer to supply him regularly with milk for these people's use; but there must be some machinery or organisation to bring it about; farmer could not be expected to break existing contract with creamery and keep proportion of milk unless he was sure of the other arrangement, 42198-9.—Point was to bring about the state of assurance

O'CONNELL, Mr. M.—*continued.*

that he would be paid regularly, 42201.—Necessity for the milk existed, but nothing was done, 42201.—Creameries did not pay better prices, only about 4*d.* per gallon, and it was worth 7*d.* to consumer, 42202.—The people would pay that, 42203.—They were proprietary, not co-operative creameries; proper organisation and business arrangement were the only things necessary to carry out reform, 42204.

Labourers' Cottages.

There were 444 cottages provided in Listowel Rural District, 310 completed and occupied and 134 building or near completion; there were 516 applied for at inquiry, and, allowing 350 to be passed, there would be 800 cottages provided, but as rate limit of 1*s.* in the £ would be reached when 800 had been built, some other sources must be sought to improve condition of remaining insanitary houses, 42204.—Rural District Council built the cottages, 42208.—It took land compulsorily from anybody it chose, 42209-10.—Money came from Board of Works; it would now come from Land Commission, 42211-2.—Rural District Council got portion back in rents, at rate of £2 15*s.* for each cottage, and rates often had to bear remaining portion up to £3 7*s.* 4*d.* per cottage, 42213.—County Council levied rate for thirty-five years, 42214-5.—It was a district-at-large rate, 42216.—It was acting much better now than it had done, 42217.—Nothing like so much lost; liability reduced, 42218.—Under present Act man who applied first got first chance of a cottage, 42219-21.—Practically the same under the old Act, but under old Act applicant must be a *bona fide* labourer; it was not passed really for any individual, 4222-3.—Gross cost of these cottages was £137 10*s.* per cottage in Listowel Rural District up to March last; that would be from £105 to £106 for cost of each building, and from £30 to £33 for the land; various other expenses, such as engineering and inquiries, 42224.—There was a kitchen and three bedrooms, 42225.—And under Public Health Act it was necessary to have a privy attached to the house, 42226.—Nothing paid for expense of compulsory acquirement, but there used to be up to last year, 42227.—The existence of the power of compulsion made the seller more reasonable, 42228.—There was practically no need to exercise power of compulsion, 42229.—An insanitary house could possibly be made sanitary, 42230.—Houses generally provided for people who had no house, who were lodging with their father-in-law or someone like that, 42231.—Generally in case of an insanitary building it was pulled down, 42232.—Rural District Council collected the rents, 42233.—No trouble about rent out of rental of £722 odd; arrears due up to March 31st amounted to £75, 42234.—Arrears not of long standing; they had all been paid since, 42235.—1*s.* 1*d.* was the average rent per week, 42236.—A shilling in the pound was the maximum rate which could be struck; actual rate struck was 4$\frac{7}{8}$*d.* to cover the liability; the loan in Listowel was a thirty-five years loan; eighteen or nineteen years of it was expired; as the old loan was paid off it relieved the pressure on the rates, 42237-40.

Sanitary Officers should be aided by Parish Committees.

Respecting the strict enforcement of the Public Health Act, it was not to be expected that a sub-sanitary officer who was paid at the rate of £10 a year should be very enthusiastic about the performance of his duties; one important witness made a statement that no return was given by the sanitary officers for the salaries they received; witness held that the statement did not apply to his part of the country, 42241.—Work of sanitary officers was not so effective as it might be, owing to the poverty of the people; the Parish Committee had funds to encourage the people to keep their houses neat; Rural District Council thought that Parish Committee should be formed to assist in removal of manure heaps, lime washing, etc.; hundreds of notices were served, but the manure, if removed, was soon allowed to accumulate again, 42242-50.—There was no Parish Committee in Listowel, 42205.—No reason why there should not be, 42206.—If there was one it would greatly improve condition of the insanitary houses, 42207.—A local committee, including the clergy, with an instructress possessed of some such qualification as the diploma of the Royal Sanitary Institute of London, should have authority to deal with sanitary matters; the county instructress should visit homes of the poor; those who attended classes in towns were educated and qualified to be instructresses themselves, 42250.

O'CONNELL, Mr. M.—*continued.*

Insanitary Condition of Schools.

To improve sanitary conditions it was necessary to begin with the schools; report of Medical Officer of Health on the Listowel district said the school was "a menace to public health"; a recent improvement was suggested with regard to use of earth closets, but the reply threw responsibility on the managers, and they had no funds; witness concurred in the verdict on condition of the schools, 42250-52A.

Tree-planting.

Forest trees in lots of four or five hundred should be given in congested areas, free to occupiers under £10 valuation, and at half-price, or 1*s.* 9*d.* per 100, to occupiers under £20 valuation, to plant shelter belts; witness thought the people would plant them; several small occupiers had said they would be very glad to have them, 42252A-4, 42257-9.—Parish Committees might get the trees for small shelters, 42255.—No trees should be given to a man who did not enclose the place; one side was fenced already, 42256.—The nearest nursery was Mr. Power's of Waterford; an occupier planted an Irish acre with 304 apple trees twelve feet apart, with small fruit trees in between; total cost of fencing, trees, planting, etc., was £17 9*s.* 2*d.*; the soil was quite unsuitable for tillage, but the trees grew well, and this year ten or twelve were yielding ten to eighteen apples each; in five or six years it was expected the whole money would be made in fruit; above instance showed that, if sheltered from the north-west, apples flourished in poor, cold land; to encourage planting trees should be provided at a much cheaper rate than 9*d.* each, 42257.

M'MAHON, Mr. WILLIAM.

See pp. 5-8.

Powers of Congested Districts Board.

Congested Districts Board should have more powers for extending congested areas and for other purposes; they should also have compulsory powers for purchasing untenanted grazing and unreclaimed land, for building houses on those lands, for enlargement of uneconomic holdings, and for giving plots and houses to farmers' sons, labourers, and artisans; the whole of Listowel Union should be scheduled as congested, 42261.—There were already ten electoral divisions in Listowel Union scheduled as congested, and people considered that the other electoral divisions ought to be scheduled as well; there were thirty-two electoral divisions altogether; great deal of congestion not in congested electoral divisions at all, but scattered throughout the union; necessary to have whole of the Union scheduled as congested, 42262.—Otherwise untenanted land could not be taken for migration of large population of congested areas, 42263.—Nothing to prevent Congested Districts Board going outside scheduled areas, which was reason for asking that whole union should be scheduled as congested, 42263.

Member to Represent Kerry on Congested Districts Board.

There should be one elected member on Congested Districts Board for each of the congested or partly congested counties; people in Kerry considered they were entirely forgotten by Congested Districts Board, because there was no member from Kerry to recommend to Board the wants of the county and congested areas of the country; more money spent in Donegal and other counties than in Kerry, 42263.—No elected member for Donegal, 42264.—County Council should nominate a member subject to approval of, say, Lord Lieutenant, 42265-7.—Member of County Council should not be excluded; there might be members admirably fitted, but they might not like the position, 42267.

M'MAHON, Mr. WILLIAM.—*continued.*

Congested Districts Board and Fishing Industry.

Congested Districts Board ought to have encouraged fisheries in the rivers by establishing hatcheries, giving money for boats and nets, and protecting mouths of the rivers from trawlers and fishing boats; great many people of opinion that boats with large nets prevented fish from entering the river; salmon and other fish prevented from coming into River Feale and River Shannon, too, 42268-9, 42271-4.—It was since the establishment of boats with nets for mackerel fishing round the coast that salmon fishing was injured, 42270.—Nets, not set in the sea for salmon, but for catching ling, cod, and other fish, 42272.—Good deal of salmon net fishing in Ireland, even in River Feale; for six or seven miles there were thirty or forty nets there fishing salmon; nets outside that prevented salmon coming into the river, 42275-6.—They made a livelihood by it near the rivers; very probable that the amount of shipping at mouth of Shannon frightened fish from coming up the Feale and other rivers, 42277.—Hatcheries had been asked for, and application made to Board of Agriculture, and some little help had been given, but not much, 42278.—Damage to local fishermen by trawlers had been spoken of to Mr. Green, but it had never been represented to Board of Agriculture or Congested Districts Board, 42279-80.—If fishermen kept a mile or so outside mouth of Shannon it would give fish an opportunity of coming in; nets over three miles long, 42281.—Salmon fishing gone down very much, even for net fishing, 42282-3.—Board of Agriculture inclined to do very little, 42285.—Lot of salmon killed by trawlers fishing for mackerel and things of very little consequence; fish also killed in spawning season, which caused great loss to fisheries, 42286.—Not enough water bailiffs up the rivers, 42287.

Congested Districts Board and Peat Industry.

Congested Districts Board ought to have powers to work and develop industrial resources of the country and power to buy land for better development and encouragement of peat industry, 42288.—Wonderful amount of employment could be given by the bogs in Ireland, and new factories could be started; over 2,340,000 acres of bog in Ireland, with a depth of twenty feet; peat could be utilised for many valuable purposes, extraction of ammonia, etc., and production of a fuel with which all the railways in Ireland and the canal barges could be worked at much less cost than with fuel at present in use, 42289.—Two tons of dried peat had more gas-producing power than one ton of best coal, 42289-90.—Even if it could be properly worked for ordinary fuel it would pay, 42290.—At Celbridge the profit was now £75 a week after paying all expenses, 42291.

Oil Found in Bogs.

Large amount of oil in the bogs which, if properly worked, would be a great commercial success, 42293.—People very slow in Ireland and very little help came from English Government; they would be sure to veto any commerce that was prospering in Ireland, 42294.—Good thing to bring it under the notice of the Commission, 42295.—Great apathy in Ireland in starting any commercial undertaking, because it had shown to them from time to time that there was hardly any profitable industry formed in Ireland that was not handicapped, if not by British Government, English manufacturers would send their agents, and they would under-cut for a time till the trade in Ireland was cut down; only remedy for Ireland was to put a protection tariff on all manufactured goods coming into the country, 42296.

Drainage.

Congested Districts Board ought to have powers for draining of floods and marshes, etc.; large amount of flooded lands and marshy lands in witness's district, 42297.—Feale and Brick were the principal rivers, 42298.—Many other flooded places along the rivers, 42299.—1,800 acres along Feale river flooded; low-lying lands along banks ought to have protection from these floods; large proportion of River Brick needed to be scoured and cleaned, 42300.—County Council had no power to undertake large drainage, nor any power to compel a tenant or landlord who, by neglecting to scour those large drains, caused the roads even to get flooded, 42301-2.—Flooding due in a great measure to the rising tide, 42303-4.—County Council had not the power to erect a tide wall or anything of that kind; some letters had been passed with regard to drainage some time ago, but it was left in hands of a committee; witness thought the Government was proposing some scheme, but in the meantime these lands are flooded, 42305-6.—Mr. Julian, Dublin Castle, had suggested that County Council should take up the work of the Cashen Board which was at present defunct, but by an order of Lord Lieutenant their functions could be taken up by County Council, with all their powers and duties; not enough members to form a quorum, so whole thing was at a dead-lock; question had been adjourned in order to find out what responsibilities would fall upon County Council if they undertook duties, 42306.

M'MAHON, Mr. WILLIAM—*continued.*

Decay of Trade at Listowel.

Rural District Council of Listowel ought to be scheduled as congested for purpose of giving small holdings to working classes for gardens and for means of supplying milk for themselves and families, and also for encouragement of industry; market towns were going to decay; Listowel was entirely dependent on its market; twenty years ago there used to be 2,400 pigs in market once a fortnight and over 2,000 firkins of butter; now not 200 firkins; trade coming into Listowel entirely lost, 42306.

Creameries causing Injury to Ireland.

Creameries had not benefited Ireland, but only caused loss, 42307.—Dietary of working class had changed; could not use creamery milk as food; cost of food so much increased that employment had fallen back very much in country districts, 42308-9.—Farmer could not well pay for labour, and had to try to do without it; people found hand-separators much more beneficial; application for loans on behalf of poorer class of farmers for purchase of hand-separators, 42310.—Much cheaper than they were, £14 10*s.* the proper price, 42311.—Farmer did not keep back enough from the creamery for his own consumption, 42312, 42328-9.—Good many of them got money in advance to purchase stock from creamery, and would then send all milk to creamery in order to repay loan, 42312.

Butter.

Higher price obtained now than when farmers made butter themselves, 42313.—2*s.* to 6*s.* or 7*s.* in English market; at Listowel price differed from week to week, 42333-4.—Five guineas a firkin for a long time, twenty or twenty-five years ago, now only £2 5*s.*; price down all round, 42335.—Dropped considerably after creameries were established, 42337-8.—At present it was 40*s.* to 52*s.*, 56*s.* the average for the year, 42339.—Average price for firkin of butter 49*s.* or 50*s.*, 42340.—Two hundred and ten gallons of milk to make a firkin of butter which would represent something more than 50*s.*, 42341-4.—Skimmed milk carried home and used for calves and pigs, 42313, 42319.—Farmer would not consume any new milk, but only milk after cream had been taken off, 42314-6.—This could not be done now; there was no nourishment in the milk, and there was contingent sickness, 42317.—The old separation was by hand, the present by machinery, 42318.—By the old method of separating milk the skimmed milk contained more fat, 42320.—There was less use for skimmed milk now for feeding purposes, 42321-2.—Looked upon as wholesome food when separated by hand, 42323.—The creamery had the advantage of any extra butter that might be extracted, 42324.—Good deal more butter made with hand separator than out of the other, 42325.—People did not get same return of milk as they carried to the creamery, though amount from the cow was just the same, 42326-7.—There was no organisation which made the best use of their butter and got them as good a price as possible, 42330.—Creameries established for profit, 42331.—Butter went cleaner into the market than it used to; butter made at home preferred to creamery, 42332.

JULIAN, Mr. JAMES E. J.

See pp. 8-13 *and* 20-1.

Congested Districts Board did Much Work in Some Districts and Nothing at all in Others.

Work of Congested Districts Board was sporadic and was overlapped by Department of Agriculture; in Brosna and Killorglin it had done a good deal of work, but in Lixnaw until recently it had done nothing at all, 42345.—In Lixnaw the Board had bought Ardbeg Estate, re-arranged it, and spent money on it satisfactorily to the tenants, 42346.—Work of the Board had been confined to a few places; whether the selection of places was good or bad would depend on the people who were questioned, 42362-3.—Witness did not know that the Board's expenditure had been made in the poorest part of the county; until two or three years ago, when Mr. Thomas O'Donnell, member for West Kerry, took it up; no money was spent in Kerry, 42364.—The money had not been badly spent; Ardbeg expenditure was very good, 42365.

Board's Grant to Kerry Agricultural Society Withdrawn.

The Board's grant to Kerry Agricultural Society had been withdrawn, as they wished to confine it to holders under £4 valuation who lived in congested districts; Society found it almost impossible to accept grant on these terms, 42346.—Society divided exhibitors into two classes, those over £30 valuation, and those under; small men as a rule would not show; ridiculous to ask small farmer or cottager to show at Tralee; it would have been possible to accept grant if it were to be expended in prizes for cottages or best-kept farm; considerable expense involved in viewing farms; inspectors had to be sent in different directions; expense of judging green crops two years ago amounted to £12 or £14, 42347-8.—If grant were split up, so much to each scheduled area, and the local people were allowed to distribute it, in such case it would be useful, 42348.

Grant to Parish Committee.

Board gave a grant of £40 to Ballyduff Parish Committee, but it was burdened with certain troublesome conditions, 42349.—All work had to be completed before any grant could be given; man building a house was obliged to get credit for materials or labour; a co-operative bank would be useful, 42350.—Grants were given on same conditions as in other places; if witness had been living in the district he might have advanced the money; only help came from the dispensary doctor, 42351.—Witness had advanced the money in case of a grant of £15 for a road to some holdings that were cut off; the money was returned when the work was completed, 42352.—Witness did not know what had been done in Killorglin district; a great deal of good had been done; but the money difficulty had existed at Ballyduff; only £20 had been expended out of the £40 promised; one widow wanted to concrete her floor, expenditure for which would be almost entirely cash; nobody would be security for such an amount, 42353.—Ballyduff Parish Committee received a grant of £40, but as a rule the grants in Kerry amounted to larger sums, in some cases to £120; total amount given in grants amounted to £1,500 this year, 42396.—Kilflynn schoolhouse was in a disgraceful condition, there were no sanitary arrangements at all, 42475.

Poultry Farm.

A poultry farm had been established at Kilflynn, but it had been given up; the above was all the Board had done in a district stretching from Cashen mouth down to the other parts, 42354.

Fishing Industry.

Fishermen at the Cashen mouth needed nets and boats badly; also a settlement of fishers at mouth of River Feale, who were badly off; a grant for nets and boats would assist them considerably; Electoral Division of Ardagh was scheduled, but some of the fishermen lived outside it; rule as to boundaries of scheduled districts proved hampering, 42354.—Fishermen had not made any application; some body had

JULIAN, Mr. JAMES E. J.—*continued.*

given a grant to some fishermen at Ballyheige, but the fishing was not available owing to want of a harbour and roughness of the tide, 42355.—Congested Districts Board had no fishing representative in County Kerry; such a thing would be specially useful all round the western coast; it would be a good thing if there were a permanent fishing superintendent, 42356-7, 42359.—The fishing settlement of Ballymore was on the north side of the river; witness had made application to Department of Fishery, but received the reply that no grants were given to inland fisheries, 42457-9.—The people fished in the estuary; their boats were not good enough to fish in the mouth of the Shannon, 42359-60.—Salmon used to be a great fishing industry, but supply of fish had fallen off; witness did not know why, 42361.

Condition of Muckinagh Estate.

Muckinagh, the estate next to Ardbeg, should have been bought as well; it was not offered; but it was an estate that should be taken compulsorily; case of a bankrupt landlord and mortgagees who could not agree; it was a question of getting the bonus; on a bankrupt estate if the landlord would lend his name the bonus could be obtained; if the mortgagees sold themselves they got no bonus, 42366-9.—Tenants were extremely poor; the estate was an oasis in the middle of bogs, and was subject to floods, fever, 42366, 42477.—Some of the tenants should be migrated; a farm had been offered to the Board, but the price they offered was insufficient to secure it, namely £400; farm was value for the £600 given, 42370.

Representation of Kerry on Congested Districts Board.

Representative of Kerry on the Board would be extremely useful, although more money for the Board was a greater necessity than a representative, 42374-5.—Witness was in favour of representative of congested districts counties being on the Board, 42376.—It would do if they were appointed by the Castle; Lord Shaftesbury had been appointed with special reference to Kerry the last time there was a vacancy on the Board, but someone who lived in the county would be more useful, 42377.—It was difficult for people in Kerry to see the value of concentration of work in Galway, but probably it was right that the Board should find out where money was most wanted; allocation of money to different counties on account of representation might lead to loss of power, but witness thought a good deal depended on who asked, 42378-81.—There was no favouritism, but the people were inarticulate; witness had asked on behalf of Ballyduff and had got the help; effect of representation would be that wants would be voiced; nothing had been done in Kerry until Mr. Thos. O'Donnell took matter up; if Kerry representative had been on the Board he could have pointed out estates for sale; anyone living in the county would point out its wants better than a person living at a distance, 42382-8.—Sea-work in Kerry had received attention before the advent of Mr. O'Donnell; several piers, etc., had been built; live stock schemes had also received their due share of attention; witness did not know that any scheme had been put before the Board, neither did he know that the Board had ever asked for estate; very possibly it was not the Board's fault, 42392-4.—The first estate bought by the Board in Kerry was the Rea Estate; since then they had bought the King, Hartopp, Ardbeg, Sandes, and Brosna Estates, 42395.

Lixnaw Quay.

There was a small landing-place for sand boats at Lixnaw; the fishermen brought sand in lighters up the river, but there were difficulties, owing to lack of a proper landing-place; County Council agreed to put one up at a cost of £380 if half cost were provided; Department presumably refused contribution, and Congested Districts Board said they could not contribute because place was 200 yards outside boundary of scheduled area; it would be extremely useful because farmers were using sea-sand instead of lime; it was instance of the way in which strict scheduling of districts interrupted useful work, 42396-401.

JULIAN, Mr. JAMES E. J.—*continued.*

Alteration of Definition of Congestion.—Question of Variation of Area.

Townland would be a more convenient unit for scheduling than the electoral division; there was a big gap in witness's division, a great deal of which might be scheduled; there was a tract of bogland running from Abbeyfeale to Ardfert; some of it was not congested, and it could be scheduled by townlands, but not by electoral divisions, 42405-6.—The 30*s.* limit was not a proper guide; inspectors should be sent round who could decide the matter by experience; witness would practically leave the matter to the discretion of the Board, 42407-11.—Area of congested districts would not necessarily be enlarged; a good deal of country now scheduled might be cut out as non-congested, while in middle of non-congested districts there were places like Conamore where people were living in a bog on the top of a hill, 42412, 42419.—Harm might be done by excluding too much, and witness would not go so far as to give power to exclude when all had been done that reasonably could be done; Board had the power now simply to do nothing, 42413-6.—There was no reason against reviving the Lord Lieutenant's power of including or excluding any division, 42418.

Discretionary Power for Board to extend its Operations wherever found desirable.

No reason to limit operations of Congested Districts Board within certain counties; if funds admitted, there were just as poor districts in parts of Wicklow as in Kerry; they might operate in any part of Ireland where it was found desirable, 42420-2.—The Board's work was well adapted to Ireland, to a place where paternal government was needed, and where there was no resident gentry to help the people, 42423.

Drainage.

The Cashen River was formed by junction of Feale, Brick, and Galey; these rivers and their tributaries drained an area of 280,000 acres, of which 11,000 acres were subject to flooding; a comparatively small expenditure would reduce the damage, and it was necessary for the sake of the farmers, the health of the people, and also to save the ratepayers the constant expense of mending the roads, 42424.—It was two or three miles from the River Brick to the mountain; the place was level at the bottom; the biggest rise was at Lixnaw, 42425-6.—River Brick had a fall of about fifty feet in from ten to twelve miles; dredging the river would make a difference, for at present there was not room for the water to flow out of the river, and it spread over the country, 42427-8.—Mr. Doran knew the facts, 42429.—Mr. M'Clean had supplied the following points:—The Cashen being a tidal river, the principal flooding occurred along the Feale, Brick, and Crumpawn, a tributary of the Brick; owing to a ford below the ferry bridge, and the large volume of salt water which flowed in during rise of tide, water from depth of eight feet in River Brick, and from ten to twelve feet in the Cashen was locked up; there were other smaller obstructions; with exception of the obstructions, the rivers were sufficiently deep, and if the obstructions were removed the average level of the water would be reduced two feet, and navigation would be possible at ordinary tides for purpose of transfer of sea-sand to inland districts, 42430.—The Cashen Board had spent £12,000, had never finished the work, and had made things rather worse than they were before; nothing had been done since, 42431.—£5,000 or £6,000 would do a good deal, but no one had gone into it sufficiently to state the exact cost, 42432-3, 42470.—The £12,000 was spent on a long embankment; also the mouth of the estuary was made narrower; the sea broke a great deal of the embankment; the failure was largely due to omission of dredging operations, 42440.—The £5,000, witness estimated, would be for conclusion of the work; the Cashen Board was now defunct; it had never held a meeting for ten years, during which time most of the members died; witness did not know who was responsible for the failure to hold meetings, 42441-2.—The landlords were at present paying the Board of Works for the £12,000, 42443.—There was apparently no authority in Ireland that had the responsibility of making appointments to a drainage board, or of supervising the working of it; the Cashen Board had the power of co-opting themselves; three formed a quorum, but only two were alive, 42444.—Matters had gone too far for any proceedings, 42445.—(*Member of the audience*—The owners of land along the banks were formed into a drainage board; speaker was the agent, and had his own views as to discretion of the Board in selecting engineer who was employed, 42446-7).—Witness had proposed that County Council should take over the undertaking, and was at present making inquiries whether they could take it up safely without incurring responsibility; County Council objected to spending money, and had made up their minds not to do the work; it was a local thing; men in Waterville and Cahirciveen would not care to have it put upon them; the riparian owners would be willing to pay, and the others ought to be made to pay, 42448-50.—The whole neighbourhood was poisoned; if occupiers contributed to the expenditure they would be better off than at present; in one case where a man's land was valued at 15*s.* an acre the flooded part was valued at 8*s.*, 42451-2.—Doubtful if above argument would overcome County Council's desire for economy; the rates were particularly high in Kerry, 42453-6.—County Council had no expeditious machinery for recovering money due to them under schemes by occupiers; a special rate would be needed on the area; it could be quickly recovered if there could be a special rate like railway or sanitary rate, 42458-9, 42461.—Witness had an idea of his own; the County Council received £33,000 at the time of the railway amalgamation, of which Claremorris received £7,000, Claremorris being the barony where the floods occurred; the £7,000 was being used in relief of the rates; if £2,000 could be applied to needs of flooded area it would give relief, 42463.—Congested Districts Board might contribute, county might contribute, and also somebody else, 42464.—Witness's private opinion was that County Council should do the work, provided they got a grant in aid from the Board, 42465-6.—There was no rate existing, the landlord having redeemed it when he sold the land, 42467.—The only people who could do so were the County Council or the Cashen Board, 42468.—At present the land was hardly fit for meadowing; if reclaimed some of it could be tilled, 42471.—Drainage area mentioned included a good many estates; the chief ones were those of Lord Listowel, Lord Ormathwaite, Sir John Tuite Neligan and Mr. Talbot-Crosbie, 42434.—Most of them were sold to the tenants, 42435, 42463.—Lord Listowel tried to make an arrangement between tenants and Land Commission that a certain sum of money should be set aside for maintenance of drains, the burden of which would fall on the tenant, 42436.—If a public body had bought those estates it could have improved the drainage before re-selling to tenants; witness believed that large drainage works were done in Mayo by Congested Districts Board, 42437-9.—Congested Districts Board could not be expected to undertake burden of maintenance; it should be thrown on riparian owners; on the Listowel Estate they had undertaken it, with a grant from Lord Listowel; each owner would keep up his own drains, 42473-5.—Very useful if Congested Districts Board or Department would take it up; almost too large a work to be done locally Treasury might bear some of the cost, 42475.

Labourers' Cows feeding along the Road.

Mr. O'Connell's suggestion with regard to the labourers' cows was excellent; many labourers had cows which fed along the road; witness had offered grazing to a labourer, but he refused, as his cow was doing well on the road; rather a nuisance; desirable to have cow confined, 42475.

Constitution of Agricultural and Technical Education Committees.

The Agricultural and Technical Education Committees were two distinct bodies now, although originally there had been one committee, consisting of the whole Council; the Agricultural Committee consisted of the whole Council and some seventeen gentlemen appointed for their knowledge of agriculture; they were co-opted or appointed by the Council once

JULIAN, Mr. JAMES E. J.—*continued.*

a year, and as a rule they were re-elected; the Technical Education Committee consisted of the County Council, with a certain number of co-opted members, twelve or fifteen; the co-opted members were largely school managers, clergymen, etc., 42620-1.—Agricultural schemes were drawn up by the Department and put before the Agricultural Committee to adopt; they could be thrown out, but that would dislocate the whole business of the year, 42622-4.—Great difficulty in getting a quorum for the Technical Committee; County Council met on Thursday and Friday; Agricultural Committee was summoned for 12 on second day, and Technical Committee went after them; by that time most of the people were very tired, and had left; few of the elected members turned up, 42628.—The members came from all parts of the county; there was no tendency for representatives of non-congested areas to have more influence than representatives of congested areas; until recently the Congested Districts Board were not in it at all, but witness did not know that there was any particular difference between them, 42630-3.

Details of Agricultural and Technical Schemes.

The two committees spent altogether about £2,500 annually, 42625.—About £1,400 went to the Agricultural Committee; £450 was spent on 150 nominations of £3 each to mares selected to be sent to registered stallions; there were only three registered stallions in the county; it might be useful if the Department would send a really good sire; not a sire in the county that had cost more than £500 or £600; the county was far behind Limerick in horses; possibly the present method was the best method of disposing of the nominations, 42638.—Another £150 or £200 was spent on premium bulls; a farmer received a nomination, bought a premium bull, had to keep it for benefit of himself and his neighbours, and at end of the year he received £14 from the Department; there were agricultural instructors, and a certain amount was expended on demonstration plots; witness had never looked at them, and did not know whether anybody ever did; there were two instructresses in domestic economy, 42626.—The items were rarely discussed; but there was much discussion concerning removal of the art master in Listowel; his classes were not largely attended, so an additional domestic economy mistress was put on instead; Listowel was much aggrieved, 42627.—An efficient net-mending instructor had been sent out, but did not stay long enough to do good; Cashen fishermen said they knew how to make nets; much objection had been raised to exclusion of Kerry bulls from the schemes; only lately been allowed to have them, 42633.—There were not so many itinerant instructors before transference of agricultural work to the Department; no dissatisfaction at the change, 42635-6.—If the money given by the Board were given to the County Council they could probably spend it better; they might do better with a demonstration farm, 42637.

DORAN, Mr. HENRY.

See pp. 13-7.

Cashen River Drainage District.

Witness had been asked to give some information with regard to the Cashen River Drainage District; catchment area of the Cashen and its tributaries comprised about 430 square miles; the area was drained by Rivers Feale, Galey, Brick, and Crompaun; Rivers Feale and Galey joined about six miles from the sea, and from their junction to the sea watercourse was called the Cashen river; about 5,000 acres were subject to flooding, and another 5,000 acres were waterlogged and comparatively unproductive; total area that would be benefited by a proper scheme of drainage would be 10,000 or 11,000 acres; between Ballybunion, Listowel, Kilflyn, and Causeway there was a patch of country which was practically a swamp, but was capable of being made into valuable agricultural land; the Cashen flowed within tidal walls and embankments to about a mile below Ferry Bridge; the surface of the 5,000 acres was not more than eleven to fourteen feet above low water mark, and was about the same or lower than the spring tide level; the tides affected the Cashen for its entire distance of six miles, 42779-80.—The level of the water in the river was raised at high tide by reason of its being confined within embankments; also the fresh water was banked up by the tidal pressure, 42481-2.—The tides not only affect the Cashen for a distance of six miles, but the Feale was affected for a distance of five miles further on, the Brick for four miles, the Galey for 2½ miles, and the Crompaun for 2½ miles; about 17 miles of these rivers were embanked on both sides, and drainage of lands adjoining was discharged, when tidal waters receded, through sluices inserted in the embankment; many of the sluices only acted for a short interval between the tides, with result that greater portion of the low-lying lands were comparatively worthless; if the tidal water could be prevented from flowing into the rivers the sluices would act continuously except when there were high floods, efficient drainage would be secured, and advantage of converting the waterlogged land into good pasture would be immense, 42483.

DORAN, Mr. HENRY.—*continued.*

Works Already Carried Out.

There had been large expenditure in construction of tidal embankments, but they had been found insufficient; in 1884 a Drainage Board was formed and a loan obtained from Board of Works to lower outlet of Cashen River to level of low water mark at neap tides from the seashore to about 125 perches upstream; two cuttings were made; one opposite Kilmore School, 900 feet long and a maximum depth of 13½ feet; it was intended to extend the cutting for 800 feet, depth to be 5½ feet, but no sinking was made in the second cutting; the level at present showed that the new cutting at the lower end was about 3 feet lower than the river bed; the expense of sinking the 3 feet was money thrown away, as the depth was not sufficient, 42483-5.

Cost of the Work already carried out.

Cost of the work as originally designed was estimated at £5,800; actual cost was £10,000, and the sum was levied on the drainage area although works contemplated were not completed; witness had the award showing the proprietors, and what each contributed; total amount was £10,054; area of lands improved was 5,784 acres; estimated value of land before drainage was £1,126 15*s.*, and estimated increase in value £972 17*s.*; if such a project were to be revived the landholders would naturally fight shy of it, and would be afraid that the estimate of expense might be as inaccurate as the previous one had been, 42485-6.—The estimate must have been very imperfectly formed, or the work had been very badly carried out, 42487.—Value of the land had not increased, the whole thing was a complete failure; witness did not think it would be successful if more was spent in the same direction, 42487-90.

Defects of Original Design—Suggestions as to what should be Done in the Future.

Promoters probably abandoned the design having ascertained that it had not the anticipated effect; design was fundamentally wrong, it provided for lowering discharging outfall of river waters without making provision to regulate inflow of tidal waters; result would be that more tidal water would enter the slob area than before the cut was made; tide rose ten feet in six hours, and would exert far greater pressure in forcing itself through the cutting than the river area could exert in forcing itself out; conditions necessary for success were to lower discharge of fresh water outlet, and at the same time to regulate or cut off the inflow of the tide; there should be erected across the estuary a tidal wall provided with flood gates which would shut out the inflowing tide when it had reached about half the height of neap tide, and impound the fresh water in the slobland during the interval of the last half of flood tide and the first half of ebb tide, when the flood gates would be opened and impounded waters allowed to escape; no tidal waters would flow to the upper side of the tidal wall, and the fresh water would be impounded for a maximum period of six hours, or twelve hours in the twenty-four, 42491.—In case of spring tides the influx of tidal water did not all escape before the next

DORAN, Mr. HENRY.—*continued.*

flood tide, therefore when there was high tide and very wet weather concurrently there was an accumulation of water on the sloblands for days and weeks at a time, 42493.—A wind from the west or north-west following the tide would have the effect of heaping up the waters on the estuary, 42424.—If there were a tidal wall the waters impounded by the closing of the flood-gates would in the intervals from half-flood tide to half ebb tide not accumulate over the slob area to a greater depth than two feet, and they would be from two to three feet below the surface of the 5,000 acres; at present an ordinary neap tide rose to the level of the greater portion of the 5,000 acres, and a spring tide would cover the whole area were it not for the embankments; unless witness's design or something similar could be adopted the land could not be sufficiently drained, because there could not be sluices to let off the land drainage; adjacent lands were water-logged, and the state of things was also likely to have an injurious effect on the health of the people, 42495.

Cost of proposed Work and Expense of Maintenance.

Cost of a tidal wall, etc., would be about £10,000; if the charge were confined to the lands directly subject to tidal influence, and if the money were advanced by a loan, repayable in thirty-five years at five per cent., it would mean a charge of £500 per annum; the estimate was exclusive of maintenance; both the Government and the county might contribute, leaving the land benefited liable to a moderate charge; the 4,000 or 5,000 acres outside the zone of tidal influence would be much improved, and ought to be included in the area of charge, but at a lower contributory rate, on the ground of benefits conferred; one result would be that the water would be taken away quickly, and a different kind of herbage would replace the aquatic grasses, etc., at present growing there, 42495-8.—Expense of maintenance would be comparatively small if the work were really well done, £50 a year would do it, 42500.—The works would require keeping clean, and the embankments would have to be maintained, 42501.—The embankments were maintained now, but it was very imperfectly done, 42502-3.

Sources from which Funds might be obtained.

Hopeless to efficiently drain the area by a continuation of the works on the lines on which they were started; the people ought to be ready to charge themselves with the amount of benefit conferred; possibly the County Council would see its way to contribute, and Congested Districts Board would no doubt feel it a duty to assist, as the rivers affected the congested areas, 42505.—Some Department, either Congested Districts Board or some other, ought to contribute, because failure had followed the sanctioning of an imperfect scheme; the landholders ought also to contribute to the cost to the maximum extent of the benefits conferred, which should be measured as follows: lands should be valued in their present condition, and two years after the work was carried out they should be re-valued; each landholder should then contribute annually a sum representing the difference between the present value of the land and the estimated fair rent of the land in its improved condition; landholder would thus have his land improved without any risk; if that plan did not provide sufficient money the Government and the county should contribute, 42506.—It might be reasonable not to demand the whole of the improved value of the holdings, 42550.—A Drainage Board should be formed, which could then borrow money from the Board of Works; the money would be repayable in the form of an annuity through the Drainage Board; if the works cost more than estimated, and if improvement value was not sufficient to repay Board of Works, the balance should be obtained from some other source than from the owners of the land, either from the Government or the county, 42510-2.—The work would be carried out by engineers of the new Drainage Board, 42513.

Question of Control of Drainage Scheme.

A Department of Public Works ought to be created; people did not like the name Board of Works; but it was not necessary to wait for that; if the Congested

DORAN, Mr. HENRY.—*continued.*

Districts Board had the control over the districts in question that they ought to have, in the absence of a Department of Public Works, such a scheme as witness had outlined might be taken up by Congested Districts Board so far as arranging preliminaries went; the people would probably be reasonable, but if not scheme would have to be abandoned, 42513-5.—Only about one-sixth of the drainage area lay within the scheduled area, and the Board would not be justified in undertaking responsibility of that kind, 42516-9.—Schemes had often been carried out outside congested areas for benefit of people inside, and present scheme might be considered such a scheme; proportion of total outlay assigned to congested area would be very small, 42520-2.—Before the Board could properly act either a larger area must be scheduled or the artificial line of congested and non-congested districts must be removed, 42523-5.—There was nothing to prevent the County Council and the people acting at once, and inviting co-operation of Congested Districts Board; the magnitude of the scheme would make the people chary of undertaking it, having regard to their previous experience; some Government Department should undertake it, 42526.—The Board would not be in quite the same position as at Kiltimagh, because there they were landholders, 42541.—If the whole district were scheduled the owners who had not yet sold to the Board would do so; the proprietors could then be formed into a Drainage Board; instead of landlords they would be tenant-purchasers; the sale of estates would not be a serious obstacle unless the people knowing their liability said the scheme could not be carried out, 42542-7.—If Congested Districts Board had control over the area they might give advice, instruction.

Fishing Rights.

One difficulty might be that people might have vested rights in the fishing in the estuary, 42527, 42539-40.—The Lixnaw navigation would be done away with; witness did see a sign of sand being landed; these things would increase the cost, and perhaps put an end to the project; witness thought no part was navigable at low water; the people did not go up to Lixnaw except at high water; the only other way would be to lower the bed of the river, 42527-30.

Cashen Drainage Board.

The Drainage Board which had been formed had ceased to act; everything had been allowed to go loose, and the members were allowed to die out without being replaced; rivers must be in a worse condition now than they were in 1884, 42503.—Under the Act of 1863 when a Drainage Board was formed they were bound to hold a meeeting in September of each year, and in the event of a member of the Board dying or ceasing to act they could have a new election; probably it had not been done in the case of the Cashen Board, because the whole business was a complete failure, and they thought they were throwing good money after bad; an action could be brought against the Drainage Board to compel them to do their duty; it was the duty of the Board of Works to advance the money to put a drainage system in efficient condition if Drainage Board failed to do it after notification; in this case Board of Works had been as inactive as the Drainage Board; there had been several cases of the same kind where the Board of Works lay dormant until Congested Districts Board bought estates, 42531-5.—Witness had not looked into possibilities of lowering bed of river, and allowing facilities for mud to be drawn up for manurial purposes, 42537-8.

Land Purchase in Kerry.

The Board had not been offered any very suitable estates in Kerry, the failure to buy in some cases being caused by the prohibitive price asked, 42551.

Document put in by Mr. Henry Doran.

Map of Cashen River, in connection with Drainage Scheme, ... *Page to face* 208

HAYES, Very Rev. Canon.
See pp. 17-20.

Decay of Ballylongford.

Aghavallan comprised the two modern parishes of Ballylongford and Asdee; it was bounded on the

HAYES, Very Rev. Canon.—*continued.*

north by the Shannon, and extended along the river seven or eight miles; population of 2,700, principally agricultural; town of Ballylongford once busy and prosperous, was now industrially dead; population which forty or fifty years ago was 800 and 900, was now reduced to half; the little fleet of boats that had once studded the harbour and been a source of livelihood to fifty families was now reduced to two or three; Saleen Harbour had been in these days full of commercial life and energy; large boats could have been seen discharging cargoes and taking away agricultural produce; trade now reduced to importation of flour and meal and other products which ought to be manufactured at home, 42552.—Principal reason for the decay was the building of a railway between Limerick and Tralee; it was the outlet or harbour for supplying most of North Kerry and Listowel, and that was a great source of revenue to small town of Ballylongford; goods that used to come through Ballylongford came now by rail, 42553.—Listowel depended before on sea transit; now the railway brought what it wanted, and Ballylongford suffered thereby, 42554-5.

Fishing Industry.

Industries were principally agricultural; there was pottery industry at one time not far from Ballylongford, 42556.—Absence of fish was the reason for decrease in fishing boats to great extent, 42557.—Permanent disappearance of fish in later years; improvement present year, 42558.—The fish were herring and salmon, but herrings had gone away to great extent, never much mackerel fishing, 42559-60.—Witness had never made representations to Mr. Green in connection with fishery off the coast; he did not feel justified, as it was not a congested area, 42607.—Volume of fisheries had very much decreased, it was a singular phenomenon and could not be accounted for, 42608.—There was salmon to any extent; two weirs worth £500 a year to owners, 42609.—Fishermen used to go to deep sea for mackerel and herring, 42610.

Valuation of Holdings, Condition of Tenants.

In Wren and Stokes' Estate there were ninety-two holdings, seventy-two of which were under £10 valuation, whilst fifty, or more than half, were under £5, 42561.—Eleven were judicial tenants, and others were never allowed to go into Land Court to get fair rents fixed, 42576.—Sixty of them were evicted and put back into their farms, twenty as graziers and forty under court leases; they were thereby excluded from going into court; remaining twenty either future tenants or hold under old lettings; land inspector had been sent down by Court of Chancery, report showing need of improvement on the estate; many families had no road leading to their houses from main roads; portion of estate bordering on the Shannon suffered from spring tides, which flowed over the land, as there was no embankment; since 1863 fifty-seven acres had been swept away, and four or five houses were now threatened with destruction, 42577.—In Asdee portion of Hickie Estate there were twenty holdings, and only four were over valuation of £10.

Criticism of System of Land Tenure, Middle Interests.

These estates were in Chancery, and should have been taken over by Congested Districts Board and declared congested; wretched condition of tenants revealed a system of land tenure as bad as could be found in any part of the world, principally on account of middle interests; each tenant had two or three landlords over him, 42561-2.—Landlords all supposed to get something out of the holdings, 42563.—Trinity College was head landlord in Ballylongford and Asdee, and sole owner of a few townlands, where Colonel Crosbie, the middleman, was evicted for non-payment of rent; that was the sole position of the two parishes having only two landlords, 42564.—Colonel Crosbie owed rent to Trinity College, and when fair rent was fixed, margin was left so small, 42565-6.—Trinity College had never taken any interest whatever in improving condition of estimates, 42570.—Reduction of rent did not affect head landlord; system of land tenure responsible for most of the distress and poverty of these parishes; rents were excessive before Act of 1881 came in, 42571-2.—Fair Rent Acts did not afford them anything like reasonable relief; personal element or middle interests entered into the fixing of fair rents; no matter what value of land may have been, middle interests must be protected; landlord's interest, irrespective of the value of land, was considered in determining fair rents, otherwise lands in witness's part of Kerry would be entitled to no rents at all, because land was not capable of yielding an agricultural rent, 42573-4.—Rent of more than two-thirds of holdings from Ballybunion to County Limerick was paid by American wages, or by household economy involving semi-starvation; consequence of evil of land tenure had entered into and vitiated land purchase; purchase prices were merely graded rents, 42575.

Emigration.

Had it not been for the large emigration a great many people in poor areas would be in a far worse position; they would starve altogether, but for emigration, in such uneconomic groups; no means of living whatever, 42576.

Representative of Congested Districts Board Proposed.

These two parishes afforded fine field for exercise of Congested Districts Board powers, but Kerry was practically shut out of benefits of this Department, and no representative had been placed on the Board; Kerry one of the poorest counties in Ireland, and it would have been a great advantage to have a representative on the Board, 42577-9.—As regards association with the county, Mr. Doran would be about the best authority, 42605.

Ways and Means of Relieving Congestion.—Land Available for Distribution.

There were 1,120 acres of untenanted or non-residential holdings, and distribution of these would be first step in direction of relieving congestion; valuation of this land was £435, and, allowing £10 for each holding, provision could be made for forty families, or for twice the number by the migration of these occupiers whose valuation was £5 or so, 42580-2.—To promote anything like prosperity along the northern seaboard Government would have to come to the aid of this poverty-stricken region; no use to look for agricultural prosperity until every foot of land along borders of Limerick to mouth of Shannon had been drained; this portion of sea coast, like the West of Ireland, not brought under notice, principally because there was a ridge of good land a quarter of a mile from the Shannon; there were two farms, one at £78, the other £74, which put up valuation of uneconomic holdings, 42587.

Court Leases.

These farms were held under Court leases, 42587.—Dividing valuation by population the high valuation on a few farms would interfere, 42582.—Farms held by tenants, 42583-4.—Negotiations were going on in case of large holding of Mr. Blacker Douglas, which he farmed himself; there was a proposal for Land Commission to buy it, but he would not accept price; witness thought they would come to terms later on, 42585.—The people were all small holders, even the graziers, 42586.—When a person was evicted, Court of Chancery sent down a valuer to value land at what price he liked, and it was a great grievance; people could not go into court for a fair rent afterwards, 42588.—Evicted tenant was put back and given seven years' lease at rent which was arbitrary on part of valuer; no chance of going into court, and there was a great difficulty in completing the sales, because these rents were higher than judicial rents, and purchase prices were based on the high rates, 42589.

HAYES, Very Rev. Canon—*continued.*

Drainage.

If district were scheduled it would have helped people to drain these areas, although Dr. O'Donnell appeared to indicate that it was only in those properties that the Board bought that they expended much money, 42589.—Drainage was an absolute necessity for the two parishes; it would be useless to give them tillage until land was drained, 42604.

Need for Drainage.

Land for most part in parishes of Ballylongford and Asdee was reclaimed bog land, entirely unsuitable for tillage, and would remain so until subjected to thorough and general scheme of drainage; aid of some beneficent Board necessary, as occupiers would never have sufficient capital to meet outlay; congestion of very pronounced type prevailed in both parishes, especially in Asdee; though they had not been scheduled as congested; two divisions in Ballylongford came nearer definition of congested area than Asdee, 70 per cent. of the holdings being uneconomic; definition of congestion very misleading; population and valuation no measure of congestion, 42561, 42582.

Dairying as compared with Tillage.

With present system of farming people could never hope for more than the means of furnishing mere necessaries of life; Government aid in the shape of loans or grants absolutely necessary; present system was all grazing and all milk; mistake for farmers to give up tillage completely; far more profitable if they turned to tillage; a farmer with ten cows sent milk to a creamery, and only got 3½*d.* at most per gallon for it; he could only send about twenty gallons daily to creamery, and that would be about 6*s.*, or £2 for week at most; this could only go on for five weeks; all he could make out of his ten cows would be £40 a year, which was very little to support a family; if he had more tillage to feed his cattle and pigs it would be more profitable, 42591.—Farmers said they did not do this because they had not the labour, it was too high, and that there was nothing to pay but grazing the country, which was becoming impoverished because of emigration, 42592.—The only farm where they did a little tillage was where they had sons at home; in families where there were seven or eight children only one or two were at home; the rest had gone to America; tillage had been given up altogether, 42593.—People required education, 42594, 42603.—They had tilled before; with the collapse of agricultural prices in the seventies, when corn was sold for little or nothing, people gave it up, 42595-6.—Parts of Ireland well tilled, and other parts going out of tillage owing to emigration, 42598.—Tillage in Clare not so great as between Listowel and Tralee, hardly any tillage, 42600-1.—Place poorer along River Feale to Tralee, 42606.—If tillage were extended farming would be more profitable, 42611-2. —Should be encouraged by Government in some way; means of transit would give people greater taste for tillage.

Construction of New Pier proposed.

Construction of a new pier would be of immense advantage to Ballylongford, 42613-4.—Present pier practically useless owing to insufficient depth of water, and unsafe by reason of exposed situation, 42614.—It was built in the wrong place; other places where there would be no difficulty, and where the largest ships could come up; amount paid for transit was very high; if a boat or ship could come in there once a month there could be fairs and means of transit, 42615.—Boats called from Limerick sometimes, but very seldom; could not get in except at high tides, and then it was dangerous, 42616.—Dredging would not do; there was a primary difficulty, which was unforeseen in building the pier; there was a bar outside, which should have been cut away; provision of a new pier was one of the functions of the Congested Districts Board; pier was absolutely necessary for development of fishing industry, 42617.

HAYES, Very Rev. Canon—*continued.*

Railway from Listowel to Ballylongford Proposed.

Line of rail to Listowel would be an advantage to the district; only seven miles from Ballylongford, and if connecting line were made to Listowel, Ballylongford Harbour would become landing place for a large portion of the agricultural produce of North Kerry, 42617.—Corn, cattle, pigs, and similar agricultural produce would then be sent to England, 42618.

MOLYNEUX, Very Rev. Canon.

See p. 21.

Poverty of Non-Scheduled Division of Ballybunion.

More poverty in non-scheduled division of Ballybunion than in any division in Listowel, congested or non-congested; more outdoor relief given than in any other division of the union, 42639.—Poor in North Kerry were exceedingly poor.—Whole of the parish of Glengariff in County Cork was scheduled as congested; there the average valuation of ten, twelve, or twenty occupiers would be about £2 per occupier; it would be evident to strangers who visited the place that these poor people needed relief, living, as they did, on uneconomic holdings, 42640.—In North Kerry there was such poverty that people had not a cow or two, as they had in Glengariff; emigration was most extensive, people went to iron furnaces in South Wales, etc., and the women did the work in spring after the potatoes were planted, 42640.—Land in North Kerry was mostly all bog, very little arable land; very little land which was productive and fruitful; heavy lands did not pay for tillage, especially when labour was high; witness did not think rising generation would ever approach the old people in their attention to business, such as drainage, etc.; extremely difficult to get them to go through slavish work, which was done so well and so long in time past, 42641.

Labourers' Cottages.

Very poor people in North Kerry had no holdings; Rural District Council had lately generously provided labourers' cottages and attachments, 42640; more labourers' cottages in North Kerry than in any other part of Ireland; necessity had arisen from fact that people were so badly housed, and had no land; Rural District Council had taken up the recent Act to such an extent that poor farmers in North Kerry were frightened; they did not know what to do with the taxation that was being heaped upon them; the Council doing all they could to carry out a great and useful business, but it was imposing a very heavy task upon them; notwithstanding reductions given in rent, difficulties of farmers had increased by increase of taxation, cost of labour, and its scarcity; witness had never seen the country in such a position as it was in now in its struggle to make ends meet, 42641.

Land Purchase in Kerry.

Witness knew of a large district on which tenants had purchased twenty years ago, but under duress, and when they were all under notice of eviction, and purchased at very high figures; purchasers were now prepared to forfeit twenty years' purchase and sign agreements under new Act of 1903; and, so difficult did they find it to pay their annuities that they would willingly agree to commence paying new annuities for sixty-eight years, provided they got credit for the twenty years they had paid already; no people would forfeit twenty years and sign again for sixty-eight years unless they were hard pressed, 42641.

HANRAHAN, Mr. JAMES.

See pp. 21-2.

Fishery at Ballylongford.

Salmon fishing in Ballylongford opened on February 12th, and lasted till 30th April; peel fishing opened May 1st and ended 1st July; then herring fishing commenced and ended on 1st November, and from this date until 14th May oyster fishing was in progress; fishermen of the locality could be profitably

HANRAHAN, Mr. JAMES—*continued.*

employed all the year round; thirty fishermen living in the district, but only three had been fishing in past year; remainder mostly did occasional work, while some depended for their living on ferrying from Saleen to Kilrush; ten to twelve boats were required to supply these men; probable cost of each boat for salmon and herring fishing would be about £16 when fully equipped, 42642-3.—Congested Districts Board should provide boats for these men under present circumstances; also facilities in the way of a pier; present pier absolutely unsafe; in most important times of the tide the boats had to remain at Saleen for fully two hours in order to float out, and dangers were incurred by fishermen, and boats, in some cases sailing boats, had to remain altogether at Saleen owing to strong currents, 42644.

Pier at Carrig Proposed.

Witness suggested a pier at Carrig; it would be of highest advantage to fishermen, 42644.—Pier would be of commercial use to Ballylongford as well, 42645-6.—Only twenty feet of water at highest tide at the old pier; if new pier were provided there would be thirty-three feet, 42646.—Proposed pier would be accessible at almost any time of the tide; it would secure boats against any wind, especially north-west and south-west, which were dangerous to boats lying at Saleen pier; some boats had been swamped while lying there, 42651.—Trawling was carried on in the Shannon, but boats from Ballylongford never fished at this place, because they were too lightly built and too old, some of them practically obsolete; four boats should be given for dredging, trawling, and fishing; they should be built exceptionally strong in consequence of the heavy strain on them, and should be eighteen feet in keel, 42651, 42654, 42656.—Trawling had done great damage to salmon fishing which was outside the river, 42652.—Fishing outside the river was with nets; some of the nets were five miles long, 42653.—Coast was very dangerous, 42655.—Herring grounds were about one mile from proposed pier, 42657, 42661.—Resident fishing superintendent would be of great use on coast of Kerry, 42658.—It would help to keep Congested Districts Board in touch with local people, 42659.—Within last three years herring and mackerel had been caught by people from Ballylongford, 42660.—They waited until herrings came into the river, 42662.

Oysters.

Season for oyster dredging opened late in September and continued during winter months; very often boats engaged in this business were obliged to remain at Saleen for weeks owing to continued winds from south-west, west, and north-west, and this also occurred in summer time, when salmon and herring fishing was going on; public oyster bed was over three miles square, and was insufficiently stocked with oysters; two boats at present dredging never touched Ballylongford harbour, as they would not get sufficient to pay them for their trouble, 42646.—Irish oysters were very marketable; witness suggested laying out half a million oysters on this bed; they would be marketable in two years' time, 42651.—No application had been made to Mr. Green; people did not know whom to ask, 42647-9, 42650-1.—District was not scheduled, 42650.

DORAN, Mr. JOHN.

See pp. 22-4.

Description of Treatment of Labourers on Mr. Blacker Douglass's and Lord Listowel's Properties.

In a part of Mr. Blacker Douglass's property, of Kilconly, about 1881, and previously, there lived six families of householders, about thirty-six altogether, and all labourers; two families had one perch of land, and the other four held about fifty perches in all; each tenant had to pay £2 10*s.* a year in labour, at 8*d.* per day, even if others obtained 1*s.* 6*d.* or 2*s.* per day, thereby proving that the six tenants were paying £3 each, or £18 per annum, for their six mud cabins and fifty perches of land, and still had to maintain their families; Mr. Blacker Douglass

DORAN, Mr. JOHN—*continued.*

was not responsible for this, as these men were only sub-tenants to farmers; four of these houses had since been levelled, and most of the occupants had emigrated to enrich other lands, and to enjoy that material and social position which had been denied them in land of their birth; Lord Listowel's property adjoined Mr. Blacker Douglass's property; in townlands of Kilconly and Beale Hill there were a great number of labourers, who had been evicted under middlemen and farmers, and had died of hunger in 1847, 1848, 1850; after that the landlord had evicted the middleman, and had held land in own possession for a number of years; he gave some employment for a time, but he took good care to leave many labourers landless; he would not even permit them one perch; some had a plot with a few hundred cabbages, but when his steward was having fences erected he had the surface of the plots taken to manure the quicks and furze seed on the fences; not one perch given to labourers, although landlord had 400 acres of untenanted land; about twenty-five labourers in the lands or farm of Scottish Provident Institution and adjoining it; and these men had only mud-wall thatched houses, with about eighty perches of land; they paid about £3 at one time, and had been paying £2 10*s.* for last twenty years; within last forty years they held as caretakers and weekly tenants, and paid said rents, at the rate of 8*s.* a week, without board, and another member of the family supplied them with food; these were only a few examples of what labourers had to undergo, and which proved the thrift and industry they had to exercise to maintain their families; often they were semi-destitute; no wonder their families fled from the country when opportunity offered; hence its depopulation, etc.; many others had to sustain life by gathering seaweeds, etc., 42663.

Claims of Cottiers with Less than Three-quarters of an Acre of Land.

There were some thousands of cottiers who were possessed of less than ¾ of an acre of land; they were exempt from present and past legislation, and exercised no tenant right, as they were debarred from entering the courts; this required immediate redress; even when sales took place, this class must remain as sub-tenants, if Acts of 1903 and 1881 were not amended; they should be permitted to enter courts and get fair rent fixed, 42663.—They should also be permitted to purchase if they desired; they must rely entirely on the recommendations of this Commission for redress; Lord Listowel's property was being purchased by the tenants, but sale was not yet completed; one man held a small house and a place for a manure pit; when engineer came round he claimed the site of a fallen room, so as to rebuild it if he so desired; but tenant farmer objected, and said that wall of existing portion must be boundary, and locked the gate to prevent him bringing in turf; house and site of room was a freehold, and Lord Listowel would not permit one perch of land to be attached to the house; there was a family of seven in this house, and all had emigrated except the one, who was now being tyrannised over; whether Estates Commissioners would defend his rights remained to be seen, 42664.

Kilehenny should be Dealt with as Congested—Evictions, Semi-destitution, etc.

Electoral Division of Kilehenny required to be scheduled as congested, because there were thirty-six families, or seventy persons in receipt of out-door relief, at annual cost of £240; there were about 205 holdings of £5 valuation and under; about 250 families had been evicted in 1847, 1848, 1850, for which there was no legal order; many died of starvation, others went to the union, and others emigrated; result of this clearance was the substitution of the bullock and large grazing tract, which debarred the division from being scheduled as congested in 1891; there was over 1,500 acres for the bullock, while there was nothing for the people but semi-starvation and the emigrant ship; there were seventeen future tenants, the victims of exorbitant rents, which in many cases were three times the valuation, and sometimes five times; about forty of the houses insanitary and uninhabitable; people received about £1,000 per annum from America, which in many cases prevented

DORAN, Mr. JOHN—*continued.*

real destitution, 42664.—Witness obtained his information from the old people in the district, 42665-8.—The aforesaid lands were most conveniently situated for relieving congestion which existed; the landlord at time of former evictions was Major William Fairfield, 42669.

Knitting Industry.

Hosiery and knitting industry was carried out under supervision of nuns of St. Joseph's Convent, and gave employment to about eight; it had been abandoned for want of accommodation, as there was an advance to forty pupils in school attendance; application had been made to Agricultural Department to aid in reviving the industry, but enterprise required local capital, and industry fell through, which was great loss to the district; this was in 1905 and 1906; if Congested Districts Board took an active part it could still be revived, 42679.

Parish Committee Grants.

Necessity for reform in the rules of Congested Districts Board as regards Parish Committees; an artisan, no matter how impoverished he was, was not permitted to avail of the grant, nor were subtenants to farmers; for two years they excluded all cottiers holding less than one acre of land, 42670-1, 42673.—Some of the tradesmen were in very bad condition, and some were well-to-do, but, no matter how impoverished they were, they could not be assisted, 42673.—Parish Committee should have discretion to give relief, 42673.—Sub-tenants had security in their holdings; as long as they paid their rent to farmers they had security; people with more than ¾ of an acre of land could apply for fair rent; if supervisor's estimate did not exceed £2 10*s.* applications were not entertained; they were entertained in 1906-7, 42674.—Committee had made suggestions to Board, but they would not entertain such cases; if estimate were 30*s.*, that would be on a dwellinghouse, people would only get one-fourth, if it was repairing an out-house; landholders whose valuation was under £7 were eligible for individual grants; a grant not exceeding £3 for the erection of an out-office, and not exceeding £5 for a dwellinghouse; on Port Royal Estate a tenant might receive a grant towards an out-house not exceeding £4, and for a dwellinghouse a sum of £10; difference of £1 in one case and £5 in the other, 42675.—Ballybunion Parish Committee obtained a grant of £75 a year for three years; people were so impoverished that they could only avail of about £6, and about £65 was returned; in second and third years the amounts returned to Board were £26 1*s.* 3*d.* and £10 8*s.*, that is to say that in three years £101 9*s.* 3*d.* was not returned to Board; if people had not received £10 from landlord to commence, even this would not have been availed of; Board would not permit the returned money to be expended in road-making and drainage in the district, where it was required, notwithstanding fact that over £200,000 towards reclaiming and developing the district would be required; people thought when they sent it back that it would be returned to them again, but were refused; one-third of the estimate in repairing dwellinghouses was allowed, and one-fourth in repairing out-offices and fences, draining, etc.; work had to be completed before they even got the one-fourth; people so poor that they very often could not undertake the work; people whose valuation was up to £10 should be permitted to avail of Board's grants; those whose valuation was £5 and under should obtain free grant of half the estimate, and artisans should be included; the Board would not allow draining or fencing until the houses were done up; some people had withdrawn because they were not in a position to carry out the work; and money would not be permitted to be availed of for draining and fencing until houses were done; 42676-7.—There were some scheduled districts that did not think it worth while to avail of Board's offer, 42677.

Land Purchase.

Best means of relieving congestion and stopping emigration was to purchase all untenanted and all other lands in the market for sale, by compulsion or otherwise, at a fair price, and sub-dividing it into economic holdings; Estates Commission should have right of pre-emption respecting private lands under their control and being offered for sale, and workers in general and uneconomic holdings, and landless working classes had first claim on these lands, 42677-8.—There should be financial aid in starting home industries; roads and other public works should be carried out under direct labour; there should also be compulsory sale of land at a fair price, which would abolish great expenses of Land Commission and other things; land speculators and capitalists should be strictly prohibited from purchasing any land save real waste, reclaimable land, Government did not undertake to do so; it was well known that a capitalist had many other ways for investment to maintain livelihood, and as men formed the real wealth of nation, remedy must be found for obtaining that wealth; emigration of proportion of the occupiers must take place, so as to enable remaining one to prosper; plenty of land was available for that purpose, 42680.

Representation of Kerry on Board.

Important that a representative of Kerry should be member of Congested Districts Board, 42680.

Emigration.

The lot of many of the working class in Ireland was intolerable; their only safety being flight to other lands, and Ireland would be ruined if they continued to go to make wealth for America, 42680.

Restrictions on Use of Bull Sent by Department of Agriculture.

Agricultural Board sent a bull to congested district of Gullane, and the first year he was limited to forty cows; after three years he was limited to forty cows besides the cattle of the man in charge; some took cows this year about 1st June, but they were refused, 42680-1.—Character of Ireland had been run down to certain degree; it was considered that police committed many of the outrages, as in case of Sergeant Sheridan, where it was proved, 42682.—A tar-monger was where people did not wish to take away life and threatened the offending people, 42683.—People wanted to keep their holdings; Irish people as a rule did not want to take life; they had died of hunger even rather than do so, 42684.

AHERNE, Mr. PATRICK J.

See pp. 24-5.

Glensharrold Electoral Division of Newcastle West Rural District.

Glensharrold Electoral Division comprised townlands of Glensharrold, Knockanagun, Carrickerry, Knockfinish, and Boranizue, and was a unit of Newcastle West Rural District, with area of about nine square miles, and population of about 1,000; poor-law valuation was about £936, and number of householders 145, majority of whom belonged to toiling class, and had to eke out scanty subsistence as best they could under very unfavourable conditions; little or no employment and scarcely any industry in district, the principal one being peat industry, which was now on the wane, most of the mine being cut away; farmers were only in middling circumstances, and gave very little employment, so land was left unreclaimed and undrained, great many of their farms being cut-away bog or moor; principal crops raised were potatoes, turnips, cabbages, and oats; potato crops not good in recent years, even last year's crop was partial failure; in district adjoining there were vast tracts of waste land which, if reclaimed and broken up into small allotments and distributed among poorer classes, with State aid, would become productive and afford beneficial return to community at large; toilers would then be enabled, by economy and industry, to live in comparative comfort at home instead of dreaming of an El Dorado across the sea; young people went to America having no prospect of a living at home; emigration had sapped the bone and sinew of manhood of Glensharrold during past twenty-five years; there were about 3,000 acres of waste land

AHERNE, Mr. PATRICK J.—*continued.*

in Rooska division, and a large colony of poor people almost destitute; congestion was also rampant there chiefly from same causes as in Glensharrold Division; unless Congested Districts Board took up the matter and acquired this land it would remain in its primeval wildness, and people would derive no material benefit therefrom, 42685.

Tree-planting.

Some of the mountain chains extending from Carrickerry to confines of North Kerry would be admirably suited for planting trees, 42685.

Limestone Quarries.

There were splendid limestone quarries within three or four miles of Glensharrold, and if railway were constructed to connect Ardagh with Listowel, passing through immediate mountain districts, limestone could be brought to where it was badly needed, and famous sand of Ballybunion could also be properly utilised, which, owing to the distance and lack of convenience, had not been resorted to for reclamation or tillage purposes by Glensharrold people, 42685.

Means of Livelihood.

Direct labour had been in operation in district during winter, but only a few labourers were employed; some of the poor lived by selling turf in Newcastle and Ratheale, while others lived on earnings of children in domestic service in East Limerick and remittances from friends and children in exile, which helped to pay rent of the little cut-away patches of bog; finest material in all Ireland for manufacture of peat moss was to be had in the district; it abounded with many resources, but means of development were not at disposal of working population, 42685.

Land Purchase.

Knockanagun and Carrickerry properties had been purchased under Ashbourne Act at eighteen years' purchase; there were eleven labourers' cottages in electoral division, and five under new scheme; good number of projected applicants who could not at present be supplied with houses; tenants of James O'G. Delmege were negotiating purchase agreements with agent; there were about fifty-six tenants, farmers and lot-holders; the lot-holders occupied three or four-acre plots, and lived by cutting and selling turf; if estate were purchased and sale of turf stopped they would starve, having no industry to rely on; produce of their little holdings would not maintain themselves and families; if whole electoral division was scheduled it would tend to improve land and people generally; farmers lived by dairying and stock-raising on a small scale; agriculture was partially abandoned, 42685.—Newcastle West had eight or nine electoral divisions with valuation under 30*s.* per head; poorest seemed to be Mount Collins, having valuation of only 17*s.* per head, 42687.—In witness's district it was only £1 5*s.* 7*d.*, and the outlying districts were the same, 42687.

Emigration.

Emigration had wrought a great change in the district; thousands of acres were lying partially idle, and would remain so until something was done by the Government to put it into cultivation, 42687.

Poverty of District.

Vice-President of Department of Agriculture had visited district in the days of the Plan of Campaign, and had described the people as a colony of squatters; only people going among them could tell how badly off they were, 42687.

SCOLLARD, Mr. CHARLES.

See p. 25.

Burden of Taxation in Glensharrold Electoral Division.

Witness wished to bear out what Mr. Aherne had said about Glensharrold Electoral Division; the country was beyond any other country, mostly wilderness all round; people taxed much more than they were able to pay; witness represented labourers of the locality of Carrickerry; he was a small farmer, and had thirty or forty acres of peaty soil of his own, and it was very hard to pay rates at present time; he did not know why rates went up so much this year; if another year came like this people would have to leave rates, land, and Government to themselves, and would have to emigrate, 42688-90.—Witness farmed for dairy purpose, 42691.

SCOLLARD, Mr. CHARLES—*continued.*

Necessity for a Light Railway passing through Athea.

If a light railway were made to Listowel, passing through Athea, it would do a great deal for the country round; Athea was becoming an important little town; between £300 and £400 of butter was bought there weekly; City of Limerick would hardly represent so much, 42692.

PIERSE, Mr. GARRETT.

See pp. 25-6.

General Conditions of Life in Gullane.

Division of Gullane was situated at estuary of the Shannon near seaside resort of Ballybunion, and was about fourteen miles distant from Listowel, the nearest market town; people were sober, honest, and industrious, but land consisted of reclaimed wild bog and barren mountain slopes, with a retensive sub-soil, and aspect towards the north, and was very much exposed to ocean gales; no trees or shelter of any kind prospered, and, consequently, cattle had to be housed and hand-fed from 25th October to 13th May; not much tillage; it did not pay in this exposed country; witness had seen potato stalks blighted twice a year by storms; chief industry was butter-making, but lately it had been sale of milk at creameries and rearing of calves; great fall in price of agricultural produce had affected people of this district very much, as they had no industry to fall back on; great many small farmers who had only one or two acres which were of such poor quality that they were very poor; outdoor relief alone in the division was 2*s.* 4½*d.* in the £, and people received yearly between £300 and £400 from America and elsewhere; yet they were deeply in debt to local shopkeepers; witness was a shopkeeper, and he had given value of about £800 in credit, 42693.—Witness trusted these tenants, poor as they were, because they could be trusted if they got help in any way to make a living, 42694.—Tenants' leases fell out about years 1875 and 1876, and landlord (Wilson Gunn) actually doubled rent on some of the tenants; even witness's own holding, which had been let for £15, was now £43, and, after going twice before Land Court, was still £19 10*s.*, poor law valuation being £16 15*s.*; far easier for tenants to pay big rents in the seventies than it was to pay reduced rents now; price of food more than doubled on account of the changes, and county cess had increased from 3*s.* 6*d.* in the £ to 8*s.* 3*d.*; then there was a fall of 35 per cent. in price of butter, and, worst of all, it was hard to get sufficient labour, as most of the young people were going to America; when bad land was out of cultivation for a few years it soon went back to its original state—growing rushes and heath, 42693.

Land Purchase.

Present landlord (Mr. R. Huggard) became owner of most of the property in this division about five years ago, and, it was openly stated, for a very small sum; Mr. Huggard was only a middleman, Trinity College being head landlord; when Land Purchase Act of 1903 was passed tenants approached agent with regard to a sale of the property, and his reply was that nothing could be done until report of Trinity College Commission was issued; after report was issued tenants had another interview with agent, who offered to sell at reduction of 6*s.* 6*d.* on first term rents and 4*s.* 6*d.* on second term rent, which was unanimously refused, as it was considered entirely inadequate; agent then asked to sell to Congested Districts Board, but he refused, 42693.

PIERSE, Mr. GARRETT—*continued.*

Compulsory Powers for Congested Districts Board proposed.

If Government did not give compulsory powers of purchase to Congested Districts Board, or some such popular body, landlord of this district would have power of compelling tenants to purchase at his own terms, because he was turning them into caretakers under Eviction-made-easy Act of 1896; last April landlord had had sixteen of those tenants summoned before petty sessions court to turn them out of their homes, but he did not appear this time; better for tenants of this district that Land Purchase Act of 1903 was never passed if Government did not give necessary powers to Congested Districts Board to purchase these poor, congested estates and resell to tenants at a reasonable price; also to make improvements and roads which were very much required in the district and to purchase 500 acres of untenanted land which was owned by the Scottish Company on next estate, and to aid cottage industries, 42693.

GRIFFIN, Mr. PATRICK.

See p. 26.

Townland of Glenagrogary should be Scheduled as Congested.

Townland of Glenagrogary in Electoral Division of Kilfergus, should be scheduled as congested; there were two other properties, one to the east and one to the west, of about equal dimensions, rents, and valuations; in Glenagrogary there were thirty-three holdings, and the actual value was £99, or £3 per holding per tenant; second term rents amounted to £165, 42694.—Congested Districts Board should take up the business of scheduling, 42695.

Negotiations for Purchase.

People had tried to negotiate with landlord for a purchase, and landlord had challenged them to sell, and given them the liberal offer of 3*s.* 6*d.* in the £ abatement on their rents; people offered to buy at 18½ years' purchase on second term rents, and 16½ years on first term rents; there were twenty-one holdings out of the thirty-three under £3 valuation, and some of them were down to 5*s.* and 10*s.*; only seven holdings over £5; people believed that without assistance of Board or some other Board they could never buy on reasonable terms from landlord; rents had been raised time after time to double what they had been, and better portions of land taken from some of the tenants and put into lots, which brought on congestion; witness's sole object was that the Board should buy on reasonable terms, 42695.

MULVILLE, Mr. MICHAEL W.

See p. 26.

Condition of Listowel Urban District.

Listowel Urban District was in very bad position; witness would like to see it under protection of Congested Districts Board; area was 1,773 acres, and number of houses about 500; no houses had been built for poorer classes by any public body; result was they were crowded into dirty little cabins with mud walls and thatched roofs, only one or two rooms; Town Commissioners had borrowed some years ago about £7,000; things had gone against them, and they now had to pay a percentage of £300 odd to the Board of Works, and they were very hard pressed, 42696.—Loan was for waterworks, which turned out a partial failure, and about £4,000 or £5,000 was lost; their rates were about the second highest in Ireland, about 11*s.* in the £; Council had to pay this rate for thirty-five years more; about sixty-eight mud-walled cabins in the town, and they were quite congested; the men could not get work.

Chief Industry.

Chief industry was agriculture, which meant a little tillage and a great deal of pasture; there were untenanted lands about the town that could be used for purposes of creating economic holdings, 42697.—Railway to Listowel *via* Newtown and Ballylongford would be a very good thing for tourist traffic, 42698.

BAKER, Mr. THOMAS.

See pp. 27-9.

Neglect of Kerry by Congested Districts Board Alleged.

Congested Districts Board had not given necessary proportion to County Kerry; they had been established for relieving congested areas in 1891; population in these areas at that time was 547,710, and was reduced to 498,000; after ten years of Board's work in congested portion of Kerry during same period population declined from 89,698 to 80,297; when Board was established it was generally thought that its special object was to relieve congestion, etc., but each of the seven congested counties had on an average 6,000 less of population than in 1891; people very pleased to have Board, but something was radically wrong when population was decreasing instead of increasing, 42736-7.—Kerry possessed one-sixth of the population of all the congested areas in Ireland, therefore if the necessary precautions had been taken by those who were in authority it would be entitled to one-sixth of entire expenditure of the Board; ten headings of expenditure, such as purchase of estates, improvement of estates, etc., and they had expended up to the present, in eleven years, one and a quarter millions sterling, 42701.—Which included purchase money of estates, and was, therefore, money which would be repaid to Board when tenants bought estates, 42721.—People in Kerry felt they had been slighted in a very large measure; under purchase of estates, improvement of estates, and industrial schemes, people had received nothing, 42702.—There had been estates purchased in County Kerry since March 1902, 42703-4.—Kerry one of the counties that was in the shade as far as landlord business was concerned, with exception of a few who at once took the opportunity to sell; people were of opinion that whole attention of Board was directed towards Connaught, and not towards giving equal treatment among the different congested areas; proper authorities did not take pains to ask as to whether justice was being done to congested areas, 42708.

Land Act of 1903.

Until Land Act of 1903 no landlord had been found reasonable enough to deal with Board or to comply with wishes of the people in a general way; Land Act of 1903 was based on a very large principle of the British Cabinet asking landlords and tenant occupiers of Ireland to come to the conclusion of amicably settling matters between them; it meant affording landlord a means of coming by every penny that his estate was worth, and affording tenant occupier as much room as was possible for making the best bargain for himself; all reasonable, humane landlords in Ireland at once availed of the idea; landlords not only given this opportunity at the time, but also given £12,000,000 of a grant to induce them to sell to occupiers of Ireland, and, to witness's mind, from that time the Cabinet wished the landlords to get out, 42705.

Piers and Slips; Criticism of Action of Congested Districts Board.

For every slip and pier they wanted the people had first to appeal to Congested Districts Board, who acknowledged receipts of communication, etc., and then considered what subscriptions or contributions they would extend towards the work, if any; there were half a dozen slips most necessary to encourage fishing industry west of Dingle, and a dozen bridges were required; witness got resolution passed at last meeting of Kerry County Council for a most necessary work outside Ballymore, for the different islands, the different parts of Ventry, for the coastguards at Ventry Harbour, and for the fishermen in Ballymore, as well as Dingle fishermen; witness had not an accurate knowledge of figures, he was in America at the time; he had pointed out the utility of this work for the fishermen, and Congested Districts Board had offered to pay half the cost if local authorities were willing to carry out the work at an expense of £150; about fifteen or sixteen years ago Mr. Green and Mr. Keating, of Congested Districts Board and Fishery

BAKER, Mr. THOMAS—*continued.*

Board, came down to Kerry to inspect; it was the time Canon O'Sullivan was there; he had taken up the necessity of getting a deep water pier built; Congested Districts Board pleased with the idea, and offered £22,000 for that slip, but owing to difficulty of obtaining an approach, and indifference on part of people, it lapsed, 42708.

Amount Paid by Barony of Corkaguiny in Respect of Railway and Harbour Charges.

No good in finding fault with Congested Districts Board in the past, but witness would like to draw the attention of the Commission to amount paid by the Barony of Corkaguiny in respect of railway and harbour charges; total amount paid to Commissioners of Public Works in respect of Fenit Pier alone was £19,450 0*s.* 7*d.*, less amount received under Local Government Act of 1898 £1,450 16*s.* 3*d.*, leaving total of £17,999 4*s.* 4*d.*; total amount paid to Great Western Railway in respect of Farranfore and Killorglin Railways, £6,539 19*s.* 9*d.*, less under same Act £644 12*s.* 5*d.*, leaving balance paid by barony of £5,895 7*s.* 4*d.*; total paid for Tralee and Dingle Committee of Management, £55,795 17*s.* 7*d.*, less reduction of £11,222 17*s.* 10*d.*, leaving total of £44,572 1*s.* 9*d.*; total net amount paid to date by Corkaguiny Barony in respect of railway and harbour charges, £68,467 11*s.* 5*d.*; it was a special year for Dingle Railway; for past sixteen years rates had averaged over 2*s.* in the £, but this year they had been brought down to 4*d.* in the £, 42709.

Total Special Charges on Land and Buildings in Corkaguiny.

Total special charges levied in Barony of Corkaguiny on land was 5·43*s.*, on buildings the general rates were 7*s.* 6*d.*, and total rate 7*s.* 10·33*d.*, which would come up to nearly 13*s.* in the £, including lands and buildings, since 1903 to present time, 42709.

Dingle Railway.

About fifteen years ago Dingle Railway was brought on as a burden, now looked upon as a benefit; the people knew nothing of railway work; experts had pointed out the utility of having the line, and whole thing was taken for granted; people thought that whatever they were told was right; they saddled themselves with a very heavy burden under the Railway Scheme; the contract was then given, and the passing of the line was in the hands of Board of Works, with result that they passed curves which should be five-chain curves as three-chain curves, 42710.

Price of Land and Distance from Market.

Long distance from a market in remote districts; this was not considered by landlord when selling; Lord Cork sold to his tenants in Cork at 21½ years' purchase; he wanted 23·31 from his tenants, though it took a tenant farmer two days and a night away from home, and cost £2, to take his horse and sell it at Castleisland fair, within his own county, 42715A.

Absence of Industries.

In the absence of industries and factories people would have to pay for clothing and everything else down from the market in County Cork; they would have to pay for their meal, flour, and bacon, their horse, cow, and sheep; even eggs and butter would have to pay for themselves again until they reached the Cork market, 42715.

Parish Committees.

There was no Parish Committee in Kerry at present; there had been one, 42716-7.—People did not seem to think it was worth taking up, 42718.—Houses and villages in the townlands of witness's district were built in clusters years ago, possibly on account of the heavy storms existing at that time; yards now divided by stones placed on edge, and when the

BAKER, Mr. THOMAS—*continued.*

people were offered a paltry little item by Congested Districts Board to remove, or to build out-offices or dwelling-houses, it could not be done unless they went out on their own lands and built there; they were held responsible by Board, under Parish Committee system to remove the manure heap at least fifteen yards away from the house; all more or less in favour of this, as the district was visited every season with fever, which was an expense to the rates, 42719.—Parish Committee scheme had been pretty well taken up of late, 42738.—But County Kerry had not received its proportionate assistance from Board in the past, 42741.—Parish Committees were giving out grants to encourage housing of the people; a man builds a house with his own horses, his own men, and his own money; immediately the building is erected the supervisor comes, and puts at least £50 on the house; there was a coastguard station at Ballydavid, with several buildings and at least two acres of best land; this townland, buildings and land for some of them is about £3 10*s.*, and £50 is put on the unfortunate fisherman, who brings his little means from the high seas, though he is not afforded a safe landing at night from Congested Districts Board, 42715A.

Land Purchase.

The sum for purchase of estates was £438,000, and £158,464 was the amount for improvements, which was added to preceding figure, 42722-3.—When estates were sold to tenants Board would be recouped the price paid, and, to some extent, price paid for improvements, 42724.—Since 1902 Board had bought £140,000 of land in Kerry; they desired to buy much more, but public authority ought not to put up price by paying too much for land, 42725.—Board should be cautious not to pay too much for land, 42726.—They would not have bought land unless at a reasonable price, 42727.—Ventry project was a good one; not the Board's fault that it did not mature, 42728-9.

Complaint as to Operations of the Board.

Board's letters did not come up to the mark placed before them by authorities of the county, 43732.—They should have allowed the money when called upon; county authorities and local authorities were already to saddle themselves with further responsibility in order to carry out necessary work; up to time of appointment of Sir T. Esmonde County Kerry might just as well have been cut away from Great Britain and Ireland, 42733.—Up to 1902 Board had expended more on Kerry than any other county for sea works, 42735.

Fishing Industry.

Fishing industry in Ireland most essential, and Board should make greater arrangements for developing it; safe landing places most necessary; owing to rents in Kerry being gauged broadly on Griffith's valuation it would be well to have a revaluation if possible; climate had greatly changed, and land worth £2 at that time was now not worth more than 25*s.*, 42741.

O'DONNELL, Mr. THOMAS.

See pp. 29-35.

Congestion.

One-sixth of the congested districts in Ireland was in Kerry, and for a long time the county had been neglected; generally speaking the county was mountainous; there was extreme congestion, and there was practically no untenanted land to be divided, 42742.

Land Purchase in Kerry.

Something could be done by purchase of estates, improvement of the land and improvement of the

O'DONNELL, Mr. THOMAS—*continued.*

home, 42743.—The Board had not purchased many estates in Kerry; they were always willing to do everything in their power, but landlords would not sell, 42770.—Ventry Estate was large and fairly congested; two or three alternative proposals for purchase had been made; one was to give such a price as, with the bonus, would amount to landlord's average net income, taken over any period he liked—ten or fifteen years; offer was also made to allow price to be fixed by Congested Districts Board, because it was impossible for individual tenants to purchase holdings so scattered, or holdings where five or six men were joint tenants on a valuation of £5, as in the Cooms district, 42772-3.—Witness would do everything in his power to prevent estate being sold, except through Congested Districts Board; the old village community existed in parts of the district; houses were to be found clustered together; they were a hot-bed of disease, and it would be a scandal to allow estates to be sold in that condition, 42774-5.—Board had bought one estate at Killorglin, and were at work on another estate at Glenbeigh; their work was excellent; in the worst part of Connaught it was scarcely possible to equal condition of people in Cromane, on the Ventry Estate; their houses were a disgrace to civilisation; in Cromane Upper there were ninety-five holdings, population of 472, and valuation of £69, or 2*s.* 10*d.* per head; in Killorglin Electoral Division there was a population of 1,697, and valuation of £691, or 8*s.* 1*d.* per head, 42776.—In Donegal, Connaught and Kerry there was not a townland to equal the condition of Cromane, 42778.—Board had bought the Rea Estate just outside Killorglin; they had done all they could, which was very little, as they were circumstanced, 42777.—The Wynne Estate, in Glenbeigh, had also been purchased by the Board, 42778.—Mahony Estate at Dooks was to be offered to the Board; it was near Cromane, and was in almost as bad a condition, 42789.—It was in rundale, and the tenants all owed arrears; the following prices for estates purchased showed the reductions made:—On the Denny Estate, purchased under the Ashbourne Act, one man's rent was £48, annuity £12; another, rent £50, annuity £14; reduction was generally from 70 to 75 per cent.; in other cases the rent was £21, annuity £7, and rent £14, annuity £3 10*s.*; the old rents were extremely high, and the present annuities were quite high enough, 42790-2.—The following were typical of replies from landlords:—One letter from Trinity College, signed by Dr. Traill, said that the agent had full directions as to terms of sale, that the number of years' purchase did not concern the tenants, as they had no money wherewith to purchase; that all they were concerned with was the reduction in the present rents when they were changed into instalments to the State, a present being made to them of the fee-simple of their farms; that all offers must be within the zones prescribed by Act of 1903; that terms of purchase under former Acts were irrelevant, as no such terms were ever offered to tenants under those Acts as were offered under Mr. Wyndham's Act; the above was a specimen of the treatment tenants had met with, the difficulty being worse in congested than in richer districts; Trinity College took about £10,000 out of Kerry; it was direct landlord of a considerable portion, and also head landlord, with middle landlords intervening in other places; one case in which there were seven; witness could not say what proportion of the gross rents Trinity College took, 42793-800.—In Lord Ventry's case, his reply simply put the tenants aside, 42801.

Fair Rents, Arrears.

Rents on the Ventry Estate had not been lowered through operation of the Land Act of 1881; in remote districts tenants did not so readily go into court as in districts where they appreciated the value of Acts, and for a number of years Lord Ventry did not collect his rents harshly; while Captain De Moleyns was agent no threats as to arrears were used, and in many cases a gale's rent was accepted for a year's rent, with the result that many were still without any abatements under Act of 1881; at the present time 350 tenants had served notice to have fair rents fixed, because there was a different agent, and the year's rent would now be collected within the year, 42778.—It was doubtful if anybody knew

O'DONNELL, Mr. THOMAS—*continued.*

under what system the rents had previously been collected; they would take anything they got; receipts such as the following were common—"Received, October 12th, 1904, from representatives of Cornelius Brian and sons, out of holding at Loghart, the sum of £5 10*s.*, being half year's rent due to Lord Ventry, up to and ending the 1st November, 1899; cash £4 13*s.* 6*d.*, temporary allowance 16*s.*"; the representative of tenant was aged 65; he had applied to have his own name put in, but the agent would not do it; witness did not know why; there was another receipt where six men had a holding of £5 10*s.* valuation; they got a joint receipt, 42779-81.—The following instance was an average one of rent compared with valuation:—John Tretton, poor law valuation £4 5*s.*, rent £8 5*s.*, and the rent before 1872 was £1 8*s.*; it was not a judicial rent, 42782-3.—Great majority of the Ventry tenants did not go into court; hundreds had become future tenants through operation of Act of 1887; arrears should not keep a man out of court; but the agent asked for arrears whenever a man was going into court; the tenant could not pay them, and, therefore, did not go into court, 42784.—The law allowed a tenant to have a fair rent fixed irrespective of what he owed as arrears, but if he wished to do so the landlord could sue for arrears; if the case was fought out there might perhaps be a stay of proceedings, 42785-6.—There were various ways in which a man's being in arrears would prevent him going into court; without any actual threat there was a hazy belief about that if a man went into court his arrears would be enforced, 42788.—Witness could give other instances where the valuation was about half the rent in the Castlegregory district, 42788.—A temporary reduction of about 3*s.* in the £ was always given, though witness knew of cases where it had been withdrawn; in Castlegregory district there was a case of four men being joint tenants of a holding; value of holdings in this district could be ascertained by number of milch cows they would carry; in case referred to, for eleven milch cows there was a rent of £65—£6 a cow—an impossible rent; in Cloghane also the rent was twice the valuation, 42789.

Fishing Industry.

Fishing industry, if properly developed, would be a great advantage to the county; Dingle Bay was excellent, so were Cahirciveen and Dingle Harbours, and there were excellent fishermen all along the coast; the district included one-seventh of all the fishermen in Ireland, and one-seventh of the value of the fish; amount of fish caught by Irish boats and landed in Ireland was not half a million for the year, 42743-6.—In Scotland the value was about £2,500,000, but there boats and landing places were considerably better than those in Ireland; Congested Districts Board might give better facilities, either by loans or free grants, to men who were ready to take boats and work them; men in the Cromane district had got some boats, and were doing well; in Dingle the fishermen had got on exceedingly well; they were careful and hard-working, but the same might be said of all the men round the coast; if they were to get on it was by devising some means whereby they could get boats, nets, training where necessary, and facilities for sending fish to market, 42746.

Question of an Inland Market for Fish.

The Dingle fishermen desired to find a market inland for their fish; the Congested Districts Board said they were not able to provide it; possibly the reason for sending the fish away was that prices were higher than inland, 42747.—Witness doubted the fact of there being no inland markets; he saw tons of fish going from Ireland to England by the Rosslare route, almost every week; some of it went to Queenstown and Bantry, and witness believed that an industry could be developed in home markets, 42748-9.—There might be some central organisation in a county like Kerry which would ensure a constant supply to dealers in Cork, Dublin, etc.; if that could be done there would be a considerable trade to inland towns, 42750-1.—Kerry institutions bargained for Irish fish in their contracts; witness could not say as to the asylum, Dr. Mangan, the Chairman, would see to that, 42752-3.—The best of everything was exported;

O'DONNELL, Mr. THOMAS—*continued.*

witness desired to enlarge the market in Ireland; there were young men ready and willing to work, and every encouragement and facility should be given them, 42755-8.

Boats.

Larger boats were needed; the Scotchmen and the Manxmen took the fish from their doors; witness had no objection to their coming, but he would rather that the Kerrymen could take their own fish, 42759.—It was a question of money; say a boat cost £300, and it was possible to get £100 as a free grant and £200 as a loan, at a low rate of interest, many fishermen would avail of that scheme, 42760.—One hundred years ago Kerry was the scene of a big herring fishery, and the traditions were not lost, 42761.—It would be an advantage if the Board were to station a resident fishing superintendent on the Kerry coast, and it might also be possible to establish a boat-building industry in some part of Kerry, 42762.

Decline in Fishing.

Value of fish caught at present in Kerry seas was £60,000; if fishing were developed that figure would multiply by ten; the men could follow the fish if they had boats, 42763.—Decline in fishing was caused partly by fish ceasing to come, and partly by decrease in population; no county where population had decreased so much as in Kerry; in fifty years Donegal had sent away 201,000, Mayo, 164,000, and Kerry 211,000; a great many of the fishermen had gone, 42764.—Witness did not know whether population would have gone if fishing had continued to pay; until recently the Kerry boats were canoes, and did not go far from shore, 42765.

Poor Rates in Dingle.

Rates in Dingle varied from 9*s.* 11*d.* to 11*s.* 4*d.* for the town; there was a population of 2,000, and there was neither light nor water, nor sewage, 42765-7.—It took in a small part of the rural district, but it was not that that made the rate so high; the pauper statistics were even worse; all over the county an immense amount was paid for poor relief; it was the worst of the congested areas, 42768-9.

Housing Question—Needs of Small Occupiers.

Although many labourers' cottages had been built, there were still in Kerry 3,874 houses of the fourth, or worst, class; in Dingle Union there were twelve houses of one room, with seven in the room; in Kenmare Union there were ten such houses with seven in the room; in Tralee Union there were twenty-nine with eight, and twenty-three with nine in the room; in Killarney Union there were forty-eight with eight in the room; these houses should all be swept away, 42801.—Witness did not know, but thought that land was probably attached to the houses; there were hundreds of small farmers who paid rates who could not be relieved under the Labourers Acts, and it was a serious question for them if their houses could not be improved; it would be very useful if loans could be made at rates similar to those which apply in the cases of labourers' cottages, 42802.—Sanitary authority could declare the houses uninhabitable, but they would not do so as long as the people had nowhere else to go, 42803-5.—If facilities were given for building houses cheaply then one person should be appointed for County Kerry who should have special knowledge of the necessary proceedings; he should be an engineer, and his services should be available in the matter of plans and drawings; such a person could afterwards insist that the people should keep their places well, which could not be done at present, when they had such places to keep, 42805.—In the districts spoken of the small occupier did most of the labour, and there was not much of a distinct labouring class, therefore it would be fair to give the same advantages to these men as to labourers; less money would be required; none should be wasted on too much inspection and red tape, 42806-10.—The Belgians had built 100,000 houses for their people at 2½ per cent. interest; labourers' cottage schemes were carried out at 2¾ per cent. interest, with 10*s.* sinking fund, which was charged as a rate on the district; the rate might be 1*s.* 3*d.* in the £ under the new Act, 42811-4.—Only men who had less than a quarter of an acre of land could get an allotment or improvement of houses; terms of Board of Works loans were impossible for small occupiers, 42815-6—Also, under the Labourers Acts, 36 per cent. was remitted, and balance of expenditure was divided between occupier and local authority, 42818-9.—In Dingle Union, with a valuation of £23,000, 100 cottages could be built for a penny in the £, under the recent Act, 42820.—Not necessarily the same finance as in the Labourers Acts, but something similar should be applied to the small occupier; money should be lent at same rate of interest, 42821.—

O'DONNELL, Mr. THOMAS—*continued.*

Parish Committees.

The Parish Committee would not be sufficient by itself, 42824.—Parish Committees had done good work; Killorglin had had one for three or four years; had had grants of £60 and £80, and was now getting £250; witness had tried to induce western district to take up Parish Committee, but had not been so successful as he would like; tenants with arrears would not make improvements, because they might be turned out, but peasant proprietors, with a feeling of security, would take up Parish Committee schemes, 42824-5.

Minerals.

There was an old lead quarry near Castlemaine; a sample of rock had been assayed, and gave 90 per cent. of lead as result; quartz containing gold had also been found at the mouth of the River Laune; coal and iron mines were worked in Glencar about 150 years ago, 42827.

Lime.

There was a great deal of limestone in Kerry, but not much in Dingle; when estates were purchased undeveloped limestone quarries should be secured and retained for benefit of the public; some large general scheme for getting lime in various parts of the country was one of the best things that could be done for the people, 42825-6.—Lime was essential for agricultural purposes; it was difficult to get it in some parts of Kerry; the land was perishing for want of it, 42828-9.—A scheme to supply lime to farmers at the cheapest possible price would be useful; the Board should make no profit, in fact should be prepared for a loss for two years; after that, when the people saw the advantage of it, the loss might be lessened, 42830-2.—Witness could undertake that farmers would buy a certain quantity at a fixed price for three years, if the lime were supplied under its value, 42833.—Price of lime at privately-owned quarries was 1*s.* 6*d.* a barrel; but the barrel was larger than other barrels, 42834.

Mountain Grazing.

On some of the mountains there was very good grazing right to the top; in the Reeks the grazing was not good; it was communal grazing; some parts of the mountain were valueless for grazing purposes, 42835-9.

Re-afforestation.

Re-afforesting was a large question in Kerry; if the mountains were private property there might be some difficulty; witness did not think that there would be any difficulty as to the grazing; the western breezes might affect the growth of the trees; no one in the neighbourhood was sufficiently expert to give an opinion, 42841-2.

Industries.

Congested Districts Board had not started or developed any industries, and it seemed necessary, seeing that there was no land for division; they should be associated with existing ones, and with the land, butter, bacon, eggs; in 1750 the town of Dingle exported linen to value of £60,000; there were hundreds of looms at work then, and the population was nearly three times what it is now; there were only a few of the old looms remaining; to revive the industry would be difficult, considering the lapse of time; the looms had disappeared owing to the introduction of shop stuff, but the linen industry had been killed by the Navigation Act and other laws since 1750; the laws

O'DONNELL, Mr. THOMAS—*continued.*

had been there long enough to destroy the industry; It was a fallacy that Irishmen were not capable of development, and of becoming industrial experts; some of the finest brains and muscles were to be found in remote glens; but the brains were going away, and were to be found all over America; the head of Armour's in Chicago was a Kerry man; in the old days flax was grown for all home purposes; witness was a farmer's son, and, as a child, had seen flax sown, worked, etc., and had done the work himself; there were traces of cultivation all over the mountains, where no one would think of cultivating now; not only flax, but cultivation of various kinds; if there were no industries it would be found that it was owing to the treatment Ireland had received; if England would but give bounties to make good the removal of brains and money; it would not be difficult to get a start even now, if Ireland had control of her own revenues, 42842-54.

Scheduling Non-scheduled Divisions.

There was a strong desire among the non-scheduled divisions to be scheduled as congested; there were two or three in witness's barony; District Council had passed a resolution, and had asked witness to present it, 42854.

O'FLAHERTY, Mr. TIMOTHY.

See pp. 35-7.

Reclamation of Waste Land.

One quarter of land in Dingle Rural District was approaching primitive state; by proper outlay on drainage, sub-soiling, and fencing it could be reclaimed and converted into homesteads; if only these improvements were carried into effect Dingle Rural District would be able to maintain double present population.

Population, Area, Valuation.

Population in Kerry in 1841 was 293,880, now reduced to 165,000, 42855.—Dingle Rural District comprised twenty electoral divisions, gross area of 126,459 statute acres, population of 18,274, and valuation of £23,811, average area 6·9 acres, and valuation £1·3 to each unit of population; four of the electoral divisions non-congested; only two susceptible of improvement; town of Dingle in 1821 had population of 4,538; now reduced to 1,786, 42864.

Fishing Industry.

Fleet of twelve boats in Castlegregory district in 1841; now not one boat there; people mostly lived by fishing then; they were now confined to very narrow strip of land; it was the most important fishing station of its day, and if it were encouraged the country would not be congested at all, 42854.—A district whose inhabitants depended to a great extent on fishing necessarily required facilities in the way of new piers, repairs to existing ones, suitable boats, and fishing gear to enable industry to be carried out with profit to those engaged in it, which in the absence of capital becomes an impossibility; State grants or loans at a low rate of interest become indispensable, 42858.

Afforestation.

As regarded plantations, the district was in all but an absolute state of nudity; trunks of trees and remains of forests to be found beneath, and sometimes projecting above, the surface of bogs and on the coast line; owing to proximity of the Corkaguiny peninsula to the Atlantic, the exposure often caused injury to agricultural produce, if not total destruction, and, as a consequence, impoverishment of those engaged in it; thousands of acres of glens and mountains, at present of no practical value, could, by afforestation, be converted into sources of profit and also a powerful and universal sanitary agency, 42855.—Part of the land was now in pasturage; beyond line of pasturage there could be plantations which would afford necessary shelter; fuel was getting very scarce; trees would afford fuel; the people could not afford to buy coal, and would have to go thirty or forty miles away if there were no trees, 42857.—Bogs were running short, 42858.

O'FLAHERTY, Mr. TIMOTHY—*continued.*

Floods.

Extensive localities within the peninsula rendered valueless by flooding from tides and rivers; one-third of Castlegregory townland submerged during spring tides; witness in his young days saw excellent crops of hay, potatoes, turnips, and mangolds produced where now only seagull or snipe found a home; tenantry were able to temporarily ward off destructive agencies whilst they had cheap labour at their command, but, owing to high rate of wages arising from scarcity of day labourers, as result of emigration, temporary embankments had to be abandoned, etc., with consequence of periodical submerging of a productive tract of country; similar condition prevailed in other localities throughout barony, 42858.

Matters needing Improvement.

Tillage had of late years so alarmingly declined from scarcity of manual labour that localities were all matted over with moss and stunted grass.—Progress of the district was obstructed by law declaring illegal the making of roads to turbary or bogs, and to graveyards, as well as roads that came under designation of *cul-de-sac*; law should be either radically altered or obliterated from Statute Book.—Bridges in many localities within Dingle Rural District had become absolutely indispensable, 42858.

Parish Committees.

Increase in grants and an extension of operations of these useful bodies became indispensable *desiderata*; funds allocated by Congested Districts Board in aid of improving dwellings of the poor as well as of the occupation of land could not be devoted to more worthy purposes; alteration for the better in condition and appearance of lowly homes in Castlegregory dispensary district, where grant had been availed of; productive of incalculable amount of good if grant in question had been extended to holdings of higher valuation than those to which it was at present restricted; village of Kilshanny was more like an African village than anything else; grant in Castlegregory district was £175 a year from Congested Districts Board, and the tillage was now wholly renovated, 42858.

Limestone.

There was mountain limestone at Magheries which had never been turned to any use; if there were limekilns there it would afford enough lime for whole district; there was a good road leading to the place, and nothing was more necessary to improve marshy and boggy land than lime; if it were availed of it would not only be a source of profit to those on whose land it existed, but to farmers of the district who could make use of it, 42858.—Road had been made to enable people to get the lime, 42859.—Want of energy and lack of fuel prevented people from getting it, 42861.—Congested Districts Board had arranged to set up limekilns and get lime burned; it would benefit the whole country, 42862.—No men with capital in the locality, 42863.—Extensive trade had been carried on in 1821 with Spain, Portugal, and France in linen, cattle, hides, butter, fish, and eggs; Dingle imported wines, brandy, and tobacco, and exported linen to value of £60,000 in 1750; now linen industry was scarcely a matter of history even, 42864.

Congested Districts Board.

Congested Districts Board had done more good than all other Boards; witness would be very sorry to see powers limited in any way; he would rather see them extended; several improvements required; Congested Districts Board had been very liberal; they could have done more, but they could not be expected to do everything all at once, 42864.—There should be a member for Kerry elected on Congested Districts Board, 42865-6.—Could be nominated by the County Council; very practical people in Kerry, 42868.

O'FLAHERTY, Mr. TIMOTHY—*continued.*

Improvement of Dingle Pier.

Pier in Dingle needed improvement badly; harbour shallow and getting silted, and required dredging very much; addition to pier would be of great value; too narrow, also rather short; double the business could be done if it were improved, 42869, 42873.—Harbour Board had charge of pier; they levied dues, 42870-1.—Dues in Dingle not heavy; the place was small, and unless they got aid they would not be able to make improvement themselves; no money left, 42872.

Water Supply.

In an impoverished place like Dingle they could not afford to spend extra rates; if Congested Districts Board came to their aid with the charge that would be made for waterworks, which were absolutely necessary; not a drop of fresh water near town at Magheries; Congested Districts Board had been asked some time ago to send an expert to discover water, because there was a spring of fresh water oozing up on the beach; this water was covered at high tides; it was about a quarter of a mile from the village; population of which was about 230, and population of the Magheries about 600; desirable to discover source of spring water, 42873-4.

M'CARTHY, Mr. CHARLES J.

See pp. 37-42.

Experience of Witness.

Witness was County Instructor for Kerry, and had been asked to give evidence on behalf of the Committee of Agriculture on the working of the agricultural scheme in the county; witness was appointed on October 1st, and spent first fortnight examining into the wants of each locality; his headquarters were in Tralee; he was a County Cork man, and was appointed by Committee of Agriculture, subject to approval of Department of Agriculture; witness had had twelve years' experience working on his father's farm in Mid-Cork, then three years at the Royal College of Science in Dublin, 42877-80, 43053.—Witness was the first agricultural instructor for Kerry, 42882, 42886-7.

Agricultural Instruction.—Lectures, Demonstration and Experiment Plots.

Committee of Agriculture consisted of the whole County Council and some co-opted members, seventeen leading agriculturists who were not Councillors; the scheme of instruction in agriculture included appointment of an instructor, whose duty it was, during the winter months, to deliver a series of lectures at night upon agricultural topics; during the daytime demonstrations were given on settling drains, better methods of cultivation, fixing of plots, etc.; also plots were laid down, samples of seed taken and tested, and some of the lectures based on them, 42877.—Some people thought the lectures were of no use, and that too much time was spent on them; the lectures only lasted four months, and during the time demonstration and experiment plots were laid down, where seeds and manures could be tested the following year; a demonstration, properly carried out, had more effect than a great deal of talk, 42880.—There had been no agricultural classes at Dingle as yet; they were usually established a year or two after the instructor had come into a county, and the pioneer work was done, 42881.—It did not matter how bad the land was for a demonstration plot if it were of uniform quality, 42883.—There had been a variety of experiments with potatoes in the Magheries district, because there they depended almost exclusively on potatoes; there was a plot to test the relative qualities of seven different varieties in order to select the best for that district, 42884.—Work on experiments and demonstrations had been going on since 1st March 1907, 42885.—There were twenty experiment plots and ninety-four demonstration plots throughout the county, fifty-six of them in congested districts, 42888.—The difference between a demonstration and an experiment plot was that in an experiment plot the ground must be accurately surveyed, the seeds or manures analysed, and the produce weighed and an exact account of it tabulated at the end of the year; it entailed a considerable amount of work, and witness could not have more than twenty experiment plots in the county because season was so short; the demonstration plot was manured according to instructor's methods, and was usually established near a chapel or some public place, where people could see it as they passed by; experiment plot had to be selected in places where there was an intelligent farmer who would help, 42889.—Experiment plot was for information of instructor, Department, and the country; demonstration plot was an example of what could be done by adopting some of the manurial systems lectured about, 42890-1.—Witness had tried working demonstration plot through a small holder, but had not been in the district long enough to obtain results; as regards its being more effective than when worked by the instructor, plot was worked by witness and farmer together; it was always on the farmer's place, 42904-7.—The average attendance at witness's lectures for the whole county was 102; Dingle average attendance, 184·65; Kenmare, 110·33.—Lecture lasted forty minutes, and then there was a discussion of an hour and a half's duration, questions were asked during discussions, and the discussions were, perhaps, more valuable than the lectures; as a rule each lecture resulted in establishing either a demonstration or experiment plot, 42908-10.—Fifteen lectures were delivered in Dingle Rural District; no lectures were delivered in towns or big villages, 42911.—Dingle Rural District included practically the whole peninsula; there were five centres for lectures (held in National Schools); Ventry, Anascaul, Castlegregory, Cloghane, and Lispole; three lectures were delivered at each centre, the same men came to each of the three lectures, and would come again in some places; there were six rural districts in the whole county; instructor had to spend three weeks on the lecturing tour in each district, 42912-7.

Work of Witness's Assistants.

Area under instructor was the whole of Kerry, and since 9th May he was also responsible for the congested districts of West Cork; witness had five assistants, and a sixth coming, 42892-3.—It would be desirable if someone were appointed in each peninsula specially for agricultural work; at present there was such a person in each rural district; the five assistants specially worked the congested districts; they did not lecture; they supplied good seeds, manures, lime, grass seed mixtures, etc., at less than half price, 42918-22.—The assistants were supplied this year, for the first time, by the Department, and all expenses were paid by the Department, 42959.—Witness would like to have assistants located in a centre in each peninsula to work all round that centre, one in Dingle, another in Cahirciveen, and another at Kenmare to work the Kenmare peninsula, 43038.—At present they were so arranged that their headquarters were in the places mentioned; the arrangement was similar to that in Mayo and in the poorer parts of Donegal; the instructors were not exactly itinerant instructors, they were provided by the Department, and this was the first year in which there had been a certain number of instructors resident in definite headquarters, 43039-46.—The assistants were at present devoting special attention to spraying, 42962-4.—They also gave general instruction in methods of cultivation, 42964.

Imported Seeds.

There was a great want of good seeds in the western part of the county; about three-fourths of the demonstration plots were under seeds alone, so as to show the people the good effect of imported seeds as against home-grown seeds, 42893.—The people knew it, but did not know how to get the seeds, and could not afford it, 42894-5.—The advantage of the demonstration was that people could buy imported seeds one year, save the seed from that for the following year, and change about once in two years; that was not a common practice; generally the seed was taken

M'CARTHY, Mr. CHARLES J.—*continued.*

from the old potatoes year after year, 42896-8.—One of the assistants had sent to a seedsman at a distance for good, reliable mixtures of seeds, and he got them far cheaper than they could be procured locally; up to that time the people did not know they could get seeds at that price or where they could get them, 42900-2.—A demonstration plot was needed, because in some of the western parts of the county people had given up sowing grass seed altogether owing to the badness of the seed; in Waterville district there were places going back to their original condition, 42903.

Scheme for supplying Agricultural Commodities at less than half price, Lime, &c.

There was a scheme in operation for supplying good seeds, manures, lime, grass seed mixtures, and other agricultural commodities at less than half price; the scheme was much availed of by the Kerry people, 42922.—Demonstration plots were laid down with these seeds side by side with what was bought locally, 2,307 plots altogether, 948 under potatoes, 671 under oats, 167 under turnips and mangels, 48 under clover, 207 under fertilisers, and 256 under lime, 42923.—These advantages for the congested districts were introduced this year for the first time, 42937.—Witness thought the scheme was formulated owing to the failure of the potato crop, and the Department had a feeling that it was time to do something for the congested districts, 42490.—The people understood that they were getting the seeds and other things below cost price, 42951.—If they had been supplied in a wholesale way there would be danger of grumbling when the price was raised, but the quantities given to each farmer were very small, with the special view of teaching the good effects of good seeds, 42952-3.—The expense was borne by the central body, and was not upon the county directly at all, 42961.—Three-fourths of the county was mouldy and peaty, and lime was very important; Department had put 133 tons of lime at the rate of 2*s.* 6*d.* for each half ton over districts of Cahirciveen and Waterville, 42923.—It was all sold and more was asked for, but funds for the scheme became exhausted; it was sold at one-third the actual cost, 2*s.* 6*d.* for each half ton, 42925-30.—The low price was arranged to show the people how necessary lime was, and also to give them some help, owing to the failure of the potato crop, 42931.—The people understood the importance of lime, but they could not get it; twenty of the demonstration plots showed the effect of basic slag as a substitute for lime; it was dearer weight for weight, but it went much further, 42932-5.—It was under consideration at present whether the lime scheme should be continued; witness thought it should be extended for another year, 42936.—It would be an excellent thing if, after a couple of years the scheme could result in an organisation among the people themselves in the poorer districts, which would enable them to have the lime at cost price, 42955.—It might be worth a small loss per man, 42956-8.

Discretion of County Committee in Framing of Scheme.

The County Committee had a certain discretion in the framing of their scheme; they could reject one part, and accept or amend the other part; they could not exceed the amount of money fixed, but it could be amended in other ways; the Department could accept or reject the amendment; their decision was final, 42944-9.

Spraying.

Spraying was the most urgent matter at the time witness gave evidence; his assistants were engaged in procuring spraying machines at reduced rates, supervising the spraying, mending old machines, giving demonstrations as to how to make the mixture, and how to apply it; 4,737 pounds of blue stone and 5,593 pounds of washing soda had been supplied to Cahirciveen; ninety new spraying machines had been supplied, and 700 or 800 farmers had benefited, 42962.—Special attention had been devoted to spraying since 9th May last; it was necessary to begin a little before the spraying season so as to be in time, 42963-4.—The local people generally obtained the spraying mixture in the local shops; witness would not go so far as to say it was not much good, but most of it was inferior, and all prepared mixtures were doubtful; the best plan was to buy the blue stone and the washing soda, get a guarantee of their purity, and make up the mixture according to the Department's instructions; the Department had distributed about 1,000 leaflets and litmus-paper, and full instructions how to test with the litmus-paper, 42965-7.—There was a method of getting a guaranteed mixture, but farmers would not ask for it; local shopkeepers had the mixture; it was not stamped; but if they gave a guarantee of 98 per cent. they were liable to be prosecuted if it were not up to the standard, 42968-70.—The prepared mixture was usually sold in little bags, and might be sold with the guarantee that there was no injurious substance in it; if washing soda were adulterated with sodium sulphate or glaubers salts it was injurious to the plant, 42973.—It was more profitable for the people to get the materials and make them up themselves; there had recently been a great change of opinion as to the value of pure material unprepared; it could be mixed very exactly, and the faintest trace of impurity could be tested with the litmus-paper; in the mixture, even if the materials were pure, there might be some chemical action set up between the washing soda and the blue stone if mixed for some time, which would ultimately have a bad effect, 42974-9.—In the mixture it was not possible to tell whether the blue stone or the washing soda was pure, therefore it was better to buy the materials apart, so that each could be tested separately, 42980-1.—The materials were obtained from the shops; they would probably be purer if sold through the Parish Committee or the creameries, 42982-4.—The price of the best spraying machine was 30*s.*; they had been procured for people whose valuation did not exceed £8 at 24*s.*; that was in a congested district, but if there was a deserving case the valuation was not adhered to too strictly; three or four farmers were asked to combine, and then it only cost 5*s.* or 6*s.* for each farmer, 42986-7.—The arrangement had been made this year for the first time, and had been made widely known, 42988-9.—Eighty new machines had been procured in that way, and thirty old ones had been repaired; also blue stone and washing soda had been procured for people who found it hard to obtain them in remote districts; there had not been much difficulty in supplying materials at cost price in remote districts, 42991-2.—Five hundred lots of the machines cost 27*s.* 6*d.* each; they were sold at a loss, 42993.—The demand for machines had been unprecedented this year, 42994.—Four samples of spraying material had been taken in the county, but witness did not yet know the result; it would hardly be made public, 43010-1.

Bulls.

There were 56 premium bulls in the county under three different schemes; there were 26 bulls under the County Scheme, under which the premiums were paid jointly by the Department and by the county; £450 was available for premiums; £15 premium was paid each year under the County Scheme; under the second scheme there were 15 bulls, and the premiums were paid wholly by the Department; it was a kind of grant-in-aid; the special wants of the county, and the capacity of the county to pay high rates being taken into consideration; this scheme was specially for districts where it was hard to obtain bulls; the point was taken into consideration in the first place; in congested districts bulls were given on special terms; Kerry bulls were bought for £22, and sold to farmers for £10, payable in three instalments—first year £3, second year £3, and third year £4; fifteen bulls were placed under those conditions, and there were more applicants than could be supplied; no premium was given, but the owner of the bull could charge what he liked for the service; usually about 2*s.*; in all the schemes the bulls had to be kept at the holders' own expense; under the premium schemes the bull was bought, and the holder got a a premium of £15 each year on condition that the bull served thirty cows at 1*s.* per head, other than those held by the owner; the farmer attended a sale at which the inspectors had previously ticketed all bulls which were eligible for premiums; if a man bought one of those bulls and a premium bull were needed in his district, he was granted a premium; the reason

M'CARTHY, Mr. CHARLES J.—*continued.*

of the ticketing of the bulls before purchase was that farmers would not be willing to buy without being certain of getting a premium, 42994-43009.—The Department now admitted Kerry bulls; there were 14 out of the total of 56; 16 Aberdeen-Angus, 2 red polled, and 24 shorthorns; general rule was to get shorthorns in the valleys where the land was good, Aberdeen Angus where the hills and the valleys met, and on the hillsides the Kerries; the Kerries were pure-bred; the Department had not refused to give premiums to Kerries during witness's time, 43019-22.—More bulls were needed, 43036-7.—In recent years there was an increase of about a dozen, 43017.

Boars.

There were in all the county twenty-five premium boars, and of these seventeen premiums were paid jointly by Department and county, and eight premiums were paid directly out of Department funds; in congested districts boars were given on easy terms; if a suitable man applied, and paid £2 down, he was given a boar; at the end of a year he was eligible for a premium of £5, in lieu of the £5 he got back £2 paid at first as an instalment, and at the end of the season in the following year he got a premium of £3; the idea of paying the £2 was that the man would have an interest in keeping the boar, 4012-3.—The white York did best as a rule in Kerry, 43014.—There was an increase of six or eight in the number of premium boars, 43018.

Stallions.

There were two half-bred hunter stallions in the congested districts; they were owned by the Department; one was stationed at Cahirciveen and another at Kenmare; nominated mares were served free; farmers whose valuation did not exceed £10 were charged 5*s.*, and farmers whose valuation lay between £10 and £30 paid 10*s.*; there was also a Welsh cob in Brosna district, 43022.—There should be more stallions, but half-bred hunter stallions were very hard to obtain, 43023.—The cart horses, as a rule, were of the old Irish type; there were no stallions for that exact type at present; a good serviceable animal could be bred from half-bred hunter stallions with that class of mare; there were 154 nominations for mares; an inspection was held each spring; the best mares were called out of each group, and two or three were placed on the reserve list; £3 was allowed as the value of each nomination, but some farmers took agricultural stallions in preference to thoroughbreds, and the value of that premium was only £2; and then a few of those in the reserve list got nominations, 43024-7.—There was a healthy competition for the nominations; ten stallion Spanish asses in the congested districts of the county; they were the property of the Department, and, as a rule, the holders got 2*s.* a week to help them, 43028-9.—The schemes were working very well, but it would be a good thing if there were more funds available to extend existing schemes and embrace all the county; particular attention should be paid to the three western peninsulas; it was there that the people wanted a little help in supplying good seeds and manures; also cattle scheme should be extended, 43030, 43034-6.

Interest taken by Agricultural Committee in the Work.

The Agricultural Committee took a warm interest in the work; several members had offered witness every facility to help in work of demonstration and experiment; members both of County Committee and of Rural District District Council all took an interest; as a rule there was more interest in the schemes in the congested districts, 43031-3.

Question of Local Administration.

The Agricultural Committee met in the Courthouse, Tralee; it was difficult for representatives of congested areas to attend regularly; but, as a rule, they made a point of attending all quarterly meetings, 43048-9.—Witness would not approve of a local administration in each peninsula; it was necessary to work from same central body and consolidate the scheme for the whole county, 43048-52.

O'LEARY, Very Rev. CANON.

See pp. 42-3.

Dingle.

Dingle district was all congested, except a portion called Mivard; not long ago Mivard had applied to be included in congested districts, but time had lapsed for extending congested area, and memorial was sent to Royal Commission, 43055.

Size of Holdings.

Holdings about Dingle were very small; a farmer with eight cows would consider himself pretty strong; average number of cows about six; no way of improving holdings by enlarging them; very little untenanted land; one little place out at the Glens taken from tenants by Lord Ventry some years ago and improved; they got compensation, and now when the place was being arranged they wanted to get it back in same proportion as they held it before; very little untenanted land to be divided, 43055.

Drainage.

Drainage very necessary, large tracts at Ventry and other glens requiring drainage; Congested Districts Board's Inspector had said that it would immensely improve that part of the country if there was some means of drainage; no bogs, and even where there was a bit of bog the people were not able to save it; they had to go seven or eight miles for fuel, 43055.

Scarcity of Fuel.

There was a question of getting coal, but to many poor farmers if they had to buy coal their farms would be no good at all, 43056.

Necessity for Bridge.

Bridge had been applied for; there was a place near Ventry where river came on to the road; people from all the western part had to bring their gravel and sand, and all the place is worn away, horses up to their hips sometimes going through it; funerals also went through it; custom of the people for generations to go a certain way, and they would not divert from it; Board were willing to give half the cost of a bridge if Rural District Council gave the other half; Rural District Council difficulty was that rates were so high and they did not see their way clear to increase them, 43056.—They, however, undertook to bring all the materials and give the labour which would represent nearly half the cost; the great industry was fishing and the great want was dredging, 43057.

Dredging Operations.

Some dredging operations carried on last year which cost £1,200 and Congested Districts Board contributed £500; much more to be done in order that boats could go in and out with perfect safety; application had been made again this year, with the usual reply that they had to postpone consideration of it on account of want of funds, 43058.

Extension of the Quay.

Boats could not come into present quay except at practically high water; if quay were extended 160 feet there would not be so much delay; £5,000 would be required, but it would be an immense permanent improvement to fishing industry in the whole country, 43058-9.

Fishing Industry.

Great mackerel and trawling centre; trawling every day except during close season; there were 23 trawlers, 9 nobbies, and 3 or more buildings; 40 boats running, 43059.

Revival of Parish Committee Proposed.

There had been a Parish Committee; witness had set about starting another last year, but people thought advantage was not sufficient to induce them to adopt it; if a man intended to build a house it would be a great matter for him to get £5 or £10; but to give a man £5 or £10 would induce him to undertake an expenditure of £50, £60, or £100 which he had not made up his mind to expend already, 43060.—Splendid things for Board to offer this money as an inducement, but it was not sufficient inducement, 43061.—50 per cent. would be better, 43062.—

O'LEARY, Very Rev. CANON—*continued.*

Witness had undertaken to revive the Parish Committee, and he would do so later on; people were beginning to change their minds after seeing the result in Castle Gregory, 43063.

Land Purchase.

Question as to whether there had been a proposal to buy through Congested Districts Board; arrangement made that Lord Cork should settle on amount to be paid at reduction of 5*s.* 6*d.* in the pound, but tenants wanted to purchase through Congested Districts Board; agent did not see any objection to it if it did not diminish in any way the amount Lord Cork was to receive, but afterwards came to conclusion that they would not on any account sell through Congested Districts Board; direct sale would be the alternative, 43064.—Witness negotiated the sale of the Douglas property when in Newtownsandes, and also had something to do with the negotiations of the Sandes property and Fitzgerald property; he also negotiated for the Blacker-Douglas' property; except in one little townland, where valuation was very high, they got such a reduction that after purchase their instalments would not be very much more than £1 a cow, no one paying more than £1 10*s.*; if they had same reduction with regard to Lord Ventry's property it would not be sufficient; 5*s.* in the pound on Lord Cork's property—better than 10*s.* in the pound on Lord Ventry's property; it would not be sufficient with regard to purchase he made at Newtownsandes in North Kerry; very few paying more than £1 a cow after purchase; considered quite enough; if they only got 5*s.* in the pound they would have to pay over £2 a cow, 43065.—One acre of land in Meath would feed a cow it would take 5 or 6 acres in district under discussion; 3 acres would feed a cow on ordinary fair land, that is supplying hay and everything, 43066.

MURPHY, Mr. JOHN.

See pp. 44-8.

Neglect of Kerry by Congested Districts Board.

Kerry, and especially East Kerry, had been much neglected by Congested Districts Board, the county ought to be directly represented on Board, 43068, 43071.—Necessity for representation was well illustrated by what had happened in connection with two farms at Crigue and Arderoume, farms had been bought by tenant purchasers under 1896 Act, 43125, 43127.—At too high a price, purchasers met with misfortunes in both cases, and, being unable to pay their first year's instalments, were evicted by Land Commission, 43091-3, 43114, 43128-31.—Owner who had sold property bought in farms, 43094-5.—And had them in his own hands for years, 43096.—During which time he made offers to tenant purchasers, 43097-100.—It was the landlord who took proceedings, he did not get all his purchase money under the 1896 Act, 43131.—Congested Districts Board then purchased the farms from owner after negotiation, 43101-2.—Which they would never have done if they had had full understanding of the local circumstances, 43068.—And if Kerry had had a representative, 43079-80, 43084, 43120-1.—Farms were purchased before witness knew of it, 43106.—Witness had never seen a representative of the Board, he met Dr. O'Donnell and Father O'Hara in reference to the matter, and had been received with every kindness and consideration, but they were too remote from the district to have a clear understanding of the case, 43068.—And they received witness only as a private person, 43069.—There had been local consultation before purchase, 43085-6, 43107.—But not with the right people, 43107, 43118-9.—People in Dublin were wonderfully ignorant of local matters in Kerry, Mr. Doran was himself a Kerryman, and ought to know all about Kerry conditions, 43123.—Farms had remained useless on hands of Board for many years, and would so remain for many more, 43068, 43087.—Board purchased farms for purpose of migration, 43072, 43081.—But no tenant would go in face of claim of evicted tenants, 43072-5.—At present grazing was let to many people, 43089.—If Kerry had a

MURPHY, Mr. JOHN—*continued.*

representative, or was directly in touch with Board, a satisfactory settlement could easily be effected, 43075, 43090.—Farms were about 100 acres in extent, 43076-7.—Witness was not speaking from point of view of relieving congestion, 43078.—There had been a complaint against Board in which witness joined for not buying land in Kerry, 43082.—Land was difficult to find, but difficulty had been exaggerated, 43083.—There was a strong feeling that evicted tenants had a right to their farms before all comers, 43110-2.—Tenant purchasers should clearly understand that they could never hope to be treated as evicted tenants, but there were very special circumstances in these cases, 43113-4.—Congested Districts Board's offer of compensation to tenants proved that they had acted unreasonably and improperly to tenants, 43114-7.—Judicial rents had been fixed once, 43123-4.—Tenants had been in possession for generations, 43126.—Settlement could easily be arranged if an adequate and proper offer were made that could be discussed with the bishop of the diocese and parish priest; witness would be prepared to meet Mr. Doran and discuss matter with him, 43133-8.—Board might have done much more in the matter of roads in Kerry, 43160.

Kenmare Estate.

In regard to sale of Earl of Kenmare's estate, prices had been agreed on with tenants, but parts of the estate, such as Coolies and Coombe, being congested districts, it was desirable that sale should be made through Congested Districts Board instead of direct to tenants, but though sale had been proposed for a year, Board had taken no steps to use their power to improve condition of people, 43138-52, 43154-6.—It was not a fair cry that land-buying operations of Board had been seriously impeded since sitting of present Commission, 43153.

Estates needing Improvement should be Sold through Congested Districts Board.

Where an estate was in need of improvement in a congested area it would be an advantage for the tenants that sale should take place through the Board, 43157.—It was ten times more difficult to effect improvements after sale to tenants, 43159-60.

Local Authorities and Price of Land.

Purchase price of land was so important to ratepayers that County Council or some public body in every locality ought to have some power to influence price; generally speaking, tenants and many other people only considered extent of reduction, and never arrived at a result from the economic point of view at all, 43160.

Definition of Congestion needed Amendment.

Present area of congestion most unsuitable; population was no test at all, especially in County Kerry, wherever there were poor tenants in Kerry or similar counties, Board should have power to relieve them without regard to population, 43160.

Tenants' Improvements in Kerry.

Tenants had reclaimed land altogether themselves, in some cases arrears had prevented them from getting their rents fixed, in others Land Commission had put increased rent on tenants' own improvements, 43160.—In one case the County Court Valuer had put on a higher rent than landlord's own valuer, 43160.

Moving Bog Disaster—Danger of Recurrence.

In regard to the disaster at Coombe some years ago, known as the "Moving Bog," there was a danger of its recurrence, and no preventive measures had been taken, though there was an outlet which would be a sufficient safeguard if it were cleared, 43160-2.—The same disaster had changed the course of some rivers

MURPHY, Mr. JOHN—*continued*

and destroyed reclaimed land of many poor occupiers, very little expenditure would set the river courses right again, 43161.

Compulsory Powers in many Directions needed for Congested Districts Board.

Board ought to have compulsory powers in many directions, a large farm adjoining district of bog disaster had gone to private person, 43162.—And near Killarney a few farmers had been enlarging their holdings to the detriment of the community, Board should have compulsory powers in such cases, 43162.—Portions of some demesnes, such as Lord Kenmare's, could easily be secured for relief of congestion, 43162.—Board ought to have compulsory powers in reference to opening of limestone quarries; at Conla, near Killarney, people had neither turbary nor limestone quarries, and land was too bad to produce anything without artificial aid, while adjoining district there was a property with splendid opportunities of opening quarries, 43162.—There ought to be powers to compel railway to bring lime at cheap rate, profits would be increased, not diminished, but Irish railways seemed to be always acting against the ideas of the people, 43162-3A.—One particular railway referred to ratepayers had to pay the guarantee, but they had no representative on the Board, 43164-5.—In case of the Dingle and Tralee Railway, County Council had nomination of Committee of Management, and thereby practical control, 43166-8.—Board might do something to improve breeds of cattle and other stock, and they ought to have power to provide up-to-date machinery to be leased or rented to small tenants, 43169.—A woollen industry might with advantage be started in Killarney, and a public department ought to take the initiative, 43169.—Fishermen much handicapped by existing laws and regulations, change could easily be effected if any public board were to make investigation, 43169.

Lack of Harmony between Department and Board.

Department of Agriculture did not work in harmony with Board, Department expended a great deal of money for which there was nothing like a proper or reasonable return, 43169.—If technical instruction in cookery, &c. was given, primary education system should be utilised to carry out scheme, the schools would be made more comfortable, and funds provided for their improvements in every way, 43169-70.

O'SHEA, Mr. JAMES.

See p. 49.

Turbary and Limestone for Coolies.

There was no turbary for division of Coolies, and on adjoining properties bogs were practically worn out, there was no limestone either except in Lord Kenmare's demesne, but there was an immense amount on Muckross property, and it would be a great advantage if Board had compulsory powers to obtain a portion of this demesne, 43176.

Road Needed.

A road was needed, a part had already been made by Board of Works, and it could be completed and put in repair at small cost, 43177, 43187.—District Council in Killarney had spent so much money on roads that ratepayers were getting restive, 43190.—But public rate would keep road in repair once it was made, 43192.

Trees should be Planted to give Shelter on Grazing Land.

There was a great extent of rough grazing held in common, it was very bleak and open, and it would be a great boon for Congested Districts Board to plant part of it with trees, 43177, 43183.—Plantation would give both fuel and shelter, 43182.

Re-striping and Enlargement of Holdings Needed.

The agricultural portions needed re-striping, 43177, 43179-82.—Only land available for enlargement of holdings was on Muckross side, 43178, 43186.—That

O'SHEA, Mr. JAMES—*continued.*

should be broken up and a few tenants transferred to it, 43184, 43186.—Their holdings being used to enlarge the others, 43187.—People had not sprayed much up to the present, but they meant to do it, 43188.

LUCY, Mr. JEREMIAH.

See pp. 49-50.

Road needed across into Rathmore.

Road needed across into Rathmore in the Clydagh district, 43193, 43203.—Population about 400 and valuation £632, there was no lime or limestone in the district, and without it nothing could be done to the land, if road were made people would only have to go nine miles instead of twenty-four round to Rathmore, 43194-5, 43203.—Number of small holdings very large, £46 only received from Congested Districts Board for making new road, 43196, 43198-9.—Nothing from Parish Committee, 43197.—People had applied for grant before, but Board gave no heed, 43200.—Locality would be willing to contribute something to road, 43201.—Length of road would be about 600 perches, and local authority would contribute a pound a perch, 43202.—District Council would give £200; about three years ago they purchased, and had applied to the Congested Districts Board, but they gave no heed; although this was a congested district, ratepayers in this part of Kerry did not know that Congested Districts Board existed, 43203.

TRENCH, Mr. GEORGE F.

See pp. 50-9.

Estates Sold by Mr. Trench.

Witness had sold or agreed to sell, with exception of one small property, eleven properties in Kerry and Limerick, covering 50,000 or 60,000 acres, with rental of £26,000, and 1,237 tenants (not counting about 500 tenants of middlemen), besides several other estates sold directly under earlier Acts, 43207-8.—Most of thse properties were outside scheduled areas; some were inside, and had been sold to Congested Districts Board, 43212.

Direct Sale not advisable where Property was in need of improvement.

Where a property was in great need of improvement direct sale was not a good method; some intervening body should improve it; there was no power at present to improve it when tenants had become tenant-purchasers, 43209-12.

Property of Trinity College in Ireland.

Report of Viceregal Commission on properties in Ireland of Trinity College had been shelved in a most unbusinesslike way; very desirable that present Commission should take it up, 43216-7, 43295.—Report recommended compulsion and power to fix prices, and gave anyone who sold his net income, 43297.—Trinity College as head landlords took about 80 per cent. of gross rent of their property, 43214.—As rent had been twice reduced in Land Courts there was now very little to spare, 43214.—Trinity College was not affected, but the middlemen and sub-middlemen suffered, being squeezed both ways, and they were getting out of it as fast as they could, 43215-6.—Mr. Blacker Douglass was a perpetuity tenant, with two and sometimes three middlemen under him; witness had one case where there were five interests, one over the other, 43216.—Trinity College did nothing for improvement of estates; Act of 1881 practically relieved them of all responsibility, leaving it entirely on their perpetuity tenants, 43219.—Except on portions held directly by College, on which they did do something, 43220.—The College had held these rents for ages, 43221.—Lands were granted to the College under Queen Elizabeth, 43228.—Five or six interests existed on Trinity College estates; tenants could not purchase as occupiers, because sub-middleman feared to be unable to redeem his head rent, and so on, 43295, 43303.—The College had a great deal of property all over the countrry, a considerable portion in the scheduled area, 43298-301.—Scheduled area did not include worst parts; there should be power to get non-scheduled congested areas included, 43301-3.—The middlemen first came in, because when the grants

TRENCH, Mr. GEORGE F.—*continued.*

were made Trinity College could only let to Protestants; there were very few Protestants, so that the College had to let large areas to them, and they could let to anybody, 43304-9.—Tenant in perpetuity was not a landlord; he paid to the College a rent about two-thirds the actual value, 43310.—There were 557 agricultural tenants besides 110 village tenants in Ballylongford, 106 under £5 rent; area was 19,061 acres; there were twelve perpetuity tenants paying £2,755 a year; in parts of the College property College was direct landlord; only two townlands were congested, Ballynoneen and Dooncaha; Mr. Blacker Douglass was direct landlord of occupiers of greater part of property, 43303.—Many occupiers were practically insolvent, and wanted to get large sums from Mr. Douglass to buy them out, 43312.—1903 Act provided £5,000 a year as a first provision for the College to make up any deficiency in the event of sale, and that money was available, 43313-4.—Loss of the College was not likely to exceed £5,000 a year, 43315. During the Famine many of the tenants broke down, and the holdings were taken up by the middleman, 43311, 43317-9.—Witness did not know whether any compensation was given for tenant-right, 43320.—The State must carry on the work of the improving landlords, 43320-4.

Blacker-Douglass Property.

Mr. Blacker-Douglass was a tenant in perpetuity, 43311.—The late Mr. Blacker-Douglass had spent large sums on improvements, road-making, reclamation, cultivation, etc., and built mill and corn store, hospital and petty sessions house, 43311.—The present Mr. Douglass had agreed to pay the College 27 years' purchase for terminable and 25 years' purchase for perpetuity leases, and witness had agreed to sell all the lands to the occupiers, 43311.

Dual Ownership.

Triple and quadruple ownerships the worst form of Irish land tenures that ever existed; was in existence before 1881, 43222-4.—Dual ownership existed in Ulster long before it came South; the Act of 1881 legalised it in the South where it already existed, 43225-7.—Dual ownership existed wherever a property was owned by landlord and improved by tenant, 43227.—Where landlords had themselves done improvements they ought to be fairly treated, but the Act made no distinction, 43227, 43282-3.

Reclamation of Flooded Land.

County Council should have power to introduce schemes for improvement of large areas of flooded land, bringing them before Board of Works or Department, and getting a decision as to what body should execute schemes; the ousting of the landlords made it necessary for some body to take up their work, 43229, 43233.—Mr. Doran had explained that on a certain river £10,000 had been lost for want of proper engineering, 43230.—Old schemes, no doubt, were sanctioned and approved by somebody; Drainage Board and Board of Works made the mistake in this case, 43255-9.—When witness asked Board of Works what works were being done in Kerry they sent a list of small things, not mentioning this great work in North Kerry. 43240.—There were also sloblands, some at Ardfert, where hundreds of acres could be reclaimed and used for enlargement, alluvial deposits being admirably suited for agriculture, 43240.

Price of Untenanted Land and Question of Compulsion.

In regard to purchase of land in landlord's hands, it was entirely a matter of price, and it ought to be frankly recognised that landlord had two interests to sell, 43240, 43285.—In this way compulsion could be long postponed, 43240.—Everything should be done to avoid compulsion, 43243.—Trinity College Commission recommended compulsion, but only in certain cases where there seemed to be absolutely no other way out of the tangle, 43243, 43303.—Witness did not want to reject power of compulsion altogether where it could be clearly shown that land could not be obtained on a voluntary basis, *e.g.*, in case of stubborn and unreasonable landlords, State ought to have power to apply compulsion, 43244-6.—Price should be settled by Government arbitrator, as in case of labourers' lots, 43240-2.—Witness had offered to

TRENCH, Mr. GEORGE F.—*continued.*

Estates Commissioners part of a landlord's home farm to be planted with tenants at their discretion; it was good land on which large sums had been expended in improvements, well situated, with very little congestion near it; it had paid £567 a year up to 1881; grazing rent was £370 and upwards, and if rent had been twice fixed in Land Court it would be £364; for this the landlord should get £10,400, plus 3½ years' purchase for tenant-right, or a total of £11,672, 43246, 43266-8.—Witness believed £364 was the fair rent, 43282.—"Occupation right," not "tenant-right," was correct expression, 43247-8.—Dual interest consisted of the land and the improvements on the land, and when the dual interest was in one man he ought to be paid for it, 43249-56, 43258-60, 43265-6.—Question of tenancy was independent of improvements, 43261-4.—In case quoted poor law valuation on buildings which cost £5,000 was £24 10s., 43246, 43257.—Land Commission offered £6,600, 43266.—£11,672 was about 30½ years' purchase, which was the figure Mr. Finucane gave on the valuation, which ignored the buildings, 43267-72, 43276, 43279-80.—30 years' purchase of the valuation would be £6,690 or £7,400 with the bonus, 43277-8.—If the farm were divided up it would be difficult to get value for the plot on which were the buildings, 43273-5.—Farm had been offered to Department for an educational farm, and witness hoped that might be a way out of the controversy, 43279.—Mr. Finucane took no account of landlords' improvements; improving landlords were rare, and should be fairly dealt with, 43282-3.—There were men in the neighbourhood ready to pay more than enough to cover capital demanded and to pay fines as well for farm when cut up, though witness did not propose to take any fines, 43283.

Method by which Price of Untenanted Land could be Fixed.

Mr. Finucane proposed to give 21 years' purchase of valuation for tenanted, 26 years for untenanted land; the five years' difference was quite arbitrary; a farm valued at £20 would bring in 17 years' purchase, one valued at £200 only four or five; there were numerous instances on the Blacker-Douglass and Lindsay Talbot-Crosbie estates, 43283.—It seemed to be a rule that the larger the farm the smaller the tenant's interest, 43284-5.—Only way to ascertain a fair price for untenanted land was to take net income for a series of years and capitalise it at four per cent. in case of owner in fee, at 3½ per cent. for settled estates, 43287-93.—There need be no loss on resale, 43294.—If Government wanted to deal with congestion as a matter of philanthropy they must be prepared to lose money, 43295.

Co-operation as a means of Improving Condition of Congested Districts.

Co-operation was the proper medium for improving the lot of occupiers in congested districts; enlargement alone would not do much good, 43325.—Societies should be formed, and should have power to introduce co-operative methods to hire or purchase land for common grazing, to introduce better breeds of animals, to instruct members in agriculture, and to borrow from Board of Works for improvements of a congested district; society should also establish a rural bank and a dairy, and undertake marketing of produce, 43325.

Rural Banks.

Rural bank was the remedy for indebtedness to shopkeepers, and shopkeepers would gain by having no bad debts, 43325.—Bank at Abbeydorney had been most successful; it had lent out £840 to sixty borrowers since October, 1896, and had no loss, 43326.—It had a great educational effect; farmers met once a fortnight to discuss matters of common business interest, and thus acquired some knowledge of business habits, and learned to work in common, 43327-8.—Capital for banks was borrowed from joint stock banks at 4 per cent., rural bank charging six per cent.; every member of the bank was also a member of the creamery, and repayments were made by stopping the amount out of the monthly cheque that went to each man for his milk, 43331-4.—No bonus had been paid as yet, but witness hoped it would come, 43333.—Every shareholder got five per cent. on his capital, and highest possible price for his milk, 43336.

TRENCH, Mr. GEORGE F.—*continued.*

Growth of Co-operation.

Altogether nearly 1,000 societies had been founded in Ireland, with 84,665 members; £388,500 capital mostly subscribed by farmers themselves, and a turnover of £2,165,000, 43328.—In Kerry there was no creamery in 1894; now there were ten, 43328.

Loans for Improvements—Proposal that Society should pledge its Credit to enable Individuals to get small Loans from Board of Works.

An occupier wishing to borrow money for improvements could not borrow less than £100 from Board of Works, but the Society would guarantee a smaller loan, 43343-5.—Rural bank had never gone into the improvement of land; there was no reason why they should not; a large increase of capital would be needed, but that could be borrowed from joint stock bank, 43346-9.—Witness proposed to interpose credit of the Society on behalf of individual borrower, and so enable him to borrow small sums from Board of Works, on which interest would include a sinking fund, 43350-6, 43364-5.—Board of Works lent at 6½ per cent. for twenty-two years and 5 per cent. for 35 years, the sinking fund being covered in both cases, 43357-62.—It ought to be possible to get money much cheaper for improvement; it was absurd that a man should be able to buy his land at 3¼ per cent., and have to pay double if he wanted to improve it, 43362-3.—In case of defaulters Board of Works would take action against Society, and the Society must have power as a friendly society to sue defaulter, 43366.-9. —Anything over £100 should be borrowed at lower interest, 43370.—Scheme would have to be submitted to Board of Works, 43371.—Small borrowers would be punctual in repayment, 43372-3.

Objections to Creameries Unfounded.

Objections to creameries were unfounded; there was no need for calves to deteriorate owing to use of separated milk, and if the women of the farm had a little more leisure for recreation, etc., it was a very good thing, 43328-9.—If children suffered it was from want of humanity on part of parents; there was every facility for keeping back enough milk for the children, 43330-1.—Witness did not think that the decrease of tillage was due to creameries; it was more likely to be due to rise in wages, 43337-8.

Wages.

Ordinary wages now were £20 a year with food and lodging, or 10*s.* to 12*s.* a week if labourer lived out, but that was rare, 43339-41.—Witness had known nothing under 8*s.* since he was quite young, 43342-3.

Suggestions as to Improvements.

A great deal of work of a local character should be given to County Councils, and the Department of Agriculture should have an improvements branch; initiation must not be left to individual farmers; as to cost, there would be as funds to draw on the County Council's funds, the Co-operative Society State Loan Fund, and the State through the Board of Works; the Department should decide on which fund work should fall; Board of Works should continue to do the engineering, but must be co-ordinated, so as to work sympathetically with other bodies; capable and experienced inspectors would be needed for maintenance, etc.; no body of men would be more suitable as inspectors than present and former estate agents of improving landlords, 43373.—Tenants should pay for improvements; it was the only sound financial system, and if the tenant did not pay he would not care to maintain. 43375.—In Estates managed on the English system, that is, where landlord did substantial repairs, the Heneage Clause inserted in Act of 1881 to protect such improvers, failed entirely, 43376-82.

TRENCH, Mr. GEORGE F.—*continued.*

Agricultural Society's Work at Valencia Island.

At Valencia Island in a congested district an agricultural society was doing good work, getting best material to put into the land, and marketing the produce, 43374-5.

Three Operations needed for Relief of Congestion.

There should be three operations for relief of congestion instead of one—viz., enlargement of holdings, organisation of agriculture, and starting of industries and development of fisheries, 43375.

Ardfert Abbey Home Farm.

On Ardfert Abbey Home Farm there were forty hands in regular work; wages bill was £1,650 a year; labourers had grass parks for their cows, and garden plots attached to house; average wages were 12*s.* a week; a shorthorn herd used to be maintained, and an auction of young bulls took place every year; this had greatly improved class of stock kept by farmers; herd was dispersed on death of late owner, but at that time Department began to make provision for shorthorn bulls; in other respects system of farming still served for education purposes, all wheat being sold to farmers as seed, etc.; landlord spent about £45,000 on improvements, 43383.—Land Acts had put a stop to improvements by landlords by depriving them of all return for their outlay; rents on improved farms were much more heavily cut down than on unimproved farms, 43382-4.

Houses for Artisans—Further Provision needed.

There was a gap in laws as to provision for rural industries; labourers could get houses built at 3¼ per cent.; artisans' houses could only be built by Board of Work's loans at 6½ per cent.; artisans did not come under Labourers Acts, because they worked by the job, 43384-5.

Taking over of Village by the Land Commission.

Land Commission was making every possible objection to taking over villages on ground that they were not good security; but Commissioners need not lose if they only paid for ground rent and gardens, leaving landlord to charge rent or interest for buildings; some legislation would be required, but the village should be treated as a vital component part of an estate, and developed by co-operative societies, cheap houses, places and means of recreation, and by libraries and lectures, 43385.

Indebtedness to Shopkeepers.

Farmers were terribly in debt to shopkeepers; witness had sometimes been able to arrange a composition; all the debtors in list presented by witness were purchasers, but in all cases purchase diminished, not increased obligation to landlord, 43385-93.—Indebtedness was very general; Estates Commissioners when selling land to a tenant should require a statement as to debt, and assist in bringing about a composition, 43394.—It could not pay shopkeepers to go on giving credit; sometimes it was due to carelessness, but sometimes it was due to the desire to have a hold on farmer, and secure his produce, 43395-7.—Any farmer who bought on credit had to pay a higher price, so that original price included interest, 43398. —Co-operative societies had rather avoided the idea of going into trade, 43399.—If a co-operative store were started it would have to begin by advancing money to get members clear out of the shops, 43400. —The store would have a fair chance of success, 43401.—There were no co-operative stores in the country at present, 43402.—Cost of living had gone up universally, and there had not been an increase of prosperity to justify the higher standard of living,

TRENCH, Mr. GEORGE F.—*continued.*

43405-8.—The standard was too low before, but the increased cost was met by running up debts at the shops, 43409.

Congested Districts Board quicker and better than Estates Commissioners.

In regard to machinery for sale of land Congested Districts Board was more expeditious and satisfactory than Estates Commissioners; it was absurd everything should be stopped for three months in the summer while officials kept holidays; there was no such break in the work of any other Department; witness did not blame the Commissioners; it was the system that was bad; out of fifty millions of money required for work actually done only seventeen millions had been paid out, and there was a great amount of work in the office not examined yet, 43409-10, 43415-6.—Congested part of Ireland should be handed over bodily either to Congested Districts Board or to a Connaught and Munster Sale Commission, sitting alternately in Cork and Galway, and the Estates Commission should be doubled from top to bottom, the *fiat* of any two Commissioners to be sufficient to authorise each transaction, 43410.—Sales through Estates Commissioners were necessarily slower than through Board, since every holding had to be mapped out, checked by surveyor, and inspected, whereas with the Board the maps were merely sectional, there was no checking of boundaries, and the estate was only inspected as a whole, the Board dealing afterwards with the individual tenant, 43417-20.—Payment had been made in seven months after a sale to the Board, whereas the Talbot-Crosbie Estate was not yet paid for after three years in Estates Commissioners' Office; on the Collis Sandes Estate the agreement was signed in June, 1904, and the funds not allocated till July, 1906, and in the case of Mr. L. Talbot-Crosbie's Estate when the question of adding arrears was raised Judge Meredith took five months to consider his judgment, 43420-2.

MORIARTY, Mr. DAVID.

See pp. 59-62.

Industries in Kerry.

Question of grass lands and emigration did not apply in Kerry, but there were other grievances; industries in Kerry and over a great part of Ireland were dead; Ireland was practically in the position of a new country so far as industries were concerned, and a great many authorities and advocates of the theory of *laissez faire*, such as John Stuart Mill had acknowledged that in a new country protection was justifiable; so that even a Liberal Government would be justified in holding out a helping hand to revive these industries, 43426.—Ireland had a claim that no new country would have, its industries had been legislated away; what the English Government ought to do in the future depended a great deal on what they had done in the past, 43427.—Witness would like to see Irish industries started and put in a self-supporting condition, 43428, 43442.—No sensible man would be in favour of Government help keeping on an industry year by year unless there was general protection in the country; in Ireland as long as Free Trade principles remained it would be absurd; industries such as woollen industry, and cabinet-making would be self-supporting once they were started and people had been taught how to use proper apparatus, 43428.—Industries were flourishing before the terrific imposts were put on, 43429-30.—Extremely difficult to establish a new industry in any district; reason akin to that of a Sheffield manufacturer who on being asked why he did not start bicycle-making in Sheffield replied, "They began in Coventry and Birmingham, they have the trade atmosphere there, and skilled hands, and there is no use trying in Sheffield now," 43430.—A population who had practically to learn a trade could not expect to get same remuneration as skilled people, 43431.—Remuneration in Ireland should be lower than

MORIARTY, Mr. DAVID—*continued.*

in corresponding trades in England, and cheaper labour ought to give Ireland a great pull in some of those poorer districts; cheaper labour would be quite unskilled and it would take generations before that labour would reach same scale of perfection as English labour, therefore it would not be so cheap as it looked; a carpenter in America was paid higher wages than in England, because American carpenter did his work quicker than an English one; a bricklayer in America would lay 4,500 bricks in a day, and in Ireland 400, 43432.—If he did not do them he would have to go; Government help would still have to be obtained to supplement want of skill and training, 43433.—Witness called protection and subsidies the same, 43434, 43437.—Plainer industries such as hand looms would derive benefit from cheap labour, they did not require any high degree of skill; cheap labour would give an advantage, and financial help from Government need not be very large and would only be wanted for a certain time, 43435.—People would not ask for a tariff, 43436.—Subsidy was a very different thing from a tariff, if there was protection it would shut out any articles from other countries and give people in Ireland an opportunity to make such articles though of inferior quality to begin with, 43439-40.—Under witness's system of giving subsidy to trade undertakings of this kind, there would be nothing in the sense of protection, and they would compete freely with articles from England and Scotland, 43441.—Witness's idea was to revive old industries, such as the linen industry, at Dingle, raw material of linens and woollens was got from Belgium and manufactured in Scotland and north of Queensland as Scotch and Irish, 43443.—It would be hopeless to attempt to revive in congested districts without Government help, 43444-5.—But an industry that flourished before would flourish now, taking altered circumstances into consideration; woollen industry was specially suited to congested districts and had never quite died out in Kerry it would assist agriculture by providing employment for persons who must otherwise emigrate, 43446-7.—Work of Congested Districts Board showed the people had skill and commercial aptitude but industries could only be revived by financial help and strong stimulus, 43448-51.—Instructors were numerous but the stimulus and example provided by the existence of industries themselves was the only form of instruction worth anything in congested district or elsewhere, 43452-3.—Instruction, so far as regarded the poorer people in congested districts had produced nothing but expenditure, 43454-5, 43462.—Success of Foxford industry was due to inspection, financial help and skilled division, 43456-8.—The Iveragh industry in Caherciveen would have succeeded with the same advantages, 43459.—Fair success could be obtained with direction by an ordinary person of good business habits and fair commercial aptitude, 43460.—Congested districts could be greatly improved by the starting of model farms here and there, which need not be expensive, 43460.—Witness could see no value in Department's experiments, agricultural work had not been more successful in non-congested than in congested districts, though in the former people might be supposed to have more money and intelligence, 43461-4.—Whether improvement would result from district instructors remaining in congested districts would depend on the way they worked, the teaching must be practical, 43465.—Model farms would be of great use for purpose of testing theory, 43466.

System of Agricultural Training for Boys would be useful.

A system of agricultural training for boys in central National schools would be useful, but the model farms would be needed as well, the old people wanted education as well as the young, 43467.—When the Board began spraying they could scarcely get people to do it; now every farmer in the district could do the litmus paper test, 43467-76.—Spraying was very successful when done twice and when care was taken to do it again if rain washed it off, 43477.

Indebtedness to Shopkeepers.

In regard to Mr. Trench's evidence as to indebtedness to shopkeepers witness thought instances given were exceptional, it was only a few large merchants in Tralee who could give certain amount of credit, and farmers of the district were prudent and thrifty on the whole, 43477-9.

FLEMING, Mr. MICHAEL.

See pp. 62-3.

Necessity for Lime.

Great necessity for lime in Kilcummin district, also drainage; district was entirely composed of small occupiers, and was very congested, 43481, 43499, 43502.—It was all reclaimed land, and had gone back very much in quality within last thirty years; reclaimed land went back very much when not attended to properly, 43481, 43493, 43494.—Only one limestone quarry in the district. it was not working at present, it had been closed since March, 43482-3, 43487.—Witness did not know the reason Lord Kenmare did not employ the men, 43484.—Plenty of demand for lime in winter, and for sixteen miles round there was no other limestone quarry, 43485.—Quarry belonged to Lord Kenmare, and he would not allow any man to interfere, 43486.—He charged 2*s.* a barrel for lime, 43487.—No difficulty as to fuel, plenty of turbary all round, thousands of acres of bog, 43488.—Quarrying always stopped in harvest time, also in March when crops were down, 43489.—Perhaps quarry would open again in the winter, but the real time for it to be open was March, April and May, 43490.

Want of Bulls and Stallions.

Good bulls were wanted in the district, there were none, also good stallions, the ones they had being of the worst class, 43490.—There was a farmer in the district who could buy a bull, but he would keep it to himself and he would not lend bull unless to a few people, 43491.—Fair way would be to give price of bull to a man or two and let them give security for price, 43492.—Department's premiums would do very well, no high class cattle wanted, from £15 to £18 was sufficient, 43493.—People were so poor that it would be a great benefit if they had a stallion, 43506.—Witness had two mares himself, 43507-8.—His neighbours all had horses, 43509.—People got stallions for 7*s.* 6*d.*, and instead of going to a good horse they would have good foals, 43510.

Land Purchase.

District now under sale by Lord Kenmare, people not getting any advantage beyond districts all round where there was good natural land, 43494.—They would only fall in with the rest of the district in the purchase; good thing if money were advanced to people at low interest; many were short of cattle, and great many wanted to improve their farms, 43495-6.—Place had been originally called "the rushy mountain," 43496.—It should not be compared with places with naturally good land, it was only third or fourth lass land, 43497-8.—No advantage derived from Congested Districts Board over districts that were not congested, there were a few roads, 43500.—There was no Parish Committee, 43501.

Migration.

People on uneconomic holdings would migrate if they could get land outside Kerry; there was no labour and people had gone to Limerick, or Waterford, or even to America, employers were not able to pay, 43503-4.—They would go to the next county, or the county beyond it, where they go now to America or Australia, 43505.—Only one farm in the vicinity for enlargement of holdings, and the family were not living in the division, there was another farm of 400 or 500 acres of bog and mixed land, 43506.

THE MacGILLICUDDY OF THE REEKS.

See pp. 63-6.

Effect of having no Transit Facilities on Supply of Lime.

Lime was the great need of these districts, where bog preponderated, 43511, 43514.—Lime implied dry land, drainage, and means of communication; in many places in Kerry it had fallen into disuse because distances were too great, and railway rates too high though the carriage of lime and sea-sand was primary reason for building railways in Dingle, Caherciveen, and Kenmare peninsulas under guarantee for which

THE MacGILLICUDDY OF THE REEKS—*con.*

people were heavily taxed, 43511, 43517-8.—Delivery was very difficult, witness, if he had quarries of his own, would get motor cars, but that would entail much expenditure in strengthening bridges, 43520.—Some delivery might be done by boat, but it was rather dangerous work, 43524.—Nearest points at which lime could be got for western ends of the three peninsulas were Castlemaine, Kenmare, and Killorglin, the peninsulas were all congested, and their total area was nearly half the county; there was a very fine quarry near the boundary with Cork with an immensity of fuel close to it; difficulties arose when quarry owners neither worked quarries themselves nor permitted other people to do so; whatever agency bought estates should take quarries into their own hands and work them on modern methods, as at Llandulas in Wales with rock drill and Hoffman kilns, if that were done the forty-two gallon barrel could be given at 9*d.* 43511-2.—Local men might combine to work a quarry and supply the neighbourhood but they would need the right to work it, and the machinery, 43511.—Farmers would be willing to pay a reasonable price for it, 43517.—Anyone would give 1*s.* a barrel, but it was imperative that they should rescue farmers from the power of mortgage, 43517.

Sea-Sand used in place of Lime.

Sea-sand was used instead of lime; it was inferior to lime but had many good qualities, 43517-8.—Lime or sand was necessary for clay as well as bog, 43521-2.—It would be useless to look for limestone deeper down than the outcrop, 43523-4.—It was absurd to compare England and Ireland in regard to the need for Government help because for 300 years Irish wealth in shape of rents had been going across the water, 43513.

Difficulties in regard to Sale of Kenmare Estate.

Difficulties in regard to sale of Kenmare Estate were due, not to Lord Kenmare, but to a hardly justifiable rise in rents twenty-five years ago, and then the management, by a receiver, Maurice Leonard, whose practices were described by a county court judge as thoroughly unjustifiable, 43515-6.—Witness in his endeavour to sell to tenants had been tripped up again and again by mortgages; men who wanted to work for their country should be released from the power of mortgagees, 43517.

Tourist Development Scheme.

County beyond Killarney ought to be opened up for middle class tourists as Switzerland and Northern Italy had been by the peasant proprietors building simple, clean, small boarding-houses where people could be put up for, say, 30*s.* a week; the proprietor would get a market for his goods on the spot, saving middleman's profit and costs of transport, 43525-6, 43528-9, 43531.—Charges in existing hotels were prohibitive except to very few, 43529-30.—One or two people, Mr. John Gissane of the Black Valley, Mr. David Doran, at Caragh Lake, etc., were already taking tourists, it was beginning slowly, 43527, 43531.

Roads Needed.

Road would have to be improved and extended to make it easy to drive from Killarney to Waterville; the road had been passed unanimously at road sessions in 1885, and was thrown out by Lord Kenmare's agent on a technical mistake, 43531.—There were two bits of road needed, Derrycunnihy to Garrymeen and Black Valley to Glencar, another road from Caragh Lake was nearly built but required to be finished, 43531.

Co-operation as applied to Fisheries.

Fisheries, coast and inland, were of foremost importance, and people were robbed in every direction by the middleman; Mr. Burdett-Coutts had broken down owing to Billingsgate ring, 43534.—Co-operation was the natural system in Ireland, English Joint

THE MacGILLICUDDY OF THE REEKS—*con.*

Stock concerns took their framework and organisation from the old Irish tribal system; witness determined to apply co-operation, and he and a friend embodied their views in a little pamphlet which was the framework of all Sir H. Plunkett's work; if Congested Districts Board wanted to be of as much use as possible they must encourage co-operation; witness had gone through the bankruptcy court in order to keep his people out of it and men who had done that had some right to be heard with respect, 43535.

EXTENT AND SITUATION OF WITNESS'S ESTATE.

Witness's estate was 17,000 acres in extent, about 1,000 acres close to Killarney, 800 round the Reeks, 5,000 or 6,000 round Caragh Lake; it was all confiscated in time of Charles I., and Charles II. regranted all that was not passed in patent to Cromwellian settlers, 43536-7.

TENDENCY TO OVERLOAD A SUCCESSFUL MAN WITH WORK.

One mischievous thing in Ireland was the tendency whenever a man was successful, a land agent for instance, for everyone to go to him till he was so overburdened with work that he could do nothing at all, 43537.

Document put in by The Magillicuddy of the Reeks.

O'RIORDAN, VERY REV. CANON HUMPHREY.

See pp. 67-72.

CONGESTION IN IRELAND.

Position of Congested Districts Board was anomalous, congestion being local, whilst the country as a whole was lacking in population; the western seaboard was over-populated, the population being greater in the poor counties of Mayo and Donegal than in rich lands of Meath and Kildare, 43539-40. —Few places were so thickly populated in proportion to valuation as Cahirciveen, 43540.—The cause was that people were driven from the counties round Dublin and the central counties to the fastnesses of the west, 43539.—Even though the surplus population be now removed congestion would recur within twenty or thirty years by natural increase, 43539, 43541, 43543.

AMALGAMATION OF HOLDINGS AND MIGRATION ONLY REMEDIES FOR CONGESTION.

The only permanent remedy lay in the amalgamation of holdings to a minimum limit of £10 or £15 valuation, 43542-4, 42548-9, 43556, 43559.—And transplantation of at least one-third of people to rich counties of the Pale from which their forefathers were driven, 43539-40, 43544, 43552, 43560-62, 43567.—Amalgamation of holdings could only take place by removal of holders; there was no spare land in Kerry, 43549-50, 43555-6.—People would go to Meath or Kildare rather than to New York, if sent in groups to the same neighbourhood, not otherwise, 43545, 43549, 43551-2.—Young sons and daughters of present occupiers would go first, 43546-7, 43553, 43563.—The old, the actual holders, would follow if they heard the young were comfortable, 43546, 43554, 43569.—Old men would go to mind the cows, 43557, 43569.—Some holdings would be amalgamated by consent, 43564.—If a young man, who was to succeed his father, were moved to a better holding in Kildare or Meath, both could be easily made to sign an agreement to part with the holding in Kerry, 43552-3, 43570-71.—Additional holdings, five or six for every six or eight holders migrated, would be created thus in Ireland, but not in that district, 43565-8.—In case of holding occupied by old couple whose son did the work, the old should be obliged to go with the son if he were given a holding elsewhere, 43572.—Young and old alike should migrate, 43574.—Witness did not wish to disturb the young men of Kildare, but the grazier who lived in Dublin and had hundreds of acres on which only cattle and a herd to mind them should be looked to, 43573, 43575.—Young men of Kildare,

O'RIORDAN, VERY REV. CANON HUMPHREY—*continued.*

some of whom also emigrated, would not have equal claim to those coming from Kerry, where congestion was so great, as they would bring their old people, 43575, 43577.—There were 1,023 holdings in Cahirciveen Union of £5 valuation and under, and 1,220 under £10, 43562.—There were hardly any labourers, all being small farmers, 43563.—To eke out a living on a holding of £5 valuation would be equal to penal servitude to many, 43570.—English who had caused the mischief should undo it and pay the cost, 43550, 43573, 43578.—There had been a Parliament in Ireland, but it was one of English settlers, 43579-80.—Witness was conscious that his scheme might seem bold and visionary, but the root of the evil must be attacked; if this were impracticable he would suggest not remedies for congestion, but the improvement of holdings and of the condition of the people, 43559-60, 43578, 43580.

LAND PURCHASE.

First and foremost Congested Districts Board should purchase land from the two or three large landlords of the district, preferably by free purchase, but if necessary by compulsion, becoming the landlord for about ten years, developing land, showing people how to do so, and then passing it on to the tenant; there were the huge estates of Trinity College and Lord Lansdowne, with whom the poor could not negotiate direct, both should be made to sell and the Board should intervene; where they did so they were real fathers to the people, 43580-4.—Only one estate, the Burns-Hartopp, had been bought in the district, 43580.—Trinity College the head landlord; not a bad one, but the land should be given to the people on fair terms, 43581-3.

ARTERIAL DRAINAGE.

If the estates were purchased by the Board, before selling to the tenants it should, before all, undertake arterial drainage which could not be done by farmers of £5 to £10 valuation, and should be the duty of a public authority; in that parish and the neighbouring one they were swamped with water; there were thousands of acres of bog, through which the Board should make canals and great arterial drains into them; the small holder would drain into these, 43583, 43585-9, 43591.—The great drains should be four or five feet below and ten feet above, and should be kept in repair by Government, as the dykes in Holland, 43586. —The large landlords—Trinity College and Lord Lansdown—did nothing since the Land Act came into force but take the rent; many smaller landlords followed their example, and the tenants in their place would be as exacting, 43584.—In present condition of land people lived from hand to mouth; they would improve inside of their houses where landlord could not see, but outside they did nothing lest they should be thought prosperous, this being thought dangerous in the past, 43587.

LIME.

Lime was scarce, but it was useless to mention it before drainage; facilities for obtaining it should be granted, 43588, 43591.—Supply of lime was not so far away—Killorglin or Kenmare; there should be a siding at Kells, at Mountain Stage and Glenbeigh, so that wagons could be put up for the use of tenants, instead of drawing lime up nine or ten miles from Cahirciveen, 43588-9.—The line was part of the main system of Great Southern line; there was a guarantee for a smaller portion built a short time ago from Farranfore to Killorglin, but much more might be done, 43589-90.—Best lime for agricultural use was that of Killorglin, 43595.—Present price, at Cahirciveen, of lime for any purpose was 2*s.* 6*d.* a barrel, which was same as an ordinary bag; this was not an economic price; formerly the price was 3*s.*, 43588, 43592, 43594.—At the kiln it was selling at 1*s.* 3*d.* or 1*s.* 4*d.* a barrel, 43597.—But in large quantities it would be obtainable at a reduced price, 43597, 43608.—It should be landed at station and sold for 1*s.* at most, its intrinsic value, 43588, 43596. —Board should help by subsidy paid direct to kiln-owner to extent of a quarter of price, and give it to people at 1*s.* a barrel, a sum the people could afford

O'RIORDAN, Very Rev. Canon HUMPHREY—*continued.*

to give, 43593, 43593-9, 43609-10.—Cost of carriage would be unappreciable; it cost £6 or £7 to bring a wagon of lime from Killorglin, a rate of a penny a barrel, 43600.—The difference in price from present cost was owing to middleman's profit, 43601-2.—Best lime for building purposes, such as that used for church came from Kenmare, and bought in great quantities by witness almost at cost price, came to about £6 10*s.* or £6 15*s.* a wagon of six or seven tons, or about 2*s.* a barrel; much cheaper than the other rate, this being for best building lime and from Kenmare, 43595, 43602-6.—Co-operative purchase by farmers associating to get a large quantity by train from Killorglin was a capital idea, but they were not so advanced; here lay the advantage of education, 43607.—Supposing a public body gave a temporary subsidy of 3*d.* or 4*d.* a barrel, such co-operation should be found amongst them in two or three years, dispensing with further subsidy, especially if the Board were the landlord, 43610-3.—The people should be taught the use of lime, which they never had and knew nothing about; they had but a little sand, 43613.

Parish Committee Grant and Work.

Grant for Cahirciveen was a miserable dole, £118 was the sum, but owing to red tape they were only able to obtain £40 that year; it should be made at least £200 to encourage work, 43613-4.—Many little houses were hardly fit to live in, 43614.—Respecting present work of Committee, removal of manure from near houses was being insisted on, new pits were being made, houses improved and roofed, 43615.

Fisheries.

More should be done by Board for local fisheries; much good had been done in Donegal and Mayo, but since 1892 Kerry had received only £25,000 out of a total expenditure of a million and a quarter; its due proportion was £200,000, 43616.—Witness admitted that a large part of the total sum was spent on purchase of estates, one being bought at Coonana in Cahirciveen parish, on which £4,400 was spent, and the pier built there on a sandy foundation was doing very well, 43617-20, 43624.

Slips.

Coscroum, north of Reenard, was sadly neglected; there was a colony of about 100 hardy, industrious fishermen, the most deserving on the seaboard, who should be encouraged; they needed a small pier, or better still, one with a slip at the end; when Mr. Bryce, the late Chief Secretary, came down a year previous he promised help in answer to a petition, but nothing had been done since, 43620, 43623, 43625.—An officer under the Board came a month ago, took bearings, but no more had been heard since, although the Board's grant under Marines Act was £2,500; the department responsible should carry out the work, 43620-3.—The cost would only be about £1,500, there being a rocky foundation, 43624.—Slips were greatly needed at Reenard, where the pilots were, at Vigett's Island, 43620.—A slip was needed at the mouth of Valentia Harbour, outside the lighthouse, near which an accident happened some time ago in the North Channel, several lives being lost, 43629-31.—Slips were put in wrong places; local people should be consulted by the Board's officers, 43630, 43635.—Nothing was more urgently needed than a slip at Cloonaska; that should be granted if all else were refused; the fishermen, a deserving set of men, were at present obliged to go by the dangerous channel of Bigness Island, 43625.

Steamer Traffic.

Pier accommodation was very defective and should be extended; steamer traffic should compete with railway, which now had monopoly; until a few years past a steamer plied round the coast, 43673.—Lime should come from Kenmare by boat, 43588.

Instruction in Herring Curing.

An instructor in herring curing was needed for Reenard, where it was desired to introduce that industry; there were herrings off the coast, but the fishermen did not know how to cure them, although they knew well how to cure mackerel, 43624-6, 43635.

O'RIORDAN, Very Rev. Canon HUMPHREY—*continued.*

Improvements for Fish and Boats.

Witness was also instructed on behalf of Reenard to ask for a steriliser for fish, as used at Birkenhead; this would be a great boon, keeping the fish sound for days until it could be cured, 43626-9.—Steriliser should be provided by Board free of charge, 43626.—Better boats, cover boats were required, instead of the long open boats now used; sails were sometimes used, and the men went out eight or ten miles, 43631-5.

Leases for Houses in Town.

Restrictions on building were so many that there was very little inducement to build; it should be possible to obtain leases for houses and building plots in the town from Trinity College, the owner of the town and all about it; one enterprising man, whose house was burned down, very foolishly spent £1,000 on re-building without a lease; as a tenant-at-will he could be turned out, the house being built before Town Tenants Act; he had wished to build a modest place, but added another storey on advice from witness, who ignored that there was no lease; one for 99 years was required, but Trinity College would date it from 1877, 43635-44.

Cattle.

Respecting the breed of cattle, foreign breeds should not be imported into Kerry; the native Kerry cow was a very good milker and the best for the place, the only one that would live and thrive there; the Board should also send native Irish horses, like the excellent breed in County Cork, not half racers, 43644-5.—Witness knew that class of work was now under the Department, 43646.

Woollen Industries.

Board should introduce and foster industries; the making of woollen stuffs should be encouraged, and to some extent subsidised; there was plenty of sheep and a quantity of wool, 43646, 43651-2, 43656.—The only factory in the district was in the Convent, and they had received little encouragement, but the Department was responsible for this, not the Board; the nuns and witness had bought a house and expended almost £100 on machinery and equipment, and thinking the Department might fairly pay for the latter, sent them the invoice, but met with a stern refusal; witness went to the County Council at Tralee, which works with the Department, and the Council were willing to help, but an official from the Department interfered, and from that day to the present the money for the machinery had not been obtained, 43646-8.—The factory had not been subsidised by the Board, 43655.—But industry was coming on; it was the only one of its kind in the district; they were making hosiery and lace of good quality, and employed fifty-eight girls in the factory, and twenty in their homes, 43649-50.—A small trader in the town, named O'Shea, produced home-spuns, employing farmers' wives in the country to spin wool and make thread, which was worked on old primitive looms; he employed seven or eight women, but if encouraged this would develop into a thriving industry; O'Shea should be encouraged and given some capital, 43646, 43650-2, 43655-7.—This subsidy would enable him to pay the women and to sell the woollens a little cheaper and set the industry on its feet, 43657.—These old women worked for very little, but they and the weaver should be paid, 43662.—It would be an advantage if the people had improved looms and an instructor were sent down, and if an inspector were to classify and mark the webs, and a connection were obtained with the industries in Dublin and London, 43653, 43659-61.—Witness had met Mr. Walker, an officer of the Board, once; he had done some good, and was about to obtain a position for one of the local workers under the Board, 43663-4.

Butter Industry.

Butter industry, which was still more important, was ruined for want of a trade mark and the want of any system of grading, 43653-5, 43662, 43664.—There was no standard or distinction as to classes of butter, the farmers' wives get no better price for the good butter than the bad; several local gentlemen

O'RIORDAN, Very Rev. Canon HUMPHREY—*continued.*

bought all the butter on the side of the roads, so that the women scarcely came into the markets; the butter was all mixed together and was getting a bad name, 43664-69, 43673.—There were no creameries, there were only a few gallons of milk in each house, 43665.—Without encouragement there would soon be no good butter, 43668.—There should be an inspector to visit the market and other districts and put the markets on a proper footing; there should be a weighbridge, an inspector, and a market for the district; the inspector, officially appointed, should grade the butter and mark it first, second, and third, in three qualities, in Cahirciveen, Dingle and Kenmare, and let the buyer give his price according to the quality, 43664-5, 43670-3.—The inspector appointed could visit five or six towns a week and grade the butter, and the local buyers could price it then, 43673.

O'DRISCOLL, Mr. ALEXANDER.

See pp. 72-6.

Position of Witness.

Former member of the Agricultural Council, living at Valentia Island, a landowner and farmer, engaged in the fishing industry and timber import trade, and owner of steam sawmills, nominated by County Council, 43674-8.

Land Purchase.

It was of utmost importance that tenants be assisted in purchase of their holdings, 43674, 43678.—To achieve this the Board should either simultaneously buy every estate offered them in any one district, or none at all; all the estates in the congested districts required improving, and all should be dealt with alike, 43678-84.—When the Board purchased one estate in each congested district, whilst the adjoining one had no prospect of enlargement of holdings or erection of new houses, the impression was strengthened that the Board was an institution for the dispensation of patronage, and the operation of wider policy of Imperial Parliament was retarded; purchase of Dillon Estate in Mayo created immense difficulties, and purchase of Hartopp and Butler Estates in Kerry put a stop to proceeding between landlord and tenant direct, and led tenants to ask their landlords to sell to Board instead, 43678, 43687.—If no land were allowed to pass from landlord to tenant, Board should be given compulsory power providing for purchase at a reasonable price, 43685.—Witness had not considered number of inspectors or amount of capital necessary to effect this, 43686-7.—In Valentia the Board had bought a farm from a gentleman who wished to sell, ostensibly as a site for houses and allotments for fishermen, after five years nothing had been done beyond putting a caretaker in charge, though the farm was sufficiently large to give allotments, 43687-8.—In 1903, when the Land Act was passed, witness offered a small property to Board without naming price, simply on Land Conference terms, which he understood to be a reduction of 4*s.* on second term rents and 6*s.* on first term rents, and then to sell to tenants on that basis; Board took two years to consider it, and then declined, 43743-5, 43749.—No land was sold in the district, 43746.—Witness did not know what prices were paid throughout Kerry, 43747-8.

Failure of Schemes of Congested Districts Board.

Unequal treatment strengthened impression that Board, striving after popularity, also took the maximum of credit to itself on all occasions, even when actual harm had been done to the community, 43687, 43689.—Several of the Board's schemes were dismal failures, 43698, 43707, 43712, 43717, 43737.—Witness attributed failure in connection with live stock schemes to the pressure in higher offices of Board of too strong a Scottish element, basing their action on what was done in Scotland, 43710.—Respecting the difficulty of reaching the proper authority for any scheme, who should give assistance, and who spent the money, witness proceeded to give instances, 43687-98.

O'DRISCOLL, Mr. ALEXANDER—*continued.*

Channel in Cahirciveen Bar proposal.

A memorial was sent to Congested Districts Board praying for the erection of a perch at end of Cahirciveen bar to mark channel for fishing and other vessels; the memorialists were referred by Board to Irish Lights Commissioners, from them to Board of Trade, and by latter to local authority, probably on the assumption that there was a Harbour Board in Cahirciveen; finally, the master of a steamer frequenting the river erected a barrel on a strong staff embedded in concrete; on a subsequent visit of a high official of the Congested Districts Board the latter took credit for what had been done, but when it was made known that the work was not due to the Board, the captain was reported to the Board of Trade for his action, 43687, 43689, 43693-4.

Harbour Board.

There was no Harbour Board, tolls would not justify constituting one, as this would entail upkeep and the salary of harbour officials, a serious matter in a poor district; the County Council made arrangements through local members and provided for a caretaker of pier for a couple of pounds a year, but this was a very different matter, 43690-3.

Valentia Harbour Station—Pier Scheme.

When Board was memorialised for a pier at Valentia Harbour Station to enable fish to be landed, Board said it was the duty of the railway company to build it, company said it was duty of Board of Works, the latter said it was that of District Council, and District Council that of County Council, and County Council had not funds for so large a work, 43694-5.—Co-operation between County Council and Board was no simple matter; the Board were willing to contribute £7,000, 43696.—It was previous to Marines Act; late Chief Secretary had promised that money would be available under Marines Works Act, three Lords Lieutenants, three Chief Secretaries, and Sir Antony MacDonnell all agreed on necessity for work, but nothing had been done; the work was not ordered, an engineer referred to by Canon O'Riordan had gone without doing anything, 43697-8.

Pier at Traganane.

A memorial was sent for the erection of a pier at Traganane; there were two local schemes, either of which would have been good, but the Congested Districts Board adopted one of their own, which they carried out at a cost of £2,000, and was perfectly useless; the disaster which occurred some time ago in Valentia Harbour was largely due to this mistake, 43698.—The parish priest consulted was also in favour of scheme advocated by witness, one man only favoured that of Congested Districts Board, 43703-4.—The engineer, witness did not know who he was, doubtless made what he thought the best selection after consulting local people, but advice was useless unless he consulted and acted on that of the people best qualified; fishermen knew by experience "where the shoe pinched," 43699-701.

Fishing Industry Schemes.

Board's schemes for development of fishing industry were a dismal failure; instead of utilising every new method found profitable, the Board furnished most primitive appliances to begin operations with, such as the "zulu" type of boat, which witness knew, and the people found an utter failure in competition with modern type, known as the "steam-drifter;" other types supplied were the "Yawl," and even the "curragh," now all discarded by other people, 43712-13A., 43717-19.—Witness was surprised to hear £3,000 mentioned as the cost of the "steam-drifter," putting it down to half that sum, but though a large sum it would equip the men to earn larger; there was no local capital to build such boats, which had been found profitable for private enterprise, and the Board should give loans to help; this would enable them to compete with others, 43714-5, 43722.—The "steam-drifter" would be used by local men for herring and mackerel fishing, not in the surrounding sea, but wherever herring could be taken; around the Scotch coast

O'DRISCOLL, Mr. ALEXANDER—*continued.*

if necessary, 43720-24.—They would not know at present how to manage, as they had none but the most primitive methods, 43725.

Cold Storage for Fish.

Witness agreed with Canon O'Riordan that the Board should provide, at a reasonable rent, cold storage where fish could be kept in times of glut until it could be dealt with, 43725.—Board should exercise supervision over transhipment of fish at North Wall and Holyhead, and send some one to visit the larger markets during the season, reporting to the senders who got bad prices why the prices were reduced, 43725.

Scientific Fishery Investigations.

Locally they were not at all satisfied that the scientific investigations into the habits of fish was proceeding on proper lines to advance the interests of the fishing industry, rather than for the benefit of the scientists engaged, and they were surprised that every tittle of information gleaned was not published, 43725.—Witness did not know that the researches had been going on for some years as international investigations and that the matter had no direct reference to the Board, 43726-8.

Board's Steamer.

Board had a steamer, the *Granuaile*, which was kept toying round coast as a half-yacht, and used sometimes to bring a cargo of staves to coopers to justify her existence; she could be made some use of in conveying lime from Galway to Kerry, which would enable Board to sell lime to farmers in congested districts at a reasonable rate; this would not prevent her being generally employed on the coast; in witness's experience a steamer of the kind could do a lot of work, 43728, 43731-2, 43737.

Fish Curing.

Respecting witness's personal experience of working of Congested Districts Board, having seen in New York, in February, 1906, a lot of fish that could not be sold owing to careless handling in Ireland, and concluding that the appliances and methods of curing were not sufficiently up-to-date, witness wrote to the Board for plans of a really up-to-date fish-curing factory, proposing to build one; on the reply that a plain shed with a partitioned portion for the storage of salt was in use, witness applied to the Department of Agriculture for a loan to build a proper factory; Congested Districts Board sent two engineers in October, 1906, to examine the site, of which they approved, explaining that they had the administration of the Reproduction Loans Act in the congested district, and asked for a plan, which was prepared; the owners of a house, the garden of which adjoined witness's premises, made a fuss about his intentions and the purpose of the money, inquiring whether they could obtain any for the protection of their lawn from the encroachment of the sea; on December 8th, witness received a communication from Board declining his application; without stating reasons, and allowing him to suppose refusal due to his neighbour's objection to site being used for fish factory, 43742-3.

Mineral Resources.

Board did nothing whatever to develop mineral resources of country; when a member of the Council of Agriculture, witness had brought forward a motion, which was unanimously carried, that money should be spent in searching for and developing the mineral resources, suggesting at the same time that the diamond borer should be lent free to those willing to use it; a Mr. Ede made an important discovery of copper on the estate bought by the Board from Mr. Hartopp, but the Board would not give him a mining concession to commence operations there, owing to some legal difficulty, which they had not troubled to remedy; meantime the best labourers were leaving the country, and capital, if found, could effect nothing without labour, 43710-2.

Live Stock Schemes.

Board's live stock schemes had been in some cases positively harmful, as in case of introduction of hackney sire, etc., the introduction of Galloway bull, instead of careful selection in Kerry, where a true breed of cattle existed; the Royal Dublin Society had also closed its Kerry herd-book against outside entries, and would not take any entries now except of the offspring of stock already registered, to the exclusion often of cattle of truer type; Board should have attempted to prevent this, or opened a Kerry herd-book for small breeders of good stock, 43707-8.—For the past two years the work was handed over by Board to Department of Agriculture, but there was no difference in conduct of things, 43709-10.

Lime.

Throughout Kerry the lime question was a very important one, the Board might spend part of its endowments in giving lime at a reduced price, bringing it from Galway to Cahirciveen and Kenmare in their steamer; lime could probably be burned in district as labour was cheap, reducing cost to probably less than 1*s.* 6*d.* a barrel, and enabling Board to supply it at about 1*s.*, and give employment in unloading and burning, 43728, 43732-3, 43737.—Witness, who had not bought lime at Killorglin, but at Kenmare, and put some on his land, thought Canon O'Riordan mistaken in carriage rate for lime being a penny a barrel; witness paid 1*s.* 6*d.* a barrel at the kiln, and 6*d.* a barrel transport from Kenmare, 43728-30.—The farmers were so poor that they were perhaps not in a position to organise and provide for the supply of lime when the subsidy ceased, it would depend on the undoubted benefit to be derived from the lime to the lands, 43734-6.

Early Potato Culture.

The action of Board in inducing several local people to carry out experiments in early potato culture under the guidance of "experts" sent for that purpose, instead of Board doing so on their own land in Valentia, had resulted in putting back prospect of early culture in district for at least ten years; in accordance with agreement with Mr. Porter, in August, 1902, witness undertook to plant 12 cwt. of early potatoe seed, to be delivered early in November with the manure; owing to some small advance in market prices they were not sent until mid-December; no information was given as to sprouting until too late; in January, 1903, the ground being ploughed and harrowed, notice to that effect was sent to Board, with request for manure promised, and instructor for planting, according to agreement; in reply, Board stated its inability to supply manure agreed upon, but promised a substitute, and not until 8th March, 1903, in response to two further appeals, did the expert come, bringing a substitute for the manure promised, and arriving in witness's absence, gave five minutes' supervision only to the workmen; the time of year being so late, the potatoes were nevertheless put down, and subsequent instructions from an inspector of Board as to loosening the ground and dressing with nitrate of soda carried out; after a frost in May had done great damage, the inspector suggested lighting fires every evening as a preventive; a letter to Board for packages, promised in agreement, for sending potatoes to market was met by request that witness should provide them, as they had none; a sample box of 16 lbs. of potatoes sent to a salesman, whose name was given by Board, selling at 1*s.* 10*d.* the 16 lbs., left witness 4*d.*, out of which the cost of the box was to be provided; this was a sample lot, witness had not reckoned what expenses would be on large transactions, 43737-42.

FITZGERALD, Mr. ROBERT.

See pp. 76-7.

Estates in hands of Witness's Predecessors.

Managed estates owned by his father, and his grandfather before him, in Valentia, 43774-5.—Witness had offered to give evidence with the view of showing what had been done by his father to relieve congestion, whilst Mr. Buxton, father of present Postmaster-General, before Land Act of 1870, had placed all small tenants of two townlands near Dingle into one

FITZGERALD, Mr. ROBERT—*continued.*

farm in Corobeg, 43751.—Witness's grandfather having unfortunately spent too much money in Parliament, witness's father bought back Valentia in the Incumbered Estates Court in 1853 with money left by an uncle, 43772, 43776.

Mr. Fitzgerald's Action in Relief of Congestion.

In townland of Corrobeg, a portion of Valentia, several holdings were held jointly by two or more tenants, 43751, 43756-7.—To relieve congestion, about 1866 witness's father fenced in a considerable portion of land in his possession, adjoining the mountain, about a quarter of a mile to a mile from the original holdings, built substantial houses thereon, and insisted on lots being drawn as to which of the tenants should be migrated, 43751, 43753-4.—As far as possible the holdings were striped; when an old tenant drew a lot and went to a new holding his former holding was amalgamated, or was given, to the other joint holder, 43752, 43755-7.—Tenants always objected to leave original holdings; drawing lots was because of his reluctance, 43759, 43765-6.—There was more land on the new holdings, but it was poorer, not so good as on holdings about; the houses were very good, better than former ones, 43760, 43768.—All the land relinquished was left to the other tenants, 43763-4.—The rent was apportioned; where there had been two joint tenants the man remaining paid the whole rent, but no fine, 43769-70.—Witness was satisfied that the course followed was the right one and that holdings were now better and the people in better circumstances, 43772.—From the point of view of the proprietor it was not a profitable transaction; on one holding of about seven acres £40 was spent on a house and £14 on fences; the total judicial rent being afterwards fixed at £1 10s.; the landlord, witness's brother, was at a loss, 43751, 43771.—Witness produced a map of Ballyhearney showing the patchwork manner in which lands were held in 1873, when the middleman's lease expired; at that time and for many years previous the rental was £266, and although a new house had been built for almost every tenant and much fencing done, present rental was only £208; the agricultural rental of Valentia Estate, excluding townland of Coromore, when purchased in 1853 was £1,064, and although between £11,000 and £14,000 had been spent by witness's father on houses, making roads, drains, fences, etc., present agricultural rents were only about £950, 43772-3.—As instance of hardships invariably attributed to landlords, one grievance against witness's father was his endeavour to compel tenants to cut weeds on their farms, another, that he exacted a nominal yearly charge to preserve his rights to sand, 43773.—Witness handed in form of certificate customarily given long before Land Act of 1870 to any tenant effecting an improvement, 43773.

Piers.

Witness called attention to fact that the sums of £1,000 and £1,300 respectively spent on piers at Valentia and Meenaghahane, the latter outside the district, which were of very little value, would have been far better spent by Board on pier at Reenard, on which every inhabitant of Valentia had to land before coming to the island, and was of the greatest importance to the fishermen; at times the number of fish-boxes heaped up almost prevented landing, 43776-80.—From local information derived from fishermen Valentia slip was in right place, 43779.

Migration.

Witness had experience of other parts of Kerry; he had not heard Canon O'Riordan's evidence as to the population, but though loth to differ from him, knowing the great reluctance of tenants to leave their original holdings, he scarcely thought that if tenants were migrated in colonies to better holdings elsewhere the old people would follow, 43781-5.—If the plan were acted upon it would be an injury to Kerry and to the cattle trade which depended largely, so cattle jobbers informed witness, on their buying cattle for large grazing farms in the centre of Ireland, 43785.

FOLEY, Mr. TIMOTHY.

See pp. 77-8.

Condition of District.

Holder of 50 acres at Keas, Glencar, 43786.—All estates in district were congested; mostly small holdings which could not be enlarged for want of available untenanted land; several hundred acres of waste land could be turned into productive land if properly drained and limed, and there was also great scope for improvement of dwellings, road-making, 43786.

Sale of Estates

Seventeen years ago Lord Lansdown had offered to sell Glencar portion of his estate to tenants at 16 years' purchase; he now refused to sell on any terms, 43786-91.—Negotiations were also pending for past two years between General Dennehy and his tenants, about forty in number; 24 years' purchase was demanded by landlord, although as future tenants they had never had a reduction and were debarred from going into Land Court to have fair rent fixed; estate was subsequently offered to Congested Districts Board, but landlord refused Board's terms and later offered it to tenants on 20 years' purchase; tenants refused, preferring purchase through Board; immediately after refusal proceedings were instituted, hanging gale inserted in all cases, all tenants being served with civil bills and ejectments, as was the general rule with landlords in district when tenants refused their offer; poor tenants loaded with arrears were thus often forced into bad bargains, 43791-2.

Condition of People.

Farmers in district, to a great extent, depended on remittances from America and other countries to pay their rent; if they had to depend on land for a living they could hardly pay any rent, and in many cases, especially when potato crop failed, barely support themselves and their families, 43792.

MAHONEY, Mr. T. M'D.

See pp. 78-9.

Pier at Cooscroom.

Wished to draw attention to need of a pier at Cooscroom; several attempts had been made by County Council to get one, and seven years ago they had asked the Congested Districts Board to contribute; the estimate of £1,400 for an ordinary pier made by County Surveyor at Board's request was referred back as too great an amount for district, and an estimate for slip asked for instead by Board was rejected as too small, Board promising to send their own engineer; since engineer's visit nothing more had been heard of Board's intentions; there were about 100 fishermen, with about forty small open boats, which there was very great difficulty in landing; it was a shelving beach, with a north or west-north wind, it was rather dangerous, and boats were often broken; large boats would be safe if the pier were made, now none would be there, 43793-5.—Cooscroom was probably suffering from fact of proposal being in competition with that for Coonananna, about four miles distant, whose pier was built at latter place, 43796-8.

Coonananna Pier.

At Coonananna a mistake was made, and a site condemned by two or three coastguard officers was chosen in preference to one on a plateau of rock suggested by local people; owing to position of pier on sandy bottom and its direction straight on the motion of the tide the original cost of about £1,400 had been greatly exceeded; repairs owing to damage from the sea having been necessary twice in fifteen years, besides ordinary repairs, 43798-801.

Procedure adopted for Grants.

As to procedure adopted at Coonananna seventeen year ago witness could not say; since then County Councils had been established, which worked with the

MAHONEY, Mr. T. M'D.—*continued.*

Congested Districts Board and the Department; plans now had to be approved both by Council and Board, as a rule, probably no other plan was submitted than that of engineer; the fact of expenditure at Coonananna remained, however, 43802, 43810-14.—At Cooscroom, to witness's personal knowledge, Congested Districts Board promised a grant at the time if plans were approved of, and when plan asked for was placed before them, disapproved of it and gave no grant, 43803-9.

Reevard Pier and Railway Company.

When the County Council agreed to the amalgamation scheme of Great Southern and Western and Waterford and Limerick Railway Companies it was stipulated that the Great Southern and Western Company should bring in a Bill to build a pier at Reevard, opposition in Cahirciveen to the amalgamation being chiefly withdrawn on that ground; the Bill was passed, but to the present day no more had been heard of it, 43828.

Steamer Traffic.

The Clyde Shipping Company then had steamers plying there, and the railway rates to Cork and Dublin from Cahirciveen being, in some instances, 25 per cent dearer, one of the best actions of the Board was its subsidy to the shipping company; the service continued two years, but owing to want of local support the steamer was now taken off, 43828-9.—Their trade had fallen off latterly owing to railway competition, 43830.

Cahirciveen Pier and Channel.

The enlargement of pier at Caherciveen was very necessary to keep the port open, as without shipping traffic the railway company would have the monopoly; the channel needed dredging and a few rocks should be removed, 43830.

Poverty of Union.

Witness believed Cahirciveen Union to be the poorest in the county; speaking from memory of the Board's reports, though Kerry contained one-eighth of the congested districts of Ireland, up to 1902 it had only received about one-fortieth of the money expended by Board, 43814-5.—The chief remedial measures needed were to do everything possible to aid the fishing industry, and on the other hand to encourage local weavers, 43820.

Convent Industries.

As regards industries, Canon O'Riordan in speaking of the most deserving convent industry had omitted to state that the nuns applied to the County Council for a grant of £80 for equipment; the resolution was passed by Council, and no less than three times it asked leave to hand over the amount to the convent; the convent expended the money on the assumption that they would obtain the grant, but the Department of Agriculture and Technical Instruction refused to sanction it, 43818.

Woollen Industry.

As regards local weavers, witness had attempted some time previous to start a little local industry, keeping two weavers at work for about nine years, but starting with only about £90, and unable to advertise the wares, the industry collapsed for want of capital, the weavers being paid 12*s.* a week, 43818-9.—Local weavers should be encouraged; there was an abundance of wool, there was always a market, especially in England, for home-spuns, and by combination and attention to one or two small points the industry might be made fairly remunerative; in 1901 there was, roughly speaking, about seventeen weavers who could work, if they had work, between Glenbeigh and Caherdaniel, and only about four or six were getting employment; advertising was needed, 43820, 43828.—No instruction in weaving had been given, but witness had been in correspondence with Mr. Walker, who had not given them much encouragement, 43821-2.—One of the great complaints was that the stuff

MAHONEY, Mr. T. M'D.—*continued.*

was too narrow; local weavers got into the habit of making flannel of narrow width, as, employed locally by local people they had to put up the warp as they got it from the women who worked the stuff, this sold locally in the market was generally common flannel and the warp generally only 22 inches wide, although a 38-inch wide piece could be made in the loom; to make it wider the women, in the first instance, would have to be induced to alter the warp; they would do so if convinced it would pay them, and witness admitted the agency of the Parish Committee might be used for the purpose, 43822-8.—To a certain extent it had been made wider for the last two years, 43828.—Another complaint was too much sameness of pattern and want of design; improved looms should be adopted and designs sent to the weavers; this was the case at present with stuff made under Mr. O'Shea, 43822.

Cattle.

With regard to cattle, witness agreed with Canon O'Riordan's recommendation of Kerries, but the Board should guard against inter-breeding of cattle, especially as in Glencar district cattle were rather deteriorating; inspectors should visit the district occasionally and to prevent worthless animals spoiling the breed would probably have to be given powers by an Act of Parliament to have bad stock castrated, 43815-8.

Mineral Resources.

In reference to the diamond-boring, a man present in court found surface coal on three miles of the district forty years ago; no effort had been made to find whether the vein were valuable, although it would be worth while looking into the matter, 43830-2.

KERIN, Rev. H.

See pp. 80-3.

Congestion.

Prior parish, containing coast line of about thirty miles, was practically one large congested area, consisting of three portions and containing divisions of Emlough, Ballinskelligs, St. Finan's, Teeraneragh, and Manan; on the seven miles of coast line of Portmagee district there were 261 holdings, 176 of which were under £5 valuation (*map produced*), 43834-6.—In Prior proper, a peninsula with coast line of about fifteen miles, there were 310 holdings under £5 and 400 fishermen, 43880, 43882-3.

Piers and Slips.

Board had done very little around coast of that part of Kerry with reference to expenditure on piers and for fishing in Portmagee district, 43836, 43888, 43891-3.—In Portmagee district, from the Ownagar River there were 220 fishermen, the only pier, a small one at Aghada, was built by Trinity College, not for fishing purposes, but for landing sand and seaweed, and was in very bad repair; the Board offered some time ago to do something further on towards Portmagee, and County Council had promised help, but the amount of work necessary when engineer came could not be carried out for promised sum, 43836-8.—A little slip added to Aghada pier would make it very useful, 43836.—In St. Finan's, the next section, the Board was building a slip, still unfinished, work had been resumed last year, the weather became bad and all the work had been swept away; up to March, 1906, £1,446 had been spent on it; when finished it would satisfy immediate demand, 43879-81.—For another little slip at Foil-aniatin, the Board was giving some little help and work would be resumed when St. Finan's slip was finished, 43881-2.—These small boat-slips were very useful, fish was plentiful, there was a large number of boats, but greater facilities for landing were required, 43889-90.—A little slip was greatly needed on coast of Prior peninsula, one built by Board of Works at Ballinskelligs, near coastguard station, was useless except at very high tide, and if a slip were built somewhere near it would be a great advantage to Ballinskelligs;

KERIN, Rev. H.—*continued.*

the boats were nearer the good fishing grounds about Bull rock, they could have a curing station, and it would be far easier to bring the fish in to the train at Valentia Harbour; the erection of a pier would make fishing a success where it was not so before, 43884-7.

Development of Fisheries.

Development of fisheries and sale of all congested area to the Board were greatest needs of district and would greatly improve condition of people, 43921-2.—Fishing was a great industry along the coast and its effects were felt about two miles inland, there were not many townlands in the whole parish not dabbling in fishing in some way, or living by it, 43851-2, 43929-31. —There was a market and a curing station for fish at Portmagee, where Manchester and other companies had agents on the spot who cured the fish and sent it to the American market; the fish caught was sent to catch the train at Valentia Harbour, and the fresh herrings and mackerel got on the Ballinskelligs side were carted to Cahirciveen, 43836, 43886, 43935-9.— Because of the small boats in use, witness desired to call attention to fact that not merely steam trawlers but sailing trawlers should be kept further out to sea, 43890.

Land Purchase.

The other great need for development of districts was the purchase of the whole seaboard by Congested Districts Board, witness would prefer this to direct purchase by tenants, as these could not help themselves so well, and they would get more help from Board in reference to improvements and fishing than in any other way, 43844, 43852, 43855-6, 43876-8, 43921-2, 43926.—Witness would advise a tenant to become owner of his holding no matter what rent was, 43875.—But he would strongly advise people to wait until Board could purchase and improve land rather than become annuitants with unimproved holdings, 43853-4, 43877.—There was disinclination on part of the landlords to sell their properties to the Board, witness had written to every landlord and agent in the parish to know whether they would do and had not received one sympathetic answer; they did not see their way to sell, 43838, 43838A, 43843.—In fact the landlords expected to drive a harder bargain with tenants than with the Board, 43838A.—Some negotiations were going on, an arrangement had been almost come to with Sir Morgan O'Connell to sell to tenants, but not to Board, 43843.—Sir Morgan O'Connell had considerable property, he and Trinity College were the most important landlords and there were three or four smaller ones, 43839, 43841-2.—Three townlands had been purchased, Lord Lansdowne had sold one estate to tenants under Ashbourne Act, and Mr. Charles O'Donell another to tenants direct, 43845, 43924.—Tenants were much better off on purchased Lansdowne property than before, and than those who had not purchased, and improvements had been carried out, 43846, 43924.—The reduction in rent, which, on one of the numerous holdings of £2 10*s.*, a year's rent, amounted to only 12*s.* 6*d.* yearly, meant much to poor people, 43847-50.—The land was no better tilled, the people witness now spoke of lived by fishing, they were all fishermen when they could get fish, they had both things, but depended rather on fishing than on the land they had; under these conditions the small difference in rental would not make so much difference to their condition, 43851-2. —Anxiety of people to purchase £2 10*s.* holdings through Board was because of impression that Board would help them, 43856.—Anxiety to purchase such holdings direct from landlord was caused by two chief reasons, want of realisation that they have security of tenure, and fear of arrears to obtain temporary relief from which, unfortunate poor people consented to sign terms of purchase which were excessive; the fear acted as a lever to force up prices, an instance of this being given, 43857, 43865, 43874.— Witness thoroughly agreed that there was a feeling among these farmers in Ireland that if a farm were left derelict almost, and unimproved, it would fare better when there was an inspection of the Assistant-Commissioners for estimating fair rent than on an improved farm, but did not blame them for trying

KERIN, Rev. H.—*continued.*

to get some reduction if the land had been overtaxed already; if, however, a man did it for twelve or thirteen years, giving up a certain productiveness of his land for a hypothetical reduction at the end of fifteen years, it was an absurd method, 43866-8.—For the better class of land Sir Francis Mowatt's explanation would hold good, that the man for the first ten or twelve years made the most of his farm and did the best he could; for the last two or three years he thought it worth while to let the farm die down so that it might be valued below its value when the time of valuation came; and at the beginning of the fifteen years the farm was probably not a bargain, 43868, 43870.—If the land in that part of the country were let go beyond three or four years it would be very hard to make anything out of it, 43869, 43872.—If the land were got the question would arise whether farms were to be greatly improved by reclamation or not, 43871-2.—The fact that a man knew the Sub-Commissioners would come and inspect the land might have a very deterrent effect, 43873.— Taking holdings towards Ballinskelligs, cutaway peat bogs without any appearance of cultivation, the land was capable of being improved provided the people got some help; people would be very slow to leave these places, and with a little help would rather improve their holdings and stay; much of the land had already been purchased and a great many improvements carried out, 43924-6, 43928.—In former times they could not improve without being overtaxed, but holders would set about improvements with better heart if they were the owners, 43858-61.—Congested Districts Board should be able to help them although expenditure of labour and money might be enormous before they could be made prosperous, 43926-7.

Kelp.

No kelp was made, they depended a great deal on seaweed for manuring, 43934.

Lime.

There were two lime-kilns in parish, about one and a half miles from Waterville, which could turn out about 600 barrels of lime, but had not been worked for forty years, they were built sixty years ago by Lord Lansdowne, who brought limestone in boats from Kenmare, close to kilns, burnt it, and sold it to tenants at 1*s.* 10*d.* a barrel and to outsiders at 2*s.* 6*d.*, 43893-5, 43899, 43909.—When kilns were working tenants were paid for working and burning, 43904.—Limestone rather than burned lime was brought presumably because more profitable, and with idea of giving employment; also fuel was very abundant at the time, 43905-8.—Working was probably discontinued because unprofitable, 43896.—Price of lime from Cahirciveen was now 3*s.* a barrel in Waterville, 43899, 43902.—At Cahirciveen it was sometimes 2*s.* 6*d.*, sometimes 3*s.*, 43901.—Lime for district came from Kenmare but might be bought at Cahirciveen from Killorglin, 43903.—There was no quarry nearer than Kenmare, where limestone was bought in rude state; witness could not tell price of burned lime at Kenmare kiln, 43895, 43908-10, 43918. —At Killorglin price was once 1*s.* 2*d.*, then 1*s.* 4*d.*, now 1*s.* 6*d.*, 43910, 43919.—It would not work well to bring shipload of lime from Killorglin or Kenmare, price of lime would go up in Killorglin if Waterville were supplied thence, and question had presumably been considered before kilns were built, 43912-14.—Every one admitted need of lime in district, quantity being needed for lime-washing of houses and it would be great boon if Board would take up and work the kilns, selling the lime to poor of congested area; at the end of two or three years the work might be self-supporting, but even at a loss to Board witness would wish experiment tried, 43893, 43895-8.—As Mr. Doran said, Board should be placed in position to risk public money on well-considered schemes, 43915-6.—People of country greatly lacked initiative, 43917.—If land were bought by Board, or similar body, before selling to tenants, institution of well-considered schemes of lime-burning would be very useful, 43920.—There was no Parish Committee, and difficulty of procuring lime was in itself an obstacle to working one, 43932-3.

FITZGERALD, Mr. MAURICE.

See pp. 83-9.

Valuation of Dromod Parish.

Valuation of Dromod Parish in 1901 was £4,767 17*s.*, and since then there was depreciation of £700; valuation was, however, no true criterion of value of land, since railway connection was non-existent at time of valuation, latter was often unequal, and one landlord at least had requested valuers to value lightly for rating purposes, 43941-2.

Character and Size of Holdings.

Average holding in Dromod parish would be from 30 to 36 acres, or what was known as a six-cow holding or glenska, 43942, 43976.—This size was quite sufficient for class of land in locality; average amount of tillage, but not meadow, would be about five acres, or nearer still, four acres, 43960, 44126.—There would be no rough mountainous grazing on these farms; some such farms called glenskas had 200 acres of mountain, but were valued, not by acreage, but by grass of six cows, and included bog, some bottom, and some reclaimed bog, 43977-8.

Spade Labour *v.* Ploughs.

If holdings were larger they could not be kept in rotation, and land would deteriorate owing to large amount of spade labour necessary on peaty land, 43942-4.—Some of land, such as reclaimed bog, was easy enough to work with spade labour; it was impossible to plough, as horses would sink, 43991, 43994.—If the bog top were first drained horses might plough it, but in some cases not for years, 43995-6.—Some of the land would be strong and stiff, and extremely hard to plough, 43994.—Where the plough could be used there would not be an increase in size, because in most holdings there were certainly some acres of reclaimed bog, and the man must do his part, 43992.—If the better land were ploughed and spade labour used for the same portion as before it might be rather too much tillage; it would not pay a man of that class, 43993.—Increase of size would not prevent emigration to America, 43994.—There was no untenanted land to be bought up, 43944.—People with their own sons to help them were far better off than others, 43945, 44014.—Tillage had not decreased to market extent during last fifteen years, 43943.

Labour and Emigration.

Many people were emigrating in recent years, 43943.—Enlargement of holdings would not affect this; there was plenty of work for sons on 36-acre holdings; young men got 2*s.* or 2*s.* 6*d.*, but when one son came into the holding majority of others would have to emigrate, 43944, 43946.—It was not altogether a question of wages, 43961.—It would take a long time to check emigration; there seemed a craze for going, friends in America urging people to go out, 43948.—Some did very well; about one per cent. came back and bought land, 43949-51, 43963-4.—Many of them were not successful, and the majority never came back, 43949-50.—One heard of the few successes, seldom of the hundreds of failures, 43952.—Witness agreed that there must always be a surplus population seeking employment in any district, for whom it was impossible permanently to provide land, even by present redistribution; it was difficult to imagine such development of fisheries as to give work to all the young men; there was nothing, therefore, but emigration or an added demand for labour such as to counteract the price of labour in other parts; this could only be effected by price of agricultural produce raised by tillage being in some way enhanced, 43953-9.—Men, except in few instances, could not do better at home than by emigration, but girls could, 43962.

Labourers' Cottages and Occupation.

Except for work round Waterville, very little labour was employed on land, most farmers doing work themselves; no labourers' cottages were built in locality so far, but some were to be built, 44007.—Labourers were getting an acre of land, hence demand for cottages; there was great danger of establishment of number of uneconomic holdings by encouraging people who were not, and could not be,

FITZGERALD, Mr. MAURICE—*continued.*

farmers, to continue in district, 44008-10.—Best remedy would be to establish industry such as peat industry, 44010.—Possibility was under discussion of giving road-making to labourers direct from County Council, instead of to contractor who employed his own sons, as was always case at present, 44010-12.—Where number of small occupiers was large they took place of labouring class; many in that country who had not holdings large enough for their families were glad of work for their sons, and if the work were given to labourers resident contractors might become unemployed, but the majority were farmers; some made a good deal of money, and all must live, 44013-4.

Girls' Domestic Service at Home and Abroad.

There was no difficulty for girls in getting £12 a year in the district; there was, on the contrary, an immense demand for domestic servants to do ordinary work, washing and milking, in Tralee, Cahirciveen, and Dromod parishes, 43948, 43965-68, 43970.—Fifteen years ago a girl of that class could be had for £6 a year, 43966.—The scarcity now was owing not so much to number of servants employed by some people and tourists, but to objection of girls to do rough work, especially milking; they preferred for less money places where there were no cows, and farmers blamed Waterville for this, 43969-70.—Training for domestic service in primary schools, though fitting them for after life and enabling them to command far better wages elsewhere, would probably increase tendency to emigrate; very few in parish wanted such trained servants, 43970-2.—Majority of girls could do as well at home; the experience of a girl formerly in witness's employ at wage of £12 a year, who had been in America some years, was that £12 in Ireland was equal to £30 a year or anything they might earn in America, 43948, 43962, 43965.—Girls could not put away much in America; with high wages they had tremendous expenses, instance being given of one with £60 a year who found it very hard to save at all; girls would do better to stay, 43973-5.

Agricultural Instruction and Experimental Plots.

Practical agricultural instruction would be of the greatest benefit; people had never heard of Congested Districts Board or Agricultural Department until last couple of years, when Board purchased an estate in next parish; the instructor sent to Tralee this year had given lectures in Waterville on three occasions, but the majority of people were not educated enough to understand lectures, and experimental plots would be far better, 43979.—Model farms would be too expensive; the Department's representatives should have compulsory powers to buy one or more experimental plots in every parish, and use as many each year as he thought fit in demonstrating best means of growing crops, 43980, 44118.—It would be better to work this through the Department's representative than by selection of the best farmer on an existing farm, and teaching him through medium of instructor to avoid jealousy as to choice, 43981-2.—However, it certainly would be a striking illustration if farmer under instruction were enabled by scientific treatment to double his receipts; others would thus see what one of their own class could do, 43983-4.—Plots should be from a quarter of an acre to an acre in size, 43985.—Experimental plot tried by Department's representative on witness's land that year, with object of showing advantage of sowing whole potatoes instead of cut ones, was unsuccessful, although preparations and planting had been carefully carried out; about half were sound, and no better than witness's own; the rest seemed to have failed and without apparent cause; the kind of potatoes was same, but not of same seed; had the experiment turned out well witness was prepared to set whole potatoes; now he doubted, 43985-90.

Potato Culture Methods.

Method of planting potatoes in big ridges was peculiar to all the poorer parts of Ireland; the chief reason was not to carry off surface water, but because there was not so much waste of ground; potatoes apparently did better in ridges than in drills; there was plenty of room for them, as much as in the drill;

FITZGERALD, Mr. MAURICE—*continued.*

there was 24 inches clear between every potato, and measured across a foot between each, and no holes between, 43997-4003.—Compulsory spraying was desirable, 44098.

Agricultural Implements.

Use of plough might be advantageous to occupiers of small farms, and it would be great advantage if ploughing and mowing machines could be hired out to farmers for the season; this would be better than using banks to enable people to buy mowing machines, and if there were a Parish Committee its agency would be a good one to have a stock of agricultural implements for hire at reasonable terms, 43990, 44005-7, 44098.

Butter Industry.

Decline of salt butter industry had been terrible loss to country; till within last twenty years every man used to keep his butter till he had two or three firkins, and sell it for a lump sum in the town, the firkin being the measure in use; now the butter was taken in small quantities, and the temptation to spend the price led to its being frittered away; a creamery started three years previous was not so successful as desirable, but they were getting more milk, and it was believed people would take it up in time, 44003-4.

Agricultural Banks.

There were two agricultural banks in the parish, one doing very well, the other not so well, owing probably to difference among the Committee, 44004.

Sale of Estates.

Two large estates had been sold in district in last five years, and negotiations were pending for others; there was but one estate sold to Congested Districts Board, Lord Lansdowne's estate in neighbouring parish having been sold direct to tenants under Ashbourne Act, 44053-4.—Hartopp and Lansdowne estates were about same value as property, and were sold practically for same price, twenty years' purchase, 44055-5A.—There was great difference in soil of two estates, a great deal of bog on one, and none, or very little, on Hartopp estate, 44054.—Board had made road at very great expense to top of mountain in order to get at some bog, 44054, 44058.—People on Burns-Hartopp estate were very short of turf; it was necessary to provide people with fuel, and turf was abundant in parish, although not on that estate, if there were means of communication, but in the opinion of one who knew locality well, road made at immense expense would never repay cost, the bog being rather inferior, 44056, 44058-60.—Witness had seen some of works carried out by Board on Burns-Hartopp estate; greater improvement than he had ever seen made by any landlord in locality; some would do a great deal of good; in some cases money had been expended foolishly for fences, the only advantage of which was to keep cattle off road, which had cost much to build; but the fences being entirely built of sods it would no doubt be of no use in a few years, owing to sheep jumping over it, and knocking down sods, and to the temptation to people short of turf to take from the fence; of the stone portion of fence some was very good, some very bad, 44056, 44061.—People on the property might be got to associate for preservation of improvements, but it was greatly to be doubted; they were unused to associate thus, 44057.

Sale of Estates through Congested Districts Board *v.* Direct Sales.

Witness could not agree with Father Kerin's evidence respecting letters written to induce sale of land to Congested Districts Board; Mr. Thomas O'Donnell, M.P., sent round circular asking priests to write to landlords and agents to ascertain their willingness to sell to Board; witness, who was agent for a very small property in Father Kerin's parish, and had just been negotiating with tenants as to terms, received a letter from Father Kerin, and in reply stated that the terms given tenants were the best that could be given; it therefore seemed useless to sell to the Board unless they were prepared to give same terms, 44061.—Witness very much doubted that landlords would have any objection to agreeing on price with tenants and selling through medium of Board instead of through Estates Commission, 44061-2.—Impression that a lower price would be had by selling to Board than by sale direct to tenants had arisen through just idea that no man, or Inspector, however capable, was so good a judge of land as the one bred in locality, whether landlord or tenant, provided he were an unbiassed fair-minded man; an island of 100 acres in Derrynane, some of best land in whole parish, on which cattle thrived almost incredibly, would not be valued by a stranger, who could not know this, at a shilling an acre, 44063-7.—Political views sometimes influenced personal interests; witness held none, 44067-9.—Power should be conferred on Board to buy at public auction, if they thought necessary, for the extension of holdings, any farms that might from time to time be for sale; the prices fetched at auction in that locality being very high, Board might not, however, be prepared to pay the price, 44118-9.—Estates in congested districts should have precedence of others as regards payment, 44119.—This was only fair; object of Act of 1903 having been to benefit poorer landlords in poorer districts, and enable them to sell, as they could not do so otherwise; the richer landlords had, however, taken up all the money, 44072, 44119-22.—It had never been said in Parliament that Act was for benefit of landlords, but was ultimately mentioned, witness agreed; Act was carried on policy of improving conditions of small holdings in congested districts, 44123-4.—First big landlord to sell was Duke of Leinster, 44120.

Terms of Payment.

When there was willingness in that locality to sell to tenants at 5*s.* to 6*s.* in the £ on second term rents, compulsory powers could not be necessary in district, 44069.—5*s.* to 6*s.* in the £ would represent about twenty-five years' purchase, or a little more, *i.e.*, respectively, 22½ and 21½ on second term rents, very few of which were sold before 1903 Act, 44070-2.—This Act would not have been required had it been possible to sell all land under Ashbourne Act; its object was, however, to benefit poorer landlords, 44072.—There was certainly bonus as inducement to landlords to sell, and advantage of paying off mortgages, but delay in payment, rather than the price, prevented sale; in many instances landlords were poor men who could not possibly afford to wait five or six years for their money, as would now be the case; it might mean ruin to them; if there could be a guarantee for payment in twelve months all land would be sold directly, 44073-6.—Depreciated money market made chance of getting money thus almost impossible, 44076.—Prompt payment would be advantage as allowing good re-investment, but landlords in some parts would be less affected; the poorer the district the poorer the landlord, 44077.—Landlords would scarcely be willing to follow precedent set by sale of Burns-Hartopp Estate to Board at twenty years' purchase, or 7*s.* in the £ in case of second term rents fixed by Land Court, 44078-80.—Witness would be very glad to accept twenty years' purchase and have bonus, on condition of immediate payment, but he could not answer for others, 44082.—On rents fixed by arrangement 5*s.* 6*d.* or 6*s.* would be excellent terms, as in majority of local instances where tenants had obtained two reductions their rents had been cut down one-half; thus a man paying £10 in 1880 now paid £5, and if he got 6*s.* in the £ it would greatly cut this down, even though reduction would be on smaller sum of £7 10*s.* instead of £10, 44080-1.

Middlemen Landlords.

Witness was unable to sell to his tenants, 44069.—Middlemen landlords in Kerry, such as witness, who was middleman under Mrs. Trent Stoughton, were being squeezed out of existence, having to bear brunt of all reductions and being obliged to pay head rent as though there had never been a reduction, 44082-3.—Further, witness was debarred from selling through Act of 1903, his lease not being for sixty years absolute, although fully equivalent, being forty-one years after present Knight of Kerry's life; this was

FITZGERALD, Mr. MAURICE—*continued.*

a great hardship, 44069, 44083, 44092, 44095-6.—Under Act of 1903 middlemen could not sell with less than sixty years' lease, 44083, 44092, 44095-6.—A recent witness had stated he considered tenure under middlemen the worst imaginable in his district; witness himself could not see how rents of tenants had been affected, but it affected unfortunate middleman very much, 44084.—He took up all functions of landlords towards tenants, who could only purchase from him, 44094-5.—Head landlord could not negotiate sale to tenants, and middleman could only do so by first redeeming head interest; this implied head landlord's consent to middleman's purchase of head rent so as to become owner in fee, and meant payment in cash, whilst being obliged to wait for money if selling to tenants, 44084, 44087, 44090.—Witness had obtained permission of Mrs. Trent Stoughton, but necessary cash payment of £5,000 to redeem head rent would be absolutely impossible for him, 44083, 44088-9.—If it could be redeemed from purchase money plan would be feasible, 44084.—If absolutely certain of getting purchase money in twelve months there would be no difficulty in borrowing, but if payment were spread over five years, interest on £5,000 would mean ruin, 44088.—In either case the price to be given by witness would be matter of negotiation with head landlord; had the lease been of more than sixty years, the price, in case of disagreement, would be fixed by Land Court, 44090.—Witness could not obtain public money under Act of 1903 to buy; he would have to redeem lease, Act not applying in case of head rent under less than sixty years, 44091-3.—Head landlord could not be paid out of purchase money; witness had counsel's opinion, and knew his case to be correct, 44093.—Witness's negotiations with landlord were begun three years previous, necessity of cash payment ending all, 44097.—No negotiations were begun by him with tenants, head landlord having laid down fixed price, which witness was obliged to agree to, and willingly accept, for power of sale to tenant, considering possible intervention of middlemen most undesirable, 44098.—As remedial measure, witness suggested that head landlords and Government changes, such as those of Board of Works, should suffer *pro rata* with loss incurred by middleman on sale of property, 44124.

Cattle.

Good breed of cattle should be introduced; bulls sent by Board during last fifteen years, or possibly by Department in last two years, were very inferior; it was apparently supposed that none but Kerry bulls were suitable, 44111, 44117.—Witness's shorthorns did not sell very well, 44111A.—They had Galloway bulls, very good cattle, but which did not grow and sell well as two-year olds; this breed was best introduction ever made in country; two cattle dealers visiting fairs last year to purchase Galloways could not get them, supply being far below demand, 44112-4, 44118.—Polled Angus were best for locality, for, though not so good as yearlings, they turned out well afterwards, 44111, 44113.—No other breed reared in district should be kept there, or there would never be a good milking breed; a good strain should be introduced from another part; although a dairy country, so little attention was paid to breeding or anything else, that some of the milk scarcely deserved the name, 44115-6.

Basic Slag *v.* Lime.

Supply of best basic slag should be sent by steamer and sold at cost price; beneficial effects of lime were known; witness's experience was that basic slag containing 38 to 42 per cent. of phosphate of lime was far better, ton for ton, both for bog and earth, 44098, 44101, 44108.—Basic slag acted very suitably on boggy land, and was of far more benefit to it than to clay; it disintegrated the bogs, and, if introduced, would help tillage, 44099-102.—Department of Agriculture and their representative bought best basic slag in Tralee at £2 15*s.* a ton, probably because there was the impression they would purchase largely; general price was about £3, lime being £3 or a little more per ton, 44103, 44106-7.—There was no native basic slag in Ireland, but witness thought the very best quality could be obtained, 44104-5.

Sea Fisheries.

Dromod Parish was not affected as other parishes were by fisheries, there being not a single sea fisherman in it; but a slip was greatly needed to accommodate the fresh-water fishermen, who could not fish for salmon and trout in winter, and could fish in the season; there would be sea fisheries if there were a slip, 44014-9, 44022, 44024.—In reality the slip would be great convenience to sea fishermen of other parishes, men who suffered much from want of proper boats and from depredations of foreign trawlers, 44014, 44022-3.—Cahirdaniel fishermen, when carrying a large catch of mackerel from fishing ground between Scariff Island and Derrymore, about two-and-a-half miles from Waterville, and taking it to Cahirciveen, had to go all way round to Derrynane Harbour to land it, 44022, 44024, 44029, 44033.—There was very good fishing; hauls of thousands of mackerel were regular thing in spring and autumn, 44030-2.—There were no statistics of catches of salmon or mackerel, but these varied immensely; three boats at Ballinskelligs about three months previous had brought in a huge haul, but very little since, 44034.—A good centre for slip might be on a line with Protestant church, 44020.—If slip were built, Waterville fishermen would have immense advantage in being nearer their destination in returning home with their catch; only advantage of Cahirdaniel men over them was nearness to fishing grounds, 44025-8.

Steamer Traffic.

Quite apart from fishing, a pier would be of immense advantage at Waterville in enabling boats and steamers to come up, 44034-5.—Ballinskelligs Bay was not unsafe for steamers; in majority of cases they could run in easily, and without danger to vessel, in lying alongside, from strong westerly winds; bay had not a sandy bottom, 44038-40.—Growing importance of Waterville would make it well worth while for steamer to ply, 44036.—Steamer of Clyde Shipping Company running from Cork used to come to Cahirciveen and Derrynane, and back, and service paid, 44036, 44044, 44047.—It was not subsidised, 44046.—Service alluded to had been given up about three years previous owing to some difference, reason of which witness could not recall, 44036, 44041-2, 44052.—When steamer called at Derrynane it was not of least service to Waterville, 44037.—Cessation was certainly tremendous loss, as railway rates were very high, and cost almost prohibitive for goods from a distance, 44034-5, 44041, 44043, 44047.—Witness would not like to state that railway rates had gone up since steamer stopped running; but the places were affected in another way, as steamer's rates were naturally always far less than the railway company's, and might have affected the latter if continued long enough, 44048-50.—As an instance, carriage of two chimney-pots from Wales was exactly equal to cost of one of them; had there been a steamer running from Cork, cost would have been less, 44050.

Inland Fisheries.

Inland fish in immediate neighbourhood was fairly protected in spawning, although some of similar streams in spawning district were neglected; protection was as good as in most parts of the country, 44052-3.

Parish Nurses.

Every parish should have, if possible, one of Lady Dudley's nurses; besides the actual nursing, the educational influence that could be exerted by them in sanitation was very important; as an instance of the want of this, in a case of typhus some years previous the household drank the disinfectants taken to them, 44125.

DELAP, Mr. WILLIAM J.

See pp. 90-5.

Land available for enlarging Holding.

There was in County Kerry very little land in owner's occupation available for enlarging small holdings, or to migrate occupiers from congested districts, 44130-1, 44133, 44159.—What land there was was chiefly rough mountain, entirely unsuited for tillage, and only suitable for young cattle during summer and autumn months, 44130, 44143, 44146.—There was but a limited quantity, as nearly all mountain grazing was held as undivided easement by tenants at foot of mountain in proportion to lowland take or part suitable for tillage held separately, 44130-1.—Much of land in district was reclaimed bog, requiring to be tilled from time to time to prevent return to original condition, 44147-9.

Migration.

No holding of rateable value less than £8 to £10 would be sufficient in itself to support a small farmer and his family, 44131.—Introduction of strangers from a distance was not practicable in Kerry, but in any case would always create jealousy, and in some districts, such as eastern parts of Galway, it would lead even to physical opposition, 44131-2.—In many different counties there was land which could be readily acquired if fair price were offered by Board; but introduction of strangers during negotiations for sale of estate in County Leitrim, for example, for purpose of dividing it up among migrants from Kerry, not only uneconomic holders in Leitrim but the larger holders would feel aggrieved; the jealousy was expressing itself very strongly in grass lands with reference to cattle, 44159-63.—Migration of occupiers from congested districts to any extent would be exceedingly difficult and costly, the sentimental feeling against going to other and distant counties was very strong and inducements would have to be made very tempting, 44133-4, 44149.—From twenty-five to thirty years' experience in Kerry, witness thought Kerry men could scarcely be induced by offer of holding and greater comfort in another county to transplant themselves; if a few were induced to go their example would affect others, but it would take many years, 44136, 44140, 44142.—There was not same disinclination for emigration, almost everyone having friends in America, whither whole townlands had migrated in famine years, 44141.—It would be absolutely necessary that migrants should be taken where they could carry on the system of farming to which they were accustomed; those from congested districts in Kerry to none but pastoral districts, dairying and raising of young cattle being their chief business, and hardly any crops being raised beyond what was necessary for home consumption; if placed on land suitable for tillage it would take a couple of generations to educate them, and learn fresh system, and meanwhile their new holdings would be seriously run out by system of meadowing or con-acre, 44142-4, 44158, 44194.—Witness had not personally followed career of people already migrated by Board, except from hearsay, but farms he had seen were being worn out by system just mentioned, 44150-2.—The first years were always very difficult in such cases, and although it did not follow that meadowing and con-acre would be resorted to in after years, unless capital were provided for migrants at the outset, their only means of living was to run out the farm and thus affect themselves for years after, 44153-4.—In almost every case homesteads, out-offices and fencing would have to be provided, and in a great many cases assistance would have to be given towards stocking new holding; tenant's interest in old holding might be set against interest acquired in the new, though interest on latter would be larger, 44149, 44154.—Loan system burdened a man, but a loan of ready money in first instance, repayable in five or six years, would meet difficulty as far as stocking of land was concerned, 44155-7.—Witness could quite imagine migrants paying a little on surrendering holding towards value of improved tenant-right on larger holding, 44158.

DELAP, Mr. WILLIAM J.—*continued.*

Grass Lands and Cattle Trade.

Witness had reason to suppose that demand for more grass lands by big men would be supported; the breaking up of any land which would carry good permanent grass was, in his opinion, most undesirable; the cattle trade of the country being its most valuable asset, and the breaking up of large grass farms in grazing counties would damage trade in young cattle, on which tenants in congested districts of South mainly relied for ready money; roughly speaking, the practice in trade was as follows:—Calves bred and reared from 1½ to 2 years were sold to dealers, who passed them on to better grass lands in midland and home counties, whence they again passed on to fattening lands of stall-feeders, 44164.—In management of large farm on Butler estate (Waterville) witness bought young stores of 1½ years at local fairs at £4 to £4 15*s.* per head, or bred them himself; when about 2 years old they were sent to another farm in King's County, and when fit for fattening, after six or eight months, they were sold for £8 to £9, to be finished by men who made practice of stall-feeding or for fattening lands in Meath or Kildare, 44164-6, 44168.—If grazing lands in Queen's County, King's County, and Roscommon were divided into holdings of thirty acres each the system would be hopelessly disorganised; carrying power of 100 statute acres of medium grass land would be about 30 head of two-year-old stores, divided into three farms, the acreage necessary for tillage, meadowing, house and offices on each would reduce carrying power of land for cattle by at least 30 per cent., 44166-7.—Most of the lands to which cattle were sent to be finished in Kildare were tillage, producing the stall-feeding material; both in Meath and Kildare there was much land that would be better in tillage than in grass, 44169-70.—If the second-class land were broken up into 30-acre farms, the occupier could not feed more than six or seven head of cattle in the year, and he could not do so to same advantage as man with 40 or 50 head of cattle in the house, 44173-4.—The demand for cattle might be increased if some of the second-class and third-class land were tilled for green crops sufficient for stall-feeding, and but though first-class land were spared, this would disorganise the system, as cattle were taken direct from congested districts, 44175-8.—There were two ways of fattening; there was land that would of itself fatten cattle, and others produce fattening stuff; the latter might somewhat increase demand for cattle, but you must have second-class land intact to keep cattle fit for fattening, 44178.—It was pure nonsense, in witness's opinion, to suggest that the grazier of medium lands—the middleman— should be done away with and the small farmer fatten his own cattle; he could only keep 40 per cent. of present number, probably had not land suitable for necessary fattening crops, and to buy artificial feeding would be ruinous, 44192.—Intermixed stock and tillage and fattening by small men would cause keeping cattle for a longer time, a decided disadvantage, 44179.—A man disposed to fatten cattle in Meath or Kildare could not take them direct from congested districts, as they would not be sufficiently advanced to fatten, 44183.—An animal should be fully grown before it could be fattened, and one could not get same class of beef from animal of two as from one of two and a half or three years, 44184, 44188.—Witness had not heard that experts considered it a loss to allow full growth before fattening had began, or that veal was superseding beef; as far as his experience went back in Waterville district, they were bound to get rid of cattle after a year and a half or two years old; he had no knowledge of any systems other than present system in Ireland, so could not compare it with that of any other country, 44186-7, 44191, 44193-4.

Improvement of Domestic Animals.

Character of stock exerted great influence, 44181.—Board had adopted very best possible method for improving breed of domestic animals by introduction of thoroughly good and suitable breeds of cattle, sheep, pigs and poultry; anyone acquainted with districts about Cahirciveen and about Kenmare would be struck by extraordinary difference in class of cattle raised; in former, Knights of Kerry and Butlers of Waterville had for many years kept up a very pure strain of Kerry cattle; in Kenmare district, where no one

DELAP, Mr. WILLIAM J.—*continued.*

had introduced good stock, cattle was miserable; in Dingle and Ventry districts Lord Ventry and Mr. George Hickson had long maintained very good class of sheep with excellent result to sheep of district; much more might be done, and Board should have larger command of funds, 44260, 44267.—Trinity College authorities had done nothing except providing sheep in Valentia Island, 44261.

Dual Interest in Land.

It was very difficult to arrive at fair price of dual interest of land in owner's occupation, suitable for purposes of Board; occupation right of tenant was that of occupying a certain farm at certain rent, of enjoying improvements made by him or his predecessor and selling same in open market; that this interest was a very valuable commodity was clear by price tenant could obtain; landlord in selling was paid for right to receive income of estate and exercising all other appurtenant rights; both parties had commodity to sell, and if landlord was in position of both landlord and tenant he had both rights to dispose of, 44215.—The question of dual interest as a security had been most lamentably lost sight of by Estates Commissioners in fixing amount of security a holding represented; they had apparently entirely ignored existence of tenant's interest in estimating security offered which often exceeds that of landlord, 44255.—Mr. Boyd and Mr. Wrench in their evidence estimated dual interest roughly at 1⅓ more for untenanted than tenanted land; the figure was somewhat low, but Mr. Boyd's suggestion that valuation and one-third be taken as minimum value, and that it should be open to landlord to prove that his income derived from lands in his own occupation was greater, and that the price be fixed accordingly, would give fair basis for ascertaining value of dual interest, 44215.—Occupier's interest, as Mr. Boyd suggested, might be reckoned at one-third, or, as Mr. Finucane proposed, might be shown by landlord's books, giving fair occupation value of holding, 44251-2.—There was a difference between 1½ valuation, and second-term rents and one-third valuation, and it was worth solving, 442545.—Second-term rents in Kerry were at or a little beyond the valuation; but it varied greatly in other counties, 44253.

Sale of Land and Compulsion.

Judging from witness's experience on thirty-five or forty estates he had managed in that and other parts of Ireland, Board would be able to purchase all the land required without any compulsion, 44215-17, 44240.—Witness had never heard of a landlord absolutely refusing to sell, in no case within his experience had an owner refused a fair price, 44218, 44240-1, 44247.—Were there such a case, witness would prefer remedy of leaving men who refused alone, and buying all other land; very few would hold out, 44220-1.—No one had right to compel another to give up his land; the principle of compulsion existed it was true for purpose of light railways and small holdings, but price was considerable, 44224-6.—Witness had bought land, and found that when you wanted land particularly you paid an extra price for it, 44242-3.—Assuming that land was absolutely essential for enlargement of holdings, assuming that land could not be obtained by other means, in an extreme case, such as absolute refusal by absentee not requiring land for his income, or refusal of reasonable terms obliging purchasing authority like Board to go further afield, witness would recognise necessity for compulsion, but only as very last resource, 44219, 44221, 44227-32, 44235, 44250.—If there were such necessity it would be in Kerry, and extreme case in another county must be met in same way, 44228, 44230.—That length had not however been reached or negotiations exhausted, 44232-3, 44236.—Where landlord fixed a price, Board having to buy and sell afterwards without repayment, would be justified in refusing if price were too high, 44244.—Instead of dropping negotiations, splitting the difference, as was done at fairs, would be best, 44245-6.—Much depended on original difference between them, 44247.—Were compulsion adopted, a tribunal would have to be created for fixation of fair price, as in the case of price to be given by a tenant, 44248-9.—Only way to arrive at fair value of untenanted land would be for some independent person to make valuation as to letting value, adding occupier's interest in that, and landlord's interest in that, 44251.

DELAP, Mr. WILLIAM J.—*continued.*

Financial Legislation.

Financial part of land legislation of past years presented extraordinary anomalies; legislation first proceeded by reduction of rents and giving tenants practically fixity of tenure, to reduce owner's interest to lowest possible point; the authority then came forward as money-lender, with depreciated value as security; they fixed limit above which price might not go, and limited possible purchaser to then occupier of land; all this resulted in exactly half the working capital of country being taken out and invested elsewhere, 44255.

Loans for Improvements.

On almost every estate with which witness had been connected, money had been borrowed by landlords from Board of Works for making roads, drains, reclamations and other improvements; in no case within witness's knowledge had tenants been required to pay, either directly or indirectly, any part of these loans or interest on them, 44255-6.—When rents were fixed in Court, evidence on landlord's side as to expenditure was sometimes given, and would have tended to help re-sale of estate, so that indirectly, by fixation of rent, the tenants would pay something, unfortunately not the smallest attention was paid to this, 44257-9.—Witness had schedule showing former conditions of eighteen or twenty estates which had been in his management, and present condition as to number of tenants, yearly rent, present arrears, and average yearly receipts, 44259-60.—Trinity College estate in Waterville district alone was 1,300 acres altogether, and was held immediatealy from College by occupiers, 44262-4.—On other estates there was but one middleman in the district, 44265.—College authorities gave from time to time small grants to tenants for building houses, for helping drains, making fences and improving roads, and these were mentioned in fixing fair rent, 44266-7.

Lime.

With reference to price of lime, it was in Kenmare 1*s.* 3*d.* or 1*s.* 6*d.* per barrel of 33 gallons; in Killarney, for barrel of only 30 gallons, last price witness had heard was 1*s.* 2*d.*, 44194-5.—Trinity College had many tenants round there, and it had been once suggested by witness that lime might be imported from Kenmare in a ship and sold at some central station like Cahirciveen at a lower price than could now be done, but the College authorities found a difficulty in undertaking what they then considered a trading operation, 44197-8.

Kelp.

There was an abundant supply of kelp along coast of Kerry in all directions; for many years there was kelp burning, which paid well, and almost the same conditions might now obtain; witness suggested that Galway and Sligo districts be requisitioned to teach kelp-making in Kerry, 44213-4.

Re-Afforestation.

Before all available land for purpose passed out of the market re-afforesting should be undertaken seriously by Government owing to increased shortage of timber from outside sources; in planting trees near seaboard it was absolutely necessary that they should be in a position completely sheltered from direct force of Atlantic gales; the storms came laden with spray, and during winter all previous season's growth exposed to them was killed;

DELAP, Mr. WILLIAM J.—*continued.*

glens lying away from sea would grow larch and spruce very well indeed, as instanced by some plantations made by witness opposite Kilgarvan ; it was very difficult lately to get young trees in the country, 44214.

Building Stone.

There were unlimited quantities of finest sorts of building stones in almost all the congested districts, and with capital available a profitable industry might be carried on by their working, 44198.—There was an immense extent of old red sandstone at Dingle, 44206. —Waterville Hotel had been built of concrete because lime was not conveniently obtainable, and building with cement was much easier, and concrete the readiest means of using cement, this accounted for its extended use in district ; though expensive, a little went a long way, 44207-9.—Capital could not always be found in Ireland for any industry which had prospects of succeeding ; this was owing to insecurity of property—before Act of 1881, and still further back, 44210-13.

Slate Quarry at Valentia.

For number of years slate quarry at Valentia was worked with great success ; old machinery became worn out and company having no capital to buy new machinery, undertaking was killed, 44200.—Company seemed not to have been able to obtain money from bank, 44201.—Irish slates were always slighter, and Valentia slate did not split thin ; it required timber or a pointed roof, and was not suitable for roofing except for a small district, 44202-5.

Suitable Boats.

Fishing industry round the coast had been very greatly aided and developed by Congested Districts Board, both by introduction of better boats and better landing facilities and system of fishing generally, 44198, 44267, 44271, 44278.—In early years of Board's work, Rev. Mr. Green brought boats, nets and men from Valentia district to neighbourhood of Clifden and Cleggan, in County Galway, to teach the people system of mackerel fishing by means of seine nets, with best results, 44213.—Nearly all fishermen in Cahirciveen district were half farmers, and would not spend the night away from home nor sleep on board, as professional fishermen did, 44267, 44276.—They would never be fishermen altogether, but part of the year they had little else but fishing to do, and in some few places they could possibly be educated to become professional fishermen, 44268-70, 44276-7.—After the famine in 1881 boats were given to the men free of all charge, and they asked to be paid for hanging the nets, and never fished the boats now, 44267.—Board had improved boats in Kerry by grants for building and acquiring them, and Mr. Green had given practical hints as to building and shape of boats, 44271-2, 44278.—Witness saw no objection to zulu boats supplied, 40273-4.—Only way to induce the men to become professional fishermen would be by inducing them to provide themselves with half-deck boats of fourteen tons' class, 44274-5.—Witness did not believe in steam-drifters ; it would be necessary to remodel harbours, landing-stage and all else ; steamers could not be brought alongside many of the small coasts in district, 44277.

Congested Districts Board.

In witness's opinion, Congested Districts Board had done excellent work throughout districts with which he was acquainted ; numerous mistakes had been made, but they had profited by experience, and any curtailment of their powers or transfer to another Department would be a grave misfortune to the congested districts ; no Government Department had done so much before for country, and it would be well that Board should be given larger command of funds for purpose of improving breeds of domestic animals and developing fishing and other industries, 44267, 44278.

SLOAN, Mr. R. O.

See pp. 95-7.

Pier or Slip Accommodation needed at Waterville.

Congested Districts Board had recognised need for pier or slip at Waterville, and offered a grant, provided that County Council voted a certain amount ; people of district were too poor to contribute, and the whole thing fell through, 44282-3.—Board ought to give a grant unconditionally, and engineering difficulties ought not to prevent it ; Board should have sufficient money to carry out duties imposed on them, 44283.— It took six or eight men, who might have to get wet to the waist, to get a boat afloat at Waterville, and to beach it safely was even more difficult, 44284.— People themselves could not make a pier, a day's work would be washed away by the tide, 44286-9.—Fishermen were anxious to fish if they could get facilities, and were sober, honest, and industrious, 44289, 44292. —Witness was not opposed to a local contribution which people could afford to pay, 44291-2.

Inland Fisheries.

Total amount given by Board for improvement of inland fisheries was £10 towards a small hatchery ; Conservators had to rely entirely on revenue derived from sale of licences, and if that fell off fisheries would suffer for lack of protection, 44292-3, 44297.— Fisheries were open to anyone who had a licence (£1 for a rod, £3 for seine nets, £10 for weirs), which could be taken out elsewhere, just as licences taken out locally could be used elsewhere, 44294-303, 44315-7. —The two hotels had purchased rights of two rivers from Sir Morgan O'Connell and Lord Lansdowne ; the landlords had the rights of the Caneragh ; the hotels had to contribute largely to cost of water bailiffs, and were, to a certain extent, in position of landlords ; but the rights were leased yearly—not bought out, 44318-25.—Lord Lansdowne contributed £3 last year, being rent he got from the fishing ; Sir M. O'Connell gave use of a lodge for police in winter time, 44326-9. —Right of fishing in the lake had been free from time immemorial, 44329-31.—Burns-Hartopp tenants would not be allowed to form an association for fishing the lake ; with indiscriminate fishing, in two years there would be no fish, 44332-8.

Claim of Inland Fisheries on the Board.

Inland fisheries of a congested district were as much entitled to Board's fostering care as maritime fisheries, 44304, 44343.—Amount derived from inland fisheries was considerable, 44343.—Small farmers of district were interested in fisheries, because visitors employed them as boatmen, and enabled them to sell eggs and fowls to a small extent, 44305-9.—About thirty men were engaged solely in inland fisheries, 44310.—About forty water bailiffs were employed in winter ; fifteen or twenty in summer, and paid from £4 down, 44311-3. —Inland fishermen were honest, sober, and industrious, 44314.—Witness did not ask for an exorbitant grant, nor that it should be made over an extended period ; he asked £60 or £70 yearly for five or six years, 44314.—Board of Conservators was elected every three years by licensed fishermen, 44341-2.

O'CONNELL, Mr. A. G.

See pp. 97-9.

Piers and Slips Wrongly Erected or Erected in Unsuitable Places.

As regards marine works, witness complained that works of little merit had been done, while works of greater merit had been left undone, 44345.—No slip should be made in any place where the open sea had full force, because no slip could stand the strength of the Atlantic Ocean ; a slip had been built by the Congested Districts Board at Butt Cove, in St. Finan's Bay, and almost £1,400 was spent upon it ; there was no shelter from the fury of the sea, and the slip was too upright ; there was terrible labour in pulling up a boat ; it took two or three crews ; the lower part of the pier had been taken away, and a timber structure

O'CONNELL, Mr. A. G.—*continued.*

was put up in its place; it was all swept away by the first storm, 44346-51.—A slip might be made by going to low water and excavating to about a foot; then make a slip twenty feet wide, and going up above high water; the sea would have no effect upon such a slip; a concrete fence should be built across the top of the slip, with a base of about three feet; it should be 6 feet high, and in the centre a gateway to pull the boats through for safety; the slip could be made in the same place where it was at present, 44353-4.—North of Valentia there was a slip that was of no use; it was built on the wrong side, and was so upright it was half standing; £1,200 was spent on it, and a small strand was always in use instead of pulling up the boats on the large slip, 44356-8.

Pier Extension at Portmagee.

There was a good pier in a land-locked harbour at Portmagee; extension of the pier was desired, in order that steamers might come alongside at any time of the tide; a memorial had been sent to Congested Districts Board when it started, and they approved of the work; it was surveyed by the Board of Works Engineer, and by Mr. Keating; the cost was estimated at £1,250; no local donation was forthcoming, and Trinity College would not contribute; the pier did not belong to Trinity College, though it was on their property; but it was for the use of their tenants, 44358-61.—Witness persuaded the County Council to subscribe £200, but the Congested Districts Board engineer destroyed the whole thing by estimating the cost of the work at £3,000, 44362.—The County Council was at present considering a contribution of £600; there did not seem to be a chance of getting anything from Trinity College, 44363-6.

Portmagee Water Supply.

Portmagee was entirely a fishing village, and there were sometimes 200 men going out fishing, besides numerous boats from other places coming ashore for water; the water-supply was short, and the water was unwholesome; Congested Districts Board had contributed £250, and Trinity College gave £100; the total cost was nearly £700, and the necessary money had been raised on the security of Portmagee Electoral Division, the valuation of which was only £700, and the extra rate put on in consequence of the water-works was 10*d.* in the £; the people were wretchedly poor, and it was thought that, as the supply was so much for fishermen from all directions, the Congested Districts Board might give an extra donation, 44366-7.—Provision of a water-supply was a necessity of fishing development, and in that way the matter could be brought within purview of Congested Districts Board, 44368-71.—The guardians were the statutory water body, but they would not levy the charge on the rates, 44372-3.—No charge was made for the water supplied to the fishing boats; that would necessitate appointment of a man with a salary which would monopolise a great part of the revenues derived from the boats, 44374-5.—The moiety of the expenditure levied on the electoral division had been paid to the contractor, and it was desired there should be some remission to the ratepayers, 44376-7.

Negotiations for Sale of Portmagee Property.

Negotiations were at present going on with Trinity College for the sale of the Portmagee property; they had refused to sell to the Congested Districts Board under any circumstances, but they would sell direct, provided that Cahirciveen joined in the sale; no terms had been mentioned, 44384-5.

Pier Needed at Ballinskelligs.

At Ballinskelligs Bay there were 60 boats, and no landing-place of any kind; there was a sheltered cove at Ballinskelligs Castle, where there were about fifteen feet of water at low tide, and a timber structure would do, 44384-5.—A pier would be needed; witness contemplated decked and half-decked vessels, and the yawls had no place to land their fish, 44386-8.

O'CONNELL, Mr. A. G.—*continued.* ...

Necessity for a Motor Service for Transit of Fish.

A motor service was necessary; a tremendous quantity of fish was killed in the bay; three or four boats would take 20,000 fish on some days, 44388-90.—Autumn was the principal time; the fish were carted to Cahirciveen, and were so shaken in the common carts that they were seriously injured; a motor would not do more injury than the cart, and it would go quicker; there were about 200 barrels of mackerel at Portmagee in the season, and 1,575 barrels of cured fish were sent from Ballinskelligs to the American market, 44392-4.

O'SULLIVAN, Mr. JAMES.

See p. 99.

Pier at Reneen.

Witness appeared in support of a new pier beyond a place called Reneen Point, in Ballinskelligs Bay; there were seventy fishermen in Reneen, and there were three seine boats, each manned by eighteen men; there were also fifteen or sixteen small boats fishing lobsters; they had no way of landing at all; when the boats came in people went out to bring in the fish from the waves; landing at night they could not go out again; it took five or six men to pull up a boat, 44396-7.—If a pier were built at Ballinskelligs Castle it would serve Reneen, but it would be rather far away, 44398.—A pier could not be placed in front of every little collection of houses, but it would be well if there was a good pier somewhere between Reneen and Waterville, 44399-400.—It was nine miles from Reneen to Ballinskelligs, 44401.—Mr. Green said Reneen was the most suitable place round the coast for the pier; there was any amount of fish in the bay, but they could not get them; witness had often seen the men go out; they got all wet getting into their boats, 44402.—The people were very poor, but they would certainly give some little local contribution if they were asked, 44403.—Representations had been made to an inspector of the Congested Districts Board, but no steps had been taken, 44404.—The people would be only too glad to contribute the labour; no estimate had been made of the cost, 44405-6.

Bridge Needed at Toreens.

There was a river crossing a road about eight miles from where the Commission was sitting, and there was no bridge; the district on the other side was called Toreens, and there were six families there who were obliged to cross the river on a plank, and could not cross at all except when the water was very shallow, 44406.—Witness thought the place was on the Burns-Hartopp Estate, but was not sure, 44407-8.—There were other families in the village beyond Toreens; the road should be extended to the village, 44408.—The matter had been placed before the Board's inspector, but they did not seem to move, 44410-1.—There was a road to the site proposed for the Reneen pier, 44413.

HAREN, Mr. P.

See p. 99.

Pier Needed at Ballinskelligs.

A pier was much needed at Ballinskelligs, and there had been some idea of closing the Sound, the late landlord had made efforts in the direction of closing the Sound, and witness had taken soundings, but the cost was too great; Mr. Green had visited the place; there was deep water at the telegraph station, and one side of the reef of rocks was a natural pier already; engineers had been sent down on different occasions, and witness had taken soundings; but when the matter went before the Board nothing more was heard of it; thirty or forty memorials had been sent to the Lord Lieutenant and the House of Commons; there were about fifty boats in Ballinskelligs, and boats came from all parts of the United Kingdom; they all complained that if there were a pier there would be facilities for fishing; witness would sooner press for the making of the pier than for the closing of the Sound; another necessity was a large curing-house, 44414.

SULLIVAN, Mr DENIS.

See pp. 100-5.

Congestion in Neighbourhood of Kenmare.

Parishes of Kenmare, Bonawn, and Tuosist, and large part of Kilgarvan were scheduled, excepting only electoral division of Cappagh; land was reclaimed from bogs, etc., and was of very poor quality; it required tilling and manuring every six or eight years; 271 holdings in district were under £4, 1,109 over; average valuation was £6 13*s.*; majority of farmers were in debt to shopkeepers; if no remittances were received from America they could not subsist and pay taxes and rent; Congested Districts Board had done very little; there was no Parish Committee in Kenmare, as Board had only offered £35, which was inadequate; landlord was Marquis of Lansdowne. There was very little untenanted land; Lord Lansdowne held about 100 acres, which he let for grazing on eleven months' system; that might be acquired by Estates Commissioners for enlargement of holdings; entire district should be scheduled, and larger grants made to Parish Committees; turbary was exhausted in some places, and people had to go far into mountains for it; grants should be made for roads to such places, 44415.—Indebtedness of farmers to shopkeepers was due to depression of the times, 44416-7.—Parish Committee had not been started, because of inadequacy of grant of £35; secretary and clerk of works would be required, and they would have to be paid; that would leave only £25 to spend, which, though better than nothing, was wholly inadequate; Board might increase grant afterwards if scheme proved a success, 44436-42, 44544-55.—The demesne land, which was let as grazing land, and therefore was not, strictly speaking, demesne land, should be taken for labourers' allotments; only about 100 acres of Lord Lansdowne's land were available, 44494-503.

Land Purchase.

Lord Lansdowne had been approached on two occasions since passing of Act of 1903 regarding sale of estate to tenants; first time he said that he did not intend to sell Glenerough Estate; in 1905 he refused to meet deputation of tenants to discuss terms of sale; later, in reply to Ven. Archdeacon O'Leary, he submitted terms, viz., twenty years' purchase of first term rents and twenty-three years' purchase of second term rents, sporting rights to be vested in landlord, and excluding from sale about seventy holdings; tenants offered seventeen years' purchase of first term rents, twenty years purchase of second term rents, sporting rights to be vested in tenants, and included holdings to be excluded; or, as an alternative, purchase through Estates Commissioners; Lord Lansdowne refused to accept either, 44415.—Farms in district which Estates Commissioners had refused to sanction sale of in 1890, as they considered security insufficient for advance, were now being sold at six to ten years' purchase higher than prices offered under previous Acts; there was no warrant for this, as prices of produce had decreased, while labour had become dearer owing to emigration; enhanced price was due to operation of zone system, and abolition of inspection for security; also lever of relief from arrears; this was serious for both tenant and ratepayers; remedy was compulsory purchase at fair price, abolition of zones, and inspection for security; all sales to be made through Estates Commissioners or Congested Districts Board, 44415.—Tenants wanted sporting rights to use for themselves, and to prevent gamekeepers coming on their lands at any time they liked, 44443-5.—Game would continue to exist, as it would be to interests of people to preserve it, as it was an asset of value, 44446-8.—Committee of tenants for protecting game and leasing to somebody would probably be best way of preserving game, 44449.—Mr. Doran lived on property where game had been left to tenants, and there was still as much game as ever; what tenants objected to was constant interference of bailiffs, etc., 44450-2.—In former times, before passing of Act of 1881, there had been much miscarriage of justice, as gamekeepers brought people before magistrates for no reason at all, and magistrates

SULLIVAN, Mr. DENIS—*continued.*

set aside evidence of all witnesses except gamekeepers or water-bailiffs; people got very little justice, 44453-73.—Landlords asked high prices for land, and tenants were willing to pay them, as fact of getting rid of arrears was a present relief, 44474-7.—Only remedy was compulsory purchase at a fair price; fair prices being those current under Ashbourne Act—fourteen or fifteen to seventeen years' purchase, 44478-9.—In former days tenants' organisation was stronger than now, and were able to make better terms than at present on that account, 44484-6.—Land was different from ordinary commodities, and could not be bought and sold on same principles, as occupiers in Ireland had interest equal to the landlords', 44487-92.—Only remedy for high purchase prices was compulsory purchase by either Estates Commissioners or Congested Districts Board, 44493.—Lord Lansdowne had refused to sell a large number of holdings on his estate; these were let to tenants; tenants had refused to purchase at his prices, but had said that others might, 44509-11.—The estate purchased in 1890, at fifteen years' purchase, was on first term rents; that would be equal to seventeen or eighteen years' purchase of second term rents, 44512-8.—Land on Lord Lansdowne's property was very poor, and reclamation was going on still; rents were put up as soon as land was reclaimed, and there was no redress after 1881 for rent charged on reclamations, 44527-35.—As witness had said, farms which in 1890 Estates Commissioners had refused to advance fourteen years' purchase on had sold under Act of 1903 for twenty years' purchase; this was proof that land was selling much higher under Act of 1903, 44536-43.—Regarding sporting rights, best thing would be for committee of tenant farmers to look after game; they did not so much want game for themselves as to have complete control of farms after purchasing them, 44567.—Ownership of everything on the land should pass to tenants, 44570.—It was great hardship that gamekeepers should have right to go over land, 44573.—Association of tenants might lease land to sportsman for advantage to themselves; or right of shooting might be subject to having to pay bird money to tenants; but landlord should not have right to send bailiffs, etc., on the land whenever he pleased, 44574-7.—Gladstone's Act of 1881 had emancipated the tenants, 44586.—Petty Sessions Bench had improved recently, and had now more members in whom the people had confidence, 44587-8.—Witness did not know of any case where land was held by one proprietor and shooting rights upon it by another, though landlords had tried to make such agreements, 44594-5.—Accounts given in papers of sales did not state whether sporting rights were retained, 44596-99.—Warren Estate in Kerry had been sold under such circumstances, but witness had never heard of it under Ashbourne Acts, 44600-4.—Game rights should not even be reserved for vendor's life-time, 44615.—Witness had purchased farm in 1890 at fifteen to seventeen years' purchase; his rent then was £20, his present instalment was £12, which he considered a fair price in that district, 44605-11.—If Estates Commissioners or Congested Districts Board fixed price witness would be satisfied with it, whatever price they fixed, 44612-4.

Cattle and Sheep-breeding.

Breed of cattle and sheep should be improved, especially cattle which were of very inferior quality and had to be kept until they were three or four years old; in times of depression they were almost unsaleable, 44415.—Nothing had been done by Congested Districts Board to improve breed of cattle or sheep in Kenmare Parish, 44428.—Now Agriculture Department had control of work, and county councils had remedy in their own hands, as Department worked through them, 44430-5.—Conditions in this part of Kerry were different from those in other parts, and cattle had here to be kept for three or four years if anything was to be made by them, 44504-8, 44519-22.—Beasts were not fattened in Kerry, but bought by graziers, who kept them about a year before selling them, 44523-6.—In poorer parts of Kerry people had no regular system of sale of cattle at a certain age; all depended on the demand; sometimes they had to be kept on mountains and fattened before they left district, 44589-93.

SULLIVAN, Mr. DENIS J.—*continued.*

Agricultural Prices

Indebtedness of farmers to shopkeepers was due to depression of times, and fall in prices of agricultural produce, 44416-9.—Witness argued that price of butter was lower, though Agricultural Department's lists showed general increase; this increase, he said, was only in price of best butter, 44420-3.—Price of cattle was very uncertain, though price of beef did not vary much; cattle sometimes sold well, but at other times demand was very slack; depression in cattle trade told heavily against farmers in Kerry, as their cattle were of such very poor quality, 44424-6.

Agricultural Schemes.

People were not satisfied with agricultural and live stock schemes, as farmers were not getting the class of help they wanted, 44556-8.—Some more useful system might be devised, 44559.—Horse was stationed in Kerry when schemes were under Congested Districts Board, 44560.—Also a bull, 44561.—Bee-keeping would be a good industry to spread throughout the country, 44565.

O'SULLIVAN, Mr. TIMOTHY J.

See pp. 105-9.

Congestion.

Parish of Kenmare was portion of Barony of Glenarought, property of Marquis of Lansdowne; number of holdings would be 300 to 400, and average valuation about £6; as soil was unproductive reclaimed mountain soil, to be of any use it has to be manured and tilled every six or eight years; potato was principal crop on which people subsisted; bread and tea was used; meat only at festival times, and then it would be an old cow; very little corn was sent to market, though a good deal was purchased for seed and feeding purposes; manual labour had to be employed in cultivating all crops, as plough and harrow could seldom be used; people had to carry manure on their backs; about three-fourths of the holdings were uneconomic; liabilities could not be met were it not for remittances from children in America and elsewhere; most of the young men and women emigrated; fishing used to assist, but it had greatly declined; there were about a dozen hand-loom weavers in the parish, who made flannels and tweeds; Congested Districts Board ought to assist them and obtain markets for their goods, as now they had to sell to speculators; there was no means of enlarging holdings, as landlord was planting lands that came into his possession; he claimed right of pre-emption when tenant was selling interest; there were three evicted tenants, who ought to get land equivalent in value out of farms in landlord's hands; principal means of improving condition of people would be compulsory purchase, abolishing zones, and giving Estates Commissioners power to fix number of years' purchase, 44617.—If this were done annuities would be lower than rent, and people would have more energy to till farms properly, 44660.—Reductions in rent were very little on Lansdowne Estate for last twenty years, 44661.—Money should be advanced at low rate of interest for improvement of uneconomic farms, 44722.—There was no land available for migration, 44725.—People would probably be willing to migrate to Kildare, Meath, Roscommon, or King's County, 44725-6.—If one in three were migrated, that would do much to relieve congestion, 44730.—A man could probably manage forty or fifty acres of land, for out of that there would only be nine or ten acres of arable land, 44731.—There was no available labour in the county, 44733-4.—People would not like to migrate to the North of Ireland, 44736.—Witness was not in favour of planting arable land of a tenant when it came into landlord's possession, but it would be a great benefit to the mountain sides of the country, 44737-8.—Co-operative tillage might be adopted to increase production of farm; it was already adopted to some extent, 44741-2.—If farm were enough for one man he would not have time to help his neighbour, but horses and ploughs could be lent if land were fit for ploughing, 44743-5.—People should be given employment on reproductive works on their farms, such as draining, fencing, reclamation, etc., 44617, 44688.

O'SULLIVAN, Mr. TIMOTHY J.—*continued.*

Land Purchase.

Landlord had at first refused to sell estate, but recently he offered abatement of 5*s.* and 7*s.* in the pound on first and second term rents respectively, but wanted to reserve sporting rights, charge high interest, and exclude large number of tenants from purchase; tenants had offered to purchase at 7*s.* and 9*s.*, or, as an alternative, to purchase through Estates Commissioners or Congested Districts Board; this landlord had refused to consider; arrears were not allowed to accumulate; before Act of 1881 tenants were evicted for very trifling causes, 44617.—When landlord claimed right of pre-emption holding was not put up for auction; he offered a certain price, and it was settled privately, 44657-9.—The 5*s.* and 7*s.* abatement offered by Lord Lansdowne was not a substantial reduction, 44662-4.—He should not receive more than his net income, which would not come to more than 60 or 70 per cent. of rental, after deducting expenses of collection, 44665.—Land Conference, before Act of 1903, had decided that 10 per cent. was fair amount to allow for cost of collection, but with large estate like Lord Lansdowne's there had to be much greater allowance; books would be only reliable guide, but they could not be got at, 44666-72.—If income were proved, fair price to buy at would be sum of money which would give that income, 44673.—Tenants would be satisfied with such arrangement, or they would agree to leave decision to Estates Commissioners or Congested Districts Board, 44674.—It would not be fair to take away a man's property and leave him worse off than before, 44677.—As things were now, people were afraid that if they improved their farms Land Commission would not give them proper reduction, 44686.—Rate of interest which landlord had wanted to charge was 3¾ per cent., which was too high, 44687.

Cattle and Sheep-breeding.

Good bulls and rams should be introduced for improvement of cattle and sheep; cattle raised were of such inferior quality that they could seldom be sold to advantage; witness had himself purchased two and three year olds at £3 during last year; if Canadian stores were introduced it would kill cattle industry, 44617.—Prices of good bulls were prohibitive to small farmers, 44678.—Agricultural Department was responsible, not Congested Districts Board; they had not provided Polled Angus bulls nor Scotch rams, but if they did, on reasonable terms, it would be a great benefit, 44679-80.—Work should not be transferred to Congested Districts Board; principle of its being in hands of Agricultural Department was best, to be worked through local bodies such as County Council, 44682-4.—Though a representative of latter body had great difficulty in improving matters under existing law, 44685.

Roads.

New roads through districts where they were badly needed would be of great utility, and would give needful employment to small farmers and their sons; in absence of roads people had to draw loads on their backs, sometimes over a mile, 44617, 44688.

Crops.

Potato this year was a good crop; there was scarcely any sign of blight, owing to cold weather; warm, foggy weather would have brought blight, 44618-23.—Corn bought in market was all American flour and Indian corn, 44624.—Excessive damp of climate in South of Ireland prevented its being grown successfully, 44625.—Foreign wheat could be bought much cheaper than home-grown wheat, 44627.

Fishing.

Fishing had declined greatly in recent years, probably owing to trawling, 44629.—Law was that trawlers should not come within three miles of the shore; but they often broke it, 44631-4.—Trawlers came from France and Isle of Man, 44635.—Trawling allowed by Irish fishery bye-law had injurious effect on fish, as it frightened them away, 44637-8.—Fishermen had not means to get boats and cure fish, to trawl themselves, 44640.

O'SULLIVAN, Mr. TIMOTHY J.—*continued.*

Industries.

Congested Districts Board might provide wool for hand-loom weaving, and inspector might find customers in England and Scotland, as that would give people 20 or 30 per cent. more for their goods than present arrangement, 44641-4.—It would also be great advantage if weavers were sent from Scotland to give instruction to home weavers so that goods might be improved, 44645-7.—Looms were very primitive, and could be improved; hand-shuttle was used, 44648-9, 44692.—There were fourteen or fifteen hand-loom weavers, 44650, 44697.—Shopkeepers who bought goods were speculators, 44653-4.—It would be a good thing to provide improved looms on loan system if inspector was sent down to give instruction, 44698-99. —Congested Districts Board instructor had not been in the districts, 44700.

Evictions.

Before Act of 1881 people were evicted for very trifling reasons; witness knew one man who had been evicted by agent for having dirty turnips, 44701-2.—It would have been better to give prize for well-kept turnips, 44705.

Agricultural Schemes.

Poorer districts would be in much greater need of assistance under agricultural schemes than better-off districts, 44707-10.—Rich districts were able to avail themselves of advantages of Department because they were able to get bulls and pay for them, 44711.—Help should be given to poorer districts so that they could avail themselves of it, 44713.

Parish Committee.

Parish Committee was doing very well for short time it had been in existence; dwelling-houses had been much improved in cleanliness and sanitary decency, 44714-5.

Manure.

There was no lime nearer than Kenmare, a distance of fourteen or fifteen miles by road, 44716-8.—No scheme had been formulated to provide lime on a large scale; coral sand was used as a substitute, but it was difficult to obtain, as labour was so scarce; the young people all emigrated to America, and only able-bodied men could dredge it, 44719-21.

M'CLURE, Mr. ROBERT.

See pp. 109-15.

Congestion.

In Kerry very little land was available for redistribution or migration; congested districts produce large numbers of store cattle, which were sold in large grazing districts; this practice had been going on from time immemorial, as shown by quotation from "Quarterly Journal of Agriculture," published in 1837, which proved that same process was going on then as now; if this system were suddenly stopped, the congested districts, instead of improving, would become suddenly worse; if grazing ranches were purchased and distributed, they should be planted with migrants from *within* the district; witness did not think that migrants would become purchasers of store cattle if planted on grazing land, as they would have to make their income by sale of their own store cattle; congestion was chiefly caused by sub-division of land, and unless that were stopped all attempts at relief would be useless; reference, again, to "Quarterly Journal of Agriculture" for 1837 showed that this evil was as great then as now; growth of population in congested districts was rapid; all could not be provided for on the land; as the country could not be enlarged, there must be emigration, it was a safety valve; Mahony Estate was only estate in Kenmare Union which was not classed as congested; owner had fought against sub-division for half a century, and between 1851 and 1881 had spent

M'CLURE, Mr. ROBERT—*continued.*

£20,000 on improvements, such as roads, farm-houses, drainage, plantation, farm fences, bridges; there was not an evicted farm on estate; Congested Districts Board had done good work, but some better arrangements should be made if heavy operations contemplated were to be carried out; rents were fairly well paid by smaller tenants, who were honest and industrious, though they sometimes lacked perseverance, 44747.—*Personnel* of Congested Districts Board should not in any way be interfered with, but there ought to be some additional authority to control it, with assistance and advice, 44803-5.

Migration.

Witness did not think migration could be extensively carried out with the consent of the people, and expenditure would be very high, as houses, offices, etc., would have to be provided, and that would cost at least £200 for each migrant; if large scheme were adopted plans should be very carefully considered; Mr. Commissioner Finucane's scheme seemed best plan and accompanied with less expense and risk; work could not be accomplished within next quarter of a century, 44747.—Witness did not know that 300 migrants had already been moved by Congested Districts Board at a cost of £70 per migrant, and, on the whole, men had succeeded in new holdings, 44750-4.—If whole could be done at that price cost was not prohibitive, 44755.—If migration scheme were adopted, people must be carefully selected, with view to future success, 44756.—Mr. Commissioner Finucane's policy was one that had been already adopted, 44757.—There had been no trial of it in Kerry, 44758.—If grass land was acquired all local claimants should first be satisfied, and then, if there were any surplus, migrants could be brought from a distance, 44760-6.

Drainage.

Low lands could be greatly improved by drainage, which would give large increase in area of each small holding; for this purpose small holders should be able to obtain small loans, not less than £10, from Board of Works, at reasonable interest for short periods; at present small loans were not allowed, 44747.—If such improvements were carried out, someone ought to be appointed to see that they were maintained, 44791-2.—There was more stimulus to owners to keep things in order than to tenants, but even they often forget, 44793-6.—If good system of arterial drainage were carried out and maintained by Government, small holders would look after their own drains, 44798-802.—If agricultural instructor were appointed in connection with schools he might also look after drains, 44847.

Loans from Board of Works.

Small loans from Board of Works should be granted for improvements, drainage, etc.; present arrangements were prohibitive, 44747, 44767, 44815.—There was no doubt that the loans would be repaid, 44816.—The present £100 limit was beyond reach of small holder, but if he could borrow £10 at a reasonable rate he could conduct his improvements, and if it was good policy for State to encourage purchase, it was good policy for them to encourage improvements, 44817-9.

Agricultural Instruction.

Agricultural instruction should be improved; if instructor selected holdings occupied by intelligent men and instructed them in best system to adopt and rewarded them for success, that would be a good object lesson to neighbours and more effectual than casual lectures; national education should be so improved as to afford practical knowledge of agriculture being imparted to scholars, 44747.—Reason for failure of agricultural instruction in schools, so far, had been that teacher was expected to give instruction, whereas there ought to be proper instructor, 44778-81.—This was only true way to improve Irish agricultural conditions, 44820-2.

M'CLURE, Mr. ROBERT—*continued.*

Suggested Improvements.

Fishing would be a great help to congests, but they were not availing themselves of it, through lack of knowledge and resources, 44747.—Congested Districts Board should encourage planting trees; many strong mountain slopes produce excellent timber, which give good return in time, 44747.

Mixed Holdings.

Re-arrangement of mixed holdings presented great difficulties; if it was to be carried out, absolute power to plan and carry out a scheme should be given; afterwards supervision and compulsory power to maintain improvements must be continuous, 44747, 44782-3.—Good time for re-arrangement was when estate was passing from landlord to tenant, 44784.—It was much more difficult to re-stripe afterwards, 44785.—Congested Districts Board would be good agency for this, as they had already successfully striped Dillon Estate and Clare Island, 44785-8.—Estates where there were a great many holdings in rundale should only be sold through medium of improving authority, not direct from landlord to tenant, 44789-90.

Compulsion.

Witness thought that compulsion would be unnecessary, and, if adopted, would prove mischievous; if fair, full value was offered for land there would not be any difficulty in getting it, 44747, 44806.—If adopted it would create distrust and damage capitalist's ideas of safety of investments in Ireland, 44806-8.—It had not done this in England, but it was different from Ireland, 44809.—If a cranky man had to be dealt with, who would not come to terms at all, compulsion ought to be applied to him, provided he got fair price for his land, 44810-13.—Arbitration would probably be a satisfactory substitute for compulsion, 44850.—Judge of High Court might act as arbitrator and settle price, 44854, 44859.—Judge might deal with several cases at same time to save costs, etc., 44861-2.—Lawyers should be kept out of it altogether, 44864-7.

Land Purchase.

Witness had, before passing of Act of 1903 sold land valued at £600 by dividing it into several lots suitable for small farmers, fixing rent on each lot and inviting tenders to purchase lots, purchasers to pay cash down in lump sum; there had been many applications from adjoining tenants; witness thought if compulsion had to be adopted seven to ten years should be added to price of second term rent for land in owner's hands; poor law valuation was not fair guide in Kerry; high prices had been paid for tenants' interests on Lord Ventry's Estate; Estates Commissioners sold land to congests at reduction as low as 15 per cent., or 3*s.* in the pound; owners were selling to congests at 35 per cent. on first term and 25 per cent. on second term rents; migrated congests limit their own fences, and largely contributed to building of their houses, 44747.—In 1904 witness had wanted to sell an estate to the Congested Districts Board, and had made all preliminary arrangements, such as filling forms, etc., but after many months' delay only answer he got was that it would not suit them, though no inspection had been made, 44823-4.—There was no unoccupied land on estate, and witness had concluded that that was reason for their not buying; in another case tenant had applied directly to Board to buy estate; Board had applied to witness to know whether owner would sell, and, when reply was made in affirmative, estate had been surveyed at cost of £30 to owner, but Board had finally replied that they would buy no more estates pending decision of Commission, 44825.—Board was anxious to buy land in Kerry, but witness did not know why they had refused to buy first estate offered; possibly price was too high or they wanted untenanted land, 44828-35.—When witness sold 600 acres he first split them up and then fixed fair rent, which was from five to ten per cent. increase on rents they were used to paying; in some cases tenants bought; in some outsiders; they had been put up to public competition, 44836-40.—In sale of 600 acres land had not been put up to auction, but witness had fixed price, and if one man did not want it at that price he offered it to another, 44844-6.—In some cases tenants give tremendous prices for land adjoining their holdings; witness knew of one case where forty years' purchase had been given for a very poor piece of land; such transactions were very foolish, and it was a good thing that Act of 1881 provided for right of pre-emption for landlords, 44841-3.

M'CLURE, Mr. ROBERT—*continued.*

Compensation for Disturbance.

If landlords in Ireland were given sum of money for land which, when invested in good 3½ per cent. security, brought in net income, transfer to such good security would be, in itself, compensation for disturbance, 44314.

Emigration.

Emigration was safety valve for country; if surplus population were transferred to ranches population would still grow, and sub-division would again take place, thus bringing on again state which was being remedied now; if sub-division were prevented, surplus population would still have to emigrate, as they could not marry and settle down in the country, 44855-8.

HARRINGTON, Rev. T., Glengariff.

See pp. 115-8.

Congestion.

Best land in parish of Glengariff was partly irrigated by rivers flowing through Glen, but greater portion of that was demesne land in possession of landlord, Mr. Leigh White; bulk of people had to eke out existence on patches of soil between rocks on seaboard; population was 1,600, valuation £954 2*s.*, on average of 12*s.* 8*d.* per head; even if land were free of rent it would not be able to support its population; as it was they could only live by help of remittances from America, or by what they themselves earned as labourers in Wales, where many went for several months of the year; remote villages of parish suffered from disadvantage of being far from fairs; people had often to lose best part of two days if they attended them, and then they preferred to sell cattle at a loss rather than have trouble and risk of bringing them home; people of Crostera would be much benefited if £50 were spent in deepening bed of river; this would add thirty acres of good land to holdings; their population was 100, valuation only £40; £60 would reclaim forty acres in Coomerkane; the people of latter place also suffered from want of a bridge, as approach roads to one that had been built had never been finished; County Council could not finish it, as road leading to village was private; Mr. Leigh White had been approached about it, but his statement was that he had agreed to make bridge if tenants would make road; tenants denied having made such agreement; to north of demesne fifty-four families had, until quite recently, been cut off from public road, and in Derreenagorrig there were four families whose access to public road was blocked by wall of demesne; a petition had been made for gate through wall, but it had been refused; on seaboard there were four townlands with fifty-five families; they supplemented incomes by fishing; people of two of them—Mackera and Bocarna—had got seine boats from Congested Districts Board, but they had proved useless for want of landing place, though they had hoped that slip would be constructed at Bocarna; money promised for that was being applied to Glengariff pier, which would not help fishing, though it would be useful for hotel, tourists, and village traders; curing station was also required; at Derryconnery, whose population was 65 and valuation £18, fishing industry was a failure, in spite of slip, because there was no road from village to slip, 44868, 44897-900.—Witness did not suggest that land of demesne should be acquired and parcelled out into holdings, 44871-2.

Cattle.

Cattle were of poorest kind, and improvement of breed was matter which Congested Districts Board should take up; owing to exceptional poverty of people, bulls should be delivered on easier terms than in wealthier districts, 44868.

HARRINGTON, Rev. T.—*continued.*

Parish Committee.

Parish Committee had been established in Glengariff four years ago, and was doing good work; larger grants, however, were required for improvement of dwelling-houses of very poor, 44868.

Re-afforestation.

Planting of clumps of trees should be undertaken to improve climate; used-up bog, poor, rocky land, etc., would be suitable for the purpose, as they could not be used for cultivation, 44868.

Compulsion.

People of Bonane wished for compulsory purchase; Lord Lansdowne had offered twenty-three and twenty years' purchase on first and second term rents; tenants had offered twenty-one and eighteen, which had been refused, so deadlock was created, which should be terminated by compulsory powers being given to Estates Commissioners, 44868.—Land could not be acquired under voluntary system, as it was too expensive, 44873-4.—If compulsion were adopted price would be lower than at present, 44875.—Fair price would be one that would give tenants a fair chance of living decently, and would allow landlord his net income, 44876-7.—Witness's definition of net income would be what a man paid income-tax on; even if books were produced, and it were shown that cost of collection of rents was only 10 per cent., he would adhere to that definition, 44881-7.—Witness said that terms offered by tenants to Lord Lansdowne were generous, because they were higher than those for which neighbouring properties had been sold, 44889-90.

Drainage.

Drainage might be greatly improved in Crostera and Coomerkane with small outlay; at present lowlands were ruined by periodic floods, 44892-3.—If money were given by Congested Districts Board work could be done by occupiers themselves, 44894.—Owner of fishing rights would probably not object, 44896.

Land Purchase.

Bad debts should not be included in consideration of income when fixing price which would give landlord net income; witness would not agree that 10 per cent. would cover cost of collection, 44901-11.

DORAN, Mr. DAVID.

See pp. 118-9.

Congestion.

Divisions of Dromore, Greenan, Loughbreen and Reen were not scheduled as congested, as three landlords resided in divisions who represented valuation of over £500, while valuation of whole four divisions was only £3,625; area of division was 33,708 acres; area in occupation of three landlords was 3,917 acres, 44914-5.—Out of 289 holdings fifty-nine were under £5 and 131 under £10 valuation, 44916.—Boat slip had been applied for, but, though two officials came down and inspected, nothing had been done; district should be included in scheduled area; land was only mountains, rocks, and bogs, and people were mainly dependent on cattle; if foreign cattle were admitted people would be ruined, 44918-9.—Estates Commissioners should purchase land with a view to making future conditions more comfortable; land needed lime; parish of Killanin had abundance of lime, which could be distributed by Congested Districts Board, 44919.—If they took over estate they could attend to drainage, 44919.—Witness was tenant on Colonel Gough's estate; there tenants gave so much for game that was shot over several farms, 44919.—It was much better for tenants to have game rights, as there was considerable friction otherwise, 44920-5.—In sales landlord had right of pre-emption, and could offer much smaller price than value of land; if landlord could use compulsion in acquiring partner's interest he ought to have compulsion used on him, 44927.—If sales were being carried through, County Court Judge or Land Court fixed rent, 44928.—Leaving price to Estates Commissioners would be best, 44931.

ROCHFORT, Mr. WILLIAM.

See pp. 119-20.

Untenanted Land on Lord Lansdowne's Estate.

Witness contested that classification of land in Barony of Glenarought, Lord Lansdowne's estate, in Parliamentary Return moved by Mr. Ginnell, M.P., was incorrect; there 5,226 acres of untenanted land were returned as valued at £697; in Government valuation lists there were 2,673 acres of rough mountain land, valued at £45 a year; some of this was let for grazing on eleven months' system, 44934-40.—Witness agreed that acreage of untenanted land was 5,226 acres; it was in rated occupation of landlord, 44940A-1.—Under heading "Woods and Plantations" there were 1,689 acres, valued at £257, and under "Demesne Lands" there were 212 acres, valued at £199, 44942.—Under townparks and other grazing lands there were 652 acres, valuation £196 a year; out of total, less than 600 acres would be of any use for agricultural purposes if required for tenants, 44943.—Of land around town, some belonged to demesne of Lansdowne Lodge, some was let on short tenure, 44945.—Mr. Maxwell, assistant agent, lived in Lansdowne Lodge, 44946.—Tenants had twice approached Lord Lansdowne with reference to sale of land, and Canon O'Riordan was their spokesman, 44946.—The mountain land would be very little use for grazing if added to holdings; it was of very little value, 44948.

Land Purchase.

Negotiations for sale were broken off over price and game, 44949-50.—It had not been suggested that sale should be through Congested Districts Board, but through Estates Commissioners, but landlord did not agree, 44951-2.—This applied to Glenrock, main portion of estate, 44953.—Improvements could be effected by Congested Districts Board if they were prepared to spend money, 44954.—If estate were sold, judging by way people paid rent, there ought to be good chance of their meeting their engagements, 44955.—Witness thought estate might be sold direct, without any improvements, 44956-7.—If sale were agreed upon on basis of Lord Lansdowne getting net income, witness could not promise that books would be produced, though method might be found by which details would not be made public, 44974-8.

Drainage.

Many holdings needed drainage; tenants could do more if they chose; arterial drainage would not be required, as it was so much on the hillsides, 44958-9.

Cost of Collection.

Cost of collection would be about 10 per cent., 44962.—Estate was scattered, and there were sub-agents in outlying districts, 44963.—On peninsula cost of collection would be about 12 per cent., including bad debts, 44964-5, 44967, 44972.—Twelve per cent. would probably apply to whole of Kerry, 44968.—Cost of collection on outlying portions of estate was greater in proportion, but whole of expenses would be spread over, 44969-71.

Document put in by Mr. Wm. Rochfort.

Page

Table showing Area and Valuation of Untenanted Land on Estate of Lord Lansdowne in County Kerry, ... 219

O'LEARY, Ven. Archdeacon DAVID.

See pp. 121-30.

Relief of Congestion in Neighbourhood of Kenmare.

If line were drawn east and west from Tralee, it would divide Kerry into two very different parts; north of that it would be fairly level, and suitable for tillage as well as pasture; South Kerry was mountainous, and land was mostly reclaimed mountain, morass, and bog; inhabitants had by persevering industry and toil, turned portions of bogs and mountain slopes into pasture land; greater part of parish of Kenmare was so reclaimed, but with exception of three electoral divisions it was excluded from operations of Congested Districts Board; rules for scheduling were difficult to understand, as sometimes districts as poor as those scheduled were excluded;

O'LEARY, VEN. ARCHDEACON DAVID—*continued.*

witness suggested that whole of County Kerry be scheduled, and that all tenants of holdings of £10 valuation and under should be entitled to special advantages now offered by Board to those whose value was £7, 44979.—This meant that holders of £10 valuation should not be excluded from advantages of Parish Committees, etc., 44981.

SUGGESTIONS FOR CONGESTED DISTRICTS BOARD.

Opinion was strong in Kerry that it did not receive support from Congested Districts Board which its condition demanded; much had been done for Donegal, Galway, and Mayo, but nothing for Kerry; a few loans had been given, but Board had not established fleet of fishing boats, technical schemes, purchase of estates, industrial schemes, etc., had all suffered in the same way; special representative of Kerry and South-West Cork should be appointed on Board, and certain sums of money earmarked for Kerry; Board was unnecessarily slow in putting into effect its purchase powers under Act of 1903, thus depriving farmers of advantages they were meant to enjoy; housewifery school in Killarney was doing good work; Parish Committees were doing good work, and should be extended, 44979, 45188-9.—Representative should be selected by County Council, 45190.—It was possible other counties would claim same privilege, but up to the present Leitrim was only county, beside Kerry, which had made such a claim; a large Board, with public-spirited men on it, ought to work well, 45191-3.

HIGH PRICE OF LAND IN COUNTY KERRY A DETERRENT TO LAND PURCHASE.

Estates had been sold in Kerry, but large estates were still unsold; prices demanded by landlord varied from 20 to 24¼ years' purchase of second term rents, which was considerable advance on average price of estates sold previous to Act of 1903, average before Act being about eighteen years' purchase; some years ago one landlord had offered to sell to tenantry at twenty years' purchase; this had been refused; same tenants had now paid twenty-three years' purchase for farms; it was questionable whether 5*s.* in the £ on second term rents was sufficient reduction for Kerry farmers; landlord whose rents were high had recently offered to sell portion of estate at 4*s.* to 6*s.* reduction; this was trifling with tenants; same landlord refused to sell considerable portion of estate; reduction in rent would be some help, but it would be a long time before indebtedness to shopkeepers was got over; mortality among calves was considerable, and all such disasters meant recourse to shopkeepers and bank; in view of all these things, reduction of 3*s.* in the pound was absurd; to meet unreasonable demands of landlords Congested Districts Board or Estates Commissioners might get power to intervene and arrange by compulsion or arbitration, 44979.—Interests of landlords should be considered as well as of tenant; tenant in South Kerry who bought at reduction of 5*s.* in the £ was much worse off than one who bought in North Kerry under Congested Districts Board, as dangers attaching to purchase were greater, people depended so much on stores fed on the mountains, 44982-4.—Small additions made a great difference to tenant, though they were trifling to landlord, 44987.—Witness gave example of farm in Dingle held by Presentation Nuns, rent was fixed by Land Commission at £17 16*s.*, it was sold at 21½ years' purchase, or 6*s.* reduction in the £, that is £382 14*s.*, bonus would be £35 18*s.* 5*d.*, total £428 12*s.* 5*d.*; that, at 4 per cent., would give £17 2*s.* 8½*d.*, slightly less than amount previously received, 44988.—Bishop would probably have power to invest £428 in whatever security he chose, and Duke of Devonshire had stated in House of Lords that 4 per cent. was safe security generally, 44989-90.—Three and a half per cent. was, however, what was generally taken as a fair figure, 44991.—If the £428 had to be invested at 3½ per cent. there would be loss of income, 44993.—Bulk of Irish landed property was in trust, and not held in fee, 44995.—Trustees were not always free to invest as they liked, though Act of 1903 had extended scope of investments, 44996-7.—Tenants would be satisfied with 3¾ per cent., though they would not with 3½, as landlords could purchase on securities not recognised as sufficient for trust purposes before Act, 44998.—On

O'LEARY, VEN. ARCHDEACON DAVID—*continued.*

estate in which landlord had offered to sell at reduction of from 3*s.* to 6*s.* in £ rents had not, as a rule, been fixed by Land Court, 45000-1.—Tenants did not want to go into Land Courts, as they had a prejudice against them, owing to the action of the Assistant Land Commission before Act of 1881, who actually in many cases raised instead of lowering rents, 45002-7.—People attributed their action either to landlord prejudice or to ignorance, 45008.—Fact was landlord was indisposed to sell at all; parish priest of Anascaul had written to him shortly after passing of Act of 1903, but his letter had never been answered, 45009.—Landlord had given tenants a reduction of 3*s.* in £, but it was not recognised by Courts, and could be withdrawn at any time, 45016.—If tenants did not pay within a certain time reduction was not given, 45018.—Voluntary reductions were often given in Ireland, as that saved trouble and expense of Land Courts, 45020.—This arrangement between landlord and tenant was not really substitution for judicial rent, as landlord could withdraw it at any time, 45022-5.—If Land Commission recognised it then it would be substitute for judicial rent, 45026.—Voluntary nature of agreement was objectionable feature of it, 45027.—Substantial reduction would be 5*s.* 6*d.*, 5*s.* 9*d*, or 6*s.*, 45052.—Reduction of 6*s.* in £ on rent of £5 would be £1 10*s.*, and at that rate it would take fourteen years to pay off £20 to shopkeeper, 45054.—If 8*s.* in £ were given £2 would be taken off; that would pay off debt in ten years, 45056-7.—But if reduction were only 4*s.* or 6*s.* in £ it would take from 14 to 20 years to pay off debt, 45059.—On particular estate before referred to they had to pay £3 to the cow, which was Kerry way of calculating; on neighbouring estate they paid £1 10*s.* to the cow, which was great discrepancy, 45060.—Mr. Drummond, of Slea Head, had, after passing of Act of 1903, offered his tenants reduction of 3*s.* in £, though, strangely enough, otherwise he was interested in tenants, 45062-4.—Witness called landlord who offered such reduction callous, as he was driving a hard bargain, 45066.—Proper price could only be estimated on basis of net income, and reduction of 3*s.* would certainly give more than that, as majority of landlords had offered from 4*s.* to 7*s.*, 45067-8.—When conditions of tenantry were such as would make application of land law to their case too severe a strain on them landlord should sacrifice some of his net income, 45073.—Three shillings in the pound would bring in more than net income derived from property, 45077-9.—In this case it certainly would give more than net income, and was an act of cruelty, 45081.—This reduction would give some immediate relief, and people grasped it without thinking of the future, 45082.—Obligation would be very difficult to meet in the future, 45084.—Sometimes people had advisors who would help them, often they had not, 45086-7.—Reductions should be greater on poor lands than on better, 45136-8.—Under preceding Acts inferior lands went for smaller number of years' purchase than better lands, generally speaking, 45139.—District was wettest in Ireland, which explained difficulty of growing crops in South Kerry, 45140-1.—When occupiers in poorer districts bought lands for smaller number of years' purchase reduction was proportionately greater, 45142.—Poorer land was generally reclaimed, 45145.—It was difficult to get rent down on reclaimed land to anything like what it was before reclamation, 45146.—Crop on poor land was very precarious, 45148.—Harvest was about three weeks late in the upland, and it was sometimes very hard to get in oats at all, 45149.—Income from farm on poor land was very precarious, 45150.—And rough stock did not find ready market in bad years, 45152.—So reduction that would enable a man to get on on good land did not give proportionate benefit to men on bad lands, 45154.—Therefore, 5*s.* might not be adequate reduction in Kerry, 45155.—Price of poor land had gone up under Act of 1903, 45157.—In sale of Dingle property if money could only be invested in 3½ per cent. instead of 4, interest would be £15, which would be a loss; but it was better to have that secure than to have third term rent fixed on property, 45161.—In case of Mr. Drummond's property at Slea Head 3*s.* reduction would mean 26½ years' purchase, which would give landlord more than gross income, 45163-4.—Mr. Drummond was now waiting to see what terms tenants would offer, 45165.—If tenants were under impression that a man ought not to have his net income they might wait until third term

O'LEARY, VEN. ARCHDEACON DAVID—*continued.*

rents were fixed, 45171-5.—Net income of owner would be ascertained by deduction from gross income; these would depend on cost of administration, &c., and could only be obtained through estate office, 45195-6.—Witness did not know of any landlord who had allowed his books to be inspected, 45198, 45202.—Reason for increase from average of eighteen years' purchase under Ashbourne Acts to twenty-two years' purchase under Act of 1903 was lowness of annuity that tenants would have to pay, 45199.—Prices which had prevailed since passing of Act of 1903 were probably indication of what net income was, 45209.—It was possible that some landlords had not received net income, as they had been anxious to get rid of a property which was a trouble to them, and were glad to lose a little under the circumstances, 45210-2.

INDEBTEDNESS TO SHOPKEEPERS.

Indebtedness of farmers to shopkeepers was greater than it used to be, partly owing to improvidence of farmers and partly to their extreme poverty, 45032.—Farmer had always first to pay the landlord, and shopkeeper comes in last, 45033.—Indebtedness might have something to do with rent, but standard of living had risen in recent years, 45037-9.—Indebtedness varied from £20 to £45; in one case in witness's knowledge farmer of £10 valuation owed £80, but that was an extreme case; average might be £20, 45040-1.—A man of £5 valuation might be the one who owed £20 to the shopkeeper, 45047.—Reduction of 5*s.* in £ would not go far towards enabling farmer to pay his debts to shopkeeper, 45050.

CATTLE.

Farmers dependent to a great extent on cattle on mountain pastures to pay rents, etc.; if price of cattle fell benefit derived from reduction ceased; if Canadian cattle were introduced tenants would not be able to meet annuities, which would mean their ruin or increase of rate, 44979.

EMIGRATION.

Population of County of Kerry was 293,880 in 1841, in 1901 estimate was 165,726; decrease was due to emigration, which was a great evil; it was not weak and infirm who left country, but young and strong, on whom a nation depended for growth and progress; last year 1,971 people emigrated from the county, all between the ages of fifteen and thirty; efforts should be made to keep youth in the country, 44979.—Only remedy appeared to be growth of Irish industries, and that would take time; in parish of Ferriter fishing provided occupation, and it was only parish in county where population had increased, 45116.

FISHERIES.

Fisheries had been developed to some extent along south and south-western coasts, with result that Ferriter was only parish in county in which population had increased; these should be further developed, 44979.

INDUSTRIES.

Lace schools helped to keep girls at home; they earned on an average 4*s.* to 12*s.* a week, and sometimes even up to 15*s.* and £1; if other industries were started some alleviation of present evil would be experienced; weaving and spinning should be developed and encouraged, 44979.—In Cahirciveen and Tuosist especially new looms would be desirable, 45117.—Lace schools had been established, but it was doubtful whether market would be found for increased output of lace, 45118-9.—There was always sale for lace from Kenmare School, but it made very fine class of lace, 45120-1.—It was suitable both for class and cottage industry; women and girls took it to their homes as well as doing it in convent schools, and it kept girls at home who would otherwise be in America, 45123-4.—Weaving was carried on in mill on River Sheen, and it was hoped that Congested Districts Board would develop that, 45186-8.—People should receive proper practical instruction in cultivation and improvement of land, 44979.

O'LEARY, VEN. ARCHDEACON DAVID—*continued.*

HARBOUR ACCOMMODATION.

Harbour accommodation was greatly needed; more piers, slips, and boats should be provided, and dredging should be carried out, 44979.—Large works should be carried out, but slips should be provided for small boats also; piers at Coomcross, Cahirciveen, and Dingle all needed improvement, and slips should be set up between them, 45125-A.

SUGGESTED IMPROVEMENTS.

Smaller grants than may be received at present should be given for drainage; where embankment of rivers was imperfect, leading to flooding of large tracts, Congested Districts Board or Agricultural Department should be empowered to execute necessary work, 44979.—Roads should be made to dwellings, particularly in villages, 44979.—Plantation of forest trees in mountainous districts would be conducive to health, and would be a source of profit eventually; instances of successful planting in Kerry gave guarantee of future success, 44979.—Sides of Mangerton and Torc had been planted, with great success; landowners had planted pieces of land not fit for agricultural purposes, 45126.—It was true that mountains were used for grazing, and if acquired by Congested Districts Board there might be demand for division among tenants for grazing purposes; but if advantages of planting were explained to them, probably people would not object, though they might demand certain amount of compensation, 45127-35.

MIGRATION.

There was not much room in county for migration, but some landlords held large farms which they might sell to Congested Districts Board or Estates Commissioners, 44979.

COMPULSORY PURCHASE ADVOCATED.

Some landlords refused to sell, except on conditions that tenants would not accept; in such cases Congested Districts Board or Estates Commissioners ought to have power to intervene and arrange by compulsion or arbitration, 45088.—Price could not be stated, as individual cases would have to be settled on their merits, 45089.—It might be fair to compel a man to lose some money over such sale sometimes, if it were for public utility and advantage; such considerations had compelled landlords to give up portions of rents by judgment of courts, 45090-5.—Witness did not know whether English rules of compensation would apply to Ireland, 45096-8.—In cases such as that of Lord Clanrickarde it was competent for State to take up estate, even though he should suffer some loss; it would not be injustice to try in that way to remedy the injustice which had prevailed on that estate, 45099-100.—State could take away property which it had given, 45101.—Some properties had been acquired by payment of cash, but most had been granted as reward for services, 45102-8.—But even those that had been acquired by payment of cash might sometimes have to be taken by State, at a loss to landlord, but loss should not be substantial one, 45109-13.—Principle was that, where public policy demanded it, it was not unjust to compel an owner to sustain loss by compulsory sale of property, 45115.—Congested Districts Board had now power to compulsorily acquire land for enlargement of surrounding holdings, 45178.—Board might take away holding much prized by owner, and for which money was not actual compensation, 45180-3.—But generally State should and would pay actual compensation for what was taken away, though there might be exceptional cases, 45184-5.

SHEEHAN, MR. J. L.

See pp. 130-1.

LAND PURCHASE.

Compulsion, with inspection, was only remedy for sale of estates in congested districts of South Kerry; Warden Estate was purchased for £38,240 in December, 1906, tenants thus paying twenty and twenty-three years' purchase, plus two years' arrears, whereas fourteen years ago they had refused to buy from Landed Estates Court Judge for fifteen years' purchase; under sale terms 4*s.* 6*d.* and 7*s.* in the £ were given to second and first term tenants respectively, but when two years' arrears were added annuities

SHEEHAN, Mr. J. L.—*continued.*

were very little reduced from old rents, 1*s.* 5*d.* being received by some instead of 7*s.*; only slum portion of estate was sold, landlord reserving better portion, including three townlands and village of Sneem; majority bought on rack rents only, 91 out of 300 tenants only being judicial; in addition, charges were made for landlord's improvements put up twelve years before, and which were all rotten; some evicted tenants signed under compulsion, as landlord notified that he would hand farms over to others if they did not sign; one evicted tenant who was in America had 200 acres reserved by landlord; he had now about 25 acres to live on; whole estate had been bought by owners for £30,000; they had realised £38,000 on worst portion of it, and had reserved almost as much rental as they had sold; it should never have been sold direct to tenants, but should have been purchased by Congested Districts Board and re-sold by them to tenants, after careful separate valuation; if potato crop failed for one year, tenants would be unable to pay annuities, and there would be a state of famine; rent was now sent by tenants' children from America, England, and Wales; under Ashbourne Act tenants had bought more cheaply in South Kerry, Mahony Hickson Estate being bought at 14½ and 15 years' purchase, and Gough Estate at fourteen years' purchase, 45214.—Attention of Estates Commissioners had been drawn to this transaction, and they were now looking into matter, and had taken up sold portion, wtih object of expending 10 per cent. on it (though Treasury was opposing that grant, and matter had not yet been settled), before allowing it to pass to purchasers, 45221-30.

Fishing.

Fishermen were too poor to get loans from the Congested Districts Board for nets and boats; curing station should be established, especially for herrings and sprats; loss of Clyde Shipping Company's service to Sneem was very much felt by fishermen and others; it was loss of £400 a year to district, 45214, 45231.—Nets and boats had to be got before fishing could be done and if there were bad years instalments could not be paid, 45216.—Share system of acquiring boats did not apply to Kerry, only borrowing system, 45217.—Witness thought that Board required large security, 45218.—He was not aware that no security was required, but that boats were paid for by catches, 45219-20.

Parish Committee.

Parish Committee was working very well; Father Hagan, parish priest, appreciated its efforts to help locality, 45234-6.

RINEY, Mr. JOHN.

See pp. 131-3.

Congestion and Poverty on Lansdowne Estate.

Greater part of Lansdowne Estate was poor and barren, soil peaty and drainage difficult owing to rocky nature of soil; other parts were poor, light and gravelly, requiring good manure; there was very little clay, hence labour had to be done by spade; improvement was difficult owing to scarcity of labour and difficulty in getting lime or sea sand; sea sand was only to be had at Kenmare, and there were no able-bodied men to dredge it; witness had reclaimed some land, but found that improvements were not permanent; principal crop was potato, which failed if summer were very wet; some oats were grown, but they were not worth much; scarcely any potatoes or grain found their way into market of Kenmare; there would not be peace or prosperity in congested districts until they were purchased, but bargain should not be left between landlord and tenant; formerly rents had been raised on every possible pretext; if Lansdowne Estate were purchased 9*s.* and 7*s.* should be taken off first and second term rents respectively; there were several untenanted farms in landlord's possession, which it was thought he would plant; tenants had wished to purchase on two occasions, but landlord refused to sell; Congested Districts Board or Estates Commissioners should take up estate and not leave bargain between landlord and tenant, as tenant would certainly agree to anything that would give immediate relief; there were some evicted farms, some in charge of caretakers, others used as grazing ranches; if some of

RINEY, Mr. JOHN—*continued.*

this land were given to evicted tenants it would be a relief; very small landowners with only a few cows would be greatly benefited by addition to their holdings; entire part of Tuosist belonged to Lord Lansdowne; there were about 450 landholders, three-fourths of them were under £5 valuation; if powers of Congested Districts Board were extended so that it could give grants to small uneconomic holders for drainage, improvements, etc., through parish committees it would be greatest help and encouragement to poor people in these distressed times, 45237.

Cattle.

Cattle were very inferior, though several attempts had been made by better class of farmers to improve breed by introduction of bulls, they were very subject to disease; mortality in calves was great and cattle suffered from gout owing to grazing on poor wet land; average price of 1½-year old was £2 5*s.*, of 2½, £3, of 3½, £4; calf heifers of best quality, £5; "Kerry Goats" was appropriate name for cows; average quantity of butter was sixty or seventy lbs. per cow, even when hand-fed; town of Kenmare was market for goods and buyers came from Cork, Limerick, and Tralee; cattle had to be sold cheap to them as compared with farmers who lived near Cork, etc., 45237.—Cattle were generally kept until three years old; wet lands made them gouty, 45247-51.—Prices received were very low, 45252.—They had to be sold for what prices they could get, as they were not the kind of cattle graziers wanted, and it did not pay to keep them grazing too long, 45253-7.

Emigration.

Great ambition of young people was to go to America; most members of family went there and sent home money, which paid landlords and shopkeepers, 45237.

Industries.

Spinning and weaving carried on at two mills near Kenmare were only industries, and they employed only a few hands, there was no fishing industry, as it was too near head of river, 45237.

Drainage.

Drainage was very necessary, as district was wet and boggy, though rocks, in many cases, prevented proper drainage, 45237.—If main drainage were done by Government small farmers would drain their own lands, 45238.—They would probably look after drains themselves without compulsion, 45239-41.—There was a good deal of heathery bogland which would require to be drained before being reclaimed; peat had been cut too low and water collected on the rock; cuts had to be made through rocks where proper drains could not be made, at great expense, 45244-6.

Land Purchase.

Witness had had experience of purchase of holding under Ashbourne Act on estate of Colonel Goff, at Templenoe, near Kenmare; Government valuer valued each farm separately at from 12 to 16½ years' purchase; witness's had been 16½ years, which he considered fair, as quality of land was better than some others; land on that estate was much better than that on Lansdowne Estate, 45237.—Very little land had been sold on Lord Lansdowne's Estate, 45262.—Agricultural instructor might help people, as they were good labourers; two men might buy at 20 years' purchase, but farms might be of very different quality; one might prosper, the other might be ruined; the bad land might even have more rent than the good land, and thus tenant would become burden on ratepayers, 45263-4.

DOWNING, Mr. JOHN.

See p. 133.

Congestion.

About eighty per cent. of holdings on Lord Lansdowne's estate were uneconomic; people could not maintain themselves were it not for fishing and money sent by friends in America; there was no means of enlarging holdings, as landlord had planted all lands that fell into his hands through right of pre-emption; the lot of the poor could, however, be improved by making roads and by drainage of bogs;

DOWNING, Mr. JOHN—*continued.*

people were so poor that they could not supplement grant of £3 made by Congested Districts Board for improvements; growth of early vegetables, if encouraged by Department of Agriculture, would be of great service, as landlord was not willing to sell; only remedy would be to grant Estates Commissioners compulsory powers of acquisition, 45267.—Drainage and roads were much needed, 45273.—Congested Districts Board grant had to be returned because people could not supplement it, 45274.—Labour was counted as equivalent to money, but material and labour were wanted for these works, which would have to be paid for beforehand, 45275.

Fishing.

Fishing industry had been steadily declining for past six or seven years; formerly men made from £10 to £25 a year by it, 45267.—Fish migrated from one place to another; 25 years ago the pilchard had been found there, but now there was none; hake and mackerel had also declined, 45269.—Herring had come into bay last year and year before, and Fishery Board has sent merchant down, with result that £300 was made on Kilmaccologue pier in three weeks, 45270.

M'DONNELL, Very Rev. Canon.

See pp. 134-8.

Land Purchase.

Purchase of two estates was under consideration of Estates Commissioners; neither was completed, though annuities had been fixed on Clinton Estate, 45278.—In these cases it was sale to Estates Commissioners and re-sale by them to tenants, 45279.—On Puxley Estate landlord and tenants had agreed as to price; it had been offered to Congested Districts Board first, but they had refused it; on Leahy Estate negotiations had been carried on, but fell through; on Leigh-White Estate price asked was so extravagant that tenants refused to consider it, 45280.—Puxley Estate had not yet been inspected, so ultimate price was not yet settled, 45281.—Price agreed on between landlord and tenant was same as that offered to Board and now to Estates Commissioners, though that might alter after inspection, 45282-4.—Negotiations with Board about sale dropped one and a half years ago, 45332.—Cause of abandonment was not known; but there was very little land available for enlargement, 45323-4.—Striping, drainage, and building of houses were all needed, 45325-6.—There were three or four small lakes which Mr. Doran had been prepared to drain into one another and into the sea, 45327.—Coral sand scheme had been for benefit of Clinton Estate, 45329.—It was not yet handed over to Estates Commissioners, though annuity had been agreed upon, 45330.—Negotiations for sale of Leahy Estate had been broken off, 45331.—Properties like those in district should not pass direct from landlord to tenants; but through improving authority like Congested Districts Board, 45332.—Commission had impeded work of Congested Districts Board in purchase, 45333.

Drainage and Re-Afforestation.

Drainage should be carried out either in connection with purchase or without it; houses should be built for poorer tenants, either by free grant or easy loan; passages were needed to connect houses with road; common passage would probably serve several houses if Congested Districts Board could help, 45285.—Tree-planting might succeed on mountain sides, 45309.—If Board acquired grazing rights from people and planted trees it would give employment and eventually pay well, 43310.—Advantage would have to be explained to the people, and then they would agree in their own interests, probably requiring some compensation, 45311-3.—Amount of employment given by Congested Districts Board would be a great benefit, and as Board had already acted on principle of giving compensation even for work that would ultimately benefit people they could hardly complain, 45314-6.—Scotch firs and the *Pinus Insignus* grew well, larch would be most useful, trees could sometimes be got at reduced rate through County Council, 45317-8.

M'DONNELL, Very Rev. Canon—*continued.*

Parish Committees.

Parish Committee had power to encourage formation of passages, but their grants were mostly in improvement of houses; amount required for road would take all their money, 45286-7.—Last year £30 had been given, this year £80; there was difficulty in spending money as there were very few masons, and one man had to wait till another had finished with him, 45289.—Enlarged grant was needed, 45303.—If larger grant was given outsiders could come in and assist in making roads and draining rivers, 45305.—Drainage could be undertaken by Parish Committee, 45306.—Small drainage only was meant, not arterial drains, 45307.—Small sum of money in hands of body of men who knew district could be well administered, 45308.—Board's inspector had been pleased with work done by Committee, 45309.

Manures.

Manure was very important question; leaving out farmyard manures there were three alternatives, lime, sand, and artificial manures; artificial manures were rarely used; lime had to be brought 25 miles from Bantry or 33 from Kenmare; so that was out of the question, 45291.—Coral sand was available in unlimited quantities, and could be got with assistance of Congested Districts Board; Mr. Doran had inspected needs of people, and had promised to consider scheme for supplying it; he had proposed one scheme, but Board had rejected it; if sand was to pay it must be procurable at 1*s.* a load; present methods cost 2*s.* and 3*s.*, which was too much, 45294. Cost came in in paying boatmen to dredge it, 45295-6.—Coral sand was really shell sand; it was not burned, but put on fields as it was as top-dressing for grass land, 45297-300.—Congested Districts Board could help by extracting sand by machinery and storing in large boat anchored over sand bed; if delivered free people could fetch it in their own boats and have it for 1*s.* to 1*s.* 6*d.* per load; if there were extensive output people would need supply of boats; boatslips were needed, and could be supplied by Board with little expenditure, 45300.—Pier that had been built some time ago was useless, as it could only be used at very high tides; result was that use of sand was being given up altogether; pier should be built on Clinton, Leahy, Leigh-White, and Puxley Estates; in a few cases roads should be made to enable people to get sand on to their farms; local Council was too poor to make them; failing supply of sand Congested Districts Board should procure lime; it could be brought by sea from Bantry or Kenmare, and kilns could be built in Castletown; lime would have to be delivered at cost price to poor tenants, 45302.—Labour for dredging sand was very scarce owing to emigration, 45334.—Mr. Doran's plan for raising sand would be best; artificial manures would be cheaper, but sand was more lasting in its effects, 45335.—If Board raised it it would be useful demonstration to show tenants what could be done, 45336.—Board would not lose much even if experiment were a failure, 45337.

Population and Valuation.

Population of union was 11,178, valuation £12,405, which averaged £1 2*s.* 2*d.* per head, 45303.

Industries.

Lace and crochet class had been established in 1906, but so far had not been very successful, teacher was to be changed so they might do better, some people advocated establishment of woollen industry, 45309, 45343.—Attendance at lace class had dropped off because girls could make no money, 45344.—If class were well established girls would be persevering, and industry would be a success, 45345-6.—Mr Walker had paid three visits altogether to the class, 45347.—His visits were too short and hurried, as he came by motor and went away quickly, 45348-9.—Military works on Bere Island did not give employment here, 45361.

Congested Districts Board.

If Congested Districts Board could pay occasional visits to districts and see work that was being done they would be more in touch with people and could see better what was required than by correspondence, 45319-21.

M'DONNELL, Very Rev. Canon—*continued.*

Emigration.

District suffered greatly owing to emigration, people emigrated to Montana, where they could earn £200 a year, 45335.—Population of witness's parish was about 2,000 as against 4,000 twenty-five years ago, 45351-2.—People came back when they were worn out working and had saved some money, and raised price of land by paying extravagant price for it, 45353.—Children in America send money to parents, about £3,000 was sent at Christmas and £1,000 during the year, 45354.—If parents die some boy returns home to take possession of holding, 45355.—They could only work in mines from six to ten years, as they got rheumatic owing to damp, 45356.—Girls went as much as boys, sometimes marrying there, sometimes returning home to be married, but rarely, 45358-9.—If land were available for young people it would probably keep them at home, 45373.—There were very few failures among those who emigrated, 45374.—Emigration was a question of wages, an industry in Ireland which would give good wages would induce young people to stay at home, 45375-8.—About £10 a family came into parish from America, 45380.—Working men in Montana are able to save about half their wages, they were boarded in Butte City for £2 a week and got 14*s.* a day wages, 45381.

Harbour Accommodation and Dues.

Pier had been improved twelve months ago for about £1,000, 45340.—Expenditure on pier was a success, but no dredging had been done in harbour, District Council had approached Congested Districts Board, but they had only offered £250 out of £1,000, 45341.—Mr. Wyndham had promised to consider matter, 45342.—Harbour dues were not charged on fishing boats, but any dues that were charged went to repair of pier, aided by contribution from Congested Districts Board, 45390-3.

Sheep.

Mountains did not carry as many sheep as they might, for people had not money to buy either sheep or cattle, there were 280 landholders in parish of £1 valuation and under, 45370.—There was fine mountain run but scarcely any sheep on it, 45371-2.

Steamer Service and Postal Facilities.

There was subsidised steamer service between Castletown and Bantry every day in summer, and every second day in winter, 45383-4.—Postal facilities were very defective, post arrived at 12.15 p.m. and went out at 1.20 p.m., so that letters could not be replied to on same day, fog horn was also wanted at lighthouse at mouth of harbour, 45384-5.—Lighthouse was under Irish Board of Lights and fog horn ought to come under term equipment; Admiralty was really harbour authority, 45386-8.—Harbour Board might be formed, but witness understood Admiralty did not like local interference, 45389.

Congested Districts Board.

There should be representative on Congested Districts Board for both Cork and Kerry, two would be required as distance was too great to secure regular attendance if only one were elected, 45471-2.

Steamer Service.

Subsidised steamer running between Bantry and Castletown, calling one day in the week each way at Bere Island, she brought whatever was wanted, and if further subsidised could carry the mails, passengers were also carried, 45473-80.

M'DONNELL, Rev. JAMES.

See p. 138.

Witness was unable to be present, but sent memorial. Points he wished to emphasise were:—

(1.) Purchase of holdings from landlord and rearrangement to prevent mixed holdings.

(2.) Desirability of migration.

(3.) Means of providing coral sand at cheap rate.

(4.) Encouragement to practise *general* fishing, so that one particular kind would not be depended on.

M'DONNELL, Very Rev. Canon—*continued.*

(5.) Necessity for veterinary surgeon from Berehaven who could also lecture on diseases of animals, etc., it was necessary that he should be able to speak Irish, otherwise his energies would be wasted.

(6.) Extension of knitting industry.

(7.) Establishment of weaving industry, such as that established by Congested Districts Board at Glengariff, 45470.

HARRINGTON, Mr. DANIEL.

See pp. 138-41.

Harbour Accommodation.

Fishing pier accommodation and dredging of harbour at Castletown needed to be developed by Congested Districts Board; if that were done herring and mackerel fishing ought to be very successful, 45394.—Proper pier accommodation ought to be provided, there was one narrow pier which was very dangerous, width ought to be doubled, if there were South of Ireland representative on Board matters might be improved, 45450.—County Council should select representative, Bishop of Ross would be good representative, 45451-2.—Seaboard of Cork was congested, and if Board developed pier accommodation fishing would become best in Ireland, 45454.—Castletown Harbour was filling up and dredging was badly needed, 45457.—Some dredging had been done, but it was no benefit, 45458.—£100 had been expended by Congested Districts Board on dredging, 45459.—At low tide at entrance to harbour there were only nine feet of water, outside at Dinish it was thirteen feet, if whole were dredged to that depth it would be very valuable, it would have to be dredged 200 feet on each side of pier, 45460.—If well done it would not be likely to silt up again quickly, 45461.—Time adopted for such work ought to be about 1st March, when people were not engaged in fishing, if begun during fishing season people could not give labour, 45465.—Tenders should be invited from contractors, as then there would be more competition and work might be better done, 45466-8.

Fishing.

There should be shelter sheds for proper curing of mackerel, as fish was easily injured by sun and rain, 45395.—If these were put up by Board curers could pay rent to Board, 45400.—Mr. Green had been approached about it, 45403-4.—Herring fishing should be developed at Berehaven as it had been in Donegal, 45405.—Herring curing was different from mackerel and people would need to be instructed, 45406-7.—Herrings were off coast about same time as mackerel 1st August to middle of October, 45410.—Last year Autumn mackerel fishing started about November and finished in February, 45411.—Scotch curers would not come down to cure herring although some came to cure mackerel, getting local labour, 45416.—Congested Districts Board should instruct in herring curing, 45418.—Seine nets were used, 45421.—Mackerel curing was much more profitable than herring, 45423.—Cost of cured mackerel was £3 a barrel last year, 45424.—They were sent to Liverpool whence they were shipped to America, 45425.—Herrings were very good, and fishing could be developed, 45426-8.—Nets and boats were the principal needs, 45429.—If Board subsidised boats as they did in Donegal that would be a great help to the people, 45430.—Subsidising meant giving boat so much at opening of season and having a chance afterwards of any fish they took besides, 45432.—Board never subsidised herring boats in that sense, though boats were given out on share system, 45434-5.—Application had not been made to Congested Districts Board for instructor in curing, but Mr. Green had said that Mr. Duthie, should come and see about it, 45436-7.—Board knew that fish were coming to these coasts, witness had cured fifty barrels of fish in a fortnight last year, 45438.—Herrings should be tried with herring nets, long-line fishing was important, it lasted from August to Christmas, 45439.—If there were opening for steam drifter Board would probably be willing to experiment, 45440.—Mackerel would not stop herrings as they were becoming later every year, they did not now come till October, 45441.—If herring fishing could be established there would be continuous fishing

HARRINGTON, Mr. DANIEL—*continued.*

for six months, 45442.—Transit facilities were very much needed, 45444.—Steam trawlers did a great deal of harm, stopping of trawling with small boats in harbour had injured line-fishing, small boats should be allowed to trawl for short time to clear the ground, 45445.—Now ground of inner harbour was fouled and fish would not lie there, if trawling were allowed by small boats fish would come in and spawn there, 45449.—Berehaven had got very little for the £10,532 paid by Board for purchase of boats and gear in County Cork, 45456.—In spring of 1896 capture of mackerel at Berehaven exceeded that at any other part by 40 per cent, seven steamers were sometimes loaded here during a week, 45462.—Spring fishing had gone down, but if there were transit facilities it would revive, steamer ought to leave Castletown for Bantry in the evening, to catch evening train, that was important as fish quickly deteriorated if kept over, 45463.—Population was too small for Harbour Board and provisional orders were very expensive, 45464.—Agricultural schemes had not been taken up by the county, 45470.

POWER, Mr. MAURICE.

See p. 141.

Improvements.

Drainage was very necessary, 45483.—Witness meant farm drains, 45487.—Roads ought to be made, 45483.—Trees ought to be planted on mountains, 45483.—Farmers would not lose much if portion of mountain were taken from grazing and reserved for planting, as mountains were very barren, 45485.—It was very necessary as mountains were so bare, 45486.—There were no agriculturel schemes in that district, 35508.—Piers were needed in several places along the coast, 45510.—Adrigole was one, 45512.—It had a pier but a very poor one, 45513.—It had been built for steamers, not for small boats, and was not yet finished, 45514-6.—Slip should be built beside the pier as small boats could not land anything, 45517-8.

Sheep.

Very few sheep were kept on mountains, and what there were were of very inferior quality, it would be useless to try to improve quality as they could not thrive on such land, 45491-6.

Manure.

Lime was very much needed, but it could not be got, it cost 1*s.* 6*d.* per barrel at Kenmare, and then had to be carried round the road, 45497-9.—Sand could not be got now as there was no boat in the harbour, 45501.—It had to be given up owing to want of men to work it as labour was very scarce, 45505.—Lime would be preferable to sand if it could be got, but people would be glad of either, 45507.—Only way of getting sand would be for Congested Districts Board to send down boats with large quantities to be landed at piers, 45520.

Land Purchase.

Landlords had not sold to tenant in that district, landlord of Leigh-White Estate had made an offer but price was very large, 45509.

O'SULLIVAN, Mr. T.

See pp. 142-3.

Fisheries and Piers.

Principal fishing ground in Berehaven was from Dursey Island to Cod Head, and these fisheries were some of most important in Ireland, Rev. Father Barton had made repeated application to Congested Districts Board for improvement of piers, slips, and roads, at last some members of Board, including Sir Horace Plunkett, came and saw for themselves, they recommended grant of £650 to build pier at Ballydonegan, but through some misunderstanding pier had been left half finished and useless, piers and slips were needed in other parts, request had been

O'SULLIVAN, Mr. T.—*continued.*

made for improvement of landing and construction of pier at Clainough, but nothing had been done, this was urgent piece of work, and could be done with little outlay, in this district about forty boats were employed in fishing with seine nets, each seine net was worked by sixteen men, commencing 1st August and continuing to November, some fifty local boats fished from August to February; hauls of mackerel taken by seines sometimes reached 50,000 in one catch, there were thirty curing stations where fish was bought, cured, and packed for American markets, giving employment to hundreds, fish merchants were English, Scotch, and American, with a few local capitalists, with such an industry it was pitiable to see best of young men emigrating, sometimes crowds of fishermen had to watch shoals of fish but were unable to catch them as they could not launch boats for want of a pier, from Carinish to Cod Head there was only one half-finished pier, parish priest had constantly written to Congestead Districts Board asking for aid and it was hoped that something would be recommended by Commission, 45521.—Pier had been constructed at Garinish many years ago by Board, 45523-4—Work had been begun at Ballydonegan five or six years before, but was stopped because of difference between labourers and engineers, they were employed in fishing when engineer wanted to begin building and they did not want to leave fishing for smaller pay offered by Congested Districts Board, 45530-4.—They would gladly work for 2*s.* a day out of fishing season, 45535, 45540.—Sir Horace Plunkett had been to Ballydonegan and saw trouble there was in launching boats, etc., and said he would recommend something to be done, 45538.—Pier had been built at Cahakeern sometime ago by contract, and work was done satisfactorily for £200, 45542.—There was no Parish Committee in parish, though Father Barton had applied for it, 45544-5.

DUDLEY, Mr. JAMES.

See p. 143.

Congestion.

Whole district of Berehaven was congested; holdings were mainly uneconomic; out of 100 known to witness only five were uneconomic; potato crop was lost from time to time owing to exposed situation and absence of trees; 90 per cent. of houses were old, low, badly lighted and ventilated; congestion might be somewhat relieved soon, as Estates Commissioners were negotiating purchase of grazing land, 45546.

Fisheries and Piers.

Only industry was fishing; at Garinish ten seines, worked by 160 men, engaged in mackerel fishing from August to November; in years gone by fishermen could make £40 on an average; this could have been doubled if there were quay accommodation; at present there was only small narrow slip capable of accommodating two boats at a time, and even to this boats could not get at high tide; fish curing was much hampered through lack of quay accommodation; in fairly good season sum turned over would be £8,000; Garinish was one of most important fish-curing stations on south-west coast, and Congested Districts Board had neglected it badly; if properly equipped condition would be much improved; in April and May fish had to be sold at less price than in other places, as it had to be carted fifteen miles to Castletownbere to be sold; owing to delays fish deteriorated before reaching English market; merchants had to wait for payment until fishing was successful; if Congested Districts Board would improve quay accommodation fishing would be greatly improved; lobster fishing was carried on in summer months, 45546.—Pier which had been erected cost £1,500 or £1,600; it should be made right, 45549-50.—Slip was good as far as it had gone, but it was too narrow, 45553-5.—Fish was sent to Liverpool, thence to America, 45556.—Ballydonegan slip would be useful if completed, 45558.—A little work was being done at Dursey Island, 45559.—Dursey Island was being sold to tenants, 45560.—Pier at Garinish had greatly increased the fishing, 45564.

O'CALLAGHAN, Rev. JAMES.

See pp. 144-5.

Work of Congested Districts Board.

Congested Districts Board had done useful work in Eyries parish during last two years; Cahirkeem pier had cost £900; Board contributed £600; they had removed rock at Kilcatherine, and had made safe landing place, though it was not finished; fish had to be put in bags and hauled over cliffs if tide was not favourable; a little outlay would make it safe place; Board had built slip at Darrigroe, and had removed rock which blocked passage between sea and Loughane, and had made landing at Innisfanard; they had undertaken to make landing place at Trasalig, where nets were torn by having to be dragged over cliffs; Travera and Tranimod needed looking after, rough weather was best for fishing, but it was impossible to go out if there were not good harbours of refuge; Board had promised to build bridge over ford between Glenbeg Lake and Argroom River, 45569.

Suggested Improvements

Road had been promised to Cleandra, 45569.—Glenbeg Lake was one of finest water powers in Diocese of Kerry; re-afforestation should be undertaken; every man should plant as much as would supply him with fuel; if properly planted trees would improve, not injure land; seeds of ash and sycamore were easily obtained; heath produced best butter and sweetest mutton; if cut and crushed in mill driven by water power and afterwards partly fermented it would make good cattle food; mountain torrents should be diverted and made to scatter clay and stones over barren slopes; cows liked fuschia, and it should be tried as a winter food, 45569-70.—If people were encouraged to enclose and plant two or three acres there would soon be enough fuel, 45570.—Ash and sycamore seeds planted themselves; ash was best timber for planting; poplar was easily planted, 45572.

Fisheries.

Fish-curing should commence immediately fish was landed, as delay spoiled fish; if there was a heavy take local agents showed telegrams, real or bogus, stating that market was glutted, and stopped buying; when bargain was made in evening 10*s.* worth of fish had to be sold for 3*s.* 6*d.*; people should be protected from bogus telegrams, and curing of fish should not be delayed; inspection was necessary, and ice-houses should be provided, also sheds and troughs supplied by pipes, 45569.

Turbary.

Bogs should be cut down to gravel instead of in holes here and there, as that made it rot; people would not be able to manage without help from Congested Districts Board, 45573.

O'LEARY, Rev. TIMOTHY.

See pp. 146-53.

Congestion in Parish of Muintinarara.

Five electoral divisions scheduled as congested in parish of Muintinarara, with population of 3,251 in 1901, 383 out of 478 families having valuation of less than £10; 629, or 24½ per cent., had emigrated from congested divisions since 1898; population had decreased by 616 persons, or 62 per cent., 45674.—There was such a craze for emigration that it was impossible to keep people at home; emigrants at Kaspar sent home invitations to others, offering good wages and £20 for expenses, 45695-6.

Improvements effected by Congested Districts Board.

Improvements on Board's estates, road-making, main drains, construction and improvement of houses

O'LEARY, Rev. TIMOTHY—*continued.*

and buildings were very useful and well done, 45574, 45643-4, 45574.—Work on Bird, Beamish, O'Donovan, and Bandon estates began on 10th October, 1905; three gangers sent down, each employing about fifteen men, who earned 10*s.* a week in winter, 11*s.* in summer; they had made eight miles of road, main drains, and sixteen houses, 45643.—They were also to improve and help to build fifty new dwellings and numerous out-offices, a most important thing, since houses were in many cases miserable hovels, 45645.—Improvement effected had even exceeded tenants' anticipations, 45644.—Board had expended about £1,700 on roads, drains, fences, dwellings, etc., 45651.

Success of Kilcrohane Crochet Class.

Kilcrohane crochet class doing well, 59 pupils earning £353 7*s.* 4*d.* last year, 45574, 45726.—Board had expended perhaps £150 on lace industry, 45651.—Sum earned was very big, considering that children came long distances in many cases, 45727.—Only three girls out of every 59 who attended classes, afterwards emigrated, 45727-9.

Board's Rent-collecting System too exacting.

Board's rent-collecting system too exacting, 45574.—Instance on Bird Estate, receivable orders sent to tenants ordering them to pay a year's rent to the bank in a certain time, and setting forth balance of arrears due, 45618, 45634.—This public setting forth of indebtedness would have a bad effect on solvency of tenants, 45619, 45625, 45635.—Mr. Mitchell, the secretary, had cancelled orders when witness had called his attention to them, and sent his assistant to collect rents, 45621, 45634.—Technically the Board, not Mr. Mitchell, were to blame, 45622-3.—Question whether it was desirable for a man deep in arrears to be able to get a loan from bank did not arise; these arrears were not worth a year's purchase, 45624.—It was necessary to go to the bank; instruction seemed to convey that tenant must pay there, 45626-30.—Improvements on Bird Estate extremely good, 45636.—In another case Board had threatened to process 25 out of 40 tenants who were unable to pay second year's rent at Bantry and Skibbereen; witness wrote asking for a list of threatened tenants, and was told it should be sent when quarter sessions were over, 45636.—He wrote again, with result that no processes were issued, and tenants got time, 45637.—Larger tenants who were not benefited by Board's improvements could not get labour, because men were all employed on Board's work, and so found it hard to pay, 45639.—It ought to be exceptional to allow tenants to go without paying full rent, but in this case three months' time was not much to ask, 45640-2.

Sales of Land.

Scheduled division owned by eighteen landlords, of whom two had sold under Balfour Act, two under Wyndham Act to tenants; three negotiating sales at present, 45574-5.—Seven landlords had sold to Board, 45576.—Principal landlord, Lord Bandon, sold direct to tenants, one townland only to Board, because tenants could not agree among themselves, some refusing to touch Board, 45577.

Prices paid for Land.

One landlord was willing to sell at 21½ years' to 18 years' purchase, but Board had made the offer, 45575.—Pending sessions of Commission, Board was not buying land unless it was exceptionally fitted for their purposes, 45579.—Board had given 18 years' purchase of first and second-term rents for Furlong Estate, on which about one-third of tenants were second-term tenants, 45612-3.—Seventeen years' for Brown Estates, 45613.—There had been negotiations for the Wright Estate, but Mr. Wright refused to sell except to tenants direct at 20½ and 22 years' purchase, 45613, 45615-7.—Estate was the poorest in the parish; Mr. Wright did not get full rents, because tenants could not pay them, 45614-45618.—Compulsory powers needed for remaining landlords, 45574-5, 45645.—Dr. Barrett, who had bought reversion of Miss O'Donovan's property for £350, refused

O'LEARY, Rev. TIMOTHY.—*continued.*

offer which would give him 23 per cent. on £350 since death of M. O'Donovan; he also denied that he was landlord of Glenlough townland, though his agent had given receipt for rents six or eight months before, and he had sent a process to a tenant who was being evicted, 45579-87.—Most unreasonable for landlord ta refuse to sell unless insured against loss of income when tenants were entitled to get fair rents fixed in court, 45588-94.—It would be reasonable enough if net income were derived from second-term rents, 45595-8. —Another landlord, Mr. O'Sullivan, wanted 20½ years' purchase for property of ordinary tenanted land, four-fifths of it mountain in non-congested portion of parish, 45598-602.—This landlord had no costs of collection, his rents being collected in a shop in town, 45603-6.—Very exceptional for gross income to be same as net income, 45610.—30½ years' purchase would give gross income; bonus would be additional, 45606-9.

Compulsory Powers needed for Striping.

Compulsory powers needed for striping, 45574.—In case of a farm held in rundale the best field was divided into eleven plots; when this farm was re-divided one tenant chose the southern half, and seemed quite pleased; the inspector then decided to remove the dwellings, which had hitherto been quite close together, and when the tenant who had had his choice of a side of the farm found his neighbour getting £20 to build a house, he went to a solicitor, and threatened legal proceedings; there should be power to coerce such unreasonable persons, 45645.

Comkeen Townland.

In regard to Comkeen townland agreements to purchase had been lodged with Estates Commissioners 2½ years ago, 45574, 45647.—But the land should not be vested in tenants without some improvement, 45646, 45648.—Population was 75; valuation, barring two tenants whom witness wished to exclude, £73 16s.; rents for all practical purposes were second-term rents; lands terribly intermixed, resulting in a great deal of trouble and confusion, 45646.—Valuation Office knew nothing about it, 45699.—Impossible to vest sub-interests, as they were in any individual, 45650.—Migration was not a feasible remedy for congestion, and there was very little untenanted land available, 45574.

Thoreen Townland.

Thoreen was only townland in parish where population had increased since 1881; only one man had emigrated during last 9½ years, and he returned; valuation of townland was £13, population 32; they were isolated and contented, 45730.

Fishing Industry.

Mackerel, herring, hake, turbot, plaice, sole, brill, haddock, whiting, pollock, mullet, bream, sprat, lobsters, scollops, cockles, crabs, mussels, and periwinkles were taken in Bantry and Dunmanaway Bays, 45574.—446 men, practically one from each family; 116 boats, or one for every four men engaged in fishing; 265 men and 60 boats fished in Dunmanus Bay, 181 men and 50 boats in Bantry Bay; Board had helped local fishermen by building five boat slips, 45574.—And had expended on improvement of piers £182 in Thawcloonish, £469 at Glenroan, £455 at Gortavarig, £454 at Dooneen, and on roads and piers a total of £4,346 17*s.* 10*d.*; all expenditure on improvements to a certain extent useless unless things were carried a little further, 45651.—Four fish-curing stations, Traghruane, Thawcloonish, Lahane, and Tragatemple; average prices for mackerel during last four years £380, £600, £700 and £571, at the four stations, 45656.—Average total, £2,153, 45574, 45656.—At Lahane there were 600,000 herrings at 3*s.* per hundred, 5,000 hawked locally, 30,000 taken anywhere they could get a market, 45656.—About £750 paid annually for herrings; large quantity of fish sold locally, 45574.—Average price for mackerel at one station in 1902 for months August, September, October, November, December was: 4*s.*, 5*s.*, 6*s.*, 10*s.*-12*s.*, 6*s.*-14*s.* per 100 of 126 fish in 1903, 5*s.*, 4*s.*, 3*s.*-9*s.* 4*s.*, 4*s.* in 1904, 4*s.*, 4*s.*, 4*s.*-6*s.*, 6*s.*, 6*s.* in 1905; 5*s.*, 5*s.*, 6*s.* 3*s.*, 3*s.* in 1906, 1*s.* 6*d.*, 2*s.* 6*d.*, 1*s.* 2*d.* 1*s.* 3*d.*, 10*s.*-11*s.*, 11*s.* 8*s.*; in June 1907, 8*s.*, 45656.

O'LEARY, Rev. TIMOTHY.—*continued.*

—Good deal earned on hake, £4 or £5 a man on an average, 45656.—Hake cured and hawked round, 45657.

Landing Places and Market Facilities Needed.

Landing places were needed at many more places, and market facilities were essential, 45574, 45651, 45654-6, 45659-60.—Piers needed at Tragher and Lahane, but Board had not sufficient funds, 45653.—Big piers wanted in only one or two places; landing of fish should be concentrated, but small landing places and facilities were needed for securing boats and taking nets up easily, 45661-9.—A motor service should be established to Kilcrohane or Ahakista, 45574, 45654.—And a monthly fair at Durrus would be useful, 45574.—Fishing was holding its own well; in some places expenditure on piers had increased amount of fish landed, 45670-3, 45680-2.—Piers asked for would not cost anything like £10,800, and the Treasury ought to return something for taxes paid on tea and tobacco, 45675-8.—Small landing places would cost perhaps £200, 45679.—Fishermen all farmed; there were no fishermen pure and simple except in town of Bantry, and there could not be unless they had boats large enough to take out in the winter months, 45691-4.—Dooneen Pier gave landing facilities for large mackerel boats, 45695, 45701.—A bit of land attached to fisherman's house was a great blessing, 45698.—Fishermen could easily be induced to concentrate their energies on fishing, and follow the fish all the year round, if they had landing facilities, 45697, 45699-700.—There was a tendency on part of fishermen to go in for large boats, 45704.—But small piers would always be useful, 45705-6.—Witness feared Government would not give the money for large piers, 45707.—Only at Durrus that a very large pier was wanted, 45709.—Church Island would be the place for the market, 45710.—People along the coast near Bantry itself did not fish; the district was not congested, and people could live on the land, 45712-4. —It was remarkable that with all the advantages of Bantry Bay there were not more big boats, but there was hardly any market except for mackerel; railway carriage was expensive, and fish did not reach Dublin in good condition, 45711-8.—Fishermen should be provided with bigger boats, and trained to get more out of the sea than they did now, 45720.—Take could be brought up to Bantry Bay on one side, 45721.—Dunmanus Bay catch would have to be taken to Ahakista or Kilcrohane, 45723.—The only two piers in Dunmanus Bay were one at Durrus, the other near Dooneen, 45725.—Pier at Dooneen was of very little use; the swell was said to be too great for boats to be moored there safely, 45726.

Parish Committee's Work.

Parish Committee had done good work, 45574, 45657.—But results were small, because when people saw Board were likely to buy estates they did not care to avail themselves of facilities offered, 45659.—Work done included building of twelve new houses and repairing six old ones, building six new out-offices and repairing three, and making of drains, roads, and fences; total of grants amounted to £162 10*s.*, and estimated cost of work to £814 13*s.* 6*d.*, 45574, 45657.—Or more than five times amount of grant received, 45658.

Potato Blight and Spraying.

Potato blight had ruined early potatoes in case of witness's curate, 45683.—That was not universal, 45684.—People believed in spraying, and sprayed carefully, twice this year in most cases, 45685-7.—It required a dry day, and that was hard to find this year, 45688-9.—No one had sprayed when blight occurred, 45690.

TURNER, Mr. A. B.

See pp. 153-61.

Explanation of Canon O'Leary's Mistake in regard to Mr. Barrett's Property.

Mr. Barrett was right in stating that he was not the owner of a certain townland; Canon O'Leary's mistake was perfectly natural and due to receipt issued from witness's office, and the office was in the wrong, 45731, 45741.

TURNER, Mr. A. B.—*continued.*

Circumstances of Sale of Furlong Estate.

Mrs. Furlong sold her estate to Congested Districts Board at eight years' purchase because her tenants withheld the whole of the rents and she could not fight them, 45731-3, 45740.—Price was 18 years' purchase without the bonus, 45735-6.

Object of Act of 1903 was to tap a new Class of Vendors.

It was not fair to make comparison between Act of 1903 and preceding Acts; Act of 1903 was meant to bring about a great ameliorative change, and it was arranged at Land Conference that the prices should be increased in order to facilitate transfer of land, 45737-9.—Scheme of finance of Act of 1903 devised in order to tap a new class of owner; financial inducements of older Acts did not attract the landlord who looked to his rents as his sole means of income; selling was now a matter of business to both sides, 45742-4, 45768-9.—Two classes who sold under former Acts were the very rich landlord and the bankrupt, as a rule, 45765-7.—Lord Dillon had a fine place in Oxfordshire, 45770.

Means of arriving at Price of Land.

Usual procedure in sale was that tenant approached landlord directly or indirectly, 45748.—Landlords willing to sell if they got their net income, 45744-5, 45749.—Net income arrived at from rental of estate; books not submitted for examination to tenants; witness did not see why they should be, 45746, 45751-8.—He had never been asked to do such a thing, 45760.—No objection to placing rentals for inspection before the Estates Commissioners; it was an excellent suggestion, 45759, 45761-3, 45771-2.

Leahy Estate.

In regard to the Leahy Estate, when the terms of sale were arranged the tenants in the Castletown division were satisfied; Eyries tenants refused to purchase; it was decided not to split up estate, and rents had to be recovered; tenants of one division refused to pay rent and proceedings had to be taken; there was an idea abroad that tenants were harshly treated, 45772.—In consequence of proceedings a great many paid, but there was great unrest in the Eyries division, 45773.—There was no proposition at present for sale of property, 45774.

Demesne in Glengariff.

Father Harrington had stated that a good deal of the best land in Glengariff was in the demesne of Glengariff and in the hands of the landlord, but except for a small herd of fallow deer all the cattle in demesne were property of people in the glen, grazed at 2*s.* 6*d.* per month in summer and 2*s.* in winter, 45774.—Demesne did not hem in the people; two public roads going right through it were maintained by landlord, 45775.—Three years ago it was agreed between landlord and tenants to build a bridge over one of the rivers, landlord to build the bridge, tenants to make the approaches, but tenants never made the approaches, 45775-6.—There was no contribution from the District Council, 45777.—Bridge was in connection with one of the roads maintained by landlord, and replaced a board used as foot-bridge; the bridge was higher than the board, so that approaches were necessary, 45778-82.—Roads were perfectly free to the public, 45783.—Another demesne in Glengariff was Lady Ardilaun's, at Reenan, which was more a garden than a demesne; there had been an addition to it lately by the death of the Countess of Ferrers, 45784-5.

Boat Slip at Muccaragh.

Father Harrington referred also to the want of a boat slip at Muccaragh; there had been one there for three years, built by Congested Districts Board, with a contribution from the landlord, 45785.—Witness had not been there since slip was built, 45787.

Scheduled District of Bantry.

In scheduled district of Bantry—Bere and Berehaven—land was mostly poor and mountainous, with small portions of good land; tenants had grazing rights over mountains and were generally well off for fuel; there were valuable fishings on the seaboard, 45788.—Standard of comfort in Berehaven equal to that in poor parts of Kilkenny and Carlow; houses as good; no considerable extents of pasture nor of land suitable for dividing up; commonage fairly and fully occupied; cattle sold in autumn fairs in good store condition; bulls supplied by landlord in certain districts some years ago, 45801.

Fishing Facilities should be considered in fixing Judicial Rents.

Fishing facilities should be considered in fixing judicial rents; landlord was entitled to benefit from position since the drawbacks were considered in fixing rent, 45788-98.—Tenants often were fishing when they ought to be looking after the farms, 45789.—By Act of 1881 the Land Commission was directed to take into account all the circumstances of the holding, 45797, 45800.—Till recently Irish farmers had maintenance of all roads; their ability to take road contract being due to fact that they were farmers and had horses idle at certain times of year; that was another economic advantage of holding farms, 45799.

Age at which Stock was Sold.

Small men kept stock, as a rule, till two or three years old in Kenmare and Berehaven districts; in Longford it often paid better to sell as yearling, 45802-5.—Animals under a year old sold as calves at, perhaps, £3, but, as a rule, they were sold at home, 45806-9.

Causes of Emigration.

There was still a great deal of emigration owing to lack of congenial employment and impatience of parental control; cheap and improved means of communication had robbed emigration of much of its terrors; emigration would continue while standard of wages remained low, 45809.—Moreover, Irishmen got on well in new countries; in America a man always got a civic position or a vote from the Town Council, 48510.

Migratory Labour.

A few men migrated as labourers to South Wales and elsewhere; this temporary absence was very advantageous; men earned good money, which they usually saved and returned more tolerant and contented, 48511.

Berehaven Mining Company.

Berehaven Mining Company had their headquarters near Allihies and Ballydonegan; mines produced copper and were satisfactorily worked for many years, employing 1,300 men, but for some years past working had not been profitable; experts declared that mineral was there, but more capital was wanted and was hard to get because the mines were in Ireland, 48511.—Capital was very sensitive, and restless condition of affairs in Ireland kept it away, 45812-22.—People in London possibly thought industry would not bear the addition of more capital, there had been a request to comply if there were a prospect of industry struggling to its feet again, 45829.—Mines were on different estates, 45829.—A member of present Government looked at a very fine demesne for sale and said he would buy it at once but for the disturbed condition of Ireland, 45823, 45830-1.—He was frightened by the socialistic tendency of legislation though he was a member of the Government responsible for it, 45832-5.

Leigh-White Estate suited to be taken over by Board.

On the Leigh-White Estate, area was 65,000 acres, average rent, £6, rental, £11,000; estate was eminently fitted to be taken over by Congested Districts Board; tenants mostly small men, tenacious of rights and fond of litigation, needing someone in authority over them to arrange and stripe property and make them obey regulations, 45836.—Rents not exorbitant; full rental received from 1895-1905, and only two ejectments carried out; 28 years' purchase given on

TURNER, Mr. A. B.—*continued.*

an average for tenants' interests, 45836-8.—Rents uniformly reduced by 25 per cent. last winter, entire reduction falling on landlord, 45838.

Landowners' Distrust of Land Commission.

Wholesale and uncalled for reductions of rent had made owners distrust fairness of Land Commission; all parties interested concluded that steps had been taken to lower generally accepted standards of value, 45838, 45844, 45847-8.—Witness could speak for many people in association with the land, 45846.—There was no great increase in cost of living or labour, 45839-40. —But standard of living had gone up and there must be some relation between cost and standard, 45839-43. —Reductions to which witness took exceptions were those on second term rents within last year or year and a half, 45850-1.—Additional inspectors and Sub-Commissioners having been appointed who took an unfairly low standard of value, 45852.—Act of 1906, by reducing inspection from two Commissioners to one had greatly weakened the Land Commission, 45853-5.—Men now appointed were apt to go if their services were not satisfactory to the powers that be, 45856, 45865.—Remarks applied in some degree to appointments made before last one and a half years, but test had been withdrawn and witness thought those appointments were really impartially made, 45857-60.—Removal of some of these men could only be explained by the exigencies of the political situation, 45861.—Witness would like to see the privilege availed of which existed, but was not sufficiently well known, that was, that landlord and tenant could apply for services of two Commissioners without any preliminary hearing or expense of valuing, 45862, 45866.—Appointment of valuers must remain with Government, 45864.—In case of disagreement there would be the ordinary appeal, 45868.—Appeals were rare, 45869.—Commission under the late Government, which was supported by landlords, had been strongly leavened with democratic element from the North of Ireland; the Tory Government were obliged to consider the Ulster tenant-farmer who was just as anxious as anyone else to get a cheap rent, though once it was fixed he paid it, 45869-75.

Administrative Persecution of Landlords and Socialistic Legislation.

Government had resorted to administrative persecution, 45876.—Witness had 100 land cases in one district, and three days before cases were heard a supplementary list of forty-six cases to be taken before the 100 was issued and witness's protest disregarded, 45877-81.—Tenants ignorant of law might require more indulgence from courts than the other parties, but that question did not arise in present case, 45882.—Cases were put in at request of solicitor for the forty-six tenants, 45985.—Legislation had been most one-sided; Act of 1857 empowered lessees, but not lessors, to get their contracts broken, 45876, 45897-8.—Act of 1896 refused to allow re-consideration when judicial rent had been fixed in error, while permitting tenant to have his case re-heard, 45876.—Much in Act of 1881 was unnecessary; it was panic legislation and might have been so framed as to avoid necessity for subsequent socialistic legislation, 45884-6.—It was socialism that State should do for an individual what he would do for himself, nothing could be more socialistic than purchase of land on public credit, 45887-8.—But witness had a good deal of sympathy with much that had been done in the way of making roads, piers, etc., 45889-92.—And preferred socialism to confiscation, 45893.—He was in favour of land purchase, as the only solution of the present deadlock, 45896, 45899.—Whole trend of legislation was socialistic, 45900.—Witness would give every facility to Congested Districts Board to take over Bantry Estate; he would leave the records for past twelve years with Commission, 45901-3.

Work of Board in Berehaven.

The Board had done much beneficial work in Berehaven, mostly by improving means of communication, 45903.—Board had declined to purchase Puely Estate on terms accepted by tenants, 45903.

Sale of Dursey Island.

Board had offered to purchase Dursey Island at a price that owner could not accept; property was

TURNER, Mr. A. B.—*continued.*

subsequently bought by tenants at a price 50 per cent. in excess of Board's offer, 45904-5.—Rents had been twice reduced and tenants were perfectly willing to give price named, 45934.—Zones had nothing to do with it, 45937.—Tenants were a better judge of what they could pay than Board's inspector, 45935, 45938. —Date of transaction was about two years ago, 45940. —Purchase was not yet finished; Estates Commissioners would have something to say to final arrangements as it was a judicially rented estate, 45906-8.—Board's valuer (Mr. Doran) had refused to supply witness with detailed valuation; this was a Star Chamber method of dealing fraught with evil, 45908-9, 45911, 45932, 45938.—Same thing happened in regard to arrangements for restoring evicted tenants, 45910, 45912.—There were considerations in case of evicted tenants which ought to affect price, which was another reason why figures should be given in detail, 45913-7. —No evicted tenants on Bantry Estate, 45920.—Witness had lately been invited to confer with Commissioners and hoped that reinstatement of tenants in question would result, 45921-2.

Price of Small Holdings.

Number of years' purchase went up directly in proportion to smallness of holdings; the market was wider for small holdings all over Ireland, 45923-5.—Average for large holdings was about eight years' purchase, for small, 20 to 25 years', 45925.—Small holder better security to the State than large holder, 45926.—Small occupiers in districts known to witness were excellent paying tenants, 45928-9.

ROYCROFT, Mr. E.

See pp. 162-6.

Congestion.

Area of Schull Union was 57,666 acres; congested portion 41,669 acres; poor law valuation £15,607 15*s.*, of congested portion £11,409 7*s.*; population 10,243, congested portion 8,159; people lived by fishing and cultivating small patches of land; seaboard was very congested, many holdings being only £2 or £3 valuation, 45944.—Large dairy holdings and untenanted land should be divided among small holders, 45993.—Many holdings were very congested, with grass for only two or three cows, but land available for migration was very limited; there were two dairy farms, one near Goleen, another at Dunbeacon; 300 or 400 acres would be available, and it was close to many holdings, so they could have their borders enlarged, 45994-9.

Piers.

More piers and slips should be built along the seaboard; Schull pier was quite inadequate for coal business and for foodstuffs landed, and ought to be enlarged and slip made at end of it; also sheds ought to be erected for curing fish, 45944, 45954-7.—Eight years ago Congested Districts Board had made contribution of £400, 45974-5.—Two or three small slips had been built at Dunkelly and other places, and more were required, 45976.

Fishing.

Seaboard districts of Dunmanus, Goleen, Toormore, Crookhaven, and Schull were congested; people lived chiefly by fishing, though some worked in mines and as sailors; fishing could be greatly improved if there were close season against trawlers in spawning season; also if small-meshed nets were used, so that immature fish might not be caught, 45945.—Sailing trawlers were allowed and steam trawlers under 20 tons, 45946.—Fishermen would not use large-meshed nets unless it were compulsory, 45950.—Some had modern appliances, but others could not afford them; if they had them they could better compete with Manx, Scotch, and French fishermen, and if Congested Districts Board could supply apparatus they could do much better, 45959.—Congested Districts Board had spent money on piers during past years, aided by grants from County Council, but amount had been too small, 45959.—Fish was sold straight to buyers and taken to Liverpool and America; spring

ROYCROFT, Mr. E.—*continued.*

mackerel were sold fresh; in autumn it was cured, 45960-5.—Mackerel was caught with seine nets; generally two boats to each net, 45967-72.—Probably 800 to 1,000 lived by fishing in Schull rural district, but a number of people did not live by fishing, 45983-4.—Some were half farmers, with one or two cows and an acre or two of potatoes, 46014-5.—Long-line fishing should be developed; men from Isle of Man all fished in that way; with proper appliances men of Schull would do that, 46016.—Herring fishing was more on the Bantry side; mackerel was more profitable, so people had gone in more for that; it was also easier, 46017-22.

Roads.

Roads were very much required in some congested portions; one place particularly was one mile from main road at Dunbeacon, and there was no way of getting to road except across fields; a grant from Board to connect that with main road was needed, 45981.

Re-Afforestation.

Large scheme of tree planting should be undertaken; there was plenty of waste land, and it would give employment and afford shelter, 45985.—There was some grazing on the land, but no tillage, 45987.—About 100 acres had been planted on Mount Gabriel 70 years before, but it had been cut down and sold by landlord before selling to tenant, 45988-91.—Another mountain belonged to Lord Bantry; before selling to tenants he had offered to sell to County Council for planting, 45992.

Land Purchase.

Good many tenants had purchased under Land Purchase Acts; Lord Bandon was first to agree with tenants; but other landlords and agents refused to come to terms; witness proposed that Congested Districts Board should buy from them and sell to tenants, 46000.—Dairy farmers were let by owners to dairymen; so that if Board bought all these lands would be available for enlargement straightaway, 46001-2.—They were on Mr. O'Grady's, Mr. Somerville's, and Captain Townsend's Estates, 46003.—Tenants were very anxious to buy, as they were paying much more rent than their neighbours; they offered same terms as neighbours had purchased at under Act of 1903, but were refused, 46004-8.—Longfield Estate was not in this district, 46040.—Lord Clinton had been approached, but he wanted too high a price, and gave a reduction of only 4*s.* in £; while tenants wanted 7*s.* 6*d.* and 5*s.* 6*d.* on first and second term rents respectively, 46041-8.—Lord Bandon, Mr. Hehir, Colonel Spaight, and Edenburgh Assurance Company were principal landlords who had sold, 46049.—Average had been 19 to 20 years' purchase under Act of 1903, 46050-1.—One had been sold under Ashbourne Act at 11 or 12 years' purchase, 46052.

Migration.

Small colonies of people would be glad to migrate if land were available elsewhere; if one out of three were migrated, land vacated would be used for enlargement of existing holdings; they would prefer migration to emigration, 46009-13.

Bacon-curing.

Bacon-curing factory should be started as that was good pig-raising country; people had to bring pigs a long way to market, 46022.—Pigs were now sent to Limerick, but home factory would save cost of transit and people in district would receive profit now received at Limerick, 46023-6.

Reclamation.

At Dough's Strand a lot of land was flooded, also at Lissagriffen; sea was encroaching; if this were drained and reclaimed it would free a great deal of land; County Surveyor had estimated cost at £600 to £700; but if Board would send down expert it would be more satisfactory, 46026-8.—There would be some local contribution to cost, but district was already paying heavy guarantees for Schull and Skibbereen tramway and Bantry extension, and could not undertake too much, 46030.—It was on Lord Clinton's Estate and was not sold yet, 46033-4.—Farmers were not getting any redress from landlords, but had to pay heavy rents all the same 46038.

ROYCROFT, Mr. E.—*continued.*

Tramway and Steamers.

Schull and Skibbereen Tramway caused great loss to ratepayers in keeping up rolling stock; curves were short and pull was great on engines; Congested Districts Board should give some subsidy; some time ago Board gave £500 a year to Clyde Shipping Company and their steamer used to call at Schull, but they had discontinued it; if £500 a year were given to Tramway it could be much improved and rates could be cheapened, 46053.—Line belonged to County Council, who ran it by Committee of Management, 46054.—When subsidised steamer ceased running foodstuffs, etc., were supplied from Limerick, 46056.—Steamer called once a week with meal, flour, and bran, 46058-60.—Clyde Shipping Company's steamer used to ply between Cork, Schull, Bantry, Castletown, Cahirciveen, and Dingle, 46061.—If Board would only transfer subsidy to tramway, it would greatly benefit the people, 46062.—Ninepence was paid in the pound as guarantee, 46063.—Tramway had been badly constructed, and contractor boasted that he made £25,000 out of it, as he had been able to gull old Grand Jury, 46064.—Greater part of light railway kept to the road, but contractor had bought bad land cheaply and run all sorts of sharp curves over it; £57,000 had been spent on it, but contractor did not spend £3,000 a mile, 46066-7. Two trains ran each way daily, sometimes three in summer, guaranteed at 5 per cent., 46068-9.—Treasury paid two-fifths, 46071.

Rates.

2*s.* 9*d.* in £ was not excessive rate for agricultural land; separate charges were what were complained of, 46073.—There were separate charges for public health, water, etc., 46074.

Postal Facilities.

Postal arrangements very very bad; mail left Skibbereen at 2 p.m. one day and was delivered at Schull at ten o'clock next morning; Schull, Crookhaven, Goleen, Ballydehob were last villages served, 46075.—Mails were not carried by light railway, but by mail car, 46076.—Postal authorities would not give enough subsidy, 46077.—Mr. Burke, of Skibbereen, gave evidence before Railway Commission respecting it, and witness might be called later on, 46078-80.—If subsidy were granted trains would be made to suit post office, 46081.—Authorities responsible would be willing to accept any fair terms to accelerate service, 46082-4.—Special train would have to be arranged which would also carry passengers, 46085-7.

Minerals.

District had large mineral deposits; Congested Districts Board should send down expert to test mineral resources and report upon them; if diamond-boring machine were sent down it would have good effect in developing mines from Skibbereen to Mizen Head, 46087.—People wanted Board to do boring, as they did not want to invest money without seeing what they were going to do, 46088.—Copper mines were working; £30,000 to £40,000 had been laid out on plant, and they employed a good many men, over one hundred, 46089-91.—State should do something for mineral resources of country, 46090.—If they did the testing, others would work them if worth while, 46093-4.—Miners earned from fifteen to twenty-five shillings a week; if mines were developed there would be employment for 600 men; this in addition to fishing would be great help, 46096.—Some copper had been sent to Swansea, 46097.—Smelting had not been done so far, but would be eventually; at Ballycummisky, plant costing £20,000 had been put up, as there was copper there; there was barytes mines four or five miles away; copper mines had stopped when copper got cheap; now price had gone up they had started again; if State did boring, capitalists would come, 46098.—Department had given almost a promise that they would send boring machine, 46099.

ROYCROFT, Mr. E.—*continued.*

Live-stock Scheme.

Regarding live-stock scheme, complaint was made that congested districts were not treated so well as richer districts, 46101.—Half-bred sires which had been sent down were not always suitable, though they sometimes were, 46102.—Nominations were given on basis of valuation, 46104.—Schemes were working well on the whole; good bulls had been sent, 46105-6.

O'BRIEN, Mr. PATRICK.

See pp. 167-70.

Congestion.

Witness had been negotiating sale of estate of 3,200 acres; average area of holding was 33 acres; average valuation £9; that meant poor land, as 33 acres would be valued at £20 if good, 46108.—Holdings could be enlarged by having cut-away bog and other wet land drained, and where holdings were badly arranged there should be re-striping and re-fencing; this would increase arable land from 15 to 20 per cent.; in many holdings out-offices and dwellings were bad and insanitary; improvements could be brought about by Government advancing cheap money at land purchase interest to people willing to improve on specified plans; agriculture should be taught in rural schools, 46109.—These uneconomic holdings of 33 acres, valued at £9, could be improved by better methods of agriculture, 46110-2.—£9 holding should be doubled to make economic holding, 46113.—60 or 70 acres would be required of that class of land to make holdings economic, 46114.—Plan for advancing money would cause great improvement in dwellings; Board of Works charged too high interest; expenses were too high, and time for re-payment was too short, 46116-21.—If farmer had 33-acre farm, and could get money at 2¾ per cent., and had sons to work for him, it would be inducement for sons to remain at home, 46122.—In time holding would be improved, though it might never be economic, 46123-4.—Agricultural Committee gave prizes to increase tillage, but most of prizes went to large holders of forty acres; prizes must be given to small holders, and doubled if people were to return to tillage, 46125.—Small holders really required three times as much help as large holders, 46127.—Prizes were given by County Committee of Agriculture for increase of tillage in Cork; no one was eligible for prizes who had not one-fifth of his holding under tillage, 46129.—Small holders were not eligible at all; valuation of £15 to £40 were in one class, from £40 to £80 in another, and over £80 in another, 46132.—Class below £15 belonged to Munster Agricultural Institute, not to Committee of Agriculture, 46133.—From point of view of getting land under tillage there was much to be said for scheme of County Committee, 46137.—And it had increased tillage, 46139.—Money should not be advanced on land not purchased, as landlord did not care for improvements, except to raise the rent, 46140-1.—Exceptions to indifference of landlords were Lord Bandon and Mr. Doherty, 46142.

Agricultural Instruction.

Agriculture should be taught in all rural schools; children were absolutely ignorant of everything pertaining to agriculture, 46143.—Plot should be attached to schools to teach children different soils, &c., and teaching should include knowledge of tree-planting and fruit-growing, 46144.—School teachers could not do this, but special agricultural teacher could attend two or three schools a week, 46145-7.—If children were early given taste for agriculture they were more likely to remain on the land, 46148-52.—Agricultural instructor had a few experimental plots in the district, 46153.

Fruit-Growing.

Fruit-growing should be encouraged; some parts of district were specially suitable for it; bounties or premiums should be given to induce small farmers to start planting orchards, 46153.

O'BRIEN, Mr. PATRICK—*continued.*

Rents and Valuations.

All holdings should be inspected before sales were concluded; no money should be advanced for agreements between landlord and tenant; landlords often offered some reduction, which tenants grasped at, when they might have had greater reduction by going into court, 46155.—Sometimes Land Commission fixed too high rent, but they were better than agents; when tenants were buying they took nothing into consideration except present advantages; on that account all holdings should be inspected, 46156.—33 acres with valuation of £9 was uneconomic holding, and it would be difficult to make it economic, but perhaps not impossible, 46157-61.—It would be mountain land and cut-away bog, 46162.—About one-fourth of such holdings could be tilled, 46166.—In one holding witness knew there were 52 acres, and 24 were arable, 46167.—Valuation of 24 acres would be about 15*s.* an acre, 46168.—Economic holding would be one valued at from 18 to £20; all arable land, 46170-1.—Department's definition was that there should be 50 acres of arable land to make an economic holding, but they reduce it to 30 where two farms would come together, and join horses for ploughing, 46172-4.—Congested Districts Board's definition was 25 acres, 46175.—There were many holdings under £5 valuation varying from 3 to 117 acres, 46176.

Migration.

People would probably migrate if they had not to go too far, 46177-8.—There was very little land in district available for enlargement; one dairy farm was held from year to year; there were about twelve cows on farm, 46179.

Dairying.

Dairy system was dying out, 46180.—There were no creameries in district; most holders were getting hand separators, and making butter themselves; price of butter was very poor, 46181-3.—Cause of decay in dairying was that money could not be made out of it; farmers were now going in for dry stock, 46213.—Ranching system was taking place of dairy system, 46214.—Such farms were really non-residential grazing farms, and should be taken for enlargement of holdings, 46216-9.

Parish Committee.

There was no Parish Committee, though Congested Districts Board had willingly given money, when asked, for other things, 46184-6.

Live Stock Schemes.

Live stock scheme had been started by Congested Districts Board, but taken over by Department of Agriculture, which had not improved matters, as there was no bull in district now, 46194.—County Committee was responsible, but majority of people took no interest in improvement of breed, 46195-7.—Now it took £12 to buy a pure-bred bull; Congested Districts Board used to do it cheaper, 46199.—Hackney stallions had been introduced, but were not a success, 46201.—Pure-bred draught horse and a thoroughbred should be sent, 46202.—Schemes which suited richer districts did not suit poorer ones, 46205.—Poor districts needed proportionately more help than richer ones, though tendency of County Committees was to give sums proportionate to rates raised, 46206-7.—There were only 13 nominations of mares in Bantry and Schull districts; value of each was £3; money should be halved and nominations doubled, 46208.—There should be special schemes suited for poor districts, as they had not same class of animals as richer districts had, 46209-11.

O'CONNELL, Rev. JOHN.

See pp. 170-1.

Industries.

Principal industries were fishing and mining, if these could be helped by Congested Districts Board it would be great advantage to district, 46220.—Lace class had begun well, thirty or forty girls were in class and were doing well, 46237.

O'CONNELL, Rev. JOHN—*continued.*

Piers.

Pier would require extension and sheds should be built for curing fish, 46221.—Pier had been extended about sixty feet some years ago, 46222.—State contributed half and county half, £1,200 was estimate, it would require to be extended another 60 or 100 feet, it was very inconvenient in fishing season, 46223.

Fisheries.

There had been no increase in fisheries lately, last year fish came very late, in December, 46225.—Mackerel was chief fish, and there was trawling for turbot, sole, and plaice, 46228.—Two islands, West Calf and Middle Calf, required slips, 46229.—There were only a few people on them, 46231-2.—Fishing was capable of development, but there was little competition between buyers, it had been suggested that Board should send buyer, 46242.—In autumn fishing many fish were cured, 46244.—There should be close season for trawling, 46244.—Larger-meshed nets fishermen could make themselves, 46245.

Parish Committee.

There was no Parish Committee though it would be very good thing; people were not persevering, they let things drop, 46234-6.—Where they had been started there was great improvement in out-offices, etc., it was not difficult to get one started, 46240-1.

Congested Districts Board.

District was not sufficiently represented on Congested Districts Board, it ought to have a representative of its own, 46237.

Postal Arrangements.

Postal facilities were very inadequate, car contract should be given up and letters should be carried by tramway, 46245.—Present contractor did it for £200 a year, railway company offered to do it for £250, post arrived at 9.30 a.m., just as train left, so if people were travelling they could not have letters before starting, 46246-9.

JAGOE, Mr. ABRAHAM.

See pp. 171-3.

Minerals.

Mineral resources of district should be developed, 46251.—Diamond drills should be provided for purpose of ascertaining what minerals there were, several mines were working, 46253.—No district had shipped any ore yet, 46254.—Barytes mines had been working for fifty years, they were not in prosperous condition, copper mines had been abandoned owing to low price of copper, but had begun again now, as copper commanded higher price, 46255.—They had better chance now as machinery was improved, 46257.—Price of copper was likely to be maintained, 46258.—Electricity had helped to bring it more into use, 46260.—Surface indications showed probability of copper, sinking shafts was expensive, but boring machinery would be cheaper, 46262.—No boring had been done, 46265.—There was geological survey of district which mining people said was accurate, 46267-8.—Witness had gone up to Dublin to Department, but they gave no encouragement as they said they had no funds available, 46269.—Drills were very expensive as they had to be renewed often, rock was soft, but hard was better, 46270-1.—Witness suggested that drilling machine should be provided by State as shaft-sinking was so expensive, 46272.—Man could lease mining rights for six months and then give it up, 46276.—District was congested, but there was very little untenanted land available, 46278-9.—Congested Districts Board should tap mineral wealth and so remove congestion by giving employment, 46280.

JAGOE, Mr. ABRAHAM—*continued.*

Piers.

Schull pier needed enlargement, 46283.—It had been enlarged by old Grand Jury, but that was not sufficient 46285.

Postal Arrangements.

Postal arrangements were very poor, Treasury had been asked for £100 a year as subsidy to tramway, but they would not give it, 46286.—£200 was present contract, another £100 was needed if tramway were to carry mails, 46287-90.—This would help rates, 46291.

Fruit and Vegetables.

Fruit and vegetables should be grown, witness had offered ten-acre pot for experiments to see what could be done, if this were encouraged Congested Districts Board should have depot for buying from people and then sending away in bulk, 46292.—They would go by rail to Cork, thence to England, 46293.—District round Schull was well suited to production of early potatoes, cauliflowers, etc. 46296-8.—Quick and through train service would be absolutely necessary, 46299.

Fisheries.

Fish was sent by rail to Cork, mackerel was cured there, spring fish were brought to Baltimore, a Liverpool man had steamers and took away fish for American market, 46300.

Tramway and Steamers.

Tramway carried bran, flour, etc., which came by steamer from Limerick, and Cork, 46302.—Russell's of Limerick ran their own steamer to Schull, 46303.—They distributed up and down the coast, but did not carry passengers, 46305-6.—Other firms sent down steamers occasionally, 46307-9.—Clyde Shipping Company had stopped running when subsidy was withdrawn, 46310.

DALY, Mr. RICHARD.

See pp. 173-4.

Mineral Rights.

Mineral Bill now before Parliament ought to be pressed on as far as possible; employment was the thing next in importance to Home Rule, 46314, 46329, 46346.—Tenants who had minerals on their lands ought to have the mineral rights, 46316-7.—They were not included in purchase; witness understood they would be vested in Land Commission, 46335.—In 1852. when Dr. Hickson bought the land, he bought the mineral rights, 46316, 46325-7.—Land would be exempt from that only by special contract, 46327-8.—The present Government would be more justified in selling the mineral rights because they were selling to tenants who had to meet them for 68½ years whatever happened, 46316, 46318, 46331.—Object of Land Purchase Act was to do away with dual ownership; if there were to be two owners of mineral rights that object would be defeated, 46317, 46330.—Witness believed that the Amending Act was to give Land Commission power to restore mineral rights free, whatever terms they would be under, 46319.—At present the landlord owned the minerals before sale and it was unfair to keep back mineral rights from purchasing tenants; either a deduction for supposed value of minerals should be made from purchase price, or mineral rights should be given over to tenant entire, 46321-4.—Tenant would be prepared to buy mineral rights if he could not get them free, 46332-4.—Or they might be leased to tenant in occupation, 46336-9.—But tenant purchaser should have first claim only when he was willing to develop the minerals, 46342-3.—A few men from Ballydehob were working in the mines, 46347.—Witness had a mine of his own, 46348.

M'CARTHY, Mr. FLORENCE.

See pp. 174-7.

Piers.

As far back as 1883 witness had tried to get the Piers and Harbour Commission to improve the piers, 46350-1.—Crookhaven pier was in a bad condition; the place was owned by Lord Eglinton, an absentee, who took no interest in anything but his rents; some members of the then Government came to Crookhaven in 1891, Lord Zetland, who was one of them, nearly having a fatal accident owing to the conditions of the pier, 46351.

Fishing Industry.

Witness had tried to start a co-operative fishing company, but was prevented by influence of some other districts and of the late Father Davis; fishing was altogether in the hands of English buyers, who treated fishermen worse than slaves, 46351.—Part of the money spent on Boards, Departments, and Royal Commissions would be more usefully spent on improving condition of the people; witness got a miserable loan from the Congested Districts Board to provide a boat, which he called the "Self-Reliance," it was this boat that effected the rescue of the Fastnet Lightkeepers some years ago; the loan was paid off; he also get a small loan of Sir T. Brady's private fund for helping fishermen, and these small loans had been very useful, 46351.—People from other countries came and fished while Irish people emigrated; Crookhaven was once the most prosperous place in Ireland and ten times its present size; its decline was not entirely due to want of fishing appliances, but largely to modern improvements which had ruined ports of call all over the United Kingdom, 46351.—At one time the County Council was prepared to offer a system of bounties for fishermen, and then again the Department stepped in and said the County Council had no power, 46363-4, 46366.

Transit Difficulties.

A mode of carrying fish was needed as well as piers and roads, 46352.—The tramway was fifteen miles away and twenty-one miles from another part of the district witness was speaking of, 46353.—Roads would require some expenditure before they were in a condition to accommodate motors, 46354.—Extension of the tramway to Crookhaven would be a means of collecting fish; it had been pressed on Mr. Balfour in 1890, 46355-6.—A scheme for carrying a line of railway to Crookhaven from Durrus in connection with carriage of mails had fallen through in consequence of increased speed of steamers, 46356.—If the tramway were extended *via* Dunmanus Bay it would tap the bay and relieve ratepayers of the district who paid about £4,000 a year in connection with the tramway which was built under a guarantee; £1 shares stood at 27*s.* to 28*s.* and the guarantee was 5 per cent., 46358-61.—It ought to be possible to pass a short amending Act compelling shareholders to sell their shares at par, 46361.—Line cost £4,000 a mile and more; it could have been made cheaper; part of it did not cost £1,000 a mile, 46362-3.—There was a short extension a few years ago at cost of ratepayers, which would be a great source of revenue if fishing were developed; the London Company man, Mr. Avigdore, came down and entertained members of the Grand Jury lavishly, with result that railway work was scamped, old engines and wagons passed, and in six months the whole thing broke down, new wagons having to be purchased and new engines hired, 46363.

Poverty of District.

During the distress of 1890 relief works were started at Dough; starving people were compelled to walk twelve or fourteen miles, men, women, and girls, and break stones on the roadside; the work selected was the widening of a road already too wide for the traffic, whereas the building of small piers near the people's homes would have been a practical and useful work, 46351.—Works carried out were monuments of the bungling associated with everything connected with Board of Works and had cost the district much money; over £200 special grant had to be made some years ago and the contractor relieved of his work; the road was constantly flooded and lives of children going to school in danger, 46351.—The Department had power to set up creameries, which were anything but a blessing to the towns and villages, 46364-5.

M'CARTHY, Mr. FLORENCE—*continued.*

Re-Afforestation.

Witness had done his best to push on tree-planting, and as much as 10,000 to 15,000 acres of land was offered for that purpose in the county six years ago; then Department of Agriculture stepped in and said that witness and his friends on the County Council had no power to do anything in connection with the tree-planting scheme, 46363.—Re-afforesting would give a great deal of employment and improve the climate; value of timber was increasing, 46367.—There was no direct importation of timber into Schull, but foreign timber was used, 46368-71.

Pier Built by Witness.

In 1891 two Manx Companies threatened to leave Crookhaven owing to the condition of the pier; to prevent their leaving and the consequent loss of employment witness spent £53 12*s.* 6*d.* out of his own pocket to improve the pier and had never been able to get the money refunded on the ground that no formal permission was given for its expenditure, 46371, 46375-80, 46384.—Formal permission ought to be required, but this was an exceptional case; there was a grant of £120 conditional on the securing of a contribution of £50; witness applied to Congested Districts Board who had not decided at end of four months; he then wrote to the Mansion House Committee and got the £50 on condition it should be refunded if the Board would contribute the amount; the Board wrote three days after the day when amount should have been lodged to say the matter would be considered at their next meeting, 46372-4.—The pier ran out just beyond witness's place of business, but private persons should not be expected to do public works, 46381-4.—Two or three members of the Board came on the Board's steamer to see the work on the pier and they were fully under the impression that they were doing the work themselves; they were in too great a hurry to go to Dunmanus Head or Dunkelly, having to keep a dinner appointment at Glengariff, 46383.—The Board were consulted; witness had been trying to get pier improved for ten or eleven years, and money was spent legitimately, but uselessly in other ways, 46387-95.

ROGERS, Rev. FRANCIS.

See pp. 177-8.

Pier and Road needed at Goleen.

A pier and road were much needed at Goleen, Board's consent had been nearly granted; at present no boat of any size could land; there was a small pier of no use except for row boats, 46397-8, 46402.—Witness thought the vote was actually made, but did not know for what amount, 46399-400.—It was five miles from Crookhaven by road, two by ferry, 46401.—The steamer called about once in three or four weeks, 46407.—Roads were greatly flooded on the strand owing to the sand choking it up, 46407-8.

MAHONEY, Mr. TIMOTHY.

See pp. 178-9.

Pier and Road needed at Goleen.

Pier at Goleen and a little approach road of a few perches were badly wanted, 46412.—The Board was giving £400, but £200 more was wanted, and that was a stumbling block, 46413-4, 46419.

Board would do the Work better than a Contractor.

If the Board would do the whole thing they would do it better than a contractor, 46415-8.—That was Mr. Longford's opinion, 46424-5.—There were not many contractors in the district who would take up the work, 46426.

Floods on the Strand.

Another work that would have to be grappled with was the cutting of the sand bank, which was causing floods, 46420.—It would cost at least £500 and that, in addition to £200 for the pier, would be a very heavy tax on ratepayers of Schull Rural District, though

MAHONEY, Mr. TIMOTHY—*continued.*

not if it were on the county-at-large, 46420, 46423, 46426.—Landlord certainly ought to contribute to the opening of this drain, but the agent would do nothing except take the rent, 46436, 46442-3.—Only a little of the landlord's land suffered, and for that he still got rent, 46437-8.—His point was that the county authorities ought to do the work, it was a public road, 46438-40.—The cutting of the strand was a public necessity, and would not add anything to purchase price of holding, 46444-5.—There was a great deal of valuable manure left there by the sea, 46444.—There was a question about spending money on improvement of property that had not been transferred from owner to tenants, but witness did not see how that came in with regard to the piers, 46434-5.

Other Pier Accommodation in District.

A pier was wanted also at Dunkelly, 46426.—The Board had built a pier and contributed £90 (half cost) towards the making of a road at Gortduff, which had done a lot of good to the place, 46428-9.

Curing Sheds needed.

Curing sheds should be built and let to curers at a fair rent, 46430.—Witness did not know many curers resident in Schull, but he cured fish on his own account, 46431.—Witness had seen Mr. Green ten or twelve years ago with reference to his projects, and Sir H. Plunkett had come to Goleen and seen the need for a pier, 46432.—Mr. Oliver went out there some months ago, and the work was going to be done now, 46433.

Close Season for Fishing and size of Mesh used.

There had been some suggestions about a close season for fish and also something about a smaller mesh ; it would be a great hardship to stop a fisherman when he had a chance of making money, and if a large mesh were used all the fish would get meshed ; if they caught small fish they should let them go again, 46445-8.

COGHLAN, Mr. TIMOTHY.

See pp. 179-80.

Dough Strand: Closing of River Estuary and resulting Floods.

In regard to the Dough Strand and the closing up of the river estuary, there were several properties concerned as well as the Clinton estate ; all the farmers of the district took coral sand off the strand for manure, and it was very injurious to them to have the sand covered with the tide as it was, 46451-2, 46459.—The roads were flooded in winter, so that people could not get to a place of worship nor the children to school, 46451-2.—There were three public roads under contract submerged for six months in the year to a depth of three feet ; people used to walk on the fences, now they were down they had stepping stones, 46453.—It was too deep for a car to go through after heavy rain, 46454.—About a mile of road was under water, 46455.—The bank was formed about two years ago, 46456.—Twelve small farmers had got a seine net two years ago, which they could now scarcely use owing to the obstruction, 46456.

Cost of opening Strand.

County Surveyor estimated that £300 would open it, 46458.—The road contractor did nothing to that portion, and the landlord would do nothing, 46458.—An application had been lodged with the District Council to open the bank, and it was passed that the Rural District Council, the Congested Districts Board and the County Council should each give £100, but the County Council struck out their £100; the majority of the votes were in East Cork, and they would give nothing but what they could not help, 46460.—The strand must be opened on the land side, 46475.—Once opened it would not be allowed to close again, the Council would employ a man to keep out obstructions; one man and his family, with a boat, could do the work, 46476-7.

COGHLAN, Mr. TIMOTHY—*continued.*

Pier needed at Goleen.

A pier was much needed at Goleen, 46460, 46473.—Two steamers came once a month, and in winter were sometimes unable to land provisions, 46460.—The Congested Districts Board were contributing, the ratepayers were so heavily taxed that the opening of the Dough Strand was all that they could do, they would have to do that, 46461-5, 46474.—Ratepayers were taxed for the Schull and Skibbereen and the Bantry Railways; rates on the whole of County Cork were low, and the County Council had £30,000 to its credit; it would be reasonable for the County Council to contribute as was done in Mayo, 46466-72.—There was a seine net in Goleen, but until the pier was built there was no way of getting the fish to market, 46472.

SHEEHY, Mr. TIMOTHY.

See pp. 181-5.

Inquiry into Question of a Brand for Mackerel.

People in Skibbereen were not enamoured of inquiries; an important inquiry affecting deep-sea fisheries and presided over by Mr. Green had been held a few weeks ago on a resolution unanimously adopted by Council of Agriculture in favour of a brand for Irish-cured mackerel; the inquiry ended in smoke, Mr. Green pooh-poohing the idea of branding or inspecting mackerel, and making no suggestion as to a remedy to the injury done to Irish-cured fish in America, 46478-9.

Congestion in Skibbereen.

Area of congested district in Skibbereen was 28,620 acres, valuation £10,191 12*s.*, population 6,769; of non-congested portion area was 83,746 acres, valuation £32,988 19*s.*, population 15,218; entire area, including urban district of Skibbereen, was 115,395 acres, valuation £49,245, population 25,195, 46479.

Extent of Skibbereen Fishing Industry.

Eighty-six large mackerel boats and 825 yawls, representing capital of £40,000, were registered in Skibbereen, 46479.—They were all local boats, 46480.—Port of Skibbereen extended from Gally Head to mouth of Kenmare River, 46480.—Use of a 2½-inch mesh by Penzance boats had had a bad effect; grading would have to come with inspection, 46502-3.—Spring mackerel season was a thing of the past; prices dropped after a week or two owing to the enormous quantity of trawled fish dumped into England, 46504.

Causes adversely affecting Mackerel-curing for the American Market.

There were three causes encroaching on the curing of mackerel for America; (1.) the excessive tariff levied by the United States, 8*s.* per barrel; price of a barrel fell to 8½ dollars last year, which left very little for the fishermen, 46840-1.—This was an opportune time to raise the tariff question as the United States and England were in communication over the Newfoundland fisheries; this question had been raised at the Colonial Conference, on which Ireland ought to have been represented, 46840.—Whatever facilities were given to Newfoundland or Canada Ireland ought to share; Ireland contributed a great deal to the American markets, and claims of Irish fishermen should be considered on this point, 46482-6.—(2.) Unfavourable conditions under which fish were cured; at present fish were cured along the open pier-head; Commission should press Government for a grant to fix suitable sheds on all fishing centres, 46486.—The uncertainty of the fishing industry prevented this from being done by private enterprise, but small buyers would be only too happy to pay for accommodation; at present cost of labour, barrels, and tariff was so great that with any further expense there would be nothing left, 46487.—

SHEEHY, Mr. TIMOTHY—*continued.*

(3.) Want of a brand and inspection for fish, 46481.—In evidence before Inquiry held by Mr. Green it was stated that some badly-cured fish sent to America had given a bad name to all Irish fish; last year thousands of barrels remained unsold, 46488.—In Mr. Green's summing up witness found no reason for his having overruled the application; his statement that Donegal herrings were fetching a higher price than others branded or unbranded was not a fact; Donegal people were in favour of brand, 46489.—As to the trade not being prepared to bear the cost of branding, the curers would be willing to pay a share, but they considered that Government should provide a large portion of the funds; if Mr. Green would not recommend them to give all that money why did he not experiment with a voluntary brand?, 46489.—Ireland got the privilege of branding in 1819, and it was taken away in 1829—since when there had been no trained inspector, 46489-90.

Branding.

Cost of branding was held out as a sort of bogey, but it was the duty of the Government to undertake it; 4*d.* a barrel on 100,000 barrels would realise £1,666; £2,000 more would be enough to meet the difficulty, 46490.—Curers would be willing to undertake the restrictions imposed by adopting a brand; the small curers would certainly co-operate, 46493-5.—Witness was willing to have the brand voluntary at first as a test, 46496, 46506.—If it were voluntary no one could accuse Government or Congested Districts Board of arbitrary action, 46500.—It was most important to regain the ground lost in America, which was the only market for Irish-cured mackerel, 46496, 46505.—Herring brand in Scotland was purely voluntary; in 1898 1,260,000 barrels were not branded but 500,000 were, 46497.—Witness knew that branding had paid in Scotland, but Scotland had had many advantages not shared by Ireland, 46498-501.

Grants made under Marine Works Act and by more incomplete.

£5,000 granted a few years ago under Marine Works Act was expended to provide Island of Cape Clear with a harbour of refuge; Congested Districts Board had given £220 for Crow Head and £25 for a road, but many other places needed help; landing stages were wanted at Tralisheen and Sherkin Island, 46491-2.

Extension of Railway from Skibbereen to Baltimore incomplete.

Some years ago Government gave a free grant to extend railway from Skibbereen to Baltimore; £60,000 was available, but line was not completed, it was still 300 or 400 yards from deep water; its completion would be a great advantage, 46506-7.—Estimated expenditure was £10,500; there would have to be a pier in connection with railway; Congested Districts Board had agreed to give £3,500, thus recognising the value of the work, 46508-10.—At the time the absence of through communication at Cork was the great obstacle to the continuation of this work, 46511.—That obstacle would be removed, a Bill had been passed through Parliament to that end, 46506, 46512-3.—The Cork and Bandon Railway were giving £15,000 and the Cork Harbour Board £10,000, 46513.—The English Great Western Company was also concerned in it, 46514.—No doubt some of the American liners would call and mails would be dropped at Baltimore, 46515.

Congestion on Coast-line between Skibbereen and Courtmacsherry.

Portion of coast-line from Skibbereen to Courtmacsherry needed attention; there was no possibility of getting grants unless district was scheduled, 46515.—There were no untenanted lands in district, but a tenant farmer in Castlehaven had 500 acres which could be had if a satisfactory price were paid, 46516, 46518.—The farmer lived on one part and farmed the whole under the dairy system; the land had been

SHEEHY, Mr. TIMOTHY—*continued.*

cleared of tenants 50 years ago, 46517.—It was exactly in the centre of the congested area from which many young men emigrated, 46519-20.

Benduff Slate Quarries.

The Benduff Slate Quarries near Carberry had been working for 50 years, and the slate was of splendid quality; help was needed to provide up to date machinery; the managing director would take £500 for new machinery and £500 for development, and pay reasonable interest on it; at present he could only employ 15 or 16 men and could not fulfil the orders coming in, but with improved machinery he could employ 50 or 60, 46521.—It was a family company, James Swanton, Limited, 46522.—It was paying, but in Ireland it was difficult to get advances from the banks for industrial purposes, 46523-4.—Government might be asked to assist, because the employment provided would be a public benefit; the work had slackened since an accident which happened 8 or 10 years ago, 46526.—Considering the way in which England strangled Irish industries in the past it was not unreasonable to ask for restitution; three or four millions a year for 50 years would not pay back what had been taken, 46527.—Creditable character of houses in the district was due to the slate quarries, 46528.

HURLEY, Mr. JEREMIAH.

See pp. 185-8.

New Pier needed at Glandore Harbour.

A pier at Glandore Harbour was almost useless for trading purposes, it was used chiefly for curing mackerel; to get mackerel to the harbour they had to be taken out of fishing boat into a small yawl and hawked again at the pier; this handling detracted from quality of fish and made perfect curing more difficult, 46529, 46532.—A quay was wanted where fishing vessels could come alongside at any state of the tide, 46530, 46533.—There were thirty-five boats, half of them local the rest belonging to Manx companies, but manned by local men, 46534-5.—Herrings had been taken off Glandore, but mackerel was the great fishing, 46537-8.

Improvements needed on Unionhall side of Harbour and at Leap.

On the Unionhall side of the harbour there was a quay built twenty or twenty-five years ago; it was entirely inadequate for the requirements of the fish-curing alone; it could be cheaply enlarged, a T-piece should be put at the head of the pier, and the channel should be deepened, 46538, 46540.—Improvements might not increase the quantity of fish but fishing would be prosecuted with greater industry, and time now wasted in discharging could be given to fishing, 46543.—No portion of the coast between Crookhaven harbour and Courtmacsherry was scheduled owing to the fact that there were one or two large farms in the district, 46539-40.—At Leap, at the head of Glandore harbour, a great deal of sand was discharged; a great deal more could be done with proper vessels and a good harbour, and there would be a market for the sand; the channel up to Leap should be dredged and the quay there enlarged and improved, 46540.

Railway needed from Clonakilty to Deep-Water Pier at Glandore.

A railway ought to be constructed from Clonakilty to the deep-water pier at Glandore Harbour, about fourteen miles, 46544-5.—The gauge should be the Cork and Bandon gauge, 46546.—Witness would not be prepared to give a baronial guarantee; part of the district through which line would run was aready paying a guarantee for the extension of the Cork and Bandon Line to Courtmacsherry, and the charge for the Schull and Skibbereen line extended to Leap and almost into Ross, 46547-9.

HURLEY, Mr. JEREMIAH—*continued.*

Extravagant cost of Schull and Skibbereen Line.

Cost of Schull and Skibbereen line was £4,000 a mile for construction and rolling stock, 46550-1.—Witness believed that was extravagant; the contractor boasted that he made a good deal of money out of it; inferior and unsuitable rolling stock was put on, which had to be changed by the guaranteeing area soon after the line was built; at one time the railway was idle for want of rolling stock, 46552, 46554.—It was constructed under the supervision of the Grand Jury—the County Surveyor, 46563.

Benduff Quarries.

Witness believed the Benduff quarries had been worked for over a century; he had seen as many as 200 men working there; work was done by contract, unskilled men drawing 12*s.*, and skilled men 15*s.* a week, the excess amounting often to £2 for unskilled, £3 10*s.* for skilled men being paid at the end of the month; they worked in gangs of twelve, 46554-5.—Not more than twenty men were now employed owing to the failure of Shaw, who was President of the Munster Bank when it broke, and owned half the quarry, 46556-7.—At that time machinery was up-to-date, but the failure of the bank shortened the capital of the quarry, and the work began to dwindle; then it was taken over by the Munster Bank and still greater loss occurred; a cliff fell down and seven men were killed, 46558-9.

Transit Difficulties.

If the railway were made it would pass the gate of the quarry which would be an excellent feeder for it; at present the railway company having refused to continue to allow the loading of slates at a siding, and Clonakity station being difficult of access, the company had to cart slates eleven miles to Skibbereen and rail them fifty-three miles from Skibbereen to Cork instead of thirty-two miles from Clonakilty, 46559.—These facts had not been brought before the Railway Commission so far as witness knew, 46560.

Legal difficulty hindering Completion of Landing-stages at Prison Cove, Cow Cove, and Blind Harbour.

Prison Cove, Cow Cove, and Blind Harbour needed a landing-stage or shelter for the boats; witness had approached Department of Agriculture in autumn of 1903, and in May, 1904, the County Council having officially asked the Department to consider the question, Department offered to contribute two-thirds of the estimated cost, the remaining third to be provided by the Council and the work to be carried out as a county undertaking, 46560-1, 46568.—The County Council agreed to this, and tenders were asked for, when (in October) the Department postponed the matter owing to a legal difficulty which was not yet overcome, 46562, 46563-4.—The difficulty was that under the Local Government Act the Department had no power to co-operate with the County Council in such matters, 46562, 46566.—The legal adviser to the County Council said the Council was free to pay the moment the Department paid in their contributions, 46568.

Reclamation of Land.

In country around from Dunmanway and further north a great deal of land ought to be reclaimed; some could only be used for tree-planting, and that ought to be done, 46568, 46571.—County Councils were slow to undertake such work until land was transferred to tenant, it would be better for the thing to emanate from an official source, 46569.—Many cutaway bogs comprising hundreds of acres could be made useful for tillage by a reasonable outlay, 46569-70.—It would not take long, 46572.

HURLEY, Mr. JEREMIAH—*continued.*

Mineral Resources.

The place abounded in slate quarries, and people who knew said there were plenty of minerals in Glandore, 46572.

Glandore Lighthouse.

Little lighthouse outside Glandore harbour was erected by a local Committee ten years ago, and up to the present, maintained entirely by contributions from fishing boats and from private sources; some months ago, the Secretary, Mr. Callinan, got a grant of £5 for three years from the Department, 46572.—The light was kept going for seven months of the year; it was first erected in interest of the fishing fleet but had become useful for more purposes; the Department should give a substantial grant so that the light could be maintained all the year round, 46572A-3.

COOPER, Captain RICHARD W.

See pp. 188-90.

Objections to breaking up Grass Lands—Effect on Cattle Trade.

Splitting up grazing lands to any extent would be a great injustice to small farmers in the South who depended on the up-country market for their stores from soon after Christmas till the English market opened, 46576, 46593, 46605.—Graziers usually bought cattle at 1½ to 2 and 3 years old, according to the part of the country they were to be taken to; 1½ year olds costing £6 to £7 stayed a year on a Tipperary farm, then being worth £12 10*s.*, were taken on to a farm in Westmeath, going out fat at £19 5*s.* to £19 10*s.* in following November, 46577A.—Small farmer must sell his 1½ year olds to make room for the new calves, 46605-7.

Effect on Value of Land.

Another objection to breaking up grass lands was the certainty that the land when laid down would be worth about half its present value; in County Cork the whole object of tillage was to renew the land, but if fattening land were broken up it took years to get it back into heart; witness remembered seeing a field of such land broken up by a Scotch steward who took one crop off it, then con-acred it out in potatoes, and then laid it down; that field was still only a storefield, 46577A-83.—The return on tillage was very poor; witness had been paid for oats double the price of beautiful oats from Odessa, 46584.—To get a judicious system of tillage you must till only according to your requirements, 46585-6.—The people who would be brought in if grass lands were broken up were little better than labourers, 46590-1.—Assuming a good system of tillage inferior grass land might pay better under tillage if you could be sure of the price of produce, 46592.—Tillage was a gamble; in witness's view the less tillage the better, 46608-13.

Stall-feeding and Employment for Farmer's Family.

And witness's experience of stall-feeding was that it was a dead loss, 46594.—As to advantages to small farmer of having employment for his family, all round Carrigaline the farmers' children could get employment; the girls did lace work, and did not like farm work, which ruined the hands for lace-making, 46595-9.

Best Training for Boys to teach them to be Handymen.

Best thing for agricultural boys would be to teach them to be handymen; witness had worked as a farm labourer in America, and could have earned double if he could have done blacksmith's or carpenter's work, 46600-2.—The young Irish farmer often thought it *infra dig* to work, 46602.—Mothers were more to blame than fathers; if local people would interest themselves in this question it would do a great deal of good, 46603.

COOPER, Captain RICHARD W.—*continued.*

Effects of Free Importation of Canadian Cattle.

In regard to Canadian cattle, the important thing was protection from disease; the United States were full of disease, and there was 3,000 miles of border between them and Canada; it was really a question for the cities; they would be the sufferers if the milk supply were cut off, 46614, 46616.—Importation would not affect the price of store cattle at home; it would affect the price of dropped calves, as it did before, 46615.

CARROLL, Mr. JOHN T.

See pp. 190-3.

Distribution of Nominations.

Nominations for mares and cows in County Cork were given to farmers, cottagers, etc., in lower valuations; £25 in West and £50 in East Riding; mare nominations were distributed *pro rata* over rural districts, but as this was considered to work unfavourably to poorer districts the County Committee adopted the Bishop of Ross's suggestion whereby number of working horses in each district was taken into account as basis of distribution; this almost doubled the nominations in some of the poorer districts, 46617-8.

Location of Premium Bulls and Boars.

In regard to location of premium bulls poorer districts in South and South-west were pretty well served, 18 bulls being in or near congested districts; the greater number were bought under Department's Loan Scheme, which was gradually being understood and availed of, 46618.—They were mostly Shorthorn bulls; there were a few Polled Angus, 46619-20.—Number of premium boars would be materially increased but for the difficulty of obtaining suitable animals; six of the 16 subsidised were in congested areas, and County Committee intended to increase the number in the poorer districts, 46620.

Grants for Local Shows.

County Committee gave £700 annually in grants to local shows, viz., £200 to Cork, £15 each to Clonakilty, Skibbereen, Bandon, Mallow, Coachford, and Midleton, £25 to Cork Poultry Show, and £90 for small butter and poultry shows in places remote from these centres; the latter shows usually finished up a month's course of lectures in one or more districts and created great local interest as well as leaving a permanent impression on those who attended the classes; the best was at Bantry, which embraced several congested areas; the six county shows were very important as interesting people who would not attend a big central show, and they had done much to grade up cattle in their neighbourhood; it was a condition of the grant that special provision should be made in the prize list for farmers of low valuation and there must also be classes for poultry, which were particularly applicable to poor districts; in Ballinhassig, where a few years ago there were not two dozen pure-bred fowl, there were 600 entries last year, chiefly owned by labourers' wives, and the Department bought a considerable share for stock purposes in other counties; two poultry, two dairy, and two agricultural class instructors and one instructor in horticulture and beekeeping were employed, 46620.—In grouping farms to compete at shows £25 was about the fair average for smaller valuations; in some classes at Skibbereen valuation was as low as £15; it varied in different parts of the county, 46621-2.—The man under £10 valuation was dealt with locally, the people of the locality having practically a decisive voice in making these divisions, 46623-4.—There were no special prizes for congested districts, 46625.

CARROLL, Mr. JOHN T.—*continued.*

Egg Stations.

There were 54 egg distributing stations in the county, 40 turkey and 20 geese stations; 20 of them in, or in easy reach of congested areas; eggs sold from stations this year would probably amount to 80,000, 46625.

Butter-making Instruction in Congested Areas.

In regard to lectures, special favour was given to poorer districts; for butter-making all congested portions of the county had been visited except Castletown district, where the West Cork instructress was soon due; the instructress spent about a month in each district, taking six to twelve pupils who attended daily through the whole routine, and in the intervals visiting private dairies where asked, 46625.

Horticulture and Bee-keeping.

There were 16 demonstration plots for horticulture and bee-keeping under the superintendence of the County Horticulturist, who also made it his special business to visit cottages and small farmers; a second man would have to be provided in October; to effect a permanent impression the instructor must come round again and again to the same place, 46625.

Central Market in Cork.

The establishment of a central market in Cork would be a great help to the poultry and horticultural industry; Department had set aside £500 for making necessary alterations in a suitable site in the Corn Exchange, 46626.

Agricultural Instruction.

Agricultural instruction was given by lectures during winter and early spring at suitable centres and visits paid between whiles to neighbouring farms; over 250 demonstration plots were arranged in various kinds of crops and manures; 2,000 copies accompanying report had been circulated through local shows, District Councils, etc.; 80 of 117 demonstration plots in West Riding of the county were in congested districts and had good results; witness did not agree with evidence tending to discredit usefulness of Itinerant Instructors, but their work might with advantage be supplemented in poorer districts by a system of resident instructors localised centrally in a small model farm, which could also be used as storehouse for distribution on loan or sale at cost price of sprayers, etc., and also for distribution of boars and other animals from Departmental institution; this system would have the merit of continuity, which was specially needed in poor districts, 46625-6.—Two agricultural class instructors were employed to teach science as applied to agriculture in six centres; train centres had been selected hitherto, but it was hoped soon to get into more remote places; the classes had been very successful and popular, 46626.—One of the largest manufacturers of artificial manures wrote attributing increased demand for manufactured fertilizers during last three years to County Council lectures, 46639.

Prize Scheme to encourage Tillage and Home Consumption of Produce on Large Farms.

A trial scheme of prizes for large farms had been arranged chiefly on the basis of a revival of tillage and home consumption of farm products; for this there were 124 entries; the scheme was framed by the Bishop of Ross; there were to be three inspectors, as the scheme involved a system of accounts and keeping of books and the ascertaining at end of year of amount of farm produce consumed on the farm, 46626-8.—Committee contributed £270 to Munster Dairy School Governors, who had charge of a scheme of prizes for cottages and small farmers (under £15 valuation), 46626, 46629.

CARROLL, Mr. JOHN T.—*continued.*

Working of Fertilisers and Feeding Stuffs Act.

The Fertilisers and Feeding Stuffs Act had been put in operation extensively with good results, especially to poorer classes; Act of last year was a poor substitute for its predecessor, 46631.—Resident instructors were needed to prevent the sale of bad seed and calf meal; the latter was outside the 1906 Act because it was mixed, and a good deal of it still came into the country, especially the remote parts, 46631.

Veterinary Relief needed in Congested Areas.

Some system of veterinary relief was greatly needed in congested areas; there were only 15 veterinary surgeons in County Cork outside the city; less than 1 for every 7,000 farmsteads, 46631.

Difference between method of Department and Congested Districts Board.

There was a good deal of confusion when Department first took over the working of the congested areas; witness had no personal knowledge of methods of Congested Districts Board, but he feared that, as might be expected from a centralised governing body dealing directly with unformed and mostly apathetic units, there were no permanent results; there was also a difficulty in getting people used to a spoon-feeding system to take any initiative in matters involving an element of risk, such as the purchase of a bull, etc., and but for the energy of the priests matters would be almost hopeless; however, things were improving, 46631-7.—The Committee spent £100 a year in premium bulls alone in congested areas, 46631.—There was no question but that poor districts required more help than better-off ones, 46638.—It would be admirable to have subsidiary grants available for special requirements of poor areas and administered by County Committee through, perhaps, a local committee; the Department had made special payments for subsidiary schemes, but there was nothing like the amount that would be needed, 46639.

Creameries and Tillage.

Cork was a great dairy county, and there were a considerable number of creameries in some parts of it; they were chiefly co-operative, 46640-2.—Witness did not think they caused a decrease of tillage, 46643--4.

TOWNSEND, Rev. Precentor.

See pp. 193-5.

Land for School Farms.

Witness had tried to promote tillage by giving land for school farms, but parents would not avail themselves of it, 46645.

Board's Tracts and Papers.

The Board had done a great deal of work as regards tracts and papers; they should have some depot in a country town where people would know they could get them for 1*d.* or so, 46645.

Soil in Skibbereen District.

Soil in Skibbereen district was generally light and moory on a clay slate foundation; where red sandstone came in the union of the two made a better soil; butter from such soil getting ½*d.* more in the market than that from clay slate farms, but the general character of the land was small fields with rocky, uneven surface, 46645.

Conditions of Tillage on Rough Ground.

Tillage did not pay because farmers did not know how to make it pay; advanced machinery could not be used in the district and tillage by manual labour must die out; it would take a hardworking farmer

TOWNSEND, Rev. Precentor—*continued.*

ten to fifteen days' manual labour in addition to horse labour to plant an acre of potatoes; if they would only work with a drill plough and make the drills they would do it in less than half the time, 46645.—Lazy beds were made almost universally for drainage purposes in rough and rocky places but on average land because it was a tradition, 46646-8.—Witness thought a great deal of the rough land in the West must lapse into grazing, 46645, 46648.

Agricultural Instruction suited to District needed.

A better system of irrigation was needed and instruction as to improving very poor pasture land, a class of instruction not as a rule given; witness's father had found Leicester sheep too delicate for the country, but by using common ewes of the country with the South Down ram had produced lambs to sell in April and May, whereas formerly lambs were never seen in the market till June or July, 46648.

Kind of Cattle needed.

It was the same with cattle; Shorthorns were rather delicate for the country and they were very bad milkers; with Shorthorn bulls, bullocks sold well, but for milkers some of the old Irish cows were needed; the Aberdeen Angus also had the name of being very bad milkers, though thirty or forty years ago they got prizes at the Dublin Show as the best milkers from anywhere; Board should apply their attention to getting a race of milking cattle for this district, 46648.

Labourers' Cottages and the Supply of Labour.

Present system of labourers' cottages tended largely to emigration; in many ways cottages were a boon, but the vice of the system was that they had no connection with farmers on whose land they were put up; as a result, the acre or half-acre of land attached was exhausted by continual potato growing; the labourer had no certainty of employment and the farmers could not find labour, 46648.—Many of these cottages were now empty, 46648, 46651.—Many farmers gave constant employment and more would do so if they could get the men, 46649.—The usual practice was to have a six or twelve months' agreement, the labourer getting a cottage and land and so much wages, 46650.—Chief cause of emigration was the decrease of labour, as farmers gave up tillage, 46653.—Better system of tillage would give more employment; labour should be spent on the most productive land, but the tendency was for farmers to farm as much land as they could work with their families, having a few cattle here and there and one person to attend them both, because it was the easiest way and because of the scarcity of labour, 46656-62.—The labourer's cottage should be part and parcel of the farmer's holding, and the farmer should pay the rates and give the labourer a separate acre of land each year, 46663-4.

Fruit-growing and Vegetable-preserving.

The return from fruit-growing was uncertain, but vegetable preserving would employ a number of women; there should be an instructor; witness was not in favour of the factory system, which tended to break up home life, and at the Cork Exhibition most interest was taken in large factory work; witness had had a little drying machine made and could have excellent green peas, beans, etc., in winter; there was a good sale for preserved vegetables all the year round; the drying process was very simple and there was no difficulty in keeping the vegetables, 46664, 46669-72.—Witness had not been in communication with Department; he had only worked locally, 46673.—Early potatoes did better near the sea on account of the late frosts; they had not been very successful, 46674.—The through service to Cork would help to provide market for them, 46675.—There was a local market for fruit, but with railway rates and deterioration from handling it did not pay to send it to Cork, 46665-9.

O'MEARA, Dr. T. J.

See pp. 195-7.

Congestion in Coast District from Toe Head to Roaring Water Bay.

Coast district from Toe Head to Roaring Water Bay, including islands of Sherkin, Cape Clear, and Hare, had an area of 20,900 acres, population of 5,750, of whom about 1,260 lived on the islands; land was mostly rocky and soil light; greater part of district was congested; inhabitants were poor, dietary defective, general health not good, houses were bad, and their surroundings very unsanitary, 46676.

Dietary—Effect of Creameries.

Dietary consisted of bread and tea, dried fish and potatoes; tea was largely used, milk and porridge hardly at all, 46676.—Substitution of tea for new milk in feeding children was a serious matter, 46689.—Creameries would eventually interfere greatly with general health of the country; the farmers sent as much milk as possible to the creameries and would not keep it back to sell locally even at an increased price, 46676-84.—Separated milk was not used; it had a disagreeable taste and deteriorated quickly; as food, it was nearly, but not quite so good as skim milk but for the taste, 46685-8.—Typhoid had broken out in connection with creameries before they were established on a proper sanitary basis, 46688.—Return to former simple dietary was much to be desired, 46716.

Diseases Prevalent.

There was an amount of tea drunkenness in the country, 46689.—And anæmia and dyspepsia were common owing to defective dietary; other diseases prevalent were rheumatic ailments and typhus fever, which was endemic, 46690.—Typhus germs had been in the country a long time and remained owing to defective sanitation; it was a disease that might arise *de novo* from insanitary conditions, 46691-2.—It was worst in Toe Head, Aughadown and Hare Island; there had been numerous outbreaks during past twelve years; one in Hare Island in 1886 very severe; after the last outbreak on Toe Head in 1903, Mr. Justice Ross, in whose court the estate was, on requisition being made to him gave directions that some twenty houses should be better ventilated at estate's expense, 46693.—It was difficult to say who was liable for putting houses in a sanitary condition; the estate was in Chancery and was administered by Judge Ross, 46644-6.—Witness, like all other doctors, was very loth to prosecute his patients, 46693, 46700.—But twenty or thirty people on Toe Head were prosecuted at his suggestion, 46693.

Prevalence of Pulmonary Tuberculosis.

Pulmonary tuberculosis was very prevalent, especially in Aughadown, Hare and Sherkin Islands and Cape Clear; its incidence was greatest in places to which consumptive Irish-Americans returned, 46696, 46700.—When the disease was introduced into houses which, from their structure could not be properly disinfected frequently, the whole family died out, 46696.—Persons suffering from tuberculosis should have their cases notified at port of landing to medical officer of district to which they were proceeding, 46696, 46715.—American regulations as to landing of consumptives were extremely stringent, 46699.—Witness believed the disease brought from America to be especially infectious, 46698.—Girls had often been employed as housemaids in America; men worked in factories and the work was very hard; it was a curious fact that in America as in Ireland the Celtic race seemed subject to tuberculosis, 46697.—A form of neucrosis was also common among young women returning from America, 46700.—Causes of high death-rate from tuberculosis were—(1) general weakening of health of people owing to emigration and defective dietary; (2) defective housing and sanitation; (3) return of consumptive Americans, 46715.

Condition of Houses.

The houses, except poor law cottages, were low, thatched, ill-ventilated cabins, with earthen floors, consisting generally of two apartments; at front and back were cess or manure pits; the conditions were highly conducive to disease and difficult to rectify for many reasons; dispensary medical officers as Medical Officers of Health were naturally and to a great extent properly unwilling to prosecute their patients, 46700, 46702-3.—There were no separate medical superintendents except for large centres, 46701.—County Medical Officers of Health should be appointed who would give all their time to sanitary work, going among the people and instructing them; prosecutions were not much use where people were too poor to put sanitary officer's recommendations into effect, 46704.—Landlords ought to keep houses in sanitary condition, but it was difficult to get them to do so when the land was passing from them to the tenants, 46705-7.—Witness believed there was no power in Ireland for the medical officer to do the work and recover from the landlord, 46707-8.—There were many houses without chimneys, and in those people suffered from ophthalmia, 46709-11.—Grants-in-aid should be made, through Parish Committees or otherwise, in the poorest districts for improvement of surroundings of dwellings, putting in proper windows and cementing floors; many people could build houses by local co-operation if they got a grant for slates and timber, 46711.—Average valuation in Hare Island was £4; in some parts houses were built in villages so that "bawns," *i.e.*, manure pits, of four or five houses adjoined, which added materially to the evils of congestion; the origin of building in villages had nothing to do with relationship, 46713-4.

Number of Houses unfit for Habitation.

In Toe Head, population 175; seventeen out of thirty-seven houses were unfit for habitation, the remaining twenty were almost all defective; in Hare Island, population 300; forty out of forty-six houses were unfit for habitation; in Cape Clear, population 620; twenty-five out of 120 houses were uninhabitable; in Sherkin Island, population 300; only six or eight out of sixty houses were unfit, 46714.

Fishing Industry in Sherkin and Cape Clear.

People of Sherkin and Cape Clear, especially the latter, were all engaged in fishing industry and were not badly off, 46715.

O'SULLIVAN, Rev. JAMES.

See pp. 198-9.

Congestion in Aughadown South.

Population of congested districts of Aughadown South was 1,400; there were thirty or forty uneconomic farms on mainland and on the islands (Hare, Skeam, and Calf) they were all uneconomic, 46717-8.

Compulsory Powers for Board proposed.

There was no word of property being sold to the Board; so far only two estates had been sold by private arrangement direct to tenants, 46719-20.—Such districts as Hare Island and Toe Head should pass through hands of an improving authority, 46721.—Overtures had been made for other estates, but prices asked were too high; Board should have compulsory powers particularly with regard to Hare Island, where sanitary improvement and definition of boundaries were much needed, 46736.

Agricultural Instruction needed.

A large proportion of land was cultivated, but imperfectly; plots should be attached to National Schools, where children could be instructed theoretically as well as practically, and there should be itinerant teachers or inspectors coming round from year to year, 46721.—Teachers would have to be trained, 46722-3.—It was on the mainland that instruction was needed and some plan should be adopted to secure good seeds, 46729-30.

O'SULLIVAN, Rev. JAMES—*continued.*

Creameries and their Effect on Health of Children.

There were creameries in the district, 46721.—They certainly had a bad effect on children's health; separated milk had a disagreeable taste and very soon became unfit for food, 46724.—People could not be induced to retain sufficient new milk for the children, 46725-7.

Needs of Island Fishing Population.

Fishing population, especially on the islands, was greatly in need of piers, 46730.—Hare Island causeway was intended as a passage from Hare Island East to Hare Island West; at high tide there was six feet of water on the strand and the tide came up very rapidly, 46731.—Work was not yet begun; it was originally expected that a quay or slip would be built in connection with the bridge and this was badly needed, 46732-4.—There were large mackerel boats and a large number of lobster boats on the island; lobster fishing would be very successful if there were a good permanent market, but except last year there was only one buyer and prices hardly paid for fishermen's labour; the Frenchman who came last year might not return, 46732-3.—A road was made through the island for the first time in 1892; Lord Zetland came down on the island to see it and through him witness succeeded in getting the road, a slip at east end of island, and a large quay at Roaring Water Bay; slip on the east was not sufficient, there should be a quay with a slip at the end of it allowed to run out; when there was a glut of fish and price was low in Baltimore, mackerel boats would come over and employ women to save fish for their own use; a quay was wanted on the mainland; all the engineers who saw the place were in favour of proposed improvements; two more little roads, north and south, were also needed, 46735.

O'SULLIVAN, Rev. JAMES—*continued.*

Cork needed Representation on the Board.

District was badly congested; valuation about 12*s.* per head in Hare Island, but the Board had never given anything except for the bridge; Cork ought to have a representative on the Board, 46736.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

MINUTES OF EVIDENCE.

EIGHTY-FOURTH PUBLIC SITTING.

WEDNESDAY, JULY 3RD, 1907,

AT 11.0 O'CLOCK, A.M.,

At the Courthouse, Listowel.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. M. O'CONNELL examined.

42127. CHAIRMAN.—You are Clerk of the Listowel Rural District Council?—Yes, my lord.

42128. You are nominated by that body to appear before us?—Yes.

42129. You have prepared some notes of evidence, and if you proceed with your statement we shall ask you any questions upon it. I think that would be the best way?—Very well. There are ten electoral divisions congested in this district; population, 10,784, roughly a third of the population and area of the Union. The Rural Council think that the remaining two-thirds should be scheduled, seeing that the average valuation per head is only £1 19*s.* 3*d.*, and of the congested divisions £1 3*s.* 2*d.*

42129A. That is a difference of 16*s.*?—Yes. The thirty shillings per head rule should be abolished, and the Board should have a discretion to schedule a townland, or a group of townlands, as it would see fit. The present method is no guide. For instance, Kilshenane, one of the scheduled divisions, has only a valuation of 16*s.* 3*d.* per head. The cause of its low valuation, of £486, is because the land, reclaimed bog largely, was of little value in 1852, when the valuation was made. A holding of only five or six pounds valuation in Kilshenane may have from ten to fifteen cows. Lisloughtin, Tarmons, Liselton, Urlee, and other places are more congested. The instance of this division is given to show that the rule at present in force should be abolished.

42130. Then, in your opinion, if a revaluation was made of this particular place the valuation would come out much higher than it is at present?—Yes. Then, with respect to untenanted lands, as to what lands are most conveniently situated for the relief of congestion, I submit a schedule of the untenanted lands in the district, which was sent to the Commission in October last.* Also the replies received from some of the owners of these tracts. Since then the townlands of Baunacaulig, Coolagown, and Ennismore have been sold to the Estates Commissioners, and the holding at Gurtcreen has been sold to a tenant. The most considerable area of the best land in that schedule is in Kilehenny, 846 acres of very good tillage land, and the letter from Messrs. Reeves and Sons, solicitors to the Scottish Provident Institution, states that they were in communication with the Congested Districts Board as to sale. It will be observed that in this schedule demesne lands are excluded.

42131. Tell us a little about this untenanted land. Is all this land that you have got in this scheduled area available for agricultural purposes? Is it all grazing or tillage land?—It is, my lord.

42132. It does not include bog or mountain?—Well, wherever the bog is it is indicated in the schedule, but all the other lands are as a rule, I think, in fact almost entirely grazing lands.

42133. All the land except the parts that have got "bog" in front of them is suitable for tillage purposes?—It is.

42134. Then when you say that the most considerable area of the best land is this 846 acres of very good tillage land, is that all under tillage now or in grass?—Portion of it is under tillage. In fact I think it is the only holding in the schedule that is farmed in a mixed farming way, that is tillage, grazing and dairying.

42135. Do you know what proportion of the 846 acres is under tillage?—Well, I do not know, but I should say there are 15 to 20 acres farmed by the Scottish Company.

42136. You say 15 to 20 acres out of 846?—Yes, I should say that there is only that.

42137. If it is good tillage land why is not more of it tilled at present?—Well, really, I do not know. It is situated near the town of Ballybunion, and in the season from June to October there is a very good market for milk there, and this farm supplies the whole village. That is the reason, I think, that there is not more tilled.

42138. Is it all in one hand?—It is.

42139. And the land is used as a dairy farm, and it pays better as a dairy farm than if it were broken up and tilled. Is not that so?—Probably they find that that is so in Ballybunion.

42140. The local market for milk necessitates a large dairy farm?—It does.

42141. Now, would you suggest that that farm should be broken up?—The suggestion I make is later on in the statement, and it is to the effect that should the company come to an agreement with the Congested Districts Board, while a part of it might be given for holdings, a large share of it should be vested permanently in the Board for the reason that I state. But I will come to that.

42142. What do you mean by the company—is it the Scottish Provident Institution?—Yes, the Scottish Provident Institution.

42143. Are they the owners of this farm?—Yes, the owners and occupiers.

42144. Owners, and occupiers also?—Yes.

42145. Mr. SUTHERLAND.—You say they occupy it. In what way?—Well, they held a mortgage of it, and it came into their possession.

42146. How do they manage it—who occupies it for them?—A caretaker.

42147. A bailiff, I suppose?—He is a farm steward and caretaker.

* See p. 206.

July 3, 1907.

Mr. M. O'Connell.

42148. CHAIRMAN.—You say it came into their possession as mortgagees?—Yes.

42149. Where is the head office of this company?—Edinburgh. Then as to the question of cottiers and milk supply, with a view of improving the condition of small occupiers, rather than increasing their number, it may be well to consider whether, in the case of congested localities situated near tracts of untenanted lands, it would be practicable, in the case of buying any of those tracts, to vest only a portion of such land in the Congested Districts Board permanently with a view of enabling that Board to let such lands for the grazing of a cow by each cottier whose present holding is too small to feed a cow. I am informed, and believe that, while in the towns milk can be got in the rural districts for six months of the year, very little milk is to be had by the labouring class. The nurses tell me condensed milk is used to feed children, and even during the summer months it appears to be the practice, generally, that in the absence of a continuous and certain demand for milk, such as contractors provide for, farmers cannot see their way to sell any of their milk by retail, as the whole of the milk is engaged to be taken to the creameries, and also for feeding calves.

42150. You say that while in the towns for six months of the year milk can be got, in the rural district very little milk is to be had by the labouring class. Do you mean that in the other six months milk can be got in the towns?—Yes; and throughout the year.

42151. But in the rural district very little is to be had by the labouring class?—That would be the winter, or rather the six months of winter and spring.

42152. Then I suppose that during that six months milk would be also rather scarce in the towns?—Well, they manage always to get the milk in the towns. That is my experience.

42153. In your opinion, in the towns they can get milk all the year round pretty regularly?—Yes.

42154. And the nurses that you refer to, are those the nurses that look after the children of the labouring class?—No; they are maternity nurses—midwives.

42155. Then the condensed milk is used for feeding the children when they are very young?—Yes.

42156. Mr. SUTHERLAND.—Do you say that milk is imported into Kerry?—I do say it, decidedly.

42157. Condensed milk?—Yes, sir. I can give you day and date, name and place.

42158. CHAIRMAN.—Is it only since the establishment of creameries that you have observed this lack of milk?—Well, I did not say that really, but I should say that the establishment of the creameries has, in fact, intensified the evil. It has made it more difficult to get the milk now in the rural districts in the winter time.

42159. I suppose there is a tendency to send all the milk to the creameries?—There is.

42160. To leave the household a little short?—Yes. Many hold the view that the appearance of the children at the rural school shows, as a rule, they are not well nourished. Suppose, then, the land is obtained near congested places, the question will then arise, in the case of these people, how are they to purchase a cow, and if they get a loan to buy a milch cow, where there is no cow already, or to replace an old tuberculosis cow, what security can they offer for the repayment of the money? Bearing upon this point, I submit a report made by me on the 7th ultimo to the Guardians, from which it will be observed that, out of a seed loan of close on £2,000 in the rural district there was actually collected out of the first instalment £986, over 99 per cent., leaving only an arrear of £13 uncollected, and in not one case out of over 1,800 recipients of seed potatoes was any attempt made to repudiate the debt.* It is to be borne in mind that a large number of these poor people were too poor to offer any sort of security; they were trusted; they proved themselves worthy of trust, and I think it may be submitted that they would also repay a loan to buy a cow.

42161. Mr. SUTHERLAND.—You suggest that the land should be provided by the Congested Districts Board?—Yes; the suggestion is that the Congested Districts Board should keep a portion of this scheduled land permanently vested in themselves rather than to multiply the number of small occupiers, and seeing that there is not enough of land to go round all, and that there will be a large number of small occupiers who would not have sufficient means of feeding their cows in the winter, it would be well that they should have grazing given them somewhere.

42162. Your suggestion is that the Congested Districts Board should let it to these people at so much a year?—Yes.

42163. Of course, that contemplates the permanency of the Congested Districts Board?—Well, yes, or some similar institution.

42164. Under a local body?—Well, possibly a rural district council.

42165. Do you think they would be willing to undertake a duty like that?—I should say so.

42166. They have already to provide cottages?—They are having the providing and the letting of cottages.

42167. Are there many such people in the places you refer to?—Oh, yes, I should say so, especially in the congested districts. There are lots of people with half an acre, or an acre, or less than two acres.

42168. In fact the same class of people that you provide labourers' cottages for?—The same class in fact. We expect to have 800 Union cottages, having an acre of land each.

42169. In the Union?—No; only in the Rural District, not the Union. The Union goes into Limerick as well as Kerry and we exclude Limerick. For instance, that would be one portion of the Union, with 800 people having only one acre of land each.

42170. Mr. KAVANAGH.—Do you give an acre now?—Yes; a statute acre.

42171. Do you think this common grazing would satisfy the people as well?—I think it would be a very popular thing, and it would be very satisfactory, I should say.

42172. CHAIRMAN.—Does the question differ from that of providing holdings? What I understand from you is this: that having built a certain number of labourers' cottages you now want to see some provision made for communal grazing for the cows belonging to these people?—Yes, and others like them.

42173. Others like them, who may have small cottages and land, but too little land for grazing a cow?—Yes.

42174. And you want some provision made for them to keep a cow?—Yes.

42175. But it is distinct from the labourers' cottages?—It is distinct from the labourers' cottages.

42176. Would not they be inclined to live on the acre of land and the grazing and tillage and not to labour?—No; that is not my experience at all.

42177. You have not had any experience of that?—I have not, but I can give you cases of tenants of Union cottages who have succeeded from one cause or another, chiefly their own industry, in making a considerable share of money, and they are just as willing to work to-day as labourers as they were before.

42178. Because as you are aware labour is short in the country and if you reduce the number of labourers you do great harm to the farming class?—Well, I consider that if there was a large extension of the Union cottages that would not prevent them from working, and it does not prevent them. We have a large number of cottages and I have yet to learn that they are not anxious to work.

42179. Mr. SUTHERLAND.—Of course an acre and the grazing of a cow would not keep a man from labouring?—No; not at all.

42180. It is no inducement to cease from labouring?—No; the object is by some means or other to try to get, not only milk, but sound milk, which is very much more the point, sound milk for the children of those people, who have, as a rule, very large families, and I think it will be also found that as a rule when those people have a cow it is an old hard-skinned, probably tuberculous, cow.

42181. CHAIRMAN.—There is one other matter. You say in the first place that you want the Congested Districts Board to provide land for those people. Then, as I understand, you further say that you would like to see them making loans to the labourers for the purchase of calves?—Yes.

42182. Is there any way now in which those men can borrow money at a reasonable rate of interest for the purchase of a cow?—There is not.

* See page 208.

42183. Have you no co-operative banks here?—No.

42184. If you had a co-operative bank would not that provide the machinery you require?—Yes; that would be a great improvement, my lord, if we had a co-operative bank. But although I am not conversant with the working of those banks I should say that the question would then arise: What about the security?

42185. Well, the security is the security of friends who stand security for the borrower?—Yes; but I have mentioned the instance of the seed loans. It was I who had the giving out of it; the guardians gave it all over to me, and I found a large number of the people were so poor that they could not get any local man to give security for them, and the Inspector said to me, "You may as well do the best you can," and we did, and they paid it all off.

42186. Mr. SUTHERLAND.—The security was in fact their own character?—Their own character.

42187. CHAIRMAN.—And in the case of the bank it would be their own character backed by the personal guarantee of two others?—Yes.

42188. Really it amounts to personal character?—It does, my lord.

42189. Would you agree that if some automatic machinery could be found by which self-help could provide the necessary capital for these people to get a calf it would be better than to throw that responsibility and burden upon a certain State institution like the Congested Districts Board?—Well, it would be well to try and see whether it would succeed. I think it would be a very great improvement if we had those banks.

42190. Mr. SUTHERLAND.—But, of course, you would suggest that the Congested Districts Board should provide the land?—Yes; it would mean that the Board should provide the land, and then let their successors, whoever they might be, administer the estate afterwards.

42191. I think it would come largely to the personal character of these people, and there would be no need to trouble the Congested Districts Board?—But they would have to get the land.

42192. But as to the price for the land?—It would be a great improvement if they got the land independently. It would do away with the question of loan.

42193. CHAIRMAN.—But is it not nearly always the case when these people find the money to purchase a cow that it is customary for their relations in America to help them in a case of that kind?—No doubt their relations in America help them, but in a large number of cases these people have large families, and it will be a bad cow that they possess, where they do possess a cow; it is probably a menace to the public health.

42194. Then you think that if there was some way in which they could get a loan to purchase a cow it would be likely to be a much better cow?—A much better cow.

42195. They would get a cow independently of the resources of their relations?—Yes. It will be found that the poor man's cow is often worth only £2, or £1 10*s.*, and an unsound cow. I know numbers of cases of it. Now that deals with cases near untenanted land. But it is suggested, respecting the supply of milk to the poor throughout the year, in the localities not situated near untenanted tracts, if it could be arranged to have contracts with the local farmers, made by the parish committees and the Board's local agent, to see to a weekly collection, it is possible that there is no economic or other difficulty about the matter, as it would be worth any farmer's while to enter into these contracts for a continuous supply, and a portion of the money paid for dear tea, which is largely consumed, would, in this way, be diverted for a supply of milk, which is so badly needed for the children of the poor, who, perhaps, have often to drink the milk of tuberculous cows—hence the high consumptive death-rate amongst the poor. In maternity cases, the supply of pure milk is of first importance.

42196. You say the parish committees could make arrangements with farmers, and enter into contracts with them to provide milk for the use of the labourers?—Yes; I think it is possible to organise such a system. If it could be so arranged, there would be a weekly collection of the debt. I think it is possible that that could be done. Taking a townland, for instance, or two or three townlands, where there would be perhaps from twenty-five to thirty farmers, if one farmer was selected out, and a contract made with him to supply milk at a reasonable rate throughout the year, say, 7*d.* per gallon, I see no impossibility in that.

42197. But there is nothing to stand in the way of doing that at the present moment?—There is organisation wanted.

42198. I suppose all the farmer wants is to have a price for his milk?—But how are you to supply it without organisation?

42199. If any one individual chooses he can do it. I suppose any individual could set himself up as a kind of middleman, and enter into a contract with a farmer to supply him regularly with milk for the use of these people?—Yes; but there must be some machinery or organisation to bring that about, because you cannot expect a farmer to break his existing contract with the creamery, and keep a proportion of his milk, unless he was sure of the other arrangement.

42200. But if he was sure that a certain amount of milk would be taken from him every week, and that he would be paid regularly, why should not he be willing to break his arrangement with the creamery?—The point is to bring about that state of assurance.

42201. Mr. SUTHERLAND.—You say there is a necessity to get the milk?—Yes. Well, the fact is that the necessity is there, and that the thing is not done.

42202. CHAIRMAN.—Do the creameries pay better prices?—No. The creameries pay, perhaps, only about 4*d.* per gallon for the milk, where it is certainly worth about 7*d.* per gallon to the consumer.

42203. And the people would pay that?—No doubt of it.

42204. Are they co-operative creameries?—No; they are proprietary creameries. Proper organisation and a business arrangement would seem to be the only things necessary to carry out this reform. Now, there are 444 cottages provided in the Listowel Rural District—310 completed and occupied, and 134 building, or near completion. There are 516 applied for at the inquiry now going on; and, allowing, say, for 350 to be passed, that will be 800 cottages provided, but as the rate limit, a shilling in the £, will be reached when the 800 cottages have been built, some other sources must be sought to improve the condition of the remaining unsanitary houses. The paper I have handed in shows the ascertained result of the working of the Act to 31st March last.*

42205. Have you any parish committee?—No, my lord; we have no parish committees at all.

42206. Is there any reason why you should not have one in Listowel?—No reason whatever.

42207. If you had one in Listowel, would not that do a great deal to improve the condition of the unsanitary houses?—No doubt about it.

42208. Tell me exactly what the procedure is for the erection of those cottages—the Rural District Council erects them, does it?—Yes.

42209. And does it take the land compulsorily?—Compulsorily.

42210. From anybody it chooses?—Anybody it chooses.

42211. Where does the money come from?—It comes from the Board of Works. It will now come from the Land Commission; but, of course, it is Treasury money.

42212. Is it money advanced by the Board of Works to the Rural District Council?—Yes.

42213. And when does the Rural District Council get it back?—They get a portion of it back in the shape of rent at the rate of £2 15*s.* for each cottage, and the rates often have to bear the remaining portion, up to £3 7*s.* 4*d.* per cottage erected.

42214. The County Council levies a rate?—Yes.

42215. Mr. SUTHERLAND.—Is it a permanent charge or for a number of years?—For thirty-five years.

42216. CHAIRMAN.—What sort of a rate—is it a county-at-large rate?—The rural district-at-large.

42217. Mr. KAVANAGH.—It is now acting rather better than before?—Much better.

42218. You don't lose so much?—Nothing like it. It reduces the liability. The ascertained liability for one would be, say, £3 7*s.* 4*d.*, and that is reduced down to £1 11*s.* 6*d.*

42219. CHAIRMAN.—Who selects the men to go into those cottages?—Well, the present Act, very properly, gives the first refusal to the man who applies in the first instance. It gives him the right of refusal. That is to say, that the man who applies in the first instance for the cottage gets the first chance of the cottage.

* See page 268.

July 3, 1907.

Mr. M. O'Connell.

42220. Mr. SUTHERLAND.—The individual applicant?—Yes.

42221. CHAIRMAN.—That is under a section of the present Act?—Yes.

42222. But under the old Act?—Well, under the old Act it was practically the same; but under the old Act the Rural District Council had the privilege of selecting any *bona fide* labourer. It was not passed really for any individual.

42223. The Rural District Council had the power of selecting the individual?—Yes.

42224. Mr. SUTHERLAND.—Now, may I ask you what do these cottages cost?—As a rule, the gross total cost, including everything, is £137 10*s.* per cottage in the Listowel Rural District up to March last. That would be from £105 to £106 for the cost of each building, and from £30 to £33 for the land. And then there are various other expenses, such as engineering and inquiries.

42225. What accommodation do you give for that?—A kitchen and three bedrooms—two bedrooms on the ground floor and one overhead.

42226. No outhouse at all?—Yes, of course, there is. Under the Public Health Act it is necessary to have a privy attached to the house. That is, of course, a technical necessity under the Public Health Act.

42227. Now how much do you pay for the expense of compulsory acquirement?—Well, it is nothing now, but it used to be a considerable sum until last year, because the owner or occupier had a certain right of going to the Privy Council, and that might be very expensive.

42228. And I suppose you find in practice that the existence of the power of compulsion makes the seller more reasonable?—Yes, we find that.

42229. And have you to exercise the power of compulsion at all?—Practically no.

42230. Now you speak about unsanitary houses. May not a house that was unsanitary before be made sanitary?—Yes, possibly.

42231. But not commonly?—Not commonly. The houses are generally provided for people who have no house, who are lodging with their father-in-law, or a person like that.

42232. And then, in the case of a building which is unsanitary, what do you do?—We pull it down. It has to be done, and it is done. We have pulled down many.

42233. CHAIRMAN.—The Rural District Council collect the rents?—Yes.

42234. Have you had any trouble about rent?—No trouble. Out of a rental of £722 odd the arrears due up to March 31, amounted to £75. That amounts to just about five weeks' rent, or 5*s.* per cottage.

42235. Mr. SUTHERLAND.—Is any of the arrears of long standing?—No. It is all paid since. It is practically all paid. There is no trouble in Listowel about rent.

42236. Mr. KAVANAGH.—What do you charge a week?—From 1*s.* to 1*s.* 1*d.*; say 1*s.* 1*d.* a week.

42237. CHAIRMAN.—Is there any provision in the Act by which the charge can be reduced—does the shilling in the pound remain a fixed charge on the rates?—Well a shilling in the pound is the maximum. You could not strike a rate of more than 1*s.*; but the actual rate struck was 4¾*d.* to cover the liability so far.

42238. I understand that in Cork they have already reached the maximum?—In Cork it would be.

42239. Is there any machinery for gradually reducing that debt?—Oh, yes. Up to the present the loan in Listowel is a thirty-five years' loan, and more than half of that is expired. Eighteen or nineteen years of it is expired. As we pay off the old loan it relieves the pressure on the rates.

42240. The shilling in the pound maximum on a certain number of years pays off the debt?—It does.

42241. Mr. SUTHERLAND.—But of course the rate will be reduced as you pay the debt?—Yes. Respecting the strict enforcement of the Public Health Act, seeing that a sub-sanitary officer, on whom the practical work falls of enforcing the Public Health Act, is paid at the rate of £10 a year, it cannot be expected that he will be very enthusiastic about the performance of his duties. That is put in chiefly by the Rural District Council in reference to evidence that was given by a witness from the County Mayo. There was rather a sweeping statement made by an important witness to the effect that there was really no return given by the sanitary officers (which would, of course include the medical officers) for the salaries they received. I hold that that does not refer to this part of the country.

42242. You say that the Parish Committees who act under the Congested Districts Board should do a very large portion of the work?—Yes; and in fact the Rural District Council say that Parish Committees should be formed to assist the sanitary authority in such work as removal of manure from near houses, lime-washing, inspection of dairies, and so on.

42243. CHAIRMAN.—Why do you say that the two things should work together—you say in the first instance that you have every reason to be satisfied with the sanitary officers, and then that Parish Committees should be formed to assist the sanitary authority?—I say that when a man is paid £10 a year it cannot be expected that he will be very enthusiastic in the discharge of his very disagreeable duties.

42244. Mr. KAVANAGH.—And he will only do £10 worth of work?—Well, he does the work, but the suggestion about the Parish Committees is put in for this reason, that the people who are noticed to remove manure and lime-wash their houses are generally the poorest people. Sometimes they are not, but as a rule they are, and the only remedy for that is to bring them before the magistrates at Petty Sessions. Well, they have no option but to impose a fine, and that is fining very poor people.

42245. Mr. SUTHERLAND.—Why does the poor man not remove the manure heap?—Well, of course, he should do it, but he is not able to do it.

42246. It is for his own benefit?—Yes; but with respect to that, we think that Parish Committees would be more effective.

42247. CHAIRMAN.—Then, it comes to this, that you yourself admit that the sanitary officers are not able to do the work in consequence of the poverty of the people, and that because of this inability to do the work, a voluntary body—the Parish Committee—should be called in to do it?—Yes; the point is that their work is not as effective as it should be.

42248. But the Parish Committee has a small amount of money to make little allowances?—Yes.

42249. To grease the wheels and make things go a little quicker?—I understand that the Parish Committee themselves, or somebody acting through them, use their funds to encourage these people to keep their houses in a neat way and give prizes to encourage them.

42250. Mr. SUTHERLAND.—I can perfectly well understand a farmer not being able to expend money on sanitary works, but poverty is no reason for not keeping his house clean?—Well, that is so. At the present the work is not as effective as it should be. Hundreds of notices are served to remove manure from near the dwellings, but the manure, if removed, is shortly afterwards allowed again to accumulate. A local Committee, including the clergy, with an instructress who should have some such qualification as the diploma of the Royal Sanitary Institute of London, to enable her to deal with such matters as ventilation, &c., should have the proper authority to deal with such matters. The county instructress should visit the houses of the poor—at present those who attend the classes in towns are educated ladies, many of whom are qualified to be instructresses themselves. To improve the general sanitary condition, I hold the view that you must commence with the schools, but the sanitary condition of the schools is "a menace to the public health"—see reports received in April and May, 1907, from medical officers of health (that is an extract from the report of Dr. Dillon of the Listowel District)—and the Chief Secretary says the condition of the premises is "infamous;" yet nothing is done. An improvement was recently suggested by the Rural Council of Listowel to the Resident Commissioner of Education with a view to the use of earth closets (*paper enclosed*), but as the Commissioner's reply merely threw the responsibility on the managers, this seems to be evading the question, as the managers have no funds for this purpose.

42251. This is a serious statement, Mr. O'Connell. You say that the schoolhouses are in an insanitary condition?—A most insanitary condition, and knowing a great number of them I adopt the statement of Dr. Dillon that they are a menace to the public health.

42252. Do you say that of the schoolhouses?—I do.

42252A. From your own knowledge?—I do, decidedly. The Rural Council suggest that forest trees, in lots of four or five hundred, should be given through the

Congested Districts Board, in congested areas, free to occupiers under £10 valuation, and at half-price, or 1*s.* 9*d.* per 100, to occupiers under £20 valuation, to plant shelter-belts.

42253. CHAIRMAN.—Do you think they would plant them?—I do.

42254. If they did would the land be more valuable for crops?—Well, my lord, I think the idea of planting trees for shelter would be very likely to be adopted. I know some small occupiers discussed the matter with me and they said they would be very glad to have them.

42255. Now, with regard to your proposal about shelter belts, do you think that that is work which might be done to some extent by the Parish Committees—that the Parish Committees might give prizes or encouragement for the planting of trees?—Well, I think they might get the trees for small shelters.

42256. Mr. SUTHERLAND.—You would require, in the first place, to withdraw the areas from pasture or cultivation, and then you would require to enclose them?—Oh, yes; to enclose them first. Well, I would not give trees to any man who did not enclose the place. Of course it will be always found that one side is fenced in already, and you have only to put a paling, which is only a very small matter, at the south side of that.

42257. Mr. KAVANAGH.—Do you think the people would plant the trees?—Oh, yes, they would.

42258. Do you think that at 1*s.* 9*d.* a hundred there would be a great rush?—Well, I am sure that some would be planted. The fact is that they are not planted already. *July* 3, 1907.

42259. I should say it would be an object lesson in planting. If they saw other people doing it they might take it in hand then?—Well, if you have four or five thousand trees to plant it will take four or five thousand to make a shelter belt for, say, a six or eight-acre plot, and I think that would be something. Mr. M. O'Counell.

42259A. Mr. SUTHERLAND.—Where would be the nearest nursery?—Mr. Power's of Waterford. An occupier having this year—March last—planted an acre (Irish measure) with 304 apple trees, twelve feet apart either way, with small fruit trees in between, I am able to state, if it is of any interest, what the precise cost was. For fencing a sod fence six feet high at north and west sides and paling at south and east thorn-quicked with furze on top, cost of trees at 9*d.* each, three years' old, approved sorts, pitting, planting, everything, £17 9*s.* 2*d.* Though the soil is a very heavy, retentive clay, light surface, about eight inches, and quite unsuitable for tillage, the trees all grew well and in sheltered places some ten or twelve are yielding this year as many as ten to eighteen apples each. The land will be meadowed, as if it were not planted, and in five or six years' time it is expected the whole money will be made in fruit. This instance tends to prove that, if sheltered from north-west, apple trees flourish in poor, cold land, which is not suitable for tillage; but, to encourage planting, trees should be provided for small occupiers at a much cheaper rate than 9*d.* each.

Mr. WILLIAM M'MAHON examined.

42260. CHAIRMAN.—You are a County Councillor, I believe?—Yes, my lord. Mr. William M'Mahon.

42261. You have some notes of evidence?—Yes, my lord; and the first point I wish to mention is that the Congested Districts Board should have more powers, powers for extending the congested areas and for other purposes; and that the Congested Districts Board ought also to have compulsory powers for the purpose of purchasing untenanted grazing and unreclaimed land, and for building houses on those lands and for the enlargement of an uneconomic holding, and giving plots and houses to farmers' sons, labourers, and artisans; and that the whole of Listowel Union ought to be treated as "congested."

42262. Would you say scheduled as congested?—Scheduled as congested. The reason for asking that, my lord, would be that there are already ten congested electoral divisions in the Listowel Union, and that we consider, and the Rural District Council and a number of the inhabitants consider, that all the other electoral divisions ought to be scheduled as well. There are thirty-two electoral divisions, and there are already one-third of them congested, or very near on it; and another reason is that a great deal of the congestion is not in the congested electoral divisions at all, but scattered throughout the union, and for that purpose it would be necessary to have the whole of the union congested.

42263. Why?—Otherwise you will not be able to take the untenanted land that would be suitable for the migration of the large population of the congested areas.

42263A. There is nothing to prevent the Congested Districts Board going outside the scheduled areas. They can do that now?—That is the reason that we ask that the whole of the union should be scheduled as congested. And we also ask that there should be one elected member on the Congested Districts Board for each of the counties congested or partly congested. We consider now in Kerry that we are entirely forgotten by the Congested Districts Board, or nearly so, for this very reason, that we have not any member from Kerry to recommend to the Congested Districts Board the wants of the county and of the congested areas of the county. We see more money spent up in Donegal and other counties than in Kerry, and we ought to have—the same as they have in Donegal—an elected member on that Board.

42264. They have not got an elected member for Donegal. In fact, there are no gentlemen on the Board that are acting or are supposed to act as representatives of any particular place. However, I understand your object?—Well, then, if not, still they look after their own counties better than they do after outsiders.

42265. How do you propose that the constitution of the Congested Districts Board should be dealt with?—I propose that the County Council should nominate a member, subject to the approval, say, of the Lord Lieutenant.

42266. Is it your proposal that a County Council should nominate one member?—Yes.

42267. Do you suggest that that member should be necessarily a member of the County Council?—No, I would not. I would think it would be enough for the County Council to nominate a member.

42268. Mr. SUTHERLAND.—But that a member of the County Council should not be excluded?—No, because we think that there might be members of the County Council that would be admirably fitted. I know myself that there might be some, and there might be others as good; those men might not like the position. We also think that the Congested Districts Board ought to have encouraged the fisheries in the rivers by establishing hatcheries, and giving money for boats and nets, and protecting the mouths of the rivers from trawlers and from fishing boats, because a great many people are of opinion that those boats with large nets prevent the fish from entering the river; that salmon and other fish are prevented from coming into the River Feale and the River Shannon, too.

42269. What trawlers do you refer to?—To those trawlers at the mouth of the Shannon.

42270. Would you put a stop to the fishing altogether?—Only not to come too near the river. I do not want to prevent them going on outside, but it is since the establishment of boats with nets for mackerel fishing round the coast that the salmon fishing is injured.

42271. But they fish for other fish round Ireland?—But they prevent salmon entering the rivers with their long nets.

42272. Are the nets set in the sea for catching salmon?—Not that I am aware of, but for mackerel and ling and cod and other fish.

42273. They are not set for salmon?—But their nets are deep and they are often four or five miles long, and when they are across the mouths of the rivers they frighten the fish from coming into them.

42274. Do they come so near as that?—They do.

42275. Is there any salmon net fishing at all in Ireland?—Oh, yes, there is a good deal. Even in our river, the Feale, for six or seven miles there are

July 3, 1907.

Mr. William M'Mahon.

thirty or forty nets fishing for salmon. It is the nets outside that prevent the salmon coming into the river.

42276. Then would not these men catch them with their nets?—Certainly; that is what we want; that these people should catch these salmon.

42277. Then it is not a question of where they are caught, but who catches them?—These men make a livelihood by it near the rivers. If it would not be out of place I remember now hearing at the time of the Japanese and Russian War that the reason for taking the island of Saghalien was that the Japanese used to fish that island all the way before that and that the amount of shipping frightened the fish to the north, and it is very probable that the amount of shipping at the mouth of the Shannon frightens the fish from coming up the Feale river and other rivers.

42278. Have those representations ever been made to Mr. Green, of the Agricultural Department?—Well, they have been; hatcheries have been asked for, and application made to the Department of Agriculture, and there was some little help given, but not much.

42279. But how about the damage to the local fishermen by the trawlers—has that ever been represented to Mr. Green?—It has been spoken of, but I do not know that it has ever been represented to the Department of Agriculture or the Congested Districts Board.

42280. Would not it be a good plan if you think that there are any grounds for that allegation to ask him to hold an inquiry?—Well, I suppose that is the procedure if the Congested Districts Board could do anything to help them.

42281. Mr. SUTHERLAND.—It is a serious thing, is it not, to interfere with the sea fisheries?—I do not know that it would be interfering with them much at any rate. It is only there outside the mouth of the Shannon. That is all that we are interested in—the mouth of the Shannon, and if the trawlers were kept a mile or so outside it, it would give the fish an opportunity of coming in. But their boats and nets frighten the fish. Any of their nets are over three miles and some of them five miles long, and when their nets are spread the fish almost will not come inside them. They are frightened away.

42282. Mr. KAVANAGH.—Has the salmon fishing gone down?—Yes; very much.

42283. Even for net fishing?—Even for net fishing.

42284. And the opinion that you express about the trawlers is the universal opinion?—It is the opinion of those that have studied the subject, but, of course, a great many pay no attention.

42285. I wonder you did not write to the Congested Districts Board?—Well, upon my reading the Board of Agriculture would be inclined to do very little for us.

42286. CHAIRMAN.—I think it comes under the Congested Districts Board, not the Board of Agriculture, does not it?—I think so; but, my lord, there is a lot of salmon killed by those boats that are only fishing for mackerel and fish that are of very little consequence. They say that there is, but I have no proof of it. And also, in the spawning season, up the rivers would want to be very well protected, because they are often caught at night, and some of the fish killed in the act of spawning, which causes a great loss and is a great detriment to the fisheries.

42287. CHAIRMAN.—Have not the Fishery Conservators people watching the river?—They have people watching the rivers, water-bailiffs, but they have not enough of them up the rivers.

42288. Is there much destruction of fish?—No, there is not much of that. We also think that the Congested Districts Board ought to have powers to work and develop the industrial resources of the country and power to buy land for the better development and encouragement of the peat industry.

42289. The peat industry?—Yes. I hold that there could be a wonderful amount of employment given by the bogs of Ireland, and at a scientific conference of engineers in Dublin within the last twelve months, and presided over by Sir Charles Cameron, an engineer there—Mr. Rigby—told them that there were over 2,340,000 acres of bog in Ireland with a depth of 20 feet, and he said that that peat could be utilised for many valuable purposes, the extraction of ammonia and other purposes, and the production of a fuel with which all the railways of Ireland and all the canal barges of Ireland could be worked at much less cost than with the fuel that is at present in use, and after scientific experiments as to the gas-producing power of peat, he stated that two tons of dried peat had more gas-producing power than a ton of the best coal, and that the works for driving all the railway locomotives in Ireland and all the barges on the canals of Ireland might all be planted in the bogs themselves, where cheap labour could be got.

42290. Mr. SUTHERLAND.—He does not say anything about the gas-producing powers of an engineer?—Oh, he says it would be the means of giving a large amount of employment and the starting of factories in Ireland in consequence of the cheap fuel that would be produced, and that it would be the means of starting large industries in Ireland and giving large employment, and even if it were properly worked for ordinary fuel for ordinary purposes it would pay and would give a large amount of employment.

42291. There are lots of peat deposits in other countries as well as in Ireland, and they have been experimenting for a number of years, and the results have in no case come up to the expectations of the engineers?—But what about this case down at Celbridge. It is at work now about a year and a-half. It was hardly able to pay any profit at first; now it is yielding £75 per week after paying all expenses.

42292. Mr. KAVANAGH.—That is only for fuel?—Oh, yes, it is; and for paraffin and wax, and other purposes. And there is a large amount of oil in the bogs. But there is another matter I would like to mention.

42293. CHAIRMAN.—We don't interfere with this if you can show that there is a commercial success in it?—Well, there is no doubt about it that if it were properly worked it would be a commercial success.

42294. Would people put their capital into it?—I am afraid they are very slow in Ireland. We have got very little help from the English Government. When any commerce was prospering in Ireland they were sure to put a veto on it.

42295. Do you suggest that they should put up machinery for working it?—Well, of course, it is a mere suggestion, but to bring it under the notice of men like you, my lord, would be a good deal itself.

42296. Mr. SUTHERLAND.—We have been hearing a great deal of it for twenty years from engineers?—Well, I think that if it were in England that it would be done, but you will forgive me, my lord, for saying that now there is great apathy in Ireland in starting any commercial undertaking because it has been shown to them from time to time that there is hardly any profitable industry formed in Ireland that would be of general good that is not handicapped. Even if it is not done by the British Government, English manufacturers send their agents here and they will under-cut for a time till they cut down the trade in Ireland, and I ask you to put a protection tariff on all manufactured goods coming into this country, as the only remedy for Ireland and its trade. People may laugh at that, but we are today suffering from it.

42297. CHAIRMAN.—We see that Ireland lacks industry and that you are anxious that no opportunity should be lost of establishing industry in the congested districts. That is your point, is not it?—It certainly is, but not put in any way insulting or annoying by any means. We also think that the Congested Districts Board ought to have powers for the draining of floods and marshes and wet land, and powers for making dams for protection against river flooding. We have a large amount of these now in our Union—flooded lands and marshy lands.

42298. Mr. SUTHERLAND.—What is the name of the river?—The Feale and the Brick are the principal rivers.

42299. CHAIRMAN.—And are there other places?—We have a lot of flooded places all along the rivers, and I think you will have evidence here about the flooding of Lixnaw from Mr. Julian.

42300. And you want to give evidence about this?—Yes, my lord, but I think it is a more general thing. I think there are about 1,800 acres at least along the river Feale flooded. The low-lying lands along the banks ought to have a protection from these floods. And then there is a great portion of the river Brick which would want to be scoured and

cleared, but you will have all that evidence from Mr. Julian.

42301. Has the County Council any power to undertake large drainage of that kind?—No.

42302. No power at all?—No; nor even any power to compel a tenant or landlord who by neglecting to scour those large drains cause the roads to get flooded.

42303. I understand that that is due in a great measure to the rising of the tide?—Yes; it is helped by the rising tide.

42304. And that the land is below the level of the high tides?—Yes.

42305. Have the County Council any power to erect a tide wall or anything of that kind?—No. There were some letters passed with regard to drainage some time ago. It was left in the hands of a Committee, and that is all. But I think the Government is proposing some scheme which they will probably adopt, and in the meantime these lands are flooded.

42306. In your opinion the County Council are powerless?—Yes, because that was tried before.

42306A. It was not tried by the County Council, was it?

Mr. J. E. J. Julian.—My lord, Dublin Castle suggested the other day that the County Council should take up the work which they have pressed us to do—to take up the work of the Cashen Board. The Cashen Board is at present defunct, but I think by an order of the Lord Lieutenant their functions could be taken up by the County Council with all their powers and duties.

CHAIRMAN.—That is a Drainage Board?

Mr. Julian.—A Drainage Board, my lord. There are not enough of the members left alive to form a *quorum*, so that the whole thing is at a deadlock. I understand that under an Order in Council of the Lord Lieutenant the County Council could stand in the shoes of the now defunct Cashen Board, and Dublin Castle suggested that the County Council should do so. It was proposed at the County Council, but the question was adjourned in order to find out during the course of the current three months what responsibilities would fall upon the County Council if they undertook those duties.

Witness.—Also we think that the rural district of Listowel ought to be scheduled as congested for the purpose of giving small holdings to the working classes for gardens, and for the means of supplying milk for themselves and their families, and also for encouraging industry and for other beneficial purposes. Our market towns are going nearly into decay, and this is a matter that is discussed in nearly all the small towns. The town of Listowel now that I speak of was dependent entirely on its market, and twenty years ago there used to be 2,400 pigs in the market here once a fortnight and over 2,000 firkins of butter. Well, Listowel has not now 200 firkins, so that that trade coming into Listowel is entirely lost.

42307. I suppose that is in consequence of the creameries?—In consequence of the creameries established in the different villages; and a good many people are of opinion that the creameries will not benefit Ireland, but only cause a great loss.

42308. Why?—Because the dietary that the working class formerly used had to be changed. They could not use the creamery milk as food. They were depending mostly on milk and potatoes for their food formerly, and they had to change the diet to other things much more expensive that they could not grow themselves, and the cost of the diet of the labouring class has so much increased that their employment has fallen back very much in the country districts, and there is very little employment in the country districts in consequence of it.

42309. You say then that by the establishment of the creameries the diet of the people is changed?—The cost of living has increased very much.

42310. Why does that affect employment?—Because the farmer cannot well pay for labour; the cost of dietary has increased so much that they must try to do without labour. The people find hand-separators would be much more beneficial to them, and we ask on behalf of the poorer class of farmers that they should get loans for the purchase of hand-separators.

42311. Mr. SUTHERLAND.—How much would they cost?—They are much cheaper than they were. They were £25 some years ago. They are down now to £10 or £12. I am just informed that £14 10*s.* is the proper price.

42312. CHAIRMAN.—You say that because creameries are established the dietary has changed. I can perfectly understand that the price paid by the creamery for milk demands that the farmer shall send all his milk to the creamery, and that in that way he leaves himself short and his family suffer. If he was a wise man he would keep back as much from the creamery as he used to consume himself?—And for his servants and workingmen; but they do not do that, and a good many of them get money in advance to purchase stock from the creamery, and they would then send all their milk to the creamery in order to repay the loan.

42313. They get a higher price now than they used to do when they made butter themselves?—They carry the skimmed milk home. They utilize it for their calves and pigs.

42314. But before the creameries were established there was not so much milk used for butter. Suppose a man had so much milk that he would consume himself, say, one-third of his total supply, could he not turn the rest into butter?—But, my lord, he would not consume any of the new milk, but only the milk after the cream was taken off it.

42315. In the old days?—Oh, certainly; only what would colour his tea if he had it.

42316. Then he would consume the skimmed milk?—Yes.

42317. He cannot do that now?—He cannot, because in the first place there is no nourishment in it and there is contingent sickness.

42318. Mr. KAVANAGH.—The old separation was by hand and the present is by machinery?—Yes.

42319. Mr. SUTHERLAND.—What do they do with the skimmed milk?—They give it to the calves and pigs. The men won't use it and their servants won't use it.

42320. CHAIRMAN.—I suppose the real difference is that in the old days, when the cream was separated by hand, the skimmed milk contained much more fat than now, when it is skimmed by machinery?—Quite so, my lord.

42321. And the skimmed milk now that is separated by machinery at the creamery is of less use for feeding people?—Or for feeding calves and pigs either.

42323. And formerly it was of use when it was separated by the hand?—It was looked upon as wholesome and good food, and it was used.

42324. But he gets an equivalent in the greater amount of butter which is extracted at the creamery?—The creamery has that.

42325. But it may pay him?—Well, they make a good deal more butter with the hand-separator today, a good deal more than they did out of the other.

42326. If his gross amount of milk was the same?—Ah, no; they do not get the same return of milk back as they carry.

42327. Do they get the same amount of milk from the cow?—Oh, yes.

42328. Then the use that they choose to make of the milk lies in their own hands. They can, if they like, keep back a certain amount of it for their own consumption?—Oh, certainly.

42329. They need not send the whole of it to the creamery?—They need not, my lord.

42330. Then why is it a disadvantage to have an organisation which makes the best use of the butter and gets them as good a price as possible?—But we have not it any way, my lord.

42331. I think the creameries do that?—I do not think they do, my lord. The creameries are established, most of them, for profit.

42332. The creamery makes a great deal better profit than the individuals?—Well, I don't think so, but it goes cleaner into the market than it used to go in the old form; but if you had your own butter made in your own house you would prefer it to the creamery.

42333. Mr. KAVANAGH.—What is the difference in price?—In the English market it is from 2*s.* to 6*s.* or 7*s.* under it.

42334. Mr. SUTHERLAND.—What is the price at Listowel?—It differs from week to week very much.

42335. What was it for a long time?—For a long time they were getting five guineas a firkin for it, and now they get only £2 5*s.* You will see the price is down all round as well as in the Irish butter.

July 3, 1907.

Mr. William M'Mahon.

42336. CHAIRMAN.—When was this time of the five guineas?—Twenty or twenty-five years ago—five guineas, even £5 10*s.* for three quarters of butter.

42337. Then it dropped considerably from that before creameries were established?—It did.

42338. What were you getting just before creameries were established?—It was down to much the same price as it is to-day, my lord.

42339. How much is that?—From 40*s.* to 52*s.* You might average it 56*s.* for the year.

42340. How much is the price to-day of a firkin of butter?—The average for the year would be about 49*s.* or 50*s.*

42341. How much milk does it take to make a firkin of butter?—The creamery manager says it takes three gallons to a pound. I have tested it myself, and you could make a pound of butter with a little over two gallons.

42342. How many pounds are there in the firkin? About seventy pounds to the firkin.

42343. Then it takes 210 gallons of milk to make a firkin of butter?—Some of the farmers says it does.

42344. Would 210 gallons of milk represent more than 50*s.*?—Well, it would represent something more.

Mr. Pierce.—Threepence farthing per gallon. That is the price in my place for the last fortnight.

Mr. JAMES E. J. JULIAN examined.

Mr. James E. J. Julian.

42345. CHAIRMAN.—You are a member of the County Council and a justice of the county?—Yes. I have been asked by the County Council to represent it and also by the United Irish League and the Land and Labour League of Lixnaw, of which I am president. The work of the Congested Districts Board is sporadic, and is overlapped by the Department of Agriculture. As far as my information goes in this county we find that in one place the Board has done a good deal and in another place it has done nothing. In Brosna, in this county, it has done a good deal of work, and it has done a good deal of work in Killorglin. In my own division of Lixnaw until quite recently it has done practically nothing at all.

42346. What sort of work have they done in these places?—What they have done lately in the Lixnaw division is they have bought an estate of Ardbeg which they bought from Mr. Hussey. They have re-arranged the land and spent a great deal of money on it, I believe in a way extremely satisfactory to the tenants. They used to subscribe £25 a year to the Kerry Agricultural Society, of which I am also secretary. They withdrew that grant last year, as they wished to confine it to holders under £4 valuation who lived in the congested districts, and the Society finds it almost impossible to accept the grant on those terms.

42347. Most Rev. Dr. O'DONNELL.—At what limit would the Society have been able to accept the grant?—We divide the exhibitors into two classes, those who are over £30 valuation and those who are under. We find, from our experience, that usually small men won't come in to show. It would be ridiculous to ask a small farmer or a cottager to bring in his exhibits and show them in Tralee at the show. Of course if it had been a question of expending the £25 in prizes for the cottages and things produced on the small farms or for the best kept farm we would have accepted it, but we are met with the difficulty of going round to view the farm and the expenses involved.

42348. Would it have been difficult to provide for the expenditure of that subsidy from the Congested Districts Board within the scheduled area?—It would all over Kerry. Suppose we had offered prizes for the best kept farms we might have had to send an inspector down to Cahirciveen, in one direction, and Tarbert, in another, to look at two farms, and the expense would be prohibitive. Even judging green crops we found two years ago that the expense of sending judges round was £12 or £14.

42349. Would the Show Committee be able to submit a scheme providing for the expenditure of that little grant within the scheduled area?—We thought if it were cut up and a small sum were given to each scheduled area, and the local people were let distribute it, that in such cases it would be useful. They bought the Ardbeg Estate. They gave a grant of £40 last year to the Ballyduff Parish Committee. That was burthened with certain conditions which were troublesome and hardly helped them very much.

42350. CHAIRMAN.—What sort of conditions?—The conditions were that all the work was to be completed before any grant could be given to them. If a man came and said he wished to do £10 worth of improvements to his house you could not advance him any of the money until the whole of the work had been completed to the satisfaction of the Board's supervisor. That meant to say that the man had to get credit for the timber and the slate or iron and whatever material was required, or from the masons. If we had a co-operative bank or any local people at the time who would have advanced the money it would have helped us considerably.

42351. Take the conditions which you found hampering; are they the same conditions that are made when grants are given by the Congested Districts Board in other places?—Practically the same. Things would have been much easier if I had been living in the district, but I am living ten miles away. Practically the only help we got was from the dispensary doctor. He was on the committee. That gave us great assistance. If I had been living on the spot I should have been in a position to have advanced the money myself or got the neighbours to have secured it. We began rather late, and I daresay with a more energetic secretary we might have done better.

CHAIRMAN.—What I don't quite understand is why we have not heard of that disadvantage being felt in other places; it seems to me so easy to see that it would be difficult for a man to find the money out of his own pocket before he gets the grant and that a little on account would be of great use to him. This point seems so reasonable that I don't quite understand why it has not been raised in other places.

Most Rev. Dr. O'DONNELL.—I believe under the old schemes there was a provision for payment of instalments as the work went on. I think that still continues in Mayo and, probably, in Galway. It is not so in Donegal. Nothing is paid until the work is completed. No doubt they do complain.

42352. Mr. SUTHERLAND.—Does not that arise in part from the fact that the work done must be certified by the Board's certifying officer before it is paid for?—I don't know what the Board's reason is; I only know the fact as hampering us. In the next case the Board gave a grant of £15 to make a road to some holdings that were cut off. The people came to me and said that they had no money and I advanced the money for them, and received it back again when the work was completed.

42353. Surely it is quite wrong that the successful working of a thing like that should depend on the fact that there is a good-natured man in the district willing to help them?—It looks like that. I don't know what they have done in the Killorglin district. They have done a great deal of good; but I certainly found that difficulty up in Ballyduff. Out of the £40 they promised we have only expended £20. One widow wanted to concrete the floor of her cottage. The expenditure there would be almost entirely cash. You could not get anybody to secure them for this amount.

42354. Most Rev. Dr. O'DONNELL.—I think, as Mr. Sutherland suggests, we may take it that the reasons for the arrangement are two: giving the grants by instalments involves considerably more expenditure, and the fact of the payments not being made until the work is quite completed would in itself be a spur to hasten on the completion?—I have nothing to do with the reasons. I was only mentioning the fact at present. There was a poultry farm established at Kilflynn. I think it has since been given up. That is all I can trace that the Board have done in a district reaching from the Cashen mouth down to the other parts. With regard to what they have not done, and what I suggest they might have done, grants to fishermen at the Cashen mouth for nets and boats are very badly wanted. There is a large settlement of fishers just at the mouth of River Feale who are very badly off. As I

understand, they live on credit during the winter and pledge their takings during the summer months. A grant from the Congested Districts Board for more modern nets and more modern boats would, I think, assist them considerably. I am not sure whether that is in a scheduled district. The electoral division of Ardagh is congested. I think some of these fishermen live outside it. There again the strict rule about the boundaries of the scheduled districts hampers us a great deal.

42355. Have these fishermen made any application for boats or nets?—I cannot really say that they have. I think some grant was given by some body, I don't know whether by the Department or the Congested Districts Board, to some fishermen at Ballyheige, but they fell through, the fishing being unavailable on account of the roughness of the tide and the want of a harbour.

42356. CHAIRMAN.—Do you know whether the Congested Districts Board have even a fishing representative in the County Kerry?—I don't think they have.

42357. Do you think that that would be a good thing?—I think all round the western coast it would be specially useful indeed. When you get down to the Dingle district you will hear more about fishing. This is a little settlement in itself.

42358. Mr. SUTHERLAND.—On the north or south side of the river?—On the north side of the river, Ballymore is the name. It is close to the Coastguard Station.

42359. CHAIRMAN.—Do you think are the wants of the fishing class more likely to reach the Board if we will say Kerry and, perhaps, Cork, were blocked out as a district for a permanent resident fishing inspector or superintendent?—Yes, I think it would be a very good thing. I made application to the Department of Fishery on behalf of these poor people. They said they were not giving any grants to inland fisheries. It is practically in the estuary that these people are fishing.

42360. Mr. SUTHERLAND.—They are not sea fishers?—I think they are not. As a matter of fact, their boats are not good enough to cast nets right in the mouth of the Shannon itself.

42361. What do they fish for?—Salmon used to be a great fishing industry. The supply of fish has partly fallen off—I don't know what the reason of that is.

42362. CHAIRMAN.—You have told us that the work of the Board, in your opinion, has been confined to a few places?—Yes.

42363. Would you say that the selection was a bad one?—It seems to me that would rather depend on the people who were asked.

42364. You don't think that the money spent by the Board has been spent with the poorest part of the county?—I don't know that it was spent with the poorest part. Until two or three years ago when Mr. Thomas O'Donnell, Member of Parliament for West Kerry, took it up, no money was spent in Kerry.

42365. Suppose that the Board found that the amount of money available for County Kerry was limited, would you say that that small amount which they have devoted to Kerry has been badly spent, and that there were other places more necessitous on which it should have been spent?—No. I don't think so at all. Ardbeg was very good. The estate next it should have been bought also—Muckinagh.

42366. Most Rev. Dr. O'DONNELL.—Was it offered?—I don't know that the owner offered it, but it is one of these estates that should be taken over compulsorily. It is a case of a bankrupt landlord and mortgagees who cannot agree. The tenants are extremely poor. It is a sort of oasis in the middle of a lot of bogs, and is subject to floods and swamp fever, and something should be done.

42367. CHAIRMAN.—What do you mean by saying that the mortgagees and the landlord cannot agree?—It is a question of getting hold of the bonus. If you have got a bankrupt estate, if you can persuade the landlord to lend his name, you can get the bonus; if the mortgagees sell themselves they get no bonus.

42368. No bonus is paid on a bankrupt estate?—On a regular bankrupt estate there is not.

42369. It has to be passed through as an estate that is not bankrupt?—Yes.

42370. Most Rev. Dr. O'DONNELL.—Is it your view that an estate such as the Muckinagh estate should not be sold to the tenants without the holdings being improved?—Yes. I think some of the tenants should be migrated. There was a farm which was offered to the Board. They offered £400, and it went for £606. I think it was a great pity that the Board lost the opportunity.

42371. Was the price that the Board offered insufficient?—It was insufficient to secure it. I am told that the profits of the farm are amply sufficient to repay the interest on the £600, and that after paying that there would have been a profit of about £100 a year by taking in graziers.

42372. You consider therefore that the Board's offer was not sufficient?—Yes.

42373. You consider that it was value for more?—Yes, I consider that it was value for the £600 which was given, and the Board should have found that out and increased their offer.

42374. CHAIRMAN.—Do you think that this partial treatment you complain of would be met by what was suggested by another witness, that there should be a representative of Kerry on the Board?—I think it would be an extremely useful thing if we had someone more intimately connected with Kerry than any of the gentlemen who are now on the Congested Districts Board. Of course I think that at the root of the whole matter is the want of more money. If you ask me whether I would rather have the man or the money, I would say more money.

42375. You think that the Board are short of money?—Yes.

42376. Are you in favour of representatives of congested districts counties being on the Board?—I should think so.

42377. How would you suggest that these representatives should be appointed?—I don't mind if they were appointed by the Castle. I think that would do just as well as any other way. The last time there was a vacancy on the Board it was suggested that somebody from Kerry should be chosen, and Lord Shaftesbury was appointed. I think we were informed that he would have special instructions to look after Kerry, but I think that somebody who lived in the county would have been more useful to us.

42378. Suppose that each county was to have a representative in that way, do you think that there would be any danger of the funds of the Board being gradually apportioned too much to each county or each representative rather than concentrated upon necessary work in any one centre?—It is rather hard for us to see the value of concentration in Galway.

42379. But from the public point of view, it is a point to be considered?—Yes. I suppose it is right that the Board should find out where the money is most wanted.

42380. If that is the effect; if the advantage of the money of the Board was to be divided into watertight compartments and merely allotted to different counties, not so much because of the necessities of the county as because of the representations made by the representative, that might lead to loss of power, might it not?—It might.

42381. Looking at the congested district question as a whole, it might be better if the Board were empowered to say: "We are sorry to overlook this particular county, but there is another place where the money is more needed, and therefore we will concentrate it upon that until the work required to be done is finished"?—It looks like the case of a landlord who has several estates. Each estate thinks that it should have its share. The Board's funds not being sufficient, some people get more and some get less, but I have a sort of idea that a good deal depends upon who asks or makes the representations.

42382. Mr. SUTHERLAND.—Do you say that they act through favouritism?—No, but I say that the people are inarticulate. They don't know what they want and they don't ask. We have a proverb that dumb priests get no parishes. I asked a grant for Ballyduff and I got it. I daresay I could have got it for Ballymore equally well.

42383. CHAIRMAN.—Therefore you think the effect of representation would be very often to bring to the Board knowledge of work required to be done in places where it is not done?—Yes. It would voice our wants. Nothing was done in Kerry until Mr. Thomas O'Donnell took the matter up. Since then they have bought five or six estates.

July 3, 1907.

Mr. James E. J. Julian.

42384. Most Rev. Dr. O'Donnell.—About that I would like to ask you a question. Are you aware that before those estates were offered the Board was exceedingly anxious to buy estates in Kerry but could find no one to sell?— Idare say if our representative had been there he could have pointed them out.

42385. That would be one advantage?—Yes.

42386. You were quite right in stating that when Lord Shaftesbury was appointed to the Board he was supposed to have a special eye over the needs of Kerry?—Yes.

42387. Your statement is that one living in the county and knowing its wants will bring those wants better before a public Board than anyone else?—Yes.

42388. You don't mind whether he was elected or nominated in some other way; if he was there he could speak for the wants of Kerry better than anyone living at a distance; that is your point?—Yes.

42389. You may take it that the Board was most anxious to buy estates in Kerry and could not find estates offered for purchase. You said a moment ago that until Mr. O'Donnell called attention to the state of the county nothing was done. Are you aware that long before that time the sea-works of Kerry had received considerable attention from the Board?—I believe they had.

42390. More than in any other county?—Yes. We had several piers and so forth built by the Congested Districts Board.

42391. Are you aware also that before that, while the Congested Districts Board had charge of agricultural instruction and the live-stock schemes, the County Kerry received its due share of attention?—I presume it did.

42392. Do you know yourself of any practical scheme put before the Board for the improvement of the county which it declined to entertain?—I don't know that any scheme was put before the Board.

42393. Would it come to this: it was very largely through the misfortune of estates not having been bought in Kerry that the Board was unable to discharge those functions which you said operated far too rarely in your experience?—I don't know that it was the Board's fault, if that is what you wish me to say.

42394. You wish to get to this, that the County Kerry undoubtedly suffered owing to the fact that estates were not sold to the Board in the County Kerry?—I never knew that the Board asked for them.

42395. The Board never go to an owner and ask him to sell; but in private ways they try to ascertain in every county what estates are suitable for their operations. Were those inquiries made in Kerry?—That, of course, I cannot tell anything about. The first instance that I remember in which the Board bought one was the Rea estate, since then they have bought the King estate, the Hartopp estate, the Ardbeg, Sandes, and Brosna estates. All that is within my own knowledge.

42396. Was there much grass land which might be acquired in Kerry either under voluntary arrangement or compulsory powers for the enlargement of holdings?—In my district there is one place to which I would like to call attention, the lands of Ennismore. But I would first like to go back to the question of the quay at Lixnaw. There is a small landing place for sand boats. The fishermen at the mouth of the Cashen were in the habit of loading up sand in lighters and bringing them up the river, but they pursued their occupation under difficulties owing to there being no proper landing place, and the County Council agreed to put one up at a cost of £380 if the Congested Districts Board or the Department of Agriculture would give half of it. The Department presumably said they would not give, and the Congested Districts Board said they could not give it because it is about 200 yards outside the boundary, and so the matter has more or less fallen through. But it would be extremely useful work, because all the farmers in Kerry are now using sea-sand instead of lime, and giving employment to these people to bring it up.

42397. What is called coral sand?—Yes.

42398. For manuring purposes?—Yes.

42399. Might it be represented that although that work was outside a congested area yet it would be of considerable advantage to people in the congested area?—Yes. It would be useful to the Board itself in Ardbeg.

42400. If that be so, the mere fact of its being outside the congested area would not stand as an objection?—I think it did in this case. I spoke to Mr. Doran about it one and a half years ago, and he said he thought it might go through.

42401. You put it before the Commission as a useful work for the Board to do?—Yes. I also instance it as a case where this strict scheduling of districts has interrupted what would be a useful work. I think the Board would have done it if it were a hundred yards further up.

42402. You said to Lord Dudley that when you made application for a parish committee the committee was established?—Yes.

42403. What grant does it receive exactly?—It got £40, out of which it expended £20 this year.

42404. Are you aware that the grants as a rule are considerably more in the County Kerry?—I believe they are. In some cases they amount to £120. £1,500 was given altogether in grants this year. I think that the maximum was £120.

Most Rev. Dr. O'Donnell.—I think you will find that the reason most of the grants in Kerry were made higher than elsewhere is because of the fact that the Congested Districts Board has not been able to acquire land for improvement in the County Kerry.

42405. Chairman.—Have you got any idea in your mind as to how what you call the strict scheduling should be got over?—I should abolish the electoral division, and let them take it up by townlands as they can.

42406. Would that meet your point?—It would be more convenient than the present system. If your lordships look at the map that is there you will see a big gap in my division a great deal of which might be scheduled. Down through the centre of Kerry there is a big tract of bogland running out from Abbeyfeale down to Ardfert. Some of that is not scheduled. You could schedule that by townlands, but not by electoral divisions.

42407. Suppose that the valuation per head in any of these townlands came to over 30*s*., what would you do then?—I think that the 30*s*. limit is no proper guide at all.

42408. Do you propose that there should be no valuation limit at all?—Yes. Send inspectors round who will say—"This is a poor district; let it be scheduled."

42409. How are they to make up their minds?—By ordinary experience. You can tell when you are in a poor district by the number and condition of the houses, and so on.

42410. Practically you would leave it to the discretion of the Board?—Yes.

42411. Without having any division?—Yes.

42412. Mr. Kavanagh.—If the present funds do not reach over a restricted area how are they to provide for an enlarged area?—You might not enlarge the area. You would cut out a great deal of country now scheduled that is not congested. A large portion of the country you passed through to-day is non-congested. As regards a considerable amount of those rich lands on the left-hand side, there is no necessity why they should be scheduled. On the other hand, in the middle of non-scheduled districts you sometimes find places like Conamore, where a whole crowd of people are living up on a bog on the top of a hill. I never knew of their existence until I went canvassing at the county council elections, and I don't know anyone else who goes there except the tax collector.

42413. You say there are certain places that do not need to be scheduled. Would you approve of power being given to the Board to exclude any area, townland, or group of townlands which in their opinion need not be included?—I don't think I would exclude too much. There might be a great deal of harm in excluding too much.

42414. Would you give them power to exclude when they have done all that they can be reasonably expected to do?—No; I don't think I would quite do that. On the Ardbeg Estate I would not say to the people—"Now, we have set you on your legs, you must go on. You won't be entitled to any benefit under any larger scheme that we may make."

42415. Do you think it unreasonable that the

Board, having bought an estate, restriped the holdings, improved the houses, and generally put them in as good condition as their funds would allow, should be able to say—"We have done everything we can for you, and now you must go out of the scheduled area"?—They have that power now, without unscheduling.

42416. They have the power simply to do nothing?—Yes.

42417. Then there is always the possibility of further demands being made?—If you are going to keep the basis of dividing valuation by population I don't think you will ever get rid of them on that basis.

42418. CHAIRMAN.—When the Act was passed originally there was a power given to the Lord Lieutenant of including or excluding for a year any electoral division which he chose. That lapsed after a year. Would you say it would be unreasonable to revive that power?—I don't think that there would be any reason for not doing it.

42419. If the electoral division were changed into a townland, would that commend itself to you?—You would get rid of a lot of them.

42420. Mr. SUTHERLAND.—Would you limit the operations of the Congested Districts Board in any way—would you say within certain counties?—I don't see why, if the funds would admit, any part should be excluded. There are just as poor districts in parts of Wicklow as in Kerry.

42421. CHAIRMAN.—You would let them operate in any part of Ireland where, in their judgment, it was found desirable?—Yes.

42422. That would give them an extraordinary power?—The whole Congested Districts Board is such an extraordinary phenomenon. It is not an economic thing. I suppose it was originally invented for particular cases and particular circumstances. The poor people in parts of Wicklow and upper Antrim want help just as much as the people here.

42423. The idea is that poverty is not so widespread. You may find poor patches in towns. The idea is that here along the western seaboard you have poverty which is great and widespread, and the definition was of course made to bring in these districts, and no others. If you now go to the full extent of your argument, and give the Board power to schedule as congested any townland which in your opinion is poor, no matter where it is situated in Ireland, you will get the whole of Ireland mapped out into a kind of check board?—I think the Board's work is extremely well adapted to Ireland. It would not do for England; but in a place like this where we want paternal government and there is no resident gentry to help the people, the operations of the Board are extremely well adapted for doing good

42424. How about your representative if you allowed the Board to operate in any part of Ireland. Probably in every county in Ireland there would be some little space that is congested; every county would be entitled to send a representative to the Board, and the Board would be nearly as big as the Parliament at Westminster?—What I want particularly to call the attention of the Commissioners to is the flooded lands at Lixnaw. It is really a very serious matter, and it is very hard that something cannot be done between all the departments to take the matter up. All the land there which you passed through yesterday receives the drainage of nineteen mountain streams. The original area of the catchment of all that river, the Feale, Brick and Galey is 280,000 acres, of which about 11,000 is subject to flooding. A comparatively small expenditure might reduce the damage. This is necessary for the sake of the farmers and the health of the people, which suffers very much in these damp districts, and also to save the ratepayers the cost of repairing the roads, which has to be borne very often now on account of the ravages of the floods.

42425. Mr. SUTHERLAND.—What is the distance from the River Brick to the foot of the mountain?—It is not, I should think, more than two or three miles.

42426. Is the place quite level?—It is level at the bottom; the biggest rise is at Lixnaw on the road you came up to-day. That is four miles.

42427. Do you know what the difference in height is between the sea-coast and the foot of the mountain; what fall has the river?—Taking the River Brick from Ardfert to its mouth at Cashen, I should not think that the fall was more than fifty feet—not quite that.

42428. How many miles does that cover?—Between ten and twelve miles. It is less than four feet to the mile, and the fall is thirty-two feet according to the survey map. If the river were dredged it would make a great deal of difference, because at present there is not room for the water that gets into the river to flow out of it, and it spreads over the country. I was speaking yesterday to a man who has a farm of sixty-five acres, and all of it except six acres is under water.

42429. CHAIRMAN.—Has anybody gone into this?—Mr. Doran knows all the facts.

42430. Has Mr. Doran gone into it for the Congested Districts Board?—Mr. M'Clean gave me these facts which he said I might read. I went up to the Arterial Drainage Commission to give evidence. I think my evidence given then is published. He says:—"For your information, the following are the principal points to bring before the Drainage Committee. The Cashen river is formed by the junction of the rivers Feale, Brick, and Galey. These rivers and their tributaries drain an area approximately 280,000 statute acres. The Cashen being a tidal river, the principal flooding occurs along the tidal estuary and thence along the Feale, Brick, and Crumpaun, a tributary of the Brick. Owing to one ford in particular, which is situated below the ferry bridge at Derrycove (which ford is formed by a deposit owing to the action of the incoming tide and the river) and to a large volume of salt water which flows in at high tide, water to the depth of eight feet in the River Brick and from ten to twelve feet in the Cashen is locked up. If the obstruction below the ferry bridge were removed, and other smaller obstructions, it would reduce the average level of the water in the rivers uniformly about two feet, and furthermore increase the storeage capacity of the river in time of floods. With the exception of the fords or obstructions at the Cashen mouth, Ferry bridge and the junction of the Feale and Brick, the rivers are sufficiently deep, and if these obstructions were removed considerable good would be affected by allowing the river to drain out at least two feet below its present ordinary level. Furthermore, the navigation of the river would be possible at ordinary tides for the purpose of transfer of sea-sand to the inland districts, which sand is largely used for agricultural purposes owing to its high manurial properties. The area of land which is flooded and rendered unfit for cropping is approximately 11,000 acres statute." The rest is rather technical.

42431. Has anything been done to carry out the suggestions made there?—Not since the Cashen Board spent £12,000 and never finished the work, but rendered things rather worse than they were before.

42432. What would it cost?—I cannot say. I think £5,000 or £6,000 would do a good deal.

42433. No one has ever gone into it sufficiently to say absolutely what it would cost?—No.

42434. Most Rev. Dr. O'DONNELL.—On whose estates is that area?—On a good many. On Lord Listowel's, Lord Ormthwaite's, Sir John Chute Neligan, and Mr. Talbot Crosbie, of Ardfert. Those are the chief ones.

42435. Are they sold to the tenants?—Most of them are—Lord Listowel's and Mr. Talbot Crosbie's.

42436. They are actually sold?—Yes. Lord Listowel tried to make some arrangement between the tenants and the Land Commission, that a certain sum of money should be put to one side for maintenance, the burden of which will fall on them.

42437. Had those estates been sold to a public body and had that public body command of the whole area, it might be able to do a great deal to improve the drainage before re-selling to the tenants?—Yes.

42438. Are you aware that large drainage works of that class were done in Mayo by the Congested Districts Board under Mr. Doran's supervision?—I believe there were.

42439. And that although the fall was very small?—Yes.

42440. Mr. KAVANAGH.—Was that £12,000 actually thrown away?—I don't think so, but they appear to have built a long embankment all along, and they changed the mouth of the estuary, making it narrower, apparently to get a bigger scour. The sea

July 3, 1907.

Mr. James E. J. Julian.

broke in and smashed a great deal of the embankment, and the failure was largely due to the fact that they spent the money before they undertook dredging operations.

42441. Would the £5,000 which you have estimated be for the completion of the work?—Yes, practically to complete it. You may have noticed passing the Cashen river yesterday a little embankment on each side. That was done by the Cashen Board, which is now defunct. It never held a meeting for ten years during which time most of the members died.

42442. CHAIRMAN.—Who is responsible for the failure to hold meetings?—I don't know.

42443. Mr. KAVANAGH.—Is there a drainage rate raised for that £12,000 now?—The landlords are paying the Board of Works for the £12,000.

42444. CHAIRMAN.—Do you mean to say that there is no authority in Ireland that has the responsibility of making appointments to a drainage board or of seeing that the thing goes on in some way?—Apparently not. I believe that they had the power of co-opting themselves. It took three to form a quorum and only two are alive now.

42445. Is there no power of proceeding against them?—I am afraid that it has gone too far.

42446. When was this Board established after the Board of Works did this work?—They did it themselves. They were established and got the money and spent it.

A member of the audience.—The landlords were the people who were interested in having the embankment. The owners of land along the banks were formed into a Drainage Board. I was the agent. I had my own particular views on the discretion of several members of the Drainage Board as to the engineer that was employed in carrying out the work.

42448. CHAIRMAN.—Under the Local Government Act of 1898, the County Council can make provision for taking over drainage undertakings; has there been any proposal that the County Council should do this?—I proposed it before the County Council, so that if any provision was made we should be in a position to take advantage of it, and the chairman wanted to know whether we should be undertaking any obligations, and I am supposed to be making inquiries at present to see whether the County Council can take it up safely without incurring any responsibility, because what the County Council were afraid of was that probably they might come down on us and say:—"Now you stand in the shoes of the Cashen Board and you must do so and so and spend money on it." The County Council objects to spend money on it.

42449. At any rate, it is now being considered by the County Council whether they should do the work themselves or not?—No. They have quite made up their minds not to do the work. There are too many charges on the county already. It is a sort of local thing. Men in Waterville and Cahirciveen would not care to have it put on them. Then the question would arise as to how the works should be paid for. I say that the riparian owners would be willing to pay, and I think that the others ought to be made pay.

42450. Others living in other parts of the county?—No; but a great deal of damage to health is done in the neighbourhood of where floods occur. The whole neighbourhood is poisoned. If you took up a whole lot of children together you could pick out the Lixnaw ones by their unhealthy appearance.

42451. Suppose that the County Council did the work and put the rate on the people who were benefited, would it be possible to get from them the cost of the work?—It would. In a case in which I appeared for a man who was having a fair rent fixed, most of his land was valued at fifteen shillings an acre, but the part that was liable to be flooded was valued at eight shillings. The area of land of this sort is 11,000 acres.

42452. Mr. SUTHERLAND.—So that even if the occupiers contributed to the expenditure, they would be much better off than they are now?—Yes.

42453. CHAIRMAN.—That is an argument in favour of the County Council doing it?—Yes, but it may not overcome their prudential desire for economy.

42454. Yes, but if they could get back the money from the people who would benefit by the work, there would be no question of economy?—They are rather shy about it.

42455. Is it because they don't know what the effect of it would be?—The rates are particularly high in Kerry, and you don't want to put sixpence in the pound on the people along there.

42456. Because you are not sure whether they might get that benefit?—They might not get the benefit.

42457. Therefore you are afraid that if the benefit was not as great as had been hoped there might be friction if this rate was put on the people?—I am afraid if we were an English body we would say, "do it yourself." As an Irish body we are rather hoping that if we don't do it some other body will do it.

42458. Most Rev. Dr. O'DONNELL.—Has the County Council any expeditious machinery for recovering money due to them under schemes by occupiers?—No. They would have to make a special rate on the area, the same as in the case of a sanitary rate.

42459. And the County Council is hampered there?—Yes. Of course if we could get it in the form of a special rate like the railway rate or the sanitary rate we could recover it quickly.

42460. The County Council has no means of recovering additions to the instalments of tenant purchasers because of drainage?—No.

42461. CHAIRMAN.—If they took over the powers of the Drainage Board they could throw on these people a special rate for the money they had spent on the drainage?—I dare say they could.

42462. Would the County Council make a grant?—There is one thing I would suggest. It is rather an idea of my own. The County Council got £33,000 free at the time of the railway amalgamation. The barony of Clanmorris, in which these floods are, received about £7,000. I think some of it is still left, and is being devoted to the relief of rates, which seems to me to be rather frittering away things. If a couple of thousand pounds could be got out of that for the flooded area it would go a long way towards giving relief.

42463. Is any of the flooded land sold?—It is nearly all sold now in the Lixnaw district. It is an intolerable nuisance that all that country should be in that state.

42464. What do you propose could be done by the Congested Districts Board?—I think if the Congested Districts Board gave something towards it, let the county give something and let somebody else give something else.

42465. Who is to do it?—Suppose that the County Council had the choosing of the Board to do it.

42466. In your view the County Council are the people to do it on condition that they get a grant in aid from the Board?—That is my private opinion. I am not speaking for the County Council.

42467. That is a very different arrangement from what was carried out in Mayo, to which his lordship has alluded. I understand that the Board have acquired the estates on each of the rivers, and have carried out the drainage, the cost being paid by increased annuities on the holders; but, obviously, if the land has been sold already to the tenants the opportunity of doing that in this case is lost?—The landlord redeemed the rate when he sold his land, so that at present there is none existing.

42468. These people having bought the land at a certain annuity, the Congested Districts Board could not now spend £15,000 and then seek to increase the annuities?—They could not do it. The only people who could do it would be the County Council or the Cashen Board.

42469. And get the money back in the form of a special rate?—I have not read the report of the Arterial Drainage Commission, but they may have made some report which would be useful to us.

42470. Mr. KAVANAGH.—You say that you could reclaim 11,000 acres of land at a cost of £4,000 or £5,000?—When I mention that amount I only suggest it could be done by clearing away the partitions and rebuilding the mouth; that would be taking about half what was spent previously; but I am not an engineer.

42471. Mr. SUTHERLAND.—Is it your opinion generally with regard to this that if the expenditure mentioned were made it could be reclaimed to the extent that it could be made tilled land?—Some of it could be tilled. At present it is hardly fit for

meadowing. I think a great deal of it could be made fit for tillage then.

42472. In the case of grants such as you mention by the Congested Districts Board, would you expect the Congested Districts Board to maintain these works in future?—No. I suppose not. They would be a rather broken reed to depend on.

42473. Works of that kind require constant repair and attention?—I think the burden of maintenance should be thrown on the riparian owners. At present they have undertaken it together, with the promise of a grant from Lord Listowel, on the Listowel Estate.

42474. CHAIRMAN.—Do you mean to say that in that case the County Council, in the form of a Drainage Board, would do the work of maintenance, and there would be a permanent rate upon the riparian owner?—I think each owner would have to keep up his own.

42475. Would that be possible?—I think it can be done. I think Mr. Hussey did some works in that way that were kept up, but it is very necessary work. I think it would be very useful if the Congested Districts Board were to send an engineer to thoroughly inquire into the matter, or if the Department would take it up, because at present it is a great loss to the people, and it is almost too big a work to be done locally in any way. I think, then, that some of the cost might fairly fall on the Treasury. I wish, in concluding to refer to Mr. O'Connell's suggestion with regard to the labourer's cow. It is an excellent idea. A great many labourers at the present day have cows which feed along the road. I met a labourer the other day and told him I could give him grazing for his cow. He said if he got it for nothing he would take it, but at present his cow was doing very well along the road. It is rather a nuisance to the public, and I would be very glad to have that cow confined. In reference to schoolhouses, I may say that Kilflyn schoolhouse answers the description which has been given. It is in a most disgraceful condition. There are no sanitary arrangements at all.

42476. Mr. SUTHERLAND.—They are not the examples for good sanitation that they ought to be?—No.

42477. CHAIRMAN.—Is the Muckinagh estate of which you have told us one that is bankrupt?—Hopelessly bankrupt. It is in the middle of the floods.

42478. You say in your precis: "I sold my property to my tenants about four years ago. I do not think the Act has relieved congestion in the Lixnaw division which I represent." Which Act do you mean?—I meant the Board. As far as I know, all the areas are just as much congested now as they were then.

Mr. HENRY DORAN re-examined.*

42479. CHAIRMAN.—I suppose you have come here to give the Commission some information about this drainage scheme?—I was instructed by the Board at the request of some representative persons of the County Kerry to appear before the Commission to give some general information that I had collected with reference to this Cashen River Drainage. I think I will have to explain to you this map, so that you may understand some special features of the scheme.† The map shows the Drainage District as fixed by the Cashen Drainage Board. The catchment area of the Cashen River and its tributaries comprises about 430 square miles. This area is drained by the rivers Feale, Galey, Brick, and Crompaun. The rivers Feale and Galey join about six miles from the sea, and from their junction to the sea the watercourse is called the Cashen River. The Cashen River, therefore, is really the outlet of the waters of the rivers I have mentioned. The Feale, which is the principal, rises in County Cork, and passes Listowel; the Galey, which flows in this direction (*pointing out on map*); the Brick, which comes along here with its tributary called the Crompaun. The striking feature of that district is that about 5,000 acres of the lands coloured blue on map are practically only about the same level as high water mark of neap tide, and were it not that these rivers are embanked on both sides for seventeen miles, the tidal waters of spring tides would cover most of the 5,000 acres. Outside the 5,000 acres which are so near the high water level, I estimate there are in or about 5,000 acres more, which, although not subject to surface flooding, are water-logged and comparatively unproductive. The total area that would be directly benefited by an effective scheme of drainage would be not less than 10,000 acres. The lands coloured blue on map comprise about 5,000 acres, those coloured yellow about 15,000 acres, or a total of 20,000. You motored through the centre of this area yesterday afternoon. Taking a boundary on map from Ballybunion to Listowel, and from Listowel to Kilflyn, from Kilflyn to about Causeway, thence in the direction of Ballybunion, you have enclosed an extensive district which is practically a swamp, with the exception of small areas scattered through it which are above the flood level of the rivers. There is not such a large area, I think, in any other part of Ireland comprising land of a character so capable of being made valuable agricultural land by drainage as this. Very little of it is bog or waste land, and practically all is land that would have a very considerable agricultural value if thoroughly drained. About three-quarters of a mile nearer to the sea than where the Feale and Galey join the Brick river discharges into the Cashen, bringing with it the waters of the Crompaun. The Cashen River flows within tidal embankments to the Ferry Bridge—Ferry Bridge is the one you passed over last evening in the motor car—a distance of about 2½ miles from the junction of the other two rivers that I have mentioned; and from that bridge for about a mile on the lower side on its course towards the sea it is also embanked. From that point on (*pointing out on map*) it traverses what may be called a tidal slob-land, which covers an area of about 500 acres. Of the catchment area there are about 5,000 acres of land, the surface of which is not more than eleven to fourteen feet above low water mark; and were it not that the waters of the rivers are confined for many miles of their course within tidal embankments the greater part of the 5,000 acres would, as already stated, be covered in high spring tides. The spring tides rise about 13 feet 6 inches over low water mark.

42480. Then the surface of 5,000 acres is actually lower than the high-tide line?—Nearly all is lower than high water mark of spring tides. The tides affect the Cashen River for its entire distance of about six miles.

42481. I suppose the very fact that you have these embankments increases the level at high tide. Supposing it was the natural state of things, and the high tide as it came up distributed itself over the fields, the level would not be so high?—It raises the water-level within the embankments by reason of the tidal pressure banking up the fresh water.

42482. And also by reason of the fact that it is confined within the embankment?—Yes.

42483. If it was not so confined you would not have the same height of water in the river?—No. It would spread over the adjacent low-lying land. These points are important, so you will excuse my repeating them. All tides affect the Cashen River for its entire distance of about six miles, the Feale for a distance of five miles further on, and the tides come along these rivers up to these points (*pointing out on map*); but it affects them much further than the tide flows by reason of the flowing tide preventing the free discharge of the fresh water down stream. The Brick is affected for a distance of four miles, the Galey for a distance of two and a half miles, and the Crompaun for a distance of two and a half miles. About seventeen miles of these rivers are embanked on both sides, and the drainage of the lands adjoining is discharged through sluices, inserted in the embankment, which open when the tidal waters in the rivers recede. Owing, however, to the neglected condition of these water-courses, many of the sluices only act for a short interval between the tides, with the result that the greater portion of the low-lying lands are comparatively worthless. If the tidal waters were prevented from flowing up into these rivers, the sluices would act continuously except when there were exceptionally high floods

* For former examination see Appendix to the First Report of the Commission [Cd. 3267, 1906], pp. 75 *et seq*

† See map (Appendix II.) facing p. 208.

July 3, 1907.

Mr. Henry Doran.

in the river, and the efficient drainage of this large area would thus be secured. The advantages to the land-holders, and to the district generally, resulting from the conversion of what is, comparatively speaking, a barren tract of water-logged land, into land capable of producing good meadow and pasture would obviously be very great. This latter view must have been shared by the owners of these lands for generations past; for a large expenditure of money was made from time to time in the construction of the tidal embankments. These, however, were found to be insufficient, and about the year 1884 the proprietors of the flooded lands formed a District Drainage Board, and obtained a loan from the Board of Works to lower the outlet of the Cashen River to the level of low water mark at neap tides from the seashore for about 125 perches up stream. That is, the project was to lower the outfall of the Cashen estuary by cuttings where you see marked red on the map, the idea being that by lowering the outlet the river waters would discharge more readily into the sea in the lower stages of the tide. The design to effect this object provided that two cuttings should be made—one opposite Kilmore School, about 900 feet long, and a maximum depth of 13½ feet. It was intended to extend this cutting towards the sea, the depth of the lower section being about 5½ feet for a length of 800 feet. The first cutting which was furthest from the sea appears to have been made to about the specified depth; but they seem to have abandoned the proposed second cutting, which was to be about there (*pointing out on map*). On taking the levels now, we find the bottom of the new cutting at the lower end is about three feet lower than the river bed where it stops, so the expense of sinking that additional three feet was money thrown away, as they did not deepen the river bed below the end of new cutting to allow it to discharge to its bottom level.

42484. You say the bottom of the cutting was not deepened?—I say that the bottom of the only cutting made is at present three feet lower than the river bed where the cutting ends.

42485. Mr. SUTHERLAND.—But, if the whole scheme was carried out, it would be eight feet below the natural bed of the river?—No, about five feet six inches lower. The work, as originally designed, was estimated to cost £5,800. The actual cost amounted to £10,000, and this sum was levied on the drainage area as shown in that map, although the works originally contemplated were not completed. I have here the award showing the proprietors, and what each contributed, based on the value of the land owned by each proprietor, the amount of the annual contributions for maintenance, as well as the proportion of the original cost. The total amounts to £10,054; the lands drained or improved are set out as about 5,784 acres. The estimated value before drainage was put down at £1,126 15*s.*, and the estimated increase in value was £972 17*s.*

42486. Mr. SUTHERLAND.—That is the annual value?—Yes, the estimated prospective increase in annual value. Now, these figures are important in this sense, that if a project of the kind was about to be revived landholders in that area would naturally be slow in undertaking all liabilities in connection with it, for they would be afraid that engineers coming forward to promote another drainage scheme might be as inaccurate in their forecast as the previous promoters. Mr. Julian stated that although people admitted that there were 11,000 acres of land now practically a swamp that could be drained for, he says, £5,000, the landholders directly interested would not of themselves undertake the work. This, no doubt, is because it is feared the actual cost may far exceed the estimated cost, and the improvement effected be far less than was anticipated.

42487. Can you form any idea why what was estimated to cost £5,600 should have cost £10,000?—The estimate must have been very imperfect or the work must have been very badly carried out or supervised.

42488. Mr. KAVANAGH.—Does that include the cuttings?—Yes. And another feature of it is that while the expense was estimated at £5,600, the increased annual value is put down at £571.

42489. Most Rev. Dr. O'DONNELL.—I was going to ask whether you agreed with the estimate of the improved letting value?—Mr. Julian tells me that the general opinion is that the value of the land has not increased, and from what I have seen, it is my opinion that it could not have increased much, because the whole scheme is a failure.

42490. Do you think that it would be successful if more was done in that direction?—I don't think that it would be successful. In round numbers, it cost double the estimate.

42491. CHAIRMAN.—Without the scheme having been finished?—Yes. As I have already said, the work as originally designed was estimated to cost £5,600, and the actual cost amounted to £10,000, and this sum was levied on the drainage area, although the works contemplated were not completed. That award you have in your hand shows the apportionment of the expenditure of £10,000 against each of the landed proprietors. It appears to me probable that the promoters abandoned the project, having ascertained that the cutting had not the anticipated effect in relieving the flooding. In my opinion the design was fundamentally wrong, as it merely provided for the lowering of the discharging outfall of the river waters without making any provision to regulate the inflow of the tidal waters. The mere lowering of the outfall would facilitate to a greater extent the inflow of the tidal waters, because the sudden rise of the tide would give a greater head and pressure to the inflow than the outflow of the fresh waters could possibly have. The result would be that more tidal water would flow through the cut into the slob area above the Kilmore ridge than could have entered before the cut was made. The drainage scheme should not only have provided for facilitating the discharge of the river waters as far as it is practicable to do so, but also to shut out the tidal waters. The tide rises here from eleven to fourteen feet in the space of six hours and if a cutting be made there (*pointing out on map*), near the entrance to the sea, the head of water, rising about two feet per hour, will exercise far greater pressure in forcing the flowing tidal water through the cutting than the whole river area could at any time exert in forcing the water out. To lower the discharge of the fresh water outlet and at the same time provide means for regulating or cutting off the inflow of the tide are two conditions that must be secured if the drainage is to be done efficiently. You will observe the very striking little difference there is between the level of the water in the estuary even in neap tides and the surface of this area, which shows the necessity for complete control of the waters at this point. These results could be secured by erecting across the estuary a tidal wall provided with flood-gates which would shut out the inflowing tide when it had reached about half the height of neap tide, and impound the fresh water in the large area of slobland comprising 500 acres, during the interval of the last half of flood tide and the first half of ebb tide, when the flood-gates would be opened and impounded waters allowed to escape. This would mean that practically no tidal water would flow to the upper side of the tidal wall, and that the fresh waters would be impounded for a maximum period of six hours on each side, or twelve hours in the twenty-four.

42492. Mr. SUTHERLAND.—Have you estimated how high these would rise?—Yes, but I do not trouble you with much details.

42493. Most Rev. Dr. O'DONNELL.—Do you think it would be more than six hours in the case of spring tides?—No, I don't think so. As already explained, the flood of every tide affects the rivers mentioned for a distance of about seventeen miles, and in the case of spring tides the influx of tidal water does not all escape before the next flood tide. When there are spring tides the whole estuary or slobland is covered. The tide flows up the rivers for seventeen miles, and the fresh waters for miles higher up are banked up, causing more or less flooding by the fresh water. When it happens that you have spring tides and very wet weather concurrently there is a considerable accumulation of waters on these sloblands and in the river for several days, and sometimes for longer periods at a time.

42494. Mr. SUTHERLAND.—If the wind was from the west or from the north-west?—That would at present have the effect of heaping up the land in its waters in the estuary, and raising the water level to a very considerable extent. The flood-gates, however, would shut out the tide. We have the large area of slob-land to impound the fresh water, and if you cannot shut out the tide you cannot efficiently drain

the whole area. It is obvious that when the tide rises practically to the level of the land, making a deeper cutting in the tidal way won't prevent flooding.

42495. The tidal water would have to go back?—It would have to go back. My suggestion, shortly, is that the fresh water impounded by the closing of the flood-gates would, in the intervals from half flood tide to half ebb tide not accumulate over the slob area to a greater depth than two feet when the sea waters were shut out. The surface of the impounded water at this level would be from two to three feet below the surface level of the land that I have referred to, whereas at present an ordinary neap tide rises to the level of a great portion of the 5,000 acres of land, and spring tides, which rise from two to three feet higher, would practically cover the entire 5,000 acres were it not for the river embankments which confine the tidal waters. The completion of the work as originally designed, which Mr. Julian suggests might be done, would, in my opinion, not be effective—in fact, I think it would be useless expenditure—and unless my suggestion of shutting out the tide by the erection of a tidal wall be carried out, the land referred to must be considered incapable of profitable improvement. That is, I do not think that unless the design I suggest, or something similar to it be adopted, you can get the land sufficiently drained, because there will not be a sufficient interval between ebb and flow of the tides to allow the sluices to let off the land drainage. The unproductiveness of this area in its present condition is not the only loss to the country, as the fact of having such a large extent of flooded land in the district must have a very bad effect on the lands immediately adjacent to it, which are at a slightly higher level, but are waterlogged although not subject to surface flooding. It is also likely to have an injurious effect on the health of the people. I am of the opinion that the construction of a tidal wall with flood-gate and sluices and the removal of the principal obstructions in the river could be carried out for a sum of about £10,000. This would mean about £2 an acre, even if the area of charge were confined to the lands directly subject to tidal influence—that is, the 5,000 acres, and if the money were advanced by a loan repayable in thirty-five years at 5 per cent., it would mean £500 per annum, or an annual charge of two shillings per acre for the period. This would be exclusive of maintenance. Considering that the original project was carried out under the supervision of a Government department, and that the drainage of this large extent of country would be of immense benefit to a large portion of the county, I think it would not be unreasonable to expect that both the Government and the county would make substantial contributions towards the execution of the work, thus leaving the lands benefited liable to a very moderate annual charge. I have already pointed out that in addition to these 5,000 acres of land which are directly subject to tidal influence, I estimate that there are approximately about five thousand acres outside the zone of the tidal influence, at a somewhat slightly higher level, which would be very much improved and ought to be included in the area of charge, but at a lower contributory rate.

42496. How do you justify that?—By reason of the benefits conferred.

42497. What benefits?—A great deal of this land, although not subject to flooding, is, say, only eighteen inches over the flood level, and where the level of the water in a flooded area is only eighteen inches higher than the adjacent land, the latter remains wet and very much in need of drainage. It cannot be cultivated—it will not produce good pasture or meadow—it is what I call waterlogged. But if you lower the water level say two feet six inches to three feet, that land would be substantially improved.

42498. The water is taken quickly away?—That is one advantage, and you would have a superior kind of herbage replacing the aquatic grasses, &c., which grow there now. I had met the objection you were suggesting to a drainage charge when I stated that although this should be included in the area of charge, the contributory rate ought to be lower.

42499. Most Rev. Dr. O'Donnell.—Would not the rate over the 5,000 acres in a year be able to maintain the whole system?—It ought, but the water-logged area would be substantially improved, and should contribute to the cost.

42500. What is the expense of maintenance?—If the work were well done the expense of maintenance would be comparatively small. I should say if it were really well done £50 a year ought to maintain it.

42501. Mr. Sutherland.—Of course you are contemplating the gross expenditure. Still the inner works would require scouring and to be kept clean?—Yes, and the embankments would be maintained.

42502. Mr. Kavanagh.—They have to be maintained now?—They have to be.

42503. And are they?—Yes, but in a very imperfect way. Although a Drainage Board was formed to carry out this work the Drainage Board ceased to act. Things were allowed to slide, and members who died were not replaced. I believe myself that these rivers are in a worse condition now than they were in 1884—in several places at any rate. They could scarcely be in a much worse condition than they are at present.

42504. Most Rev. Dr. O'Donnell.—Then £50 would not cover the cost of the caretaker?—The caretaker for which, my lord?

42505. For the drainage?—I am referring to the maintenance irrespective of the caretaker of the flood gates. I have only gone into the matter in a general way. I desired to indicate a general scheme, and to point out that I think it is hopeless to attempt to efficiently drain that area by a continuation of the works on the lines on which they were started. That is really the most important idea I want to put before you, and to throw out the suggestion that if the people are prepared to do something more practical than grumbling and complaining, they ought to declare their willingness to be taxed to the extent of the annual value of the benefit actually conferred—not a problematical benefit—and that the County Council would contribute something, I have little doubt that the Congested Districts Board would also assist, inasmuch as the rivers do injury to the congested areas. Unless something such as I suggest is done I am afraid this district will remain a swamp.

42506. Chairman.—Who do you propose should do it—who do you suggest should go about it?—First of all, I do believe that the Government ought to contribute. It is largely because of a Government Department sanctioning and ratifying an imperfect scheme that the failure has followed. The men who own the land should agree to contribute towards the cost of the work to the maximum extent of the benefits conferred measured in the following way:—The land should be valued by competent valuers in its present condition, and say two years after the work was carried out, it should be re-valued by equally competent valuers, and each landholder should be liable to contribute annually as a maximum figure a sum representing the difference between the present estimated fair rent of the land and the estimated fair rent of the land in its improved condition after the work was concluded, and that he should not undertake any liability to pay more than that. This limited liability would keep the landholder in a safe position. He would have his land improved without any risk, for he could not be charged any more than the fair rent resulting from its improved condition. If the capitalised annual value of the improvement actually effected did not cover the cost of the work, the Government and the county should betwen them contribute the deficiency. But I may say that I believe the increased annual value of the land would in this case repay the cost.

42507. Your proposal assumes this—For two years at any rate you cannot determine what the contribution of the landholders will be?—Not safely.

42508. Therefore somebody has got to pay up the money first?—Yes.

42509. And do the work before these holders are taxed?—Yes.

42510. You say that that is to be divided between the county and the Government?—Who is to spend it? Is it to be spent by the County Council with a Government grant, or by the Government with a County Council grant?—The way I suggest is if the landholders agree, as I have just explained to you, to have their lands taxed to the extent of the ascertained improved value resulting from the drainage works, they would then form a Drainage Board, and they could then borrow money from the Board of Works to carry out the work. That money would be

July 3, 1907.

Mr. Henry Doran.

repaid to a Department of Public Works in the shape of an annuity payable by these landholders through this Drainage Board, or possibly through the County Council. The lending Department should approve of the plans, and exercise efficient supervision and control over the works conjointly with the Drainage Board.

42511. Will you tell me if I clearly understand what you propose. In your opinion the first step is that the landholders, or, in this case, the tenant purchasers, should, by agreement to a scheme of that kind, create a new Drainage Board?—Yes.

42512. In place of the semi-defunct Board we have already heard of. That they should undertake the cost, and the work should be met by them from the actual increased worth of their holdings, and that if they did not repay the full value of the work the balance should be made up by contributions from the Government and County Council?—Yes; and that these terms should be settled and agreed upon before landholders should take the risk of embarking upon the scheme.

42513. That assumes that the work would be carried out by engineers of the new Drainage Board created by the holders themselves?—Yes. I may say in connection with these details that we have recently had an Arterial Drainage Commission. I gave evidence before that Commission, and suggested how, in my opinion, a Drainage Board ought to be formed, and that we ought to have in this country a Department of Public Works—people don't like the name of the Board of Works, but if the existing Board of Works is not an efficient body that is no reason why a reconstituted body to undertake the control and management of land improvement schemes should not be created. This Department ought to take the initiative and supply the people with the necessary plans, estimates of cost, etc.

42514. Are we to wait until some new Board of Works arises?—Well, last year, my lord, we were told that we might expect changes in that direction this year, and it now looks as if they were as far off as ever.

42515. Is it essential to your scheme that a Drainage Department or a remodelled Board of Works should be created?—In my opinion, if the Congested Districts Board had control over these districts, and in the absence of the Department of Public Works which I say should be in existence, the Congested Districts Board ought to undertake the responsibility of initiating and managing land improvement schemes of this character. I should not be afraid to undertake a scheme of this kind. Before commencing operations we would require the landholders to enter into a legal agreement defining the extent to which they might be taxed, and if we could not get them to be reasonable we could abandon the scheme. My opinion is they would be reasonable.

42516. What control have you in your minds?—At present we are only interested in about a sixth of the drainage area.

42517. Do you mean to say that the fact that part of this catchment area lies outside the congested area would debar the Board from taking steps to get the authorities to agree to the scheme?—The Board would not be justified in undertaking responsibility of that kind at present, because only a comparatively small proportion of the area affected is within the scheduled congested districts.

42518. There would be no greater financial responsibility on the Board—I mean they would only play the part of organisers to obtain the Government consent?—Yes.

42519. Their scheme to do that now would not involve a greater financial responsibility than it would if it had a larger area?—Not necessarily, but they should pay the officials engaged in making the arrangements.

42520. Yes, but also for the congested districts as well?—Yes, incidentally for the congested districts affected.

42521. Yes, but you have very often undertaken to carry out schemes outside congested areas for the benefit of people inside?—For the benefit of people inside.

42522. Would not this be regarded as a scheme for the benefit of people inside?—It could be, and might properly be so considered, but having regard to the small area scheduled, the Board may not feel justified in undertaking a work when the proportion of the total outlay assigned to the congested area would be very small.

42523. Then it comes to this, that before the Board could properly act in a matter of this kind a larger area would have to be scheduled?—Not necessarily if the Board had control over the whole of a county containing congested districts.

42524. That means scheduling the larger area?—Yes, or that the artificial line of congested and non-congested districts be removed.

42525. In some way or other throwing the larger area on the responsibility of the Board?—Yes.

42526. Does the Commission understand that in your case it is useless for the County Council or any body locally to move in this matter until the Board is placed in such a position as to enable them to take the initiative?—What I meant to convey was that there is nothing to prevent the County Council acting at once, or the people directly interested acting at once, and inviting the co-operation of the Congested Districts Board, but it is a large scheme, and the landholders would be very chary about taking it up having regard to their previous experience. It is a work of such magnitude that some Government Department should undertake the management of it, and not to leave its fate to the accidents of local control.

42527. You would have to pay the total, while you would have to pay any damage you might do to fishing interests?—Yes. I am glad you mentioned that. I overlooked it. Persons may have what might possibly be called vested rights in the fishing in the estuary who would object and say, "If you shut out the tidal waters our fishing will be injured." I understand the fishermen only fish when the tide is near the full. That is a very important matter, and it should be considered. There is also the question of navigation to Lixnaw, which is only possible in the higher states of the tide. A possible way to meet this difficulty may be to lower the bed of the river.

42528. I only mentioned it because all these things might increase the cost considerably?—Yes, and might possibly put an end to my project altogether. I am right, I think, in saying that no part of the river is navigable in low water at present.

42529. Mr. Sutherland.—That is when the sluices are open they could not go up and navigate?—Yes, in the present state of the river bed.

42530. Is it possible to navigate up to Lixnaw?—It would not be possible in the present state of the river bed, except in high water.

42531. Chairman.—I am surprised at what you tell us about the old Drainage Board, and the way they have apparently been allowed to drift out of existence. Is there no statutory authority or no means at all for ensuring that when vacancies occur on the Drainage Board they shall be filled up?—Oh, yes, there is. When a Drainage Board is formed under the Act of 1863, under which this scheme was carried out, the members are bound to hold a meeting in September of each year. In the event of a member of the Board dying or ceasing to act provision is made in the Act for the election of new members.

42532. Why has not that occurred in this case?—Because the promoters found, as far as I can see, when the money was expended that the drainage scheme was a failure, and they thought it would be throwing good money after bad to continue operations.

42533. Could not the actual holders of the land which has become worse by the neglect of the Drainage Board—could not they bring an action against the Drainage Board to compel them to do their duty?—They could; and under the law it is the duty of the Board of Works while any of the money advanced remains unpaid to complain they found that the Drainage Board were not properly maintaining the drainage system, and to notify the Drainage Board that it was not in an efficient condition, and to have it immediately put right, and, failing that, the Board of Works have the power to have the work done themselves, and on the assessment table which you have before you to apportion the money they have expended upon it against the several proprietors. But the Board of Works, like the Drainage Board, apparently let matters slide. We have had several cases lately on estates which we bought where works of this kind were carried out many years ago, and where the Drainage Board ceased to act, as in this case. The Board of Works lay dormant until

they found the Congested Districts Board bought the estates, and then they served the Congested Districts Board with notice to put the drainage system into an efficient condition.

42534. Most Rev. Dr. O'Donnell.—The material design was not a suitable one from the start?—In my opinion it was fundamentally unsound.

42535. Would not that be a reason why the local Drainage Board felt itself without heart?—That is what I have said—that when they found money expended without the anticipated results being realised they neglected the matter.

42536. In your programme there are two parts—first there is the material or physical, and then there is the plan for carrying it out. I suppose, barring the difficulties of navigation or fishery rights, you would look upon it as good economic expenditure to erect a tidal wall?—Yes.

42537. Would there be any chance of lowering the bed of the river at a moderate expenditure and allowing facilities for sea-sand to be drawn up for manurial purposes?—That I did not look into, but I don't think so, because most of it traverses alluvial ground and probably would be easily lowered; but I cannot speak emphatically on that, as I did not examine the river bed carefully.

42538. It is not unlikely?—It is not unlikely.

42539. What kind of fishing is there in the estuary?—Salmon are netted.

42540. We do not know exactly whether the owners interested would object to the construction of this wall?—No.

42541. As regards carrying out the work, let us see what might be done. What step would be necessary in order to put you in the same position with reference to this work as you were in when you drained the Lung river?—We could not be quite in the same position, because the Board were landholders in the latter case of nearly all the lands affected.

42542. If the whole district were scheduled, then the owners who have not yet sold to the tenants would sell to the Board?—Yes.

42543. So far that is a possible thing?—Yes.

42544. If that were done, do you see any chance of getting the proprietors to work it?—They would, I believe, co-operate with the Congested Districts Board or other Department that would undertake the direction of the work.

42545. How would you work it out?—For the purpose of carrying out this work a Drainage Board would have to be formed. This Drainage Board would be constituted by representative members of the landholders holding land within the drainage district. Instead of having all landlords on the Board as formerly you would have several tenant-purchasers on it; they are the landlords of their own holdings.

42546. You don't think the number of estates sold prohibit that method here?—I don't know how many estates in this area have been sold.

42547. But you consider that the sale of the estates is not a serious obstacle?—Yes, unless the people, having satisfied themselves as to the extent of their liability are desirous of carrying out the drainage work.

42548. If a Drainage Board were formed, what kind of help of an executive kind could a Board like the Congested Districts Board give; advice, instruction, or money?—I think they should give a little of all three if they had control over the area.

42549. You say it would be reasonable to expect that the riparian proprietors of the future would agree to pay a sum corresponding with the improved value of the holdings?—Yes; the improved value resulting from the drainage.

42550. Would not you encourage them to go into this Drainage Board by allowing them somewhat more advantage than that? Would not it be reasonable not to demand from them the whole of the improved value of the holdings?—Yes. But I believe that this is quite a feasible scheme apart from any extraneous aid.

42551. With reference to something said by a previous witness, I should like to know whether, in your experience, you had any opportunity of buying estates in Kerry until within the last couple of years?—We have been offered not very suitable estates in Kerry. With regard to those which the Board were offered and did not buy, the failure to buy was due to the fact that the price asked was quite prohibitive.

Very Rev. Canon Hayes examined

42552. Chairman.—You are Parish Priest of Aghavallan in this county?—Yes. It comprises the modern parishes of Ballylongford and Asdee. The parish is bounded on the north by the Shannon, and extends along the river a distance of seven or eight miles. The population of the parish is about 2,700, principally agricultural. The little town of Ballylongford, once busy and prosperous, is now industrially dead. The population of the town, forty or fifty years ago, between eight and nine hundred, is now reduced to half the number. Its industries are gone. The little fleet of fishing boats that once studded its harbour, and was the source of a decent livelihood for at least fifty families, is now reduced to two or three. The harbour itself, called Saleen, was in those days full of commercial life and energy. Large boats could be seen constantly in the harbour discharging their cargoes and taking away agricultural produce, principally corn. Our trade is now reduced to the importation of flour and meal and other products, which could, and ought to be, manufactured at home.

42553. What is, in your opinion, the reason for the falling away of industries and your fishing fleet?—One of the principal reasons why Ballylongford has gone down so much was the building of a line of railway between Limerick and Tralee. It was the outlet or harbour for supplying most of North Kerry and Listowel. Of course that was a great source of revenue to this small town of Ballylongford, and the goods that used to come through Ballylongford come now by rail.

42554. Listowel before depended on sea transit?—Yes.

42555. Now the railway brings what it wants?—Yes, and Ballylongford suffered thereby.

42556. When you speak of industries, in the sense of importing produce for Listowel?—I mean principally agriculture. I believe that at one time they had industries in the way of potteries a short distance from Ballylongford.

42557. What is the reason of the decrease in the fishing boats?—The absence of fish to a great extent.

42558. Is there a permanent disappearance of fish?—Yes, strange to say, in later years. They say there is an improvement in the present year.

42559. What do they fish for?—Herrings and salmon.

42560. The herrings have gone away?—To a great extent.

42561. Was there mackerel-fishing?—I don't think it was ever a good ground for mackerel. There is a fisherman going to give evidence with regard to the fisheries. I asked to be freed from giving evidence on the fisheries, as I had no technical knowledge and had no experience, so I brought a fisherman. Passing from that subject, I have a hope that under altered agricultural and national circumstances commercial life and activity will once again be restored. The land for the most part in the parishes of Ballylongford and Asdee is reclaimed bog—cold, wet, impoverished, and entirely unsuited for tillage; and will remain so until subjected to a thorough and general scheme of drainage. For this purpose the aid of some beneficient Board is vitally necessary, since the occupiers themselves will never have sufficient capital to meet this outlay. Although not scheduled as congested, congestion of a very pronounced type prevails in both parishes, especially in Asdee. Yet, strange to say, the parish of Ballylongford, at least two divisions of it, Carrig and Lisloughtin, comes nearer the definition of a congested area than Asdee, where seventy per cent. of the holdings are uneconomic. This shows how misleading the definition of congestion is, and that population and valuation (in many instances) are no

July 3, 1907.

Very Rev. Canon Hayes.

measure of congestion. Let us take one estate in the parish of Asdee as an example. In the Wren and Stokes estate there are ninety-two holdings, and seventy-two of those are under £10 valuation, the lowest standard for an economic holding, whilst fifty, or more than half, are under £5. In the Asdee portion of the Hickie estate there are twenty holdings, and only four of them are over a valuation of £10. These two estates are in Chancery, and should long since have been taken over by the Congested Districts Board, and declared congested estates. The wretched condition of the tenants of these estates reveals a system of land tenure as bad as could be found in any part of the world, and principally on account of middle interests. Each tenant for miles and miles in this part of the country has the honour of having two, and in some estates three, and in some cases four, landlords over him.

42562. Most Rev. Dr. O'Donnell.—Is it that the holdings are in patches?—The head landlord is Trinity College. There is a second landlord, a permanent one, Blacker Douglas, and in many other cases there are two others. In this estate Wren and Stokes have an interest, and there was a fourth—O'Connor—but he was wiped out.

42563. Are they all supposed to get something out of the holdings?—Yes.

Mr. Sutherland.—We have heard of dual ownership being the curse of Ireland, but here we have quadruple ownership.

42564. Most Rev. Dr. O'Donnell.—In our return we have it that in Asdee there are 83 holdings under £4?—Trinity College is the head landlord of Ballylongford and Asdee, and sole owner of only a few townlands, where Colonel Crosbie, the middleman, was evicted for non-payment of rent. That is the only portion of the two parishes where there are only two landlords.

42565. Chairman.—Colonel Crosbie, the middleman, was evicted for non-payment of rent. Was he one of these other landlords?—Yes, and he owed so much rent to Trinity College.

42566. And he did not pay?—No, he did not pay; when the fair rent was fixed the margin was left too small for him.

42567. Mr. Kavanagh.—Will he be reinstated under the new Act?—Oh, the poor man is dead. He was not a bad man at all.

42568. Most Rev. Dr. O'Donnell.—Do you know what proportion of the rent paid by the tenants does Trinity College take?—I was trying to make it out.

42569. Of the Trinity College estates in Kerry, do you know?—I do not.

42570. Has that Corporation—Trinity College—done anything to improve the condition of the estate?—No. It never took any interest whatever. The head landlord did not care whether the estates were improved or not.

42571. Chairman.—The reduction of the rent does not affect the head landlord?—No; that is just it. It never affects the head man. This unfortunate system of land tenure is responsible for most of the distress and poverty of these parishes. The rents are excessive, having been arranged so that each owner would have his pound of flesh out of the poor tenants whom they have crushed to death between them.

42572. That is not since the Act of 1881?—No, not since the Act of 1881, because the fair rents came in.

42573. You are speaking of a time before twenty-six years ago?—Yes. Nor did the Fair Rent Acts afford them anything like reasonable relief, for it is well known the personal element or middle interests entered into the fixing of fair rents. No matter what the value of the land may have been, the middle interest must be protected. Mr. Commissioner Bailey admitted that the landlord's interest, irrespective of the value of the land, was considered in determining fair rents. Were it otherwise the landlords in this part of Kerry would be entitled to no rents at all, because the land is so bad it is not capable of yielding an agricultural rent, that is a rent or profit left over after all the expenses of labour and soforth are deducted.

42574. Mr. Kavanagh.—Have the four interests been fixed on the tenants?—The three superior landlords had to get their rent in any case.

42575. Chairman.—All this about the landlords' interest he means before the Act of 1881. Dual ownership did not commence in 1881?—No; long before it. The rent of more than two-thirds of the holdings from Ballybunion to the County Limerick, a distance of from twenty to thirty miles, is paid by American wages; or by a household economy involving semi-starvation. And the worst of it is, the consequences of this evil system of land tenure have entered into and vitiated land purchase, for it is well known that purchase prices are merely graded rents, and share their original sin.

42576. Chairman.—If it had not been for the large emigration that has taken place a great many of those people in the poor areas would be in a far worse position?—They would starve altogether if it were not for emigration in such uneconomic groups. They had no means of living whatsoever. Let us go back again to the Wren and Stokes Estate and learn from it the effects of this evil system of land tenure. This estate is held by Trinity College, Blacker Douglas, and Wren and Stokes, or their representatives. The estate comprises over ninety holdings, and only eleven are judicial. The other tenants were never allowed to go into the Land Court to get fair rents fixed, a very unjust exercise of landlord powers.

42577. Mr. Sutherland.—How were they prevented?—I will tell you in a moment. Sixty of them were evicted and put back into their farms again, twenty as graziers and forty under court leases. Any person having a court lease could not go into court. They were excluded thereby. The remaining twenty are either future tenants or hold under old lettings. A very fair and a very able report of the condition of the tenantry of this estate was made by Mr. Holmes, a land inspector, who was sent down by the Court of Chancery to inquire into and report on the real state of things in this estate. I should like to refer you to that report, which shows the great need of improvement on the estate to which reference is made. (*Produces report.*) Many families, some thirty or so, I believe, have no road at all leading to their houses from the main roads. The absence of roads is a great hardship and in many ways a serious disadvantage. The occupiers have no means of bringing manure to their little holdings, although there is an abundance of sand within easy reach if they only had the roads. The portion of the estate bordering on the Shannon suffers very much from spring tides, which flow over the lands as there is no embankment. Since the year 1863 fifty-seven acres have been swept away altogether by the incursions of the Shannon, and four or five houses are now threatened with destruction. They are those within a few yards of the sea. These two parishes afford a fine field for the exercise of the powers of the Congested Districts Board, but unfortunately Kerry is practically shut out from the benefits of this department, and to secure this exclusion no Kerryman has ever been placed on the Board. Of course your lordship was saying that every county could not have a representative, but it has been recognised that the western seaboard is the congested area of Ireland, and Kerry is one of the poorest counties in Ireland, and undoubtedly it would have been a great advantage to Kerry if it had a representative on the Board.

42578. Most Rev. Dr. O'Donnell.—Who knew the wants of the people?—Yes.

42579. And to put them before the Board?—Yes, my lord. The people themselves have no initiative. They don't know how to ask the Board. They never knew where Dr. O'Donnell lives at all.

42580. He is very rarely in the same place long. Lord Shaftesbury has taken the greatest interest in this portion of Kerry, but all the same your point would remain, that a person knowing the people and their wants would be more suited than anybody else to advocate their claims?—Yes, my lord, that is what I say. We trust, however, that this Royal Commission will bring Kerry's wants and claims before the Board, and induce it to treat us with a little more consideration and justice. But to come to some practical conclusion, and to the ways and means of relieving congestion, and of promoting some measure of general prosperity—There are 1,120 acres of untenanted or non-residential holdings in the district, and the distribution of these lands would be a first step in this direction. The valuation of this untenanted land is £435, and, allowing £10 for each holding, provision could be made for forty families, or for twice the number by the migration of those occupiers whose valuation is £5 or thereabouts.

42581. CHAIRMAN.—What do you mean by £10?—The valuation is £435.

42582. Allowing £10?—Yes, allowing £10 for each holding. That is the lowest standard for each economic holding, so you could supply land to forty or eighty families by migration, taking away one family, and letting its land run into the next family's, and make it an economic holding, giving each man an amount of land with a valuation of £10. But to promote anything like general prosperity along this northern seaboard the Government must come to the aid of this poverty-stricken region in some way or other. Until every foot of land from the borders of Limerick to the mouth of the Shannon is thoroughly drained it is in vain to look for agricultural prosperity. The land is very wet—the most of it is bogland, and the part that is not is of very inferior soil—cold, wet, and unproductive. As long as the land remains steeped in water, winter and summer, as at present, all effort to improve it is only so much energy wasted. The farmers themselves will never lay by sufficient capital to accomplish this drainage scheme. Here is where the definition of congestion did us an immense amount of harm. If congested areas were scheduled by groups of uneconomic holdings all my two parishes of Ballylongford and Asdee would be almost congested, and an immense amount of good have been done by the Board. This portion of the sea coast is like the West of Ireland, but it was not brought under notice principally because there is a ridge of very good land a quarter of a mile from the Shannon. There are two farms, one valued at £78 and the other at £74, which puts up these 72 uneconomic holdings. Dividing the valuation by the population, the high valuation on a few farms would interfere.

42583. Most Rev. Dr. O'DONNELL.—Would these farms be available for small holders?—They are held by tenants. There are 1,120 acres of non-residential land.

42584. Within what area is that large amount of land?—It is within the one parish.

42585. Did you think the remainder of the holdings might be enlarged by using that land?—I made a calculation as to how many holdings could be enlarged. Of course negotiations are going on in the case of one large place or holding Mr. Blacker Douglas has, which he farms himself. A proposal has been made to the Land Commission to buy it, but he would not accept the price, but I daresay they will come to terms after a little time.

42586. Would you consider that if the untenanted land is not sufficient for the enlargement of uneconomic holdings large tracts of grazing lands in the hands of tenants ought to be taken from the tenants?—They are all small holders, even the graziers.

42587. I thought you said there were two large farms?—They are not graziers. They hold under Court leases. They were evicted too, but got back under Court leases.

42588. Mr. SUTHERLAND.—What is a court lease?—If a person is evicted, the Court of Chancery sends down a valuer, and I regret that that is a great grievance. They have no title to go into Court for a fair rent afterwards. The Court sends down a valuer to value the land at any price he likes.

42589. What is the lease?—They put him back and give him a seven years' lease at this rent which was an arbitrary rent on the part of the valuer. They have no chance of going into Court, and have a great difficulty in completing the sales because these rents were higher than the judicial rents, and the purchase prices are based on these rents which are rather high. It is a very bad state of things. If we were scheduled as congested it would have helped us to have drained these areas, I should think, although his lordship, Dr. O'Donnell, appears to indicate that it was only in those properties that they buy that they expend much money.

42590. Most Rev. Dr. O'DONNELL.—You may take it from me, that the Congested Districts Board find it very difficult, as the law stands, to carry out drainage schemes properly. It is only when the Board has control of a wide area so that other owners can not dispute the rights and interfere with the scheme, that it can be properly carried out?—Is it not one of the functions of the Board?

42591. It is?—With the present system of farming they can never hope for more than the means of furnishing the mere necessaries of life. Government aid in the shape of grants or loans is absolutely necessary. It is absolutely necessary for this training. When I speak of the present system of farming, it is all grazing and all milk. I think that it is a mistake that our farmers have given up tillage completely, and I have been calculating that it would be far more profitable if they turned to tillage, because if you take a farmer of ten cows, he sends milk to a creamery, and only gets 3½*d.* at most per gallon for it. He could send to the creamery only about twenty gallons of milk, and that would be somewhere about 6s., calculating that for a week, he would only make £2 at most. That would only go on for five months. I calculated that all he could make out of his ten cows would be £40 a year. That would be very little to support a family. I think if he had more tillage to feed his cattle and pigs it would be more profitable.

42592. CHAIRMAN.—Lots of people have told us that. If that is so, why in the world don't they do it?—That is it. If you ask that of a farmer he says he has not the labour, that it is too high, and that there is nothing to pay but grazing the country, which is becoming impoverished because of emigration.

42593. In those farms where they do happen to have labour in the family, you would think that if tillage was better than grazing they would do it there?—That is the only family where they have a little tillage—where they have sons at home. Going around my people, I have asked how many children there are, and am told seven or eight, and when I ask how many are at home the answer is only one or two. The others are gone to America. They have given up tillage altogether.

42594. Most Rev. Dr. O'DONNELL.—Do you think if the people had instruction in practical tillage it would be desirable?—That is the point I was coming to—they require education.

42595. Mr. SUTHERLAND.—They tilled before?—Yes.

42596. Had they more education before in tillage?—No, really, but they tilled more. With the collapse of agricultural prices in the seventies, when corn was sold for little or nothing, the people gave it up.

42597. Have agricultural prices kept up in those parts of Ireland that I see tilled more than others? There is more tillage in some parts of Ireland than in others?—Yes, but is there more tillage in any part of Ireland to-day than there was in those days?

42598. You see parts of Ireland well tilled and no tillage in other parts. How do you account for parts going out of tillage and other parts being maintained in tillage?—The primary reason is emigration, I suppose.

42599. Are you acquainted with Clare?—Not very much.

42600. Is tillage there so great as between here and Tralee?—I don't think it is.

42601. Am I exaggerating when I say there is hardly any tillage?—No.

42602. What is the difference between that and the place between this and Tralee?—It is poorer than along the River Feale that you are speaking of to Tralee.

42603. Most Rev. Dr. O'DONNELL.—You think instruction is necessary at the present time?—I do.

42604. Drainage is an absolute necessity?—Yes; a pressing necessity for the two parishes. In fact yes, as I said it would be useless to give them to tillage until the land is drained.

42605. Talking about association with the country, I suppose Mr. Doran would have sufficient association?—He would be about the very best authority.

42606. Has Mr. Green, of the Fishery Branch of the Agricultural Department, any special connection?—No, none at all, I believe.

42607. Talking about the fishery, did it ever go to Mr. Green that something could be done for the fishery off that coast?—I have been parish priest only for twelve months. I did not feel justified, as it is not a congested area.

42608. The volume of the fisheries on that coast has very much decreased?—Yes; it is a most singular phenomenon; they could not account for it. It is a fact that fish abandon a coast for a certain time. I know no reason for it.

42609. What class of fish were there?—Salmon to any extent. There were two weirs worth £500 a year to the owners.

July 3, 1907.

Very Rev. Canon Hayes.

42610. Used the fishermen go to the deep sea for mackerel and herrings?—They used.

42611. Mr. SUTHERLAND.—A striking illustration you have given as to the unprofitable nature of dairying as compared with tillage leads me to ask you a further question, whether if the tillage were extended farming would be more profitable?—I think it would be.

42612. You only get the produce of the cow for a certain number of months in the year, and if you had tillage it would be different?—Yes.

42613. You think tillage should be encouraged by the Government in some way?—If we had the means of transit—facilities for transit—it would, no doubt, give the people a greater taste for tillage. The construction of a pier is another great want here, and would be an immense advantage to the district in many ways.

42614. Where?—At Ballylongford. The present pier is practically useless owing to insufficient depth of water and it is unsafe by reason of its exposed situation. The pier at present has become almost useless because the entrance is filled up and there is no depth of water.

42615. It was built in the wrong place?—Quite so. There are other places or positions where there would be no difficulty. The largest ships could come up. The amount we pay for transit is very high. If we could get a boat or ship in there once a month we would have fairs and we would have a means of transit.

42616. Do boats from Limerick call in there at times?—Some of them do, but very seldom, because they cannot get in at all except at high tides, and then it is dangerous, because the entrance has filled up.

42617. Most Rev. Dr. O'DONNELL.—Does it need to be dredged?—Dredging won't do. There is a primary difficulty which they do not foresee in building the pier. There is outside a bar which should have been all cut, so that the present pier is practically useless. Providing a new pier is one of the functions of the Congested Districts Board, if you happen to be under it, this pier is absolutely necessary for the development of the fishing industry. If connected with a line of rail to Listowel it would be a great advantage to the district. It is only seven miles from Ballylongford, and if a connecting line were made to Listowel, Ballylongford Harbour would become the landing-place for a large portion of the agricultural produce of North Kerry.

42618. Mr. SUTHERLAND.—What places would you ship to from there?—To England; we would send away our corn, cattle, pigs, and similar agricultural produce.

42619. CHAIRMAN.—Before you conclude I would like you to tell us a little about your Committee of Agriculture: who appoints you?—The County Council; but I did not intend to give evidence at all as to this, because when they appointed me they evidently made a mistake. I have been in the parish only twelve months, and there is no work being done by the Department at all, either agricultural or technical; so I have nothing to say of the work of the Agricultural and Technical Department, because there is no work going on; that has become apparent, because the itinerant teachers who had been giving lectures have ceased.

Mr. JULIAN re-examined*.

Mr. Julian.

42620. CHAIRMAN.—The Agricultural and Technical Committee are appointed by the County Council? The Agricultural and the Technical Education Committees are two distinct bodies. Originally there was an Agricultural and Technical Committee of the County Council, which consisted of the whole County Council, that is some thirty members and some seventeen additional members who are nominated by the County Council, and afterwards the Department thought it should be divided into two, so that we should have one committee for agriculture, which consists of the whole County Council, and some seventeen gentlemen who have been appointed because of their knowledge of agriculture, and are prominent in farming matters in the county.

42621. Mr. SUTHERLAND.—By whom are they appointed?—They are co-opted or appointed by the County Council once a year. As a general rule they are always re-elected. Then there is also the Technical Education Committee, which consists of the County Council, with a certain number, 12 or 15, co-opted members. The co-opted members of the Technical Committee are very largely school managers, clergymen, and gentlemen who have to do with education.

42622. Do you have to initiate the schemes of agricultural development, or do the Department? The initiation is a matter about which I have complained before the Committee. We are supposed to adopt schemes for every year. It consists generally of an official of the Department coming down with a scheme cut and dry and telling us that we must pass it because this is the last opportunity we shall have of adopting it.

42623. The scheme is actually drawn up by the Department?—It is drawn up by the Department and put before us to adopt. Of course we can throw it out if we like, but that will dislocate the whole business of the year.

42624. Mr. KAVANAGH.—You can throw out any item?—Yes, and dislocate the whole business.

Mr. KAVANAGH.—Oh no.

42625. CHAIRMAN.—The scheme is initiated by the Department?—Yes. We formulate and adopt it all in the same moment. These two committees spend £2,500 in the year altogether.

42626. How is the money distributed between the Committees?—About £1,400 of it goes to the Agricultural Committee, and as much goes to the Technical Committee. For instance, we spend £450 in giving 150 nominations of £3 each to mares which are selected to be sent to registered stallions in the county. I may remark that there are only three registered stallions in the county. Between them they divide this £450. The class of the stallions is a matter of opinion. We give a certain amount of money, another £150 or £200, on premium bulls. That is to say, a farmer applies for a premium bull. If he gets a nomination he goes up to Dublin and buys a premium bull, and he has to keep that bull for the benefit of himself and his neighbours, and at the end of the year he receives £14 from the Department. That swallows up another £200 or £300 a year. Then we have different lectures. We have agricultural instructors, and we spend a certain amount of money on demonstration plots. I don't know that anybody ever goes to look at them. I never did myself. We have two instructresses in domestic economy. I think that may come under the Technical Department.

42627. These items are not discussed by you in detail?—They are sometimes discussed. We had a great discussion about the art master in Listowel. We had an art master here when our technical scheme came on. We found that his classes were not very largely attended. We cut him out and put on another domestic economy instructress. The result was that Listowel, which was the only place attending his classes, was very much aggrieved by his not being put on again.

42628. Take the question of the suitability of the standard; whether you are doing sufficient to provide bulls or mares, whether the plots are sufficient, or whether the itinerant instructors are good. Are those things ever discussed?—It is with the greatest difficulty that we ever get a quorum for the Committee. The County Council meet on Thursday. It generally goes over until Friday. The Agricultural Committee is then generally summoned for about 12 on the second day, and the Technical Committee meet after them. By the time we have got to them most of the people have got very tired and have gone away. Most of the elected members don't turn up. It is the biggest farce that was ever invented.

42629. Mr. KAVANAGH.—In the County Kerry?—In the County Kerry.

42630. CHAIRMAN.—Are any of these people specially acquainted with the congested districts?—They come from all parts of the county. There are one or two from each district.

42631. Should you say when there was a discussion with regard to the scheme there was a tendency for the representatives of the non-congested areas to have

* See pp. 8–13.

more influence than those who represented the congested areas?—No, because I think the Congested Districts Board, until quite recently were not on it at all.

42632. They are now?—They are.

42633. We have been told in some places that the explanation of why a continuous county scheme does not work well in congested areas is because the representatives nominated who act on the County Committee, and who are supposed to look after these scheduled areas, are not men of weight and influence, and that therefore although the schemes work all right in the non-congested areas, yet they work badly in the congested area?—I don't know that we have had much difference at all. We tried to put an efficient instructor in net mending in the congested areas. He went out to a few places. He did not stay long enough to do any good. The fishermen in Cashen said they did not want him, as they knew well how to make nets. Another matter to which we objected very much was the exclusion of Kerry bulls from the schemes. It was only lately that the Department allowed us to have Kerry bulls when we wanted to help the congested districts. Down about Cahirciveen they wanted Kerry bulls and not shorthorns. Now they allow us to have Kerry bulls.

42634. Can you tell us as to the sort of thing that went on when the agricultural instruction was given by the Congested Districts Board before the new Department took it over?—No. I don't know much about that.

42635. Did you hear people saying that the agricultural instruction was not so well done now?—I don't know about that. I don't think there are quite so many itinenant instructors going about.

42636. You don't think that in the County Kerry there is any dissatisfaction at the change?—I don't think so.

42637. Mr. Sutherland.—Is it your opinion that if the money given by the Board were given to the County Council without any conditions they would expend it better?—Yes. I am not quite sure but that they might do better with a demonstration farm.

42638. Even with the breeding of cattle?—I don't know whether it would be more useful if the Department would send us down a really good sire. They advance the money to buy a sire, but I don't think there is a sire in the county that has cost more than £500 or £600. We are far behind Limerick with the horses they have got there. I don't know whether you could could do better with the £450 than give the nominations in the way they do.

Very Rev. Canon Molyneux examined.

42639. Chairman.—You are parish priest of Ballybunion?—Yes. I live in a non-scheduled division myself, and I have more poverty in that than you would have in any division in Listowel, congested or non-congested. It is a curious fact that there is more outdoor relief given in that non-scheduled division of Listowel Union than in any other division in the union.

42640. Most Rev. Dr. O'Donnell.—Some of the townlands must be very poor?—The poor in North Kerry are exceedingly poor. I may tell you that I was parish priest of Glengariff in the County Cork, and the whole of that parish, I believe, was scheduled as congested. Take ten, twelve, or twenty holdings, and the average valuation of those holdings would be but £2 per occupier. To the eyes of strangers, and those who visit the district, look at the miserable cabins and notice the small valuation it would be evident that these poor people want relief, living as they do on such uneconomic holdings. That, of course, is quite plain. If you take twenty occupiers in that district, their valuation would not exceed £2 per occupier. Now, we have in North Kerry such poverty that the people have not a cow or two as they have in that other district. The emigration is most extensive. They go to the iron furnaces in South Wales and such places, and I may tell you to their credit, though it is not a very nice occupation for women, yet the women do the work in spring after the potatoes are planted. In North Kerry those very poor people have no holdings. Lately the Rural District Councils in North Kerry have given a noble example to the country at large by the liberal and generous way in which they have provided labourers' cottages and allotments of land. In North Kerry you have more labourers' cottages built than in any other part of Ireland. The necessity for this arose from the fact that the people were so badly housed and had in very many cases got no land. Reference has been made to tillage. In this connection I may point out that the land in North Kerry is mostly reclaimed bog. There is very little arable land. There is very little of the land that is productive and fruitful. Naturally heavy lands of that kind do not pay for tillage and especially now when labour is so high, and I regret to say that I don't think the rising generation will ever approach the old people who have passed away in their attention to business, such as drainage and things of that kind. I fancy it would be extremely difficult to get the rising generation now to go through the slavish work that they did so well and so long in times past.

42641. Most Rev. Dr. O'Donnell.—Is it under the recent Act that these labourers' cottages are being provided?—They gave a noble example long before that, but they have also taken up the recent Act to that extent that all the poor farmers in North Kerry are frightened at them. They don't know what to do with the taxation they are heaping upon them. They are doing everything they possibly can to carry out a great and useful business, but nevertheless it is imposing upon them a very heavy task. Notwithstanding the reductions given in rents, the difficulties of farmers have been increased by the increase in taxation, the cost of labour and its scarcity. I am seventy years old and forty-six years a priest, and I never saw the county in the position that it is in now in the struggle to make ends meet. Such is the struggle that I know a large district on which the tenants purchased twenty years ago but they purchased under duress for they were all under notice of eviction and purchased at a very high figure, and the purchasers came to me the other day and told me they were prepared to forfeit the twenty years' purchases and sign agreements under the new Act of 1903. So difficult do they find it to pay their annuities that they would willingly sign to commence to pay new annuities for sixty-eight years provided they get credit for the twenty years they have paid already. No people outside of a lunatic asylum would forfeit twenty years and sign again for sixty-eight years unless they were very hard pressed.

Mr. James Hanrahan examined.

42642. Chairman.—In what part of Kerry do you live?—I am a merchant in Ballylongford. The evidence that I wish to bring before you is on behalf of the fishermen of the district. The salmon fishing opens on February the 12th and lasts until the 30th April. The peel fishing opens on May the 1st and ends on July the 1st. Then the herring fishery commences, and ends on November the 1st. From this date until May 14th the oyster fishing is in progress. This shows that the fishermen of the locality can be profitably employed all the year round. There are altogether thirty fishermen living in the district, and of this number only three have been fishing this past year. The remainder depended mostly on work which they occasionally get, while some depend for their living on ferrying from Saleen to Kilrush. The number of boats required to employ those men is from ten to twelve, and the probable cost of each boat would be about £16 when fully equipped.

42643. Mr. Sutherland.—That is for the oyster fishery?—No, the salmon and herring.

42644. Chairman.—Do you mean that the Congested Districts Board should provide boats for these men?—Yes, in the present circumstances, and facilities in the way of a pier. The pier is absolutely unsafe. In the most important times of the tide these boats would have to remain at Saleen for fully two hours in order to float out, and dangers are incurred

July 3, 1907.

Mr. James Hanrahan.

to the fishermen and the boats. For that reason I would suggest the building of a pier at Carrig, where the men could easily get their boats in and out at any hour of the tide. The pier would be of the highest advantage to the fishermen. In some cases sailing boats must remain altogether at Saleen owing to the very strong currents, while if a pier were built at Carrig this drawback would be overcome.

42645. Mr. SUTHERLAND.—Would that pier be of any use to Ballylongford?—It would be of commercial use to Ballylongford as well.

42646. Is Carrig an island?—No; this is on the mainland opposite the island. It would serve as a pier for Ballylongford. At the old pier there is only twenty feet of water at the highest tide. If the new pier were provided there would be thirty-three feet. The season for dredging oysters opens late in September and continues during the winter months. Very often those boats engaged in this business must remain at Saleen for weeks owing to continued winds from the south-west, west, and north-west. This also occurs during the summer time when they are fishing for salmon and herrings. The public oyster bed is over three miles square, and is insufficiently stocked with oysters. In fact, the two boats at present dredging never touch Ballylongford harbour, as the little they would get would not sufficiently pay them for their trouble.

42647. CHAIRMAN.—Have any of these views which you have been expressing ever been represented to the Congested Districts Board or to Mr. Green?—I am not aware that they were.

42648. Why?—I daresay they did not know whom to apply to.

42649. Did they not know that Mr. Green looked after the fisheries?—A lot of them never heard of Mr. Green.

42650. Most Rev. Dr. O'DONNELL.—I suppose that the district is not scheduled?—It is not.

Mr. SUTHERLAND.—But Mr. Green has charge of the fisheries for all Ireland.

42651. CHAIRMAN.—You really think that they did not know whom to apply to?—They did not know up to then. Shannon oysters are very marketable. On this bed I would suggest the laying out of half a million oysters, which would be marketable in two years hence. Trawling, too, is carried on in the Shannon, but the boats from Ballylongford never fish at this place owing to their being too lightly built and too old, some of them being practically obsolete. I would suggest the giving of four boats for dredging and trawling. The boats should be built exceptionally strong in consequence of the heavy strain on them, and should be thirty feet in keel. The proposed pier if built would be almost accessible at any time of the tide. It would secure the boats against any wind, especially from the north-west and south-west, which are dangerous to boats lying at Saleen pier. Some boats have been swamped while lying there.

42652. Mr. KAVANAGH.—We have had evidence of the trawlers doing great damage to the salmon?—That is fishing outside the river, but this is trawling inside the river.

42653. We have had evidence of the fishing outside doing damage?—That is not the trawling. That is with nets. Some of the nets are five miles long.

42654. Mr. SUTHERLAND.—You want boats thirty feet in keel for herring fishing?—Yes.

42655. How far could they go to sea?—This coast is very dangerous.

42656. Then all the greater necessity for large boats?—Thirty feet in keel is quite sufficient.

42657. Most Rev. Dr. O'DONNELL.—How far out are the herring grounds?—From the proposed pier about a mile.

42658. CHAIRMAN.—Do you think it would be of use to have a resident fishing superintendent on the coast of Kerry?—Yes.

42659. That would help to keep the Congested Districts Board in touch with the local people?—Yes.

42660. Most Rev. Dr. O'DONNELL.—Have you heard the old people speak of the time when herring and mackerel were caught by the people from Ballylongford?—Within my own time. Within the last three years.

42661. Mr. SUTHERLAND.—Where do they get the herrings?—About a mile from the proposed pier.

42662. They waited until the herrings came into the river?—Yes.

Mr. JOHN DORAN examined.

Mr. John Doran.

42663. CHAIRMAN.—What district do you come from?—I reside at Glanawillan, Asdee, County Kerry. I wish first to refer to the industry of the poor workers striving to obtain a livelihood. In a part of Mr. Blacker Douglas' property in the townland of Leansachane, North Kerry, about 1881 and previously there lived six families of householders, about thirty-six all told, and all labourers. Two of them had not one perch of land, and the other four held about fifty perches in all. Each tenant had to pay £2 10*s.* a year in labour, at 8*d.* per day, even if other men obtained 1*s.* 6*d.* or 2*s.* per day; thereby proving that the six tenants were paying £3 each, or, in other words, £18 per annum for their six mud cabins and the fifty perches of land, and yet maintain their families. Mr. Blacker Douglas was not responsible for this, as these men were only sub-tenants to farmers. Four of these houses have since been levelled, and most of the occupants have emigrated to enrich other lands, and to enjoy that material and social position which has been denied them in the land of their birth. Adjoining this is the property of Lord Listowel, and in the townlands of Kilconly and Beale Hill there was a great number of labourers, and at one time, under middlemen and farmers, some were evicted, and died of hunger in 1847, 1848, and 1850. After that the landlord evicted the middlemen, and held it in his own possession for a number of years. He gave some employment for a time, and he took very good care to leave many of the labourers landless. He would not even permit them one perch of the land of their birth, and I knew some of them having the place of a few hundred of cabbages, and when his steward was getting fences erected he got the surface of these haggards or plots drawn away to manure the quicks and furze seed on the fences. Although having close on 400 acres of untenanted land, he did not give one perch to many of the labourers. There are about twenty-five labourers on the lands or farm of the Scottish Provident Institution, and adjoining it, and some of these men have only mud-wall thatched houses, with about eighty perches of land; and they paid about £3 at one time, and have been paying £2 10*s.* for the last twenty years; and within the last forty years they hold as caretakers or weekly tenants, and pay said rents at the rate of 8*s.* a week, without board, and another member of the family supplying them with food. These are only a few examples of what the poor labourers had to undergo, which proves the thrift and industry they should exercise to maintain their families; and often times they were semi-destitute. It is no wonder their families would fly from this country when the opportunity offers. Hence its depopulation, etc. Many others had to sustain life by gathering seaweeds on the strand, such as dilisk, sloucane, periwinkles, carrigeen moss, etc., and making sale of them, and eating them, some being semi-destitute. I also wish to call special attention to the necessity of remedying the following grievances of some poor cottiers, which have passed unnoticed by the Government and the Irish Party and other public men. There are some thousands of cottiers possessed of less than three-quarters of an acre of land. They are exempt from present and past legislation, and totally at the mercy of their task-masters. They exercise no tenant-right, as they are debarred from entering the courts to fix a fair rent, and thereby establish a tenant-right. This is sad and mean in the extreme, and requires immediate redress; and even when a sale takes place this class must remain as sub-tenants to farmers, if the Acts of 1903 and 1881 are not amended. They should be permitted to enter the courts to have a fair rent fixed, and to avail of a purchase when such takes place.

42664. Most Rev. Dr. O'DONNELL.—What class is that?—The people who hold less than three-quarters of an acre of land. They should be permitted to purchase if they so desire. From sad experience of the

past, this class must rely entirely on the recommendations of this Commission for redress. I will give another case of hardship and tyranny. Lord Listowel's property is being purchased by the tenants, but the sale is not yet completed. There is a poor man holding a small house, and a place for a manure pit, but in fact no space or land for sanitation purposes. When the engineer came round he claimed the site of a fallen room, so as to rebuild if he so desired; but the tenant-farmer objected, and said that the wall of the existing portion must be the boundary, and even locked the gate, so as not to allow him to bring in some turf, said gate being only about two perches from the site for the turf, and being an old passage long before this tenant was born. Is this not tyranny of the poor? It is well to state that the said house and site of room is a freehold, and Lord Listowel would not permit one perch of land to be attached to this house. There was a family of seven in this house, and all emigrated except the one that is now tyrannised over, and whether the Estates Commissioners will defend his rights remains to be told. There is a class of uneconomic landholders of from one to fifteen acres who, by their thrift and industry, are in many cases overstocked. They pay a high price for meadowing and hay to the extensive landholders, and have sometimes to go a distance of from one to five miles to obtain same. I know a man in Glanawillan holding less than five acres of medium or inferior land, and maintaining five large cows and a small pony, and he sometimes pays up to £12 for meadowing and hay per year, which is equal to the rent of a small farm, so that if these classes got a few acres extra they could easily pay for it. These are proven facts. Another matter as to which I am anxious is to get some non-scheduled congested districts scheduled as congested. I submit that the electoral division of Kilehenny requires to be dealt with as congested, for the following reasons: There are in it thirty-six families, or seventy persons, in receipt of outdoor relief, at an annual cost of about £240. There are about 205 holdings, of £5 valuation and under. There were about 250 families evicted in 1847, 1848, and 1850, and there was no legal order for this; and while some families were partaking of their food other serfs were stripping the roof, and would not permit them to partake of their food. Many died of starvation, others went to the union, and others emigrated. The result of this clearance was the substitution of the bullock and the large grazing tract, which debarred this division from being scheduled as congested in 1891. Nevertheless semi-destitution prevails. While over 1,500 acres of land, including untenanted, non-agricultural, and non-residential, some of it almost equal to the Golden Vein of Tipperary, exists for the benefit of the brute creation, and semi-starvation and the emigrant ship are the portion of God's people. There are seventeen future tenants, the victims of exorbitant rents—the rents in many cases being three times the valuation, and other cases five times. About forty of the houses are insanitary and uninhabitable. The people receive about £1,000 per annum from friends and children in America, which in many cases prevents real destitution in the division.

42665. CHAIRMAN.—How do you arrive at that?—From the old people of the district.

42666. How do you arrive at the gross amount?—From the information of the people of the district.

42667. Did you make that up as your estimate?—Yes, after consulting the people of the district.

42668. From what they told you you came to the conclusion that the amount was about £1,000 a year?—Yes.

42669. What size is the district you have in your mind?—The electoral division of Killehenny, which includes the village of Ballybunion.

42670. In one electoral division £1,000 a year is received from America?—Yes, in the electoral division of Killehenny. In many cases it prevents real destitution. Congestion certainly prevails in this division. The aforesaid lands are most conveniently situated for relieving the congestion which exists. The landlord, at the time of the former evictions, was a middleman named Major William Fairfield. There was a hosiery or knitting industry carried out under the supervision of the good nuns of St. Joseph's Convent, which gave employment to about eight young ladies. It has been abandoned for want of space and accommodation as there was an advance to forty pupils in the school attendance. Application was made to the Agricultural Department to aid in reviving the industry, but in accordance with their rules the enterprise required local capital, which was not forthcoming, and the industry fell through, which was a great loss to the district. This occurred in 1905 and 1906. If the Congested Districts Board or Agricultural and Technical Instruction Department took an active part it could be revived even yet. In addition to the 1,500 acres of untenanted non-residential and non-agricultural land there are three large farms, two of them about 200 or 300 acres in extent, where these clearances were made in 1847, 1848, and 1850. That is what prevented this division from being scheduled as congested. Outside these tracts the outdoor relief exceeds what it is in the congested divisions. I would also wish to refer to the necessity for a reform in the rules of the Congested Districts Board as regards Parish Committees. An artisan, no matter how impoverished he is, is not permitted to avail of the grant; nor are sub-tenants to farmers. For two years they excluded all cottiers holding less than one acre of land.

42671. Most Rev. Dr. O'DONNELL.—Is the artisan a tradesman?—Yes.

42672. Would not a small farmer be much more in need of assistance than a tradesman?—Some of the tradesmen, as is the case with every other class, are in a very impoverished condition. Some of them perhaps are well-to-do. But no matter how impoverished they are they cannot be assisted under present rules.

42673. You suggest that the Parish Committees should have discretion to give relief?—Yes. Relief to sub-tenants of farmers is not permitted. Unless they are tenants to real landlords they are excluded.

42674. Have these sub-tenants security in their holdings?—Yes. As long as you pay your rent to the farmer you have security. If you have more than three-quarters of an acre of land you can apply to have a fair rent fixed. For many years they excluded all cottiers holding less than one acre of land, and in some cases over one acre, and if the supervisor's estimate did not exceed £2 10*s.* they were not entertained; but they were entertained in 1906-07. I am secretary of a Parish Committee and find that these alterations are wanted.

42675. Did you make suggestions to the Board, asking them to make these changes?—The Committee made suggestions, but they would not entertain such cases. If the estimate were thirty shillings, that would be on a dwellinghouse you would only get one-third, but if it was repairing an outhouse one-fourth. They said such a small sum would not be entertained, and they struck it out for two years. However, the people are so impoverished that I wrote to the Secretary of this Royal Commission a long time ago and said I was going to give evidence on this point. However, it now appears that they have not excluded these classes for this year, but for the two previous years they were excluded. Landholders whose valuation is under £7 are eligible for individual grants—a grant not exceeing £3, for the erection of an out-office, and not exceeding £5 for a dwellinghouse. Contrast that with Port Royal estate. A tenant may receive a grant towards an outhouse not exceeding £4, and for a dwellinghouse a sum or grant of £10; that is a difference of £1 in one case, and of £5 in another. What is the cause of this?

42676. That would be where an estate has been bought by the Congested Districts Board and is being sold to the tenants by them, and the Board wishes the homestead to pass to the tenant in a good condition? It is on an estate bought by the Congested Districts Board, and similar advantages would be available in Kerry if the Board had been fortunate enough to buy estates?—The Ballybunion Parish Committee obtained a grant of £75 a year for three years. The people were so impoverished that they could only avail of about £6 for works and about £65 was returned. In the second and third years the amounts returned to the Board were £26 1*s.* 3*d.* and £10 3*s.* 10*d.* That is to say that in three years there was returned to the Board a total of £101 5*s.* 1*d.*; and so impoverished were the people that if they had not received £10 from two landlords to commence, even so much of the

July 8, 1907.

Mr. John Doran.

grant would not have been availed of. Notwithstanding the fact that over £200,000 towards reclaiming and developing the district would be urgently required the Board would not permit the returned moneys to be expended in road-making and drainage in the district, where we would require roads, draining, and such things as that. We thought when we sent back the money that it would be returned to us afterwards, but it was refused. They allow about one-third of the estimate in repairing dwelling-houses and one-fourth in repairing out-offices and fences, draining, and soforth. The work must be completed before they even get the one-fourth. The people are so poor that they very often cannot undertake the work, and I would suggest that people whose valuations are up to £10 might be permitted to avail of the Board's grants. Until the houses are done up they won't allow draining and fencing. Some people withdrew this year because they were not in a position to carry out the works, and the money would not be permitted to be availed of for draining and fencing until the houses were done. Under the circumstances, I would suggest that all classes of householders whose valuation is £10 or under be permitted to avail of the Board's grants as already stated, and that for valuations of £5 and under they obtain free grants of half the estimate, and that artisans be included, and also sub-tenants to farmers.

42677. CHAIRMAN.—You want artisans included, and a certain amount of money handed over before the work is completed?—The Board would not do so. There are some scheduled districts that did not think it worth while to avail of the Board's offer in accordance with their mode of procedure under present rules; the congested districts of Duagh and Ballyconry did not avail of it. The best means of relieving congestion and stopping emigration are the purchase of all untenanted and all other lands in the market for sale, by compulsion or otherwise, at a fair price, and its sub-division into economic holdings, and that the Estates Commissioners should have the right of pre-emption for the express purpose of relieving congestion respecting private lands under their control and being offered for sale, and that the workers in general and the uneconomic holdings and the landless working classes have first claim on these lands.

42678. You cannot give these people the first claim?—The working classes and the uneconomic holders.

42679. You would give the uneconomic people first claim?—The two would have an equal claim. Our motto is the land for the people.

42680. Two men cannot be first?—When there is sufficient land why not supply those classes? Then there should be financial aid in starting home and all other industries. The roads and all other public works should be carried out under direct labour. Then we should have the compulsory sale of all lands at a fair price, which would abolish the great expenses of the Land Commission and other expenses. Land speculators and capitalists should be strictly prohibited from purchasing any land whatsoever save the purchasing of the real waste, reclaimable land, if the Government do not undertake to do so. Of course a friendly and paternal Government would do so in the interest of country. It is well known that the capitalist has many other ways for investment to obtain a livelihood; and the capital of the workingman is his sweat and labour, which can be chiefly exercised in the land, and as men form the real wealth of nations a remedy must be found for obtaining that wealth, as in the aforesaid suggestions, and the migration of a portion of the occupiers in order to enable the peasants who remain to prosper, as plenty of land is available for the purpose; also I would advocate the reclamation of the land, such as fencing and draining, by State aid or otherwise and the establishment of a Board for such a purpose. It is of the utmost importance that a Kerry man should represent Kerry on the Congested Districts Board and on the Agricultural Board, and real class representation on all public bodies, and very specially of the labour element, as they are the wealth-producers and busy workers of the social hive, and a real labour representative should be a member of this Royal Commission, as no other class can understand the workingman's (sometimes unbearable) position. To shorten the matter, the lot of too many of the working classes in this country is rightfully considered to be hell upon earth, their only safety being their flight to other lands, their position being most intolerable and unbearable, and it must spell ruin to Ireland if they continue to go to make wealth for America and elsewhere. Now, as to the Agricultural Board. I do't know much about its mode of procedure, but they sent a bull to the congested district of Gullane, and the first year, I think, he was limited to forty cows, and when he was three years old he was limited to forty cows besides the cattle of the man in charge. This year some few took cows about the 1st of June and they were refused. If the bull was sent there to improve the condition of the cattle of the country was it right to draw the line in that manner at forty cattle?

42681. There were two members of your Agricultural Committee examined to-day who could give an answer to that?—I only thought it was wrong, whoever was to blame for it.

42682. Who are the tar-mongers you refer to in your precis?—The character of Ireland has been run down to a certain degree. I maintain that they are wrong. It is considered that the police committed a great many of the outrages that were committed. That was proved in the case of Sergeant Sheridan.

42683. What is a tar-monger?—Where people would not wish to take life they would wish to give a threat to offending people.

42684. Mr. SUTHERLAND.—You are speaking to us who are not natives of Ireland about stories that have been told, and we know so little about it that we have never even heard the name?—Such a thing might have occurred one time. The people want to keep their holdings. The Irish people as a rule don't wish to take life. They have died with hunger even in the bad times rather than do so. It appears then that if anybody said they would wish to prevent people from doing harm such as grabbing and things like that, they might take that man and rub some tar to him and put a few feathers on it, and let him have the trouble of rubbing them off and conduct himself for the future.

Mr. PATRICK J. AHERNE examined.

Mr. Patrick J Aherne.

42685. CHAIRMAN.—What district do you represent?—I represent the Glensharrold electoral division of Newcastle West Rural district. The Glensharrold electoral division, which comprises the townlands of Glensharrold, Knockanagun, Carrickerry, Knockfinisk, and Baranique, is a unit of Newcastle West Rural District, with an area of about nine square miles, and a population, roughly speaking, of about 1,000. The poor law valuation is about £936, and the number of householders 145, the majority of whom belong to the toiling class, having to eke out a scanty subsistence as best they can under the very unfavourable conditions in which they are necessarily constrained to live. There is little or no employment, or scarcely any industry in the district, the principal one being the peat industry, which, like all the other staple industries of the poor in the past, is now on the wane, most of the mine being cut away. Farmers are only in middling circumstances in the district, and very little employment is consequently given by them, so that the land is left unreclaimed and undrained, a great many of their farms being mainly composed of cutaway bog or moor. The principal crops raised are potatoes, turnips, and cabbage, also oats. The potato crop in recent years was not good in quality or in quantity in the district. Even last year's crop was a partial failure. In the district adjoining it, there are vast tracts of waste lands which, if reclaimed and broken up into modest allotments and distributed among the poorer classes with State aid, would become productive and would afford a beneficial return to the community at large. The toilers would thus be enabled by economy and industry to live in comparative comfort at home instead of dreaming of an El Dolrado across the seas. The young people of both sexes when they arrive at maturity flee to America, having no prospect of a living at home. Emigration has sapped the bone

and sinew of the manhood of the Glensharrold electoral division during the past twenty-five years. There are also about 3,000 acres of waste land in the Rooska division and a large colony of poor people almost destitute. Congestion, as in the Glensharrold division, is also rampant there, chiefly from the causes ascribed to it in the Glensharrold division. Except the Congested Districts Board take up the matter and acquire those broad tracts of waste land and plant the people there in a position of security, such land will remain in its primeval wildness till the end of time and the people will derive no material benefit therefrom, but continue to live in enforced idleness and abject poverty. Some of those mountain chains, extending from Carrickery to the confines of North Kerry, would, in the opinion of many, be admirably suited for the planting of trees. There are splendid limestone quarries within a distance of three or four miles of the district. If a light railway was constructed to connect Ardagh with Listowel, passing through the intermediate mountain districts, limestone could be thus brought to where it is badly needed, while also the famous sand of Ballybunion could be properly utilised, which at present, owing to the distance and the lack of the means of conveyance, has not been resorted to for reclamation or tillage purposes by the people of the Glensharrold electoral division. Direct labour has been in operation in the district during winter, but only a few labourers are employed. Some of the poor live by selling turf in Newcastle and Rathkeale. Others live on the earnings of their children in domestic service in East Limerick, and remittances from their friends, and sons and daughters in exile also contribute to their maintenance and help to pay the rent of the little patches of cutaway bog in Glensharrold. The finest material in all Ireland for the manufacture of peat moss is to be had in the district. It abounds with many resources, but unfortunately the means of development are not at the disposal of the working population. Knockanagun and Carrickerry properties were purchased under the Ashbourne Act at 18 years' purchase. There are eleven labourers' cottages built in the electoral division, and five under the new scheme projected, still there is a good number of applicants who presently cannot be supplied with houses The tenants on the Glensharrold estate of James O'G. Delmege, D.L., are negotiating purchase agreements with the agent. There are about fifty-six tenants, farmers and lot-holders. The lot-holders occupy three and four acre plots, and live by cutting and selling turf. If the estate is purchased and the sale of turf stopped, they will starve, having no industry to rely on. The produce of their little holdings would never maintain themselves and their families. If the whole electoral division was scheduled as a congested district it would tend to improve the land and people generally. Farmers not on a very extensive scale live there by dairying and stock-raising, agriculture being partially abandoned.

42686. Most Rev. Dr. O'Donnell.—The rural district of Newcastle West has eight or nine electoral divisions, with a valuation under 30 shillings per head. The poorest seems to be Mount Collins, with a valuation of only 17 shillings per head?—Yes.

42687. In your district it is only £1 5*s.* 7*d.*?—Yes. I am only speaking for my own district, but my experience of the outlying districts is the same. Emigration has wrought a great change in the district, because any man taking a view of the land can see thousands of acres of land lying partially idle, and it will continue to do so until something is done by the Government to put this in a position to be cultivated. That is why I am here, to appeal to the Commission to do something in that respect for the Glensharrold Electoral Division. Mr. T. W. Russell, now Vice-President of the Department of Agriculture, visited the district in the days of the plan of campaign, and so indescribable was the condition of the poor people that he described them as a colony of squatters. Only people going among them can tell how really badly off they are. I hope you will be sympathetic enough to give us some chance of living in our own country instead of driving us to seek a living away. The golden gates of the West are good enough in dreams, but in reality there is something very different behind them.

Mr. Charles Scollard examined.

42688. Chairman.—What district do you come from?—From Carrickerry, West Limerick. I wish to bear out what Mr. Aherne has said. The country there is beyond any other country. It is mostly all a wilderness round it. We are taxed very much more than we are able to pay. I represent the labourers of the locality, and there is one thing surely I have to say. I am representing myself to be a small farmer besides and it is very hard to pay the rates at the present time. I don't know how the rates went up so much this year. If another year comes like this we will have to leave the rates, the land, and the Government to themselves. If something is not done for us we will have to emigrate.

42689. What do you do personally?—I am a small farmer, having 30 or 40 acres of peaty soil.

42690. Is that your own or your father's?—My own.

42691. What do you do with it?—I farm it for dairy produce. Mr. Aherne has only spoken the fair truth.

42692. Mr. Sutherland.—What do you propose should be done?—I would like a light railway to Listowel, passing through Athea. If we got that railway it would do a great deal for the country round. Athea is becoming a very important little town. Between £300 and £400 worth of butter is bought there weekly, and the City of Limerick would hardly represent so much.

Mr. Garrett Pierse examined.

42693. Chairman.—What district do you represent?—I represent the congested division of Gullane, where I live and for which division I am Rural District Councillor. The division is composed of the following townlands:—Trippol, Bromore, Lensahane, Faha, Gullane, Derra, Tullabeg, Tullamore and Rahavanig. This division is situated at the estuary of the Shannon, near the seaside resort of Ballybunion, and is about fourteen miles distant from Listowel, the nearest market town. The people are sober, honest, hard-working and industrious, but the land consists of reclaimed wild bog and barren mountain slopes, with a retentive subsoil and aspect towards the north, and is very much exposed to the ocean gales, as no trees or shelter of any kind will prosper here and the consequence is cattle have to be housed and hand-fed from the 25th October to the 15th May. There is not much tillage, as it does not pay in this wild, cold, exposed country. I have seen the potato stalks blighted twice this very year by the storms. The chief industries of the people are butter-making, but latterly on the sale of milk at creameries and on the rearing of calves. The great fall in the price of agricultural produce has affected the people of this district very much, as they have no industry to fall back upon. There are a great many small farmers who have only one and two acres, and this of such poor quality that the people are very poor. To show you how poor the district is the outdoor relief alone in this division is 2*s.* 4½*d.* in the pound, and the people receive yearly between three and four hundred pounds from friends in America and elsewhere, and yet the people are deeply in debt to the local shopkeepers, of which there are five in the division, I myself being one, and I have given the value of about £800 in credit. About the years 1875 and 1876 the tenants' leases fell out and the then landlord, Wilson Gunn, actually doubled the rent on some of the tenants, even my own holding, which my father saw let at £15, was risen to £43, and now after going twice before the Land Court it is still £19 10*s.*, the poor law valuation being £16 15*s.*, which shows that when land is once very high it is hard to get it down to its proper value. Yet, though big as the rents were in the Seventies it was far easier for the tenants to pay them than the reduced rents at present, as now the cost of living on account of the changes; food being more than doubled; the rates and county cess having increased from about three shilling and six pence in the pound (half of which was allowed by the landlord) to eight shillings and three pence at

July 3, 1907.

Mr. Garrett Pierse.

present. Then there is the fall of about 35 per cent. in the price of butter, and worse than all, it is hard to get sufficient labour, as the most of the young people are going to America, and when bad land is out of cultivation for a few years it soon goes back to its original state, growing rushes and heath. The present landlord, Mr. Richard Huggard got to be owner of the most of the property in this division about five years ago, and it is openly stated for a very small sum. I heard it stated here it was only two or three years' purchase. He is only a middleman: Trinity College being head landlord. When the Land Purchase Act of 1903 was passed the tenants approached the agent, another Mr. Huggard, with regard to a sale of the property to them, and his reply was that nothing could be done until the report of the Trinity College Commission, which was then sitting, was issued. After that report had been issued the tenants had another interveiw with the agent, and he offered to sell at a reduction of six shillings and six pence on first term, and four shillings and six pence on second term rents which was unanimously refused as it was considered entirely inadequate, and the tenants then asked would he sell to the Congested Districts Board, and he absolutely refused. We have faith in that Board, or we would trust any Board that the Government would put up. Well, now, my point before this Commission is this, that if the Government do not give compulsory powers of purchase to the Congested Districts Board, or some such popular body that the people would have faith in, the landlord of this district will have the power of compelling the tenants to purchase as his own terms, because he is turning them fast into caretakers under the Eviction-made-easy Bill of 1896. It is only last April that the landlord had sixteen of those tenants summoned before the Petty Sessions Court to turn them out of their homes, but he did not appear this time. Better for the tenants of this district that the Land Purchase Act of 1903 was never passed if the Government does not give the necessary powers to the Congested Districts Board to purchase these poor congested estates and resell to the tenants at a reasonable price, and by improvements and road-making, which are very much required in this district, and also by purchasing 500 acres of untenanted land which is owned by the Scottish company in the next estate, and aiding some cottage industries. I hope the Commission will recommend to the Government that nothing short of the remedies which I have suggested will satisfy the people of the congested districts. To show the poverty of the district I may mention that the oudoor relief rate alone in that division is 2*s.* 4*d.* in the £. It is a union rate at present, and is a shilling in the £ all over the union, but if it is a separate rate in that division, as there is talk of making it, it would be be 2*s.* 4*d.* Between £300 and £400 yearly comes from American friends. A great many poor people deal with me, and I know the cheques they get. The people are deeply in debt to the local shopkeepers. There are five in the division. I have £800 credit given myself. I trust the people, poor as they are, because they can be trusted if they got help in any way to make a living.

Mr. Patrick Griffin examined.

Mr. Patrick Griffin.

42694. CHAIRMAN.—Where do you reside?—At Glenagrogarry, Glin. I represent the whole townland. It is one little property. I have a list here of parties and valuations, and I am sent here by the whole body of the tenants to try to get this townland scheduled as congested. There are two other properties, one to the east and one to the west, of about equal dimensions, rents, and valuations. On the property I represent there are thirty-three holdings. The actual value of the thirty-three holdings, including buildings, is £99, or £3 per holding, that is, £3 per tenant. The second term rents on these small holdings amount to £165.

42695. You want this townland scheduled?—Yes. I want the Congested Districts Board, if they possibly can, to take up the business. We were trying to negotiate with the landlord for a purchase. The landlord challenged us to sell, and he gave us the very liberal offer of 3*s.* 6*d.* in the £ abatement on our rents. We offered to buy at eighteen and a half years' purchase of second term rents, and sixteen and a quarter. There are twenty-one holdings out of the thirty-three under £3 valuation, and some of them are down to five shillings and ten shillings, and there are only seven holdings over £5. We believe that without the assistance of your Board or some other Board we can never get to buy on reasonable terms from the landlord. These rents had been raised time after time to double what they had been, and a mountain common of the land taken from some of the tenants, and put into lots, which brings on congestion. That is what brought me before you to-day. I simply wish that it should be put under your Board to buy the property on reasonable terms. It is in the electoral division of Kilfergus and Listowel Union.

Mr. Michael W. Mulville examined.

Mr. Michael W. Mulville.

42696. CHAIRMAN.—Would you kindly state what points you wish to bring before the Commission?—I would strongly recommend that the Listowel district be scheduled as a congested area under the Congested Districts Board, because it is badly circumstanced. The area is 1,773 acres, poor law valuation £4,800, the number of occupied houses 515, population 3,605, giving seven persons to each house, valuation per head of the population £1 6*s.* 3*d.* Neither the Board of Guardians prior to 1887, nor the Town Commissioners from 1887 to 1898, nor the Town Council from 1898 to 1907 have built any decent cottages to house the artisans and labourers. The result is that in the outskirts of the town, at Convent Lane, Clievragh, and Ballygowlog, there are 112 houses consisting of two rooms only. The day room, in addition to the family, contains the cooking utensils, washing apparatus, agricultural implements, and clothes; the windows in many cases broken and stuffed full of rags. In the sleeping apartment the parents and their children, boys and girls, are indiscriminately mixed; often no windows, the openings in the half-thatched roof admit light, and expose the family to the vicissitudes of the weather. Every domestic arrangement essential to the preservation of health, decency, and cleanliness, is wanting. The Town Commissioners in 1887 got a loan of £7,000, the interest on which—£330—the Town Council have to meet half-yearly, and this presses hard on the ratepayers.

42697. Mr. SUTHERLAND.—What was the loan for?—For a waterworks scheme, which turned out a partial failure, and about £4,500 was lost. The poor rate and town improvement rate average 10*s.* in the £ valuation, making Listowel the second most heavily taxed town in Ireland. The labourers are employed on agriculture, and at the two saw-mills and three creameries, off and on, not continuously, and are hard put to support their families, and in numerous instances have to beg alms and invoke relief from the workhouse union rates. Quite close to the town at Clievragh there is a dairy farm belonging to Mr. Maurice Leonard, of Killarney, a non-resident in the district. The area is 132 acres. If the Congested Districts Board purchased this dairy farm from Lord Listowel and Mr. M. Leonard, and parcelled it out among forty-four deserving labourers much benefit would result. There are untenanted lands around the town, which, if purchased by the Congested Districts Board and formed into economic holdings, would much benefit the people.

42698. We have got a return of those?—The construction of a line of railway from Listowel *via* Newtownards and Ballylongford to Tarbert would link the tourist route *via* the Counties of Cork, Kerry, Clare, and Galway, and be of great public benefit. There is an extensive bed of limestone in Listowel district, and as beds of coal occur interstratified with beds of limestone and other rocks, it would be a praiseworthy action on the part of the Congested Districts Board if they sent down a steam-power diamond rotary core boring plant or drill to prove the minerals of the district as coal, ironstone etc.

The Commission adjourned.

EIGHTY-FIFTH PUBLIC SITTING.

THURSDAY, JULY 4TH, 1907,

AT 11 O'CLOCK A.M.

In the Courthouse, Dingle.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); Most Rev. Dr. O'DONNELL WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. THOMAS BAKER examined.

42699. CHAIRMAN.—You are a member of the County Council?—Yes.

42700. You are nominated by them to appear here to-day?—Yes.

42701. Please tell the Commission anything you wish to say?—The first point that I wish to deal with is that the Congested Districts Board are not giving their necessary proportion to the County Kerry. They have been established for relieving congestion in the congested areas in 1891. At that time the population in these areas was 547,710. After ten years work of the Board the figure has been reduced to 498,000. In the congested portion of Kerry during the same period the population declined from 89,698 to 80,297, which is a decrease of at least 9,000 in the population. When the Board was established it was generally thought that its special object was to relieve congestion, brighten the homes of the poor people, and redress their grievances, but each of the seven congested counties is on an average now at least 6,000 less than its population of that date. There must be something very radically wrong, when after that Board being appointed for the purpose I have named, and being possessed of very extraordinary powers at the time, that up to the present such a result is possible. Not only are they entitled to buy estates and re-sell them at a lower sum than that at which they have purchased. Kerry possesses one-sixth of the population of all the congested areas in Ireland. Therefore, naturally we would expect if the necessary precautions were taken by those who were in authority we would be morally and justly entitled to one-sixth of the entire expenditure of the Board. They have ten headings of expenditure, such as purchase of estates, improvement of estates, industrial schemes, parish committees, marine works, inland works, industrial loans, agricultural loans and agricultural schemes. They have expended up to the present in eleven years, which is a long period for a very distressful community in the congested areas of Ireland, up to the 31st of March, 1902, one and a quarter millions sterling.

42702. Are you talking now of the whole of the congested areas?—Yes; the congested areas of the whole of Ireland. We feel that in our County of Kerry we were slighted in a very large measure, seeing that though we possess one-sixth of the entire population of congested areas in Ireland yet out of that £1,250,000 we received only £25,000 up to the present under all headings. Under the purchase of estates we have received nothing; on the improvement of estates we have received nothing; and we have received nothing under industrial schemes.

42703. There have been estates purchased in the County Kerry?—If so it is since this period of March, 1902. I am only dealing with the eleven years of the Board's existence up to that time.

42704. Mr. SUTHERLAND.—They are bought now any way?—Yes, but I am speaking of from 1891 to the 30th of March, 1902.

42705. Why are you doing that?—It is because I have the figures for that period. I have not got what has been done since, because it might be considered by you. I must make my case as strong as I can.

42706. But you must be fair to the other side?—You can give me figures from that date down.

42707. Most Rev. Dr. O'DONNELL.—Do you know of any estate offered on reasonable terms before 1902 to the Congested Districts Board which the Board did not buy?—Not to my knowledge.

42708. That was the trouble?—But we could deal with that later on. Until the Land Act of 1903 no landlord could be found reasonable enough to deal with the Board or to comply with the wishes of the people in a general way. I would like to put before you that the broad principle of the Land Act of 1903, as well as I could understand it, was based on a very large principle of the British Cabinet asking the landlords of Ireland and the tenant occupiers of Ireland to come to the conclusion of amicably settling matters and grievances between them. It meant affording the landlord a means of coming by every penny that his estate was worth, and affording the tenant occupiers as much room as they possibly could for making the best bargain for himself. All the reasonable, all the rational, all the humane feeling people within the landlord circle in Ireland at once availed of the idea. The landlords were not only given this opportunity at the time, but they were also given twelve millions of a grant to induce them to sell to the occupiers of Ireland; and the Cabinet, to my mind, from that wished the landlords to get out, and the men who were deficient of reason and who did not care to comply with the wishes of the people generally, who did not care for the harmony and peace of Ireland with the British Government——

CHAIRMAN.—I don't want to interrupt you unnecessarily, but this has got very little to do with us; if you would tell us about the congestion?—We were one of the counties who were in the shade as far as the landlord business was concerned, with the exception of Mr. Julian, and a few others, who at once availed of this, and we are of opinion that the whole attention of the Board was directed towards Connaught, and not towards giving equal treatment among the different congested areas, and I draw attention to the fact that the proper authorities did not take the pains of asking as to whether justice was being done to the congested areas. For every slip and pier that we want in our country here we must first appeal to the Congested Districts Board. They acknowledge receipt of our communication, and then the very first thing after that will be that plans and specifications of the work are sent up to them. They will then consider what subscriptions or contributions they will extend towards the work, if any. Where is the good of the proper authorities of any locality making a strong appeal to this Board when this is the result? We have need of no fewer than half-a-dozen slips most necessary to encourage our fishing industry, West of Dingle, along that small promontory, and we require a dozen bridges there, and recently at the last meeting of the Kerry County Council I got a resolution passed for a most necessary work outside Ballymore, which is a middle way for the Blasket Islands, for the different islands, for the different parts of Ventry and for the coastguards across to Ventry harbour, and for the fishermen—very industrious, hard-working men—in Ballymore, as well as those of Dingle who are obliged to take shelter in this particular spot time after time, and

July 4, 1907

Mr. Thomas Baker.

fish there, though there is no railway communication. Some time ago, I think about fifteen or sixteen years, Mr. Green and Mr. Keating, of the Congested Districts Board and the Fishery Board came down here to inspect. It was in the time of Canon O'Sullivan here. He took up the necessity of getting a deep water pier built within about 160 rods of where you are sitting now. The Congested Districts Board at that date were pleased with the idea and offered £22,000 for that slip, but owing to the difficulty of obtaining an approach thereto and owing to the indifference on the part of the people it lapsed.

42709. Mr. SUTHERLAND.—Where was that?—That was at Ballymore, at the north side of Ventry.

A member of the audience.—£32,000 was the figure.

Witness.—I have not accurate knowledge of the figures. At this time I was in America and I do not know whether my figures are accurate or not, but the gentleman who has spoken is a representative of the district on the Rural District Council and may give evidence later on, but I am only pointing to the inconsistency of the Congested Districts Board now. I have made as strong a case as I could for the work, pointing out its utility for the fishermen of the locality, and they have agreed to pay half the cost of this necessary work, as they call it, if the local authorities are willing to carry out the work at an expense of £150. This is equal to a match out of a match-box, or a bucket out of the lake. What are we to do now? We must go back to the County Council again and ask them to bring on a further resolution. By-and-bye we are met with a more plausible story than the first, and after a bit we will get tired as they did at the time of getting the offer of the £32,000. I was going to say, when I was interrupted by Mr. Long, that owing to the difficulty of obtaining from the tenant occupiers that little approach to the slip at that time the £42,000 was offered the thing was found necessary to be dropped. Now, there is no good in finding fault with the action of the Congested Districts Board in the past, but I would like to draw the attention of the Commission to the amount paid by the barony of Corkaguiny in respect of railway and harbour charges. The total amount paid to the Commissioners of Public Works in respect of the Fenit pier alone is £19,450 0*s.* 7*d.*, less amount received to date under Section 58, Sub-section 4 of the Local Government Act of 1898—£1,450 16*s.* 3*d.*, leaving the total £17,999 4*s.* 4*d.* The total amount paid the Great Western Railway to date in respect of the Farranfore and Killorglin Railways is £6,539 19*s.* 9*d.*, less under the same Act and section, £644 12*s.* 5*d.*, leaving the balance paid by the barony of £5,895 7*s.* 4*d.* The total amount paid to the Tralee and Dingle Committee of Management is £55,795 17*s.* 7*d.*, less reduction of £11,222 17*s.* 10*d.*, leaving a total to be paid of £44,572 1*s.* 9*d.* The total net amount paid to date by the Corkaguiny barony in respect of railway and harbour charges is £68,467 11*s.* 5*d.* I should say that this is a special year for the Dingle Railway. For the past sixteen years the rates would average over two shillings in the pound, but this year they have been brought down to four pence in the pound. But the total special charges levied in the barony of Corkaguiny on land are 5·43 shillings. On buildings the general rates are 7*s.* 5*d.*, and the total rate would be 7*s.* 10·33*d.* Putting those two together they would come up to nearly 13 shillings in the pound, including lands and buildings since the year 1903 to the present time. If you wish I can call out all the items.

42710. Mr. SUTHERLAND.—We have all the statistics for the County Kerry?—I wish to add now an outline of the general grievances of the district. About fifteen or sixteen years ago the Dingle railway was brought on as a burden. We look upon it as a benefit, but regard should be had to the circumstances in which it was passed. Our people here knew nothing at all about railway work. They knew nothing at all in connection with it. Experts pointed out the utility of having the line and then the whole thing was taken for granted by the people of this Dingle peninsula that whatever they were told was right. They yielded to that and saddled themselves with a very heavy burden under this railway scheme. Then the contract was given, and whoever the contractor was at that time, the passing of the line was in the hands of the Board of Works, with the result that whether they wished to favour the contractor or whether they acted independently on the part of the people, or whether they were really possessed of knowledge at all of what responsibility they were under to the community, they passed the curves which should be five-chain curves as three-chain curves and grades. I do not at all accuse them all, but I have had twelve years experience in America in railway work, and I never knew a curve to take place before crossing a bridge and immediately after. It is in approaching the bridge on either side that the immediate curve comes on, and it is across the bridge that the curve is, on the dangerous part of it. The bridge itself is dangerous enough to the public with the curves, more especially a three-chain curve, and in a great many cases unfortunately on the Dingle railway the curves are all put in on the thirty grade.

42711. CHAIRMAN.—How do you suggest that this has any connection with our inquiry at all?—I am only placing before you the burden suffered by the rates owing to those irregularities.

42712. About the curves?—The curves which take place on the land and some chains away——

42713. Most Rev. Dr. O'DONNELL.—The chairman wishes you to say how does that faulty construction of the line affect the reference to the Commission—why do you bring it before this Commission?—My answer is we look at this Commission as a special Commission from his Majesty to examine the real grievances of the districts in the congested areas, and not with any offensive point of view do I wish to convey this, but I am thoroughly acquainted with the voice of the people around here, and were it not for the confidence we have in the straightforward honesty of King Edward, we would laugh at this, as we have laughed at the past actions of Royal Commissions, but we have such implicit confidence in the man's inclinations of drawing a line of peace that it is only for that reason that I wish to bring this grievance before you; but what am I to deal with at all unless I place the facts before you?

42714. Mr. SUTHERLAND.—Have you read the reference to this Commission?—Yes.

42715. Do you remember the points on which we were asked to get evidence?—Yes.

42715A. Was railways one of them?—I do not think so, but I am only dealing with the general grievances of our district. I know that the railway inspection is being carried on, but I do not wish to dwell on this, but I am only pointing it out as one grievance. I will go from that to that branch of the Congested Districts Board which is dealing with Parish Committees. They are giving out grants to encourage the housing of the people, which is most essential to my mind. Then when a man turns up without asking them for anything, he builds a house with his own horses, his own men, his own money, immediately after he has that building erected on comes the supervisor, and on this building, which has been built by the industry, honesty, and hard-working means of his own family, and his horses, and everything else, recommends the grant of at least £50 on that house, if it is worth the name of a house. It will show you all the management, or at least how it appears to us. Then we have back at Ballydavid a coastguard station with several buildings and at least two acres of land, of the best land. That townland, buildings and land, I think for some of them it is about £3 10*s.*, and £50 is put on the unfortunate fisherman who brings his little means from the high seas, though he is not afforded a safe landing at the dead hour of night from the Congested Districts Board, which has been formed to relieve him. That is one of the grievances. Another one of the grievances which appears to me and others too to be a great impediment in the way of justice and fair play in those remote districts is this. We are a very long distance from a market here which is not considered by the landlord when he is selling to us. Take Lord Cork. He sold to his tenants above in Cork at twenty-one and a half years' purchase. He wanted 23·31 from his tenants, though it will cost one of our tenant farmers two days and a night away from home, and £2 back of it to take his little horse and sell it at the Castleisland fair within his own county. Then in the absence of industries here at home, and of factories, we will

have to pay for the clothing and for everything else down from the market in the County Cork, where he sold his property. They will have to pay for their meal and flour and bacon, their horse and cow and sheep. Even the eggs and butter will have to pay for themselves again until they reach the Cork market.

42716. Most Rev. Dr. O'Donnell.—Have you a Parish Committee where you live?—Not at present.

42717. Was there one at any time?—There was.

42718. Why did it cease?—Anything like this that is sprung on our people they do not seem to grasp the real definite conclusion of it all at once, and they did not seem to think this was worth taking up.

42719. What is your own opinion about it?—My opinion is that owing to something we cannot now fathom our houses and villages in the townlands of this district were built in clusters years ago, and I think it was from the very heavy storms existing in the country at the time, such as we have recently heard of in California, they built the houses in clusters. Now the yards are divided by stones placed on edge, and where they are now offered a paltry little item by the Congested Districts Board to remove or to build out-offices or dwelling-houses unless they go out on their lands and build right there, they are held responsible by the Board under this Parish Committee system to remove at least fifteen yards away from the house the manure heap. That we would all be in favour of from the fact that our district is visited more or less every season by fever and incurs an amount of expense to the rates, but now the paltry sum is so very nominal that owing to those clustered villages they would not pay them.

42720. Do you remember how much the grant was on the last occasion to the Committee?—I do not.

42721. At the start you said that in eleven years the Congested Districts Board had expended £1,250,000; do you know this, that that money included the purchase money of estates, and included therefore money which would be repaid to the Board when the tenants bought the holdings?—The money for the purchase of estates was £438,000, and there was the improvement of estates. You call those a loan, but it takes the money away from our people.

42722. What is the figure for the improvement of estates?—£158,464.

42723. Naturally you add that figure to the preceding one?—Yes.

42724. You understand that when the estates are sold to the tenants the Board will be recouped the price which they paid for the estates, and to some extent the price of improvements?—Yes.

42725. You have not the figure after 1902 for the purchase of estates, but it is a fact that since 1902 the Board has paid £140,000 for land in Kerry. The Board would desire to buy much more, but I suppose that you yourself hold with them that a public authority ought not to put up the price by paying too much for land?—Yes.

42726. Do you think should the Board, in Kerry or elsewhere, pay too much for the land?—They should not. They should be most cautious about it.

42727. Therefore, if the Board in those years was not able to get land at a reasonable price it should not have bought the land?—No.

42728. Now, in reference to the Ventry project, was it a good project?—I would consider it so.

42729. It was not the fault of the Board that it did not mature?—No.

42730. You have been in correspondence with the Board about other projects recently?—Yes.

42731. What exactly do you complain of in the operations of the Board?—In the first place, I want to show you to what extent our barony here was saddled under the various charges.

42732. You put it very clearly that the rates were very high. We draw from that that it would be comparatively difficult for the people to find a local subsidy. That is clear. That was the drift of your statement; but what exactly is there to complain of in the tenor of the letters you have received from the Congested Districts Board?—That they did not come up to the mark placed before them by the authorities of the county.

42733. Mr. Sutherland.—That is, that they should allow the money?—If they would be called upon, as we have in this recent case. We have it from the extraordinary burden placed on our ratepayers that even the county authorities and the local authorities are ready to saddle themselves with further responsibility in order to carry out the necessary works of the district; and, in fact, up to the time of the appointment of Lord Shaftesbury, the County Kerry might just as well have been cut away from Great Britain and Ireland.

42734. Is that really your complaint, that they are not given the whole of the money?—I did not say that at all.

42735. Most Rev. Dr. O'Donnell.—Would not you consider it some evidence of the Board's willingness to help sea works in Kerry that up to 1902 it had expended more in Kerry than in any other county for sea works?—Certainly.

42736. Are you aware of the fact?—I am, and fully admit it; and, furthermore, we are very pleased to have them, and we do not wish to throw any cold water on them at all; but it appears there should be something wrong when our population is going down instead of increasing.

42737. But you told us that that was actually happening in all the congested counties?—Yes.

42738. That is a sad indication of the state of things existing. I want to ask you this: don't you know that the parish committee schemes have been pretty well taken up of late?—Yes.

42739. Don't you know that the grants are considerable for parishes in Kerry as compared with grants elsewhere—Mayo, for example?—I don't know that.

42740. You will find that they are somewhat larger, and that the Board tried to help Kerry, where it saw that help was feasible. Are you aware that before 1902, the year you talk of, for live stock and agricultural work, for which the Board was then responsible, the expenditure in Kerry was quite up to its proportion?—No. I only took the figures up to the date which I have pointed out.

42741. You will find that up to 1902, the very date you took, for live stock and agricultural work, the expenditure in Kerry was up to its proportion then. You put your finger on what was very palpable when you said that up to 1902 no estates had been bought in Kerry?—I am very glad that they are taking steps to deal with this matter in Kerry. Really, I am not prejudiced from any quarter, but I know that the County Kerry did not receive its proportionate assistance from the Board in the past; and, as I said before, I do not come here to say anything against the Board. On the contrary, I am pleased that they are in existence; but we think it essential that they should make greater arrangements for developing our fishing industry in Ireland. That appears to me to be the most essential industry, and the providing of safe landing places is in this connection most necessary. Another matter, is that owing to the fact that our rents are gauged broadly on Griffith's valuation, it appears to me, if possible, it would be well to make a revaluation, because since the time of Griffith's valuation the climate has greatly changed, and land that was worth £2 at that time is not worth more than 25*s.* to-day.

Chairman.—I think it is pretty well agreed that if a revaluation of Ireland were to take place it would bring out a higher figure than you now have. It would not help your argument a bit, as revaluation would show a greater value than ever.

Mr. Thomas O'Donnell examined.

42742. Chairman.—You are member of Parliament for West Kerry?—Yes. The first part of the evidence which I had prepared I need not go over, as I did not know you had these abstracts of figures, which I will not occupy your time by going into. You will see that we have one-sixth of the congested districts of Ireland in Kerry. We are a considerable portion of congested Ireland, and should not be neglected. My friend tried to emphasise the fact that for a long time we were totally neglected. Naturally, each district tries to get as much as it can for itself. Generally, the condition of Kerry is this: we are a very mountainous county. A great deal of our land is not good. It is

July 4, 1907.

Mr. Thomas O'Donnell.

admitted that there is very extreme congestion in Kerry. To relieve that is a very serious question for us in Kerry who take a deep interest in the social and material well-being of the people. Thinking the matter over, we are not in the same position as men in Mayo and other parts of Ireland, where there is considerable untenanted land to be divided up among the congested areas. We have not that land. Practically, we have no untenanted land. It does amount to that. We may have a few hundred acres here and there, but practically we have no untenanted land to be divided up. The question then for us to consider is, have we any way out of the difficulty? Are we to see our people huddled together in small cottages, or going away to America?

42743. Mr. SUTHERLAND.—Is not there another alternative?—We ask ourselves that question. We feel that something can be done in the purchase of estates, the creation of peasant proprietors, the improvement of the land, consequent on that the improvement of the home. These will be of considerable advantage to us in Kerry, but I believe that the fishing industry along the coast of Kerry will be, if properly developed, a very great advantage to the county. We have, as you have seen, an excellent bay, Dingle Bay, Cahirciveen Harbour, and Dingle Harbour, and we have excellent fishermen all along the coast. You begin at Brandon, going round the Head, and coming along to Ballyferriter and Ballydavid, and on to Cahirciveen, away down the coast. We have in that district, taking those actually fishing and those engaged in curing, or connected with fishing in its various ways, nearly one-seventh of all the fishermen in Ireland, and I should say practically one-seventh of the value of the fish of Ireland. The amount of fish taken along the whole Irish coast, according to the latest returns, is not half a million for the year.

42744. CHAIRMAN.—Is that landed or caught?—Caught by Irish fishermen.

42745. And landed in Irish boats?—Certainly.

42746. That does not represent the full value of the fish caught?—No, it does not; and I don't mean to assert that it does; but the amount caught by Irish boats and landed in Ireland is that. In Scotland it is something like about £2,500,000. The number of boats that the Scottish people have, the class of boats they have, and the places at which to land those boats are all considerably better than ours. If we are to be improved in Kerry by the Congested Districts Board I would strongly suggest that one of the best ways of doing so is to give better facilities, whether by means of loans and free grants of money, or by whatever way the scheme may be devised, to give better facilities to men who are ready to take up boats to work them. It was only the other day I was able to get a fishing boat from the Congested Districts Board for fishermen in Cromane. They are now at work, and, I am happy to say, are doing well. If these men get on we will have a dozen boats there before long. Here in Dingle the fishermen have got on exceedingly well. They are very careful, hard-working fishermen. The same may be said of the men all round the coast. If they are to get on it is by devising some means whereby they may get boats and nets and training where necessary, and facilities for sending their fish to the market.

42747. Then, in your opinion, what the Kerry fishermen most require is more attention paid to boats, nets, and instruction?—Yes; and providing markets is another important matter. Some of the Dingle fishermen were with me a short time ago, and asked me would it not be possible to find a market in the inland towns of Ireland. I wrote to the Board asking them could that be done, and the Board said they were not able to do it.

42748. Most Rev. Dr. O'DONNELL.—The prices got by sending it away are considered better than those got inland in Ireland?—That may be the reason.

42749. CHAIRMAN.—There are not markets, or they don't eat fish?—I doubt that. I cross almost weekly from Rosslare, and I notice tons of fish going from England to Ireland. Where is fish going to? I have had the curiosity to inquire, and I have seen some of that fish going down to Queenstown and to Bantry. I don't know whether any comes to Dingle, but certainly I am led to think, from what I have seen, that an industry could be developed for Irish fishermen to find a market at home.

Mr. SUTHERLAND.—I saw fish at Enniskillen Station the other day which had come from Aberdeen.

42750. CHAIRMAN.—I believe that a good deal of that fish coming back from England was originally caught on the Irish coast and landed at Milford Haven and round there in order to get the best price, and the fish that is not sold there comes back again for consumption here?—There is also this point. Take the ordinary householder in the County Kerry. If he wants a small quantity of mixed fish where would he send for it? Not to Dingle. I don't see why, in a county like Kerry, there should not be some central organisation which would ensure that dealers in Cork, Dublin, and other towns and cities throughout Ireland, would have a constant supply of fish.

42751. Mr. SUTHERLAND.—That is the great consideration—the constancy of supply?—If that could be done there would be a considerable trade to the inland towns of Ireland, and more people would eat fish, and it would improve them to eat it. Kerry men, who have eaten fish, are men of brains and muscle.

42752. Most Rev. Dr. O'DONNELL.—Do the institutions ever put Irish fish in their tender forms for contracts?—All our Kerry institutions—I don't say that they boycott foreign stuff, but they naturally will be inclined to prefer everything produced at home.

42753. Do they eat Kerry fish in the asylum?—I could not answer that. I believe Dr. Mangan, who is chairman, would hardly allow that to pass.

42754. I believe you are perfectly right in saying that in the inland towns of Ireland there is a great consumption of imported fish?—Yes.

42755. But you are prepared to hear that the price the people can get for cured herrings off the coast of Donegal is bigger in the export trade than they could realise by sending them inland?—May it be in this way, that the best of everything is exported, and what little remnants are left are sold inside?

42756. The gist of your suggestion is that the Irish coast should supply the inland parts of Ireland, and an organisation should be set on foot to effect that?—Yes.

42757. CHAIRMAN.—The fish I fancy that are landed at Milford and then come back again to Ireland are caught by much larger boats than the ones you contemplate; are not you desirous of starting a market for fish caught by the longshore fishermen?—Of course my idea is to enlarge the market. If there is a market in Ireland for them let them avail of it if they can.

42758. Mr. SUTHERLAND.—Unless the supply was constantly landed there would be great difficulty, and you can only get fish regularly by going to where fish are, and not by waiting until the fish come in?—Certainly; but we have splendid young men ready and willing to work to-day, and I think there should be every encouragement and facility given to get them to join it.

42759. You must get larger boats?—Certainly. The Scotchmen and Manxmen come in and take away the fish from our doors. We don't object to them coming, but we would rather take it ourselves.

42760. It is of very great importance, as you have given it as the alternative remedy for congestion, that we should have some practical hint from you as to the methods by which it can be carried out. There was a scheme there by the Congested Districts Board. You are doubtless familiar with it: have you any suggestion to make as to the improvement of that?—I will make one suggestion. It all comes back to a want of money. Suppose a boat costs £300, and you could get £100 of that as a free grant and £200 as a loan at a low rate of interest, I think you would get a large number of fishermen to avail of that scheme.

42761. Of course the qualifications of fishermen differ along the coast of Ireland. I have always heard that the fishermen of Kerry are better than those of Mayo?—This has been the scene of a big herring fishery 100 years ago, and the tradition has not been lost yet, so if my suggestion were adopted it might do great good. The question which meets us is, we have congestion: we have no land to relieve it, and we do not want to wait for those industries that are so slow about coming. They may come in the distant future. They have not come yet, and they won't relieve congestion to-day. The fish are at the coast. Why not give us an opportunity to catch them.

42762. CHAIRMAN.—Does not it seem to you that it would be an advantage if the Congested Districts

Board were to station a resident fishing superintendent on the Kerry coast?—I should say so, and I don't see further, why it would not be possible, seeing that we would require so many boats, nets, and all other things connected with it, to establish a boat-building industry in some part of Kerry.

42763. Most Rev. Dr. O'DONNELL.—The fish, we may take it, that are caught in the Kerry seas at present are value, year after year, for £60,000; is it your conviction that if the fishing were thoroughly developed that figure would go up considerably?—I should say it would multiply by ten. I do not say they should remain in Kerry, but go wherever the fish are if they had boats.

42764. Mr KAVANAGH.—In your memory, what has caused the falling off in Kerry?—Fish are very peculiar animals, and in some seasons won't come. Again, the population has decreased. There is no county, congested or otherwise, where the population has gone so much as in Kerry. Take Donegal, Mayo, and Kerry. In fifty years Donegal has sent away 201,000, Mayo has sent 164,000, and Kerry has sent away 211,000, though our population was considerably lower than that of Mayo or Donegal. The proportion here is very much larger than in any other county in Ireland. I am afraid that a great many fishermen have gone.

42765. If the fishing had continued to pay do you think would the population have gone?—The boats which the fishermen had on the coast of Kerry until recently were small canoes, and did not go far from shore. Possibly the fish did not come so near during the transition period. I cannot really answer that.

42766. Most Rev. Dr. O'DONNELL.—In connection with those districts, it is a curious phenomenon that the only spots in Mayo and Donegal where the population has not gone down are the bog and mountain tracts; on the good land the population has gone down?—Mr. Baker gave you some figures dealing with rates. I won't go into these, but I will just mention one fact. Dingle town at the present moment has neither light, nor water, nor sewage. I have not the figures for the present year, but last year the rates varied from 9*s.* 11*d.* to 11*s.* 4*d.* for the town. Of course two shillings for the railway was in that, but it is an extremely high rate for a town which has neither light nor water.

42767. Possibly the reason why it is so high is that it is a town with a poor area outside?—It is almost all in the town, which has a population of 2,000.

42768. Does it include any of the poor rural district?—A small part of it, but it is not the rural district makes the rate high. The Dingle people might be asking the Congested Districts Board at some future time to do something towards helping them to drain or light the town. I don't go into that. Our pauper statistics are worse even. I have them here from the Local Taxation Commission Report. All over the county we pay an immense amount of money for the relief of the poor.

42769. CHAIRMAN.—Is it the worst of all the congested areas?—By far the worst.

42770. Mr. SUTHERLAND.—Was this the only alternative you have for relieving congestion?—That is one. Dealing with the question of land I have certainly to say we have not had many estates purchased in Kerry by the Board. The Board are not to blame for that. I have found the Board, whenever I was able to offer them an estate at a reasonable price, always most willing and anxious to do everything in their power. I don't wish to make any charges, but the fact is that the landlords would not sell, and if the Board did not buy you cannot blame the Board for that.

42771. CHAIRMAN.—Can you give us, or send us, concrete cases of where estates have not been bought owing to the refusal of the owners to sell?—Yes; I can give them to you now.

42772. I don't want them now, but you might let us have them afterwards?—Very well. Lord Ventry's estate practically comprises the greater part of this peninsula. It is a very large estate, and is fairly congested. The representatives of the tenants, parish priests and county councillors, met in Tralee over twelve months ago, and made a proposal to Lord Ventry, asking him to sell to the Congested Districts Board. In order to be extremely fair, because we were very anxious to purchase, we made two or three alternative proposals. One of the proposals was, we were ready to give Lord Ventry such a price as, with the bonus, if invested at 4 per cent., give him his average net income taken over any period he likes, ten or fifteen years. We also made the offer to have the price to be fixed by the Congested Districts Board, because it would be impossible, when you have holdings as you have there in the Cromane district to buy direct.

42773. Is it a settled estate?—That I cannot say; but to fix the price by individuals where you have, as I can show you, in Cromane five or six men joint tenants on a valuation of £5, with little patches scattered here and there, without any regularity or continuity, the purchase by the individual tenants of holdings such as these, so scattered and so remote would be an impossibility, and of course the little reduction they get is really no great matter to them. That is one particular case.

42774. Mr. SUTHERLAND.—Would you say it is eminently fitted for the Congested Districts Board to deal with?—Not alone eminently fitted, but so far as my power goes I will do everything in my power to prevent it from being sold except through the Congested Districts Board. This is an extremely old part. The old village community practically exists in parts of this district. You will find, say, ten, or a dozen, or twenty houses all gathered together. There is one cluster as you come on from Annascaul to Lispole. Any person to see those would know that they are hotbeds of disease and all sorts of trouble. It would be a scandal to allow estates to be sold in that condition. The number of people driven into hospital by fever is something that we all feel very much troubled about.

42775. CHAIRMAN.—Any system allowing the property to pass straight from the landlord to the tenants would be stereotyping the old conditions?—It would be criminal, because this is the time to give the people a new start in life, and if you continue the old wretched houses you will never get out of the difficulty.

42776. Therefore the property ought to pass through an improving body like the Congested Districts Board?—It is eminently suitable for the Congested Districts Board. They have one estate purchased at Killorglin, and on another estate they are hard at work at Glenbeigh, and I am very pleased with the excellent work they have done and the thorough supervision they have given. Take a few instances on this estate of Lord Ventry's. Take Cromane in Killorglin electoral division, Killarney rural district. In Cromane Upper you have 95 holdings, with a population of 472 and a valuation of £69, or an average per head of 2*s.* 10*d.* I don't think that in the worst part of Connaught you can equal the condition of those poor people. The houses they live in are a disgrace to civilisation. It is impossible for men in such houses to rear families and educate them to have an ambition or anything of that sort. I have taken my figures from the census returns for 1901. You won't find them exactly in the abstract before you. I have taken seven townlands in the Killorglin division with a population of 1,697, and a valuation of £691, or an average of 8*s.* 1*d.* That is on Lord Ventry's estate.

42777. Mr. SUTHERLAND.—The Congested Districts Board bought an estate near Killorglin?—Yes, the Rea estate, just outside. As they were circumscribed they could do very little. They did all they could.

42778. Most Rev. Dr. O'DONNELL.—According to our returns the Caragh electoral division has a still lower valuation than Killorglin?—Taking it as an electoral division, yes, but if you look over all Donegal, Connaught, and Kerry there is not a townland in any of them to equal the townland of Cromane. It is just right out on the road from Killorglin to Glenbeigh. You can see it by turning slightly out of the way. The Wynne Estate has been purchased by the Board in Glenbeigh. Cromane is on the sea, bordering Killorglin and the Wynne estate. I take another portion of Lord Ventry's estate. The rents, I am sorry to say, have not been lowered through the operation of the Land Act of 1881. In those remote districts, as I suppose you must have found, the tenants do not so readily go into Court as in districts where they appreciate the value of Acts, and in addition, for a number of years Lord Ventry did not collect his rents either harshly or cruelly. He took in many cases a gale's rent for a year's rent. The

July 4, 1907.

Mr. Thomas O'Donnell.

result is that very many of them are still without any abatement under the Act of 1881. To show you how many do exist up to the present, in this particular district, over 350 tenants have served notices to have fair rents fixed for the first time within the last couple of months, because the year's rent would now be collected within the year by a new agent.

42779. CHAIRMAN.—Before that were there abatements given?—I don't know that anybody knows the system under which they collected them. It was a sort of tri-na-cheile system; they would take anything they got, perhaps as arrears. I have some instances of receipts which were given, which were typical on Lord Ventry's estate:—"Received on the 12th of October, 1904, from the representatives of Cornelius Brian and sons, out of holding at Loghart, the sum of £5 10*s.*, being half-year's rent due Lord Ventry up to and ending the 1st day of November, 1899. Cash £4 13*s.* 6*d.*, temporary reduction sixteen shillings." The man who is representative of the tenant is sixty-five years old. His father is probably dead forty years. He is still the representative of the tenant; and so the thing goes on.

42780. Mr. KAVANAGH.—Surely if he had applied to have his own name put in the agent would have done so?—No; they have applied. That is the very first question I asked them, and they told me not.

42781. On what ground did they refuse?—I don't know. I see no grounds. I have another receipt where six men are on a holding of £5 10*s.* valuation. They have divided it into plots, but they will not get different receipts. There they are getting one joint receipt. The fact is that these rents have not been reduced.

42782. How does the rent compare with the valuation?—I have taken a few instances. I did not want instances that were very bad, but typical instances. John Tretton, poor law valuation £4 5*s.*, rent £8 5*s.*, and the rent before 1872 was £1 8*s.*

42783. Mr. SUTHERLAND.—That £8 5*s.* is not a judicial rent?—I don't think so.

42784. They did not go into Court?—Some went into Court, but the great majority did not. Through the operation of the Act of 1887 hundreds and hundreds of Ventry estate tenants became future tenants.

Mr. T. O'Flaherty.—A great many of these have not gone into Court on account of their fear that the arrears would be recovered if they went into Court.

Witness.—Arrears should not, and do not, keep men out of Court, but the fact is that the agent did use those arrears as a threat, and whenever a man did go into Court he was asked for arrears and could not pay them, and the result was he did not go into Court. Now there are 350 going in.

42785. CHAIRMAN.—What is the state of the law with regard to arrears?—A tenant can go into Court and have a fair rent fixed irrespective of whether he owes arrears or not, but if a landlord wishes to sue for arrears he can do it. He can collect the old arrears quite irrespective of the reduction given by the Land Court. If a man goes into Court for the first time in 1907 to get a fair rent fixed and owes five years arrears the landlord, if he likes, can eject the man for two years' arrears and recover the remainder as an ordinary debt, and go on recovering these if he wishes.

42786. Mr. SUTHERLAND.—Can they not apply for a stay of proceedings?—If they go to Court and fight the case out the judge might grant an injunction.

42787. CHAIRMAN.—Do you wish us to understand that in these cases there was more or less a fear among the tenants that if they went into Court there would be action taken, or was there any actual threat used?—I should say that while Captain Demoleyns, Lord Ventry's brother, was agent on the estate, as far as I have personally known myself I never heard that he used such threats. He did not collect his rents harshly, and possibly the tenants felt that if they paid a gale in the year they might not do much better if they went into Court, but now there is a different agent.

42788. At that time the actual fact that they were in arrear was not the reason that they did not go into Court?—There are various ways in which a man's being in arrears would prevent him going into Court. Without there being any actual threat there seems to be a hazy belief going about that if a man went into Court his arrears could be and possibly would be enforced. I don't want to make charges which I cannot prove. I don't know that of the agent who was previously there. I have a number of other names where the valuation is about half the rent in the Castlegregory district.

42789. Mr. KAVANAGH.—When reading out that receipt you also read out temporary reduction?—Certainly. Generally about three shillings in the pound was always practically given, but I am afraid there are cases where that temporary reduction was withdrawn for reasons that I don't wish to go into. In the Castlegregory district I find a case where four men are joint tenants of holdings. The holdings in this district are practically all dependent on milch cows. Their receipts, you may take it, are what they get for their butter, bacon, and calves, and whatever else they make. We have a fair idea of the value of holdings from the number of milch cows they carry. In the case referred to, for 11 milch cows there is a rent of £65, which is practically £6 a cow. That is, of course, an impossible rent. I have the same from Cloghane, where the rent is twice the valuation, and also in many other places. The Mahony estate at Dooks is being offered to the Board, I am happy to say. It is very near Cromane, and is almost as bad as the Cromane district. The agent told me the other day that they would offer it to the Congested Districts Board.

42790. Mr. SUTHERLAND.—Has it got rundale also?—I think so. The tenants there also all owe arrears. I have taken also for your guidance the prices paid for estates purchased. Take one estate purchased under the Ashbourne Act, the Denny estate. These are the old rents unreduced by the Land Court. One man's rent was £48. His annuity is £12. The rent of another was £50, and his annuity is £14. That is generally from 70 to 75 per cent. reduction.

42791. CHAIRMAN.—Do you say that one man's rent was £48 and his annuity is only £12?—Yes, and the next man's rent was £50, and his annuity is £14. Here are some other cases: rent £21, annuity £7; rent £14, annuity £3 10*s.*

42792. These are tremendous reductions; there must be some special reason for that?—Except that the old rents were extremely high and that the present annuities are quite high enough.

42793. Do you mean to say that up to the time he bought one man's rent was actually £48, and that his annuity is only £12?—Certainly. On Lord Ventry's estate the tenants who have gone into Court are getting a reduction of from seven to ten shillings in the pound at the present time. The present rents are nothing more than nominal rents. If there is to be a purchase, then they must be reduced almost as much as in the Denny estate. In reference to the question of replies from landlords, I may read you the following letter from the Bursar's Office, Trinity College, to the Secretary of the Tenants' Committee:—

BURSAR'S OFFICE, TRINITY COLLEGE,
June 4th 1904.

Knockamon Estate.

To Mr. DANIEL P. O'BRIEN.

SIR,—In reply to your letter of 21st May on behalf of yourself and other tenants on the above estate, I have to say that the agent of the estate has had full direction from this office as to the terms of sale to the tenants. You can see him on the matter. I have to remark, however, that the number of years' purchase does not concern you, as you have no money wherewith to buy. You have only to consider what reduction in your present rents will be made when they are changed into instalments for a limited period to the State, a present being made to you all of the fee-simple of your farms, without any payment for it. All offers which you may make must be within the zones prescribed by the recent Act. Terms of purchase under former Acts, such as are quoted by you are quite irrelevant, as no such terms were ever offered to tenants under those Acts as are now offered under Mr. Wyndham's Act.

Yours truly,

ANTHONY TRAILL,
Provost.

42794. Mr. SUTHERLAND.—That is not accurate?—I don't say that it is accurate, but it comes from Trinity College. Mr. Traill signs it.

42795. CHAIRMAN.—That is to a Trinity College tenant?—Yes. This is practically the style of reply we have to contend with.

42796. Most Rev. Dr. O'DONNELL.—You would not consider that an argument worthy of a University?—No; nor of a National School, but this is just a type of the style of treatment that we have been meeting with, when we met fairly, landlords from whom we wanted to buy, and of course the thing is far worse in the congested districts than it is in the richer districts. Take Listowel. Mr. Talbot-Crosbie has sold, and Lord Listowel has sold. Mr. Talbot-Crosbie has given fairly good terms, as I understand. The landlords in this wretched congested district will be expecting exactly the same prices for their slums as for these better properties. The thing is impossible. We cannot pay them and we won't.

42797. What proportion of the gross rent does Trinity College take from its estates in Kerry as head landlord?—I believe that Trinity College gets out of our county £10,000 a year, and according to the last reports which were published I think they get as much as your own county.

42798. The reason I ask is this: on the Leitrim estate in Donegal it takes two-thirds or three-tourths of the rent?—In Kerry, Trinity College is itself direct immediate landlord of a considerable portion, and also head landlord, with middle landlords intervening in other places.

42799. Mr. SUTHERLAND.—How many in some cases?—I know one case in which there are seven intervening.

42800. CHAIRMAN.—You don't know, where it is head landlord in this county, what proportion of the gross rents it takes?—I could not say. In my constituency there is not a great deal of Trinity College land. Dr. O'Leary is here and knows the district pretty well. He will be giving evidence, so I do not want to go into that.

42801. That was an interesting letter you read, but it was hardly an answer to my question about the attitude of landlords with regard to the Congested Districts Board?—I referred to Lord Ventry's case first. His reply was in so many words putting us aside. I can send you our letters of inquiry and his actual replies. I don't know whether it comes within the scope of your inquiry, but I am extremely interested in the housing question, because the figures for Kerry are extremely bad. Although we have built a large number of labourers' cottages and are doing all we can, as much as in any other county, I find that we have here in the County Kerry 3,874 houses of what are called the fourth or worst class. In the Dingle Union, for instance, we have twelve houses of one room, with seven in the room; in the Kenmare Union there are ten with seven; in the Killarney Union, forty-eight with eight in the room; in the Tralee Union there are twenty-nine with eight, and twenty-three with nine, and, of course, that does not give anything like an idea of the actual condition of those rooms and their present surroundings. Those 3,784 houses are of the last class, and, if possible, should be swept away. They are all practically in the congested districts, and when improving the congested districts you should not deny improvement in the housing conditions of the people.

42802. Mr. SUTHERLAND.—Is there land attached to these houses?—I cannot answer that. I have taken those from the Census returns, but I should say there is. Then take the small farmers who pay rates. There are hundreds of those, I should say, among the 3,800 of the very poorest type who cannot be relieved under the Labourers' Acts, and it is a serious question for those who come into that class if their houses cannot be improved. I don't know would it be possible to have money granted to those poor people at rates similar to those which apply in the case of labourers' cottages. It would be an extremely useful thing and would have a great effect in checking disease and lowering the rates which the people have to pay, as well as raising the moral tone of the people.

42803. CHAIRMAN.—I suppose that the sanitary authority, as a matter of fact, can declare these houses uninhabitable?—Yes, but you won't get the sanitary authority to do that when the occupants have nowhere else to go to.

42804. The sanitary authority has got that power?—Certainly.

42805. Is there no corresponding power to compel the owner to build a better house. If the sanitary authority declares a house to be unfit for human habitation is the only result of that action to put the man out?—Yes. The final result will be that the sanitary authority will do nothing; and that is regrettable in a county like this, where we have so much bad housing, and where there is a need for general improvement. I don't think the question of sanitary authorities comes within the scope of your inquiry, but I am afraid that the sanitary authorities in the various districts will not be disposed to act very strongly in the discharge of their duties. They are local men and don't like to be harsh, but if facilities were given to those poor people for building houses and money lent at a cheap rate of interest, then it would be essential that there should be one person, say, in the whole County Kerry, who would have special knowledge of all the necessary proceedings. He should be an engineer as well as an expert in sanitary science and public health, and his services should be available for these poor people in the matter of plans and drawings for the building of houses, and he could insist afterwards that those people should keep their places well, but you cannot insist on men keeping their places well until they have such places to keep.

42806. Most Rev. Dr. O'DONNELL.—You consider that small occupiers with very small holdings in very many cases take the place of the labourer?—Yes.

42807. In those districts the small occupiers do most of the labour?—Yes.

42808. You have not much of a distinct labouring class?—Yes.

42809. That being so, you would consider that some of the advantages extended to labourers elsewhere should be extended to these men who take the place of labourers?—Certainly; in the shape of money at a low rate of interest.

42810. But you would not consider that they would require quite the same amount of public money as labourers?—Not at all. I would not have money wasted on too much inspection and too much red tape.

42811. At what rate should the money be advanced to them?—That is the first question. The Belgians, who are not as rich as the English, built 100,000 houses for their people at 2½ per cent. interest., while with all our Labourers Acts we have only 20,000 labourers' cottages in Ireland. Of course we will soon have as many more.

42812. CHAIRMAN.—Labourers' cottages schemes are carried out with the aid of the county rate?—Yes, but with money borrowed at extremely low rates, 2¾ per cent. interest, with 10 shillings sinking fund.

42813. That goes on as a rate on the district?—Yes, but the rate is extremely small.

42814. It may be a shilling in the pound?—Yes; 1*s.* 3*d.* under the new Act.

42815. You would not suggest that a part of the county like this could bear such a rate?—No. There is a specified class of men who are benefited under the Labourers Acts. Only men who have less than a quarter of an acre of land can have houses improved or built or get an allotment of land, but there are hundreds of small farmers who are really no better off than labourers who cannot get any assistance whatever for improving their houses, and whose houses are actually as bad as those of the labourers.

42816. What are the terms of Board of Works' loans?—Impossible.

42817. Most Rev. Dr. O'DONNELL.—The Board of Works at present charges the Congested Districts Board 3½ per cent. on its loans, but you are aware that under the recent Labourers Act the interest is 2¾ per cent.?—Yes.

42818. A further inducement is that one-third of the expenditure is remitted?—Thirty-six per cent. is remitted.

42819. Then the balance of the expendiutre is divided between the occupier and the local authority?—That is it.

42820. So in that way, even for a considerable scheme, the local authority has not so much to bear?—Take Dingle Union, with a small valuation of £23,000, we could build 100 cottages for a penny in the pound under the recent Act.

July 4, 1907.

Mr. Thomas O'Donnell.

42821. You don't say with reference to the improvement you advocate that the same finance should apply, but you would desire something like that?—No, but certainly I would suggest that one part of the scheme would be that they would get money at the same rate of interest.

42823. You know the improvements that have been done under the parish committees?—Yes.

42824. For the poorest classes of Kerry you would not consider the amount of these subsidies is sufficient?—If you have nothing else than the parish committee scheme I would consider that it is not sufficient. I consider that parish committees, where taken up, have done some good work. My own parish, Killorglin, has been working it for three or four years, and got a few grants of £60 and £80, and is now getting £250. Splendid work is being done. I went over this western district to try to get them to take up this parish committee scheme. I was not nearly as successful as I would like to have been, for many reasons. It is impossible to get these small tenants who have loads of arrears hanging over them to make any improvement, because they have the natural dread that when they improve these improvements are the landlord's, or may become the landlord's any day the landlord pleases. While they owe arrears they may be turned out, and they don't know where they are. Thus they will not improve. But once make those men peasant proprietors. Make them feel that they have security that the result of their work is their own, and then you will get them to take up parish committee schemes.

42825. In other words, the struggle for existence is so great at present that they cannot look to a more comfortable existence?—No; it is sad, but true. We have a considerable amount of limestone, though not much in this particular part. It is an extremely important thing that when estates are purchased by the Congested Districts Board the limestone quarries that are not at present worked should be secured. Of course, if they are private property they cannot be interfered with, but where there are undeveloped limestone quarries they should be retained for the benefit of the public, the improvement of the houses and of land. Some large general scheme, such as Mr. Doran suggested, for getting lime here and there through the various parts of the county is one of the best things that can be done for the people.

42826. Mr. Sutherland.—Is there much limestone in Kerry?—There are lots of limestone in Kerry, but not much in Dingle. I don't know whether you would go further than with lime, and experiment with other minerals. I think we have other minerals, too.

42827. What minerals have been indicated?—We have near Castlemaine an old lead quarry. I have got a sample of rock I took from it some time ago. I gave it to a mining expert from Klondyke. He took it across to America, and got it assayed in America, and the result of the assay was about 90 per cent.—the largest he ever saw. He actually went up the mountains with me, and said—"They are made for something; is there mineral of any kind here?" He took up several specimens of rock, and got them assayed. He actually went down to the mouth of the River Laune, and said—"I will find a bit of gold here before I leave." He picked up several bits of quartz, and found a neat little strip of gold. There were coal and iron mines worked in Glencar about 150 years ago, but that was done by Welshmen, and not by Irishmen.

42828. Most Rev. Dr. O'Donnell.—Lime is a necessity for land for agricultural purposes?—It is absolutely essential. The land in many places is simply running out; it is getting perished for want of lime.

42829. In several parts of Kerry it is difficult to find lime for agricultural purposes?—Very difficult.

42830. Would not a scheme, if it could be worked, to supply farmers at a reasonable cost with such lime as they require be a useful project?—Undoubtedly.

42831. You think lime should be sold at the cheapest possible price?—Yes. I don't know how far you would go in incurring a loss, but I certainly say that the Congested Districts Board should make no profit out of selling lime to farmers.

42832. Would not it be good policy to make some loss if, through the loss, the people were educated into a more general use of lime?—I believe that lime is not being used sufficiently owing to various causes—the difficulty in finding it, and the poverty of the people. You certainly should be prepared to have a loss for a couple of years. After that period, when those people saw the great advantage of it, possibly you could lessen the loss.

42833. Do you think if the Congested Districts Board, or any such body, offered lime supplied at a price under its value would a certain number of farmers in different districts be induced to guarantee that they would take a definite quantity of lime year after year, say, for a period of three years, at a fixed price?—I would have no trouble in arranging it myself all over the County Kerry in a fortnight.

42834. Mr. Kavanagh.—What price do you pay for lime?—At privately-owned quarries about 1*s.* 6*d.* a barrel, but I think our barrel is larger than other barrels.

42835. Chairman.—Is there grazing on these mountains?—On some of our mountains there is very good grazing. Up in the Reeks there is not; they are craggy; but on those mountains about this peninsula there is very good grazing.

42836. Right up to the top?—Right up to the top; for sheep and small cattle.

42837. How are they grazed? Are they held in small holdings?—I think they are held in common by the lowland tenants: the right of so many collop on the mountain. That is what I believe is the case.

42838. If the land here was sold largely there would have to be an arrangement made for communal grazing still upon the mountain?—I should say so.

42839. Do you know anywhere about here where there is any part of the mountain that is valueless for grazing purposes?—There are parts of the mountains that are valueless; but, speaking generally of the mountains on this particular peninsula, you can graze them higher than most mountains in Ireland.

42840. The reason I ask you is that we have had one or two witnesses before us at different times who have urged that if the Board purchase estates in such districts something might be done towards the afforesting of the mountains?—I think in co-operation with the County Councils that is one of the coming things for a county such as Kerry. Reafforesting is a large question, and I did not want to enter into it, afraid of delaying you too long. Our people in Kerry are becoming very much interested in the matter. If the mountains become private property there will be some difficulty.

42841. So long as the mountain is useful for grazing it is difficult to get the consent of the purchasers to have it used for afforestation?—If it were more valuable under trees I don't think that that difficulty would intervene.

42842. Do you know yourself of any mountain about here which, in your opinion, would be more useful for afforesting than for grazing?—I am not an expert on afforestation. I don't know whether the western breezes of this particular place would affect the growth of trees. Some people tell me it would. I don't think any of us here are sufficiently expert in the matter to give an opinion. Having dealt with the land, the fisheries, and the houses, the only further thing I have to say is that the Congested Districts Board has not, up to the present, taken on itself the starting and developing of industries. Even with the fisheries and the general improvement of land, we in Kerry will still, I am afraid, have to migrate. If there is any contemplated enlargement or change in the Congested Districts Board in counties such as Kerry, where we have no land available for division, it seems necessary to turn to the development of some industries associated, of course, with already existing ones, and the land; for instance, butter, bacon, eggs, and all the other things connected with it. The little town of Dingle exported in 1750 linen to the value of £60,000 per annum.

42844. Mr. Sutherland.—Manufactured linen?—Yes; made on the old hand loom, of course. There were hundreds of looms at work then in this town. Its population then was nearly three times what it is now. We had industries then. We have none now. The old loom is practically gone. There are a few remaining. To revive them, of course, seeing that there has been such a lapse of time, and that the continuity was not preserved, is difficult; but some people make a mistake in thinking that the Irishman is not

capable of becoming an economic unit and industrial expert. I think he is quite capable of becoming it, and learning to work continuously and with great skill, as much as any other man; and that will be for the future for the men who wish to improve the conditions of counties such as Kerry a very important matter.

42845. CHAIRMAN.—What was the reason for the absolute disappearance of the loom?—I suppose it was the death of the unfittest. The shop stuff came in.

42846. Mr. SUTHERLAND.—Did you ever hear of the Act of Parliament that came in?—Yes. The Navigation Act and various other laws that killed Irish manufacture were since 1750.

42847. CHAIRMAN.—In your opinion, the disappearance of the linen industry was due to trade laws?—Yes, entirely due. But I thought you referred to the recent disappearance of the looms, because they did disappear.

42848. But the reason that the trade died was not the adoption of machinery?—Not at all. I am perfectly satisfied that Irishmen, if they had been allowed to develop naturally, and unnatural laws had not been brought in to destroy their trade, would have been able to develop themselves and bring their industries up-to-date quite as well as English and Scotch men or anybody else. It is the merest fallacy to say that we are not capable of development. You have some of the finest brains and muscles in remote glens. I have met them in America. The head of Armour's, in Chicago, is an Irishman, and, I think, a Kerry man; and so on all over America. Our brains are going from us.

42849. Mr. SUTHERLAND.—Would you think that the revival of the manufacture of linen would have to be accompanied by a revival of the growing of flax, which was a great thing in Ireland at that time?—I remember myself as a child to have seen flax sown, worked, and done in the old farmhouse. I am a farmer's son. I have done the work myself, and have seen it done, from beginning to end. *July* 4, 1907. Mr. Thomas O'Donnell.

42850. Most Rev. Dr. O'DONNELL.—In those days used farmers here only grow as much flax as did themselves?—Yes. All the old people in my father's time grew flax for all home purposes. You would not see a trace of it to-day, except some of the old linen made in that period, twenty or thirty years ago, which still survives. As far as I know, none of it is being made at present.

42851. In that period, when the export trade was so considerable, flax must have been generally grown around here?—I should say so. You will see traces of cultivation all over our mountains, where now no man would think of cultivating.

42852. Mr. SUTHERLAND.—Was that flax?—Cultivation of various kinds. To make good the debt due to us for the removal of our brains and money if England would depart from her free-trade principles and give us bounties. If the point is truly inquired into it is found that if we have no industries it is owing to the treatment we got.

42853. But the positive laws forbidding the export of Irish dead meat or of linen to England is a different thing from free trade?—Yes; but the laws were there sufficiently long to destroy the industry.

42854. Most Rev. Dr. O'DONNELL.—It is difficult to get a start now?—Yes. It would not be if we had control of our own revenues. In conclusion, I should mention that there is a strong desire among those divisions that are not scheduled as congested—there are two or three in our barony—that they should be scheduled. The District Council have passed a resolution, and sent it on, and they asked me to bring it before you to-day.

Mr. TIMOTHY O'FLAHERTY examined.

42855. CHAIRMAN.—You are Chairman of the Dingle Rural District Council?—Yes. I wish to make suggestions about improvements in this district—the reclamation of waste lands. At least a fourth of the land of the Dingle Rural District is in something approaching a primitive state. Under altered circumstances, viz., by a proper outlay on draining, subsoiling, and fencing, such at present semi-barren land could be converted into homesteads, where those now seeking to eke out a livelihood in foreign lands could live, and support families in moderate comfort. It is no stretch of the imagination to assert that, if only the improvements above suggested were carried into effect, the Dingle Rural District would be able to maintain double its present population. With regard to population, we find that in 1841 there was a population of 293,880 in Kerry, and that it is now reduced to 165,000. I recollect, in 1841, I saw in Castlegregory district a fleet of twelve boats, each of which would carry ten tons. To-day there is not a boat there. The people lived mostly by fishing then. They are confined to-day to a very narrow strip of land. It was a most important fishing station in its day, and if the fishing were encouraged our country would not be congested at all. The district under consideration is in all but an absolute state of nudity, as regards plantations. In its bogs, and to a large extent, along its coast line, are to be met beneath, as well as projecting above their surfaces, trunks of trees, the remains of magnificent forests that once existed in the respective localities. Owing to the proximity of every part of the Corkaguiny peninsula to the Atlantic, there is, in the absence of shelter afforded by plantations, an unprotected exposure to cold northerly winds and other chilling and ravaging blasts, often causing, if not total destruction of crops, at least irreparable injury to agricultural industry, and, as a consequence, impoverishment to those engaged in it. Thousands of acres of glens and mountains at present of no practical value could, by afforestation, be converted not only into sources of profit, I may say of wealth, to the country, but may further become, through the influence that foliage exercises in purifying the atmosphere by absorbing carbonic acid and other deleterious gases therein, and evolving pure oxygen, a powerful and universally sanitary agency.

42856. Where is this land that you think could be afforested?—All over the barony of Corkaguiny. Mr. Timothy O'Flaherty.

42857. Is this land used for anything now?—Part of it is pasturage, but beyond the line of pasturage there could be plantations, which would afford necessary shelter; besides the fuel is getting very scarce, and these trees would afford fuel to the people, who are in a bad state owing to its present scarcity. They cannot afford to buy coal, and if there were no trees they would have to go thirty or forty miles away.

42858. Do you mean to say that turf is running short here?—Yes. The bogs are running short. Extensive localities within the peninsula have been rendered totally valueless by flooding from tides and rivers. At least a third of the Castlegregory townland is actually submerged during the prevalence of spring tides. I myself in my younger days saw excellent crops of hay, potatoes, turnips, and mangolds produced where now only the seagull, the curlew, and the snipe find a congenial home. The tenantry, whilst they had cheap labour at their command, were able to temporarily ward off the destructive agencies; but, owing to the high rate of wages arising from the scarcity of day labourers as the result of emigration, the temporary embankments had to be abandoned, free scope had to be allowed to the encroaching tide, with the consequence of the periodical submergence of a productive tract of country. A similar condition of affairs prevails in other localities throughout the barony, too numerous to be here indicated, demonstrating, as it does, that our country may, by the economic expenditure of capital, be made to support in greater comfort than is obtainable in foreign countries, the thousands of her children that are annually abandoning home and all its endearing associations, to become the "hewers of wood and the drawers of water" in the land of the stranger. Tillage and as a consequence, the growth of green crops, artificial grasses, cereals, &c., have of late years, so alarmingly declined, from the scarcity of manual labour, that localities that in years gone by, looked like so many smiling and attractive gardens, are now prairie-like, matted over with moss and stunted grass. A district, the majority of whose inhabitants depends to a marked extent on the harvest of the deep, necessarily requires, to render that harvest available and profitable, facilities in the line of new piers, the re-

July 4, 1907.

Mr. Timohty O'Flaherty.

pairs of existing ones, suitable boats and fishing gear, to enable the industry to be carried out with profit to those engaged in it, which, in the absence of capital, becomes an impossibility that cannot be overcome; hence, state grants, or loans at a low rate of interest become indispensable to the realisation of the full benefits of, or even to a tangible approach to, the securing thereof from the surrounding teeming ocean, a remunerative reward in the shape of its finny wealth. The law declaring illegal the making of roads to turbary or bogs, to graveyards as well as roads that come under the designation of *cul-de-sac*, materially obstructs the progress of the district, and should, in the interests of the community, be either radically altered, or obliterated from the Statute Book. Bridges in many localities within the electoral divisions of the Dingle Rural District become absolutely indispensable. An increase of the grants to Parish Committees and an extension of the operations of these useful bodies, become indispensable *desiderata*. The funds allocated by the Congested Districts Board in aid of improving the dwellings of the poor, as well as of the occupiers of small holdings, could not be devoted to more worthy purposes. Where, as in the Castlegregory dispensary district, the grant has been availed of, and practically and efficiently administered, a very manifest alteration for the better in the condition and appearance of the lowly homes of the peasantry, cannot fail to attract the eyes of the most non-observant traveller. It would be productive of an incalculable amount of good, if the grant in question were extended to holdings of higher valuations than those to which it is at present restricted. In my own neighbourhood there was formerly a village resembling an African hamlet, from the appearance of its dwellings. In the Castlegregory district we have a grant from the Congested Districts Board of about £175 a year. The consequence is that that village now is a wholly renovated place, so that you would like to pass by and see the appearance of the houses at a distance. The village is Kilshannig. With regard to limestone, we have hillocks of that material down at Magheries which have never been turned to any use; whereas if there were some lime-kilns there it would afford enough lime for the whole district. There is now what we had not before—a good road leading to the place. Of course in marshy and boggy land nothing is so necessary to improve them as lime, and if this limestone that exists with us in such abundance in Maharies peninsula were availed of and turned to use, it would not only be a source of profit to those on whose land it exists, but a source of profit to the farmers of the district who could make use of it.

42859. What prevents them from working it now?—Some time ago, until we took action in the matter with the parish priest at our head, there was no road leading into the Magheries. We got a road made. Previous to that no one could go there for lime or anything else but to drag his car along the strand with horse and car sinking into the sand.

42860. Now that you have got the road what prevents people from going there?—There is also another road for which we may look to the Congested Districts Board. There are two villages that require it, and I believe the matter was brought under the notice of Mr. Thomas O'Donnell, M.P. He said it would not require more than 100 perches of a road in length. The two villages, Cutteen and Garrywilliam, are still isolated.

42861. What prevents them from working the limestone?—I cannot say; want of energy, and another thing, they say they have no fuel.

42862. Must you have coal for burning lime?—Yes. If the Congested Districts Board came to an arrangement with these parties on whose land the lime exists to set up lime-kilns and get the lime burned the Congested Districts Board would suffer nothing by it, and it would benefit the whole country.

42863. I should have thought from what you said that it was possible to get an opening for some local men to do a good business with this lime?—There are no men with capital in the locality.

42864. Mr. SUTHERLAND.—Is it on the islands?—No. It is on the mainland. Dingle Rural District comprises twenty electoral divisions, having a gross area of 126,459 statute acres; a population numbering 18,274, and a valuation of £23,811, thus giving an average area of 6·9 acres, and a valuation of £1·3 to each unit of its population. Of the twenty electoral divisions in the rural district, four are non-congested; and to anyone having an acquaintance with these four divisions that are indeed only too susceptible of improvement, it looks, to say the least, anomalous that they should not have come under the aegis of the Congested Districts Board. The town of Dingle itself, which in 1821 had a population of 4,538, now reduced to 1,786, ranked formerly not as the capital of Corkaguiney alone but of the entire "Old Kingdom." It carried on an extensive trade with Spain, Portugal, and France in linen, cattle, hides, butter, fish, and eggs. In return it imported wines, brandy, and tobacco, a large factor of which, whether by collusion or otherwise, escaped the scrutinizing eyes of the revenue officers. According to Customhouse entries Dingle, in 1750, exported linen to the value of £60,000. Now, the linen industry of Dingle and of its environments is scarcely a matter of history even. There may perhaps be a surviving handloom or two to tell the sad tale of days that are long since over, when about 400 of their compeers could be heard thudding away in every nook and lane of the town. I must be pardoned this digression which has been designedly entered into for the purpose of giving a tangible illustration of the lamentable, the heart-sickening decline in number, as well as in industrial resources, of a formerly prosperous community. So far as I know, the Congested Districts Board has done more good than all the other Boards under His Majesty, and I would be very sorry to see that the powers of the Congested Districts Board should be in any way limited. I would rather see them extended. We want several improvements, and the Congested Districts Board indeed has been very liberal. It could have done more, but of course we cannot expect that it would do everything all at once. We must take time, and I am sure that the Congested Districts Board, in anything that we reasonably bring under its notice, will come to our aid.

42865. Mr. SUTHERLAND.—What way do you think the composition of the Congested Districts Board could be improved so that there would be a representative of Kerry on it?—What I would say is that all we want is to have a member for Kerry on the Congested Districts Board.

42866. What way should he be put there?—Elected on it.

42867. The present members are by nomination of the Crown?—Yes.

42868. Would you be content with that?—Undoubtedly, or have the member nominated by the County Council; and I may say that we have very practical people in Kerry.

42869. You would prefer his being nominated to by the County Council rather than by the Crown?—I would. There is also here in Dingle a pier, and it wants improvement badly. I am sorry it has not been brought by the other witnesses before you. In fact the little harbour is very shallow and requires dredging very much, and an addition to the pier would be of great value. At low tides no vessel can come near the pier; the pier is too narrow, and it is rather short also. Double the business could be done on the pier if it were improved.

42870. Who has charge of the pier now?—I believe there is a Harbour Board in Dingle. I am not well acquainted with it, but I know that this is a matter that they are always asking for.

42871. Do they levy dues?—I believe they do.

42872. That ought to enable them to improve the harbour?—The dues in Dingle are not heavy. The place is a small place, and unless they got some aid they would not be able to do it themselves. They have spent all the money they had, and have nothing now for improvements.

42873. Has it become shallow through filling up?—I believe that it is getting silted. There is also another matter connected with Dingle brought under my notice by the Medical Officer of Health—the question of a water supply. In an impoverished place like Dingle they could not afford to expend extra rates. If the Congested Districts Board came to their aid, with the charge that would be made for the waterworks, which are absolutely necessary, something could be done. Down at the Magheries we have not a drop of spring water in the peninsula. I wrote to the Congested Districts Board some time ago to send down an expert to see where we could discover water, because there is a spring of fresh water

oozing up on the beach. That fresh water is covered at high tides. It is about a quarter of a mile away from the village of Fahamore, which contains a population of about 230. The population of the Magheries is about 600 people. It would be desirable to ascertain where is the source of that spring water that is exhibiting itself on the beach.

42874. CHAIRMAN.—I don't know whether the Congested Districts Board have ever done anything about waterworks?—If they sent down an expert to discover the source of this spring it would be a good thing.

July 4, 1907.

Mr. Timothy O'Flaherty.

42875. Mr. SUTHERLAND.—Are you a farmer yourself?—No. I am an ex-National school teacher.

42876. Most Rev. Dr. O'DONNELL.—Do you live in the Magheries?—Yes.

Mr. CHARLES J. M'CARTHY examined.

42877. CHAIRMAN.—You represent the County Committee of Agriculture?—I have been asked on behalf of the Committee of Agriculture to give evidence on the working of the Agricultural Scheme in this county. The Committee consists of the whole County Council and some co-opted members, who consist of leading agriculturalists who are not Councillors, and who number seventeen. First, I would like to deal with the scheme of instruction in agriculture, with which I am directly conected. It consists of appointing an instructor in agriculture, whose duty it is during the few winter months to deliver a series of lectures in the night time upon all agricultural topics. During the daytime while the lecturing season lasts demonstrations are given on settling drains, showing better methods of cultivation, the fixing of plots, and other matters of that nature. And also plots are laid down throughout the county, samples of seeds are taken and tested, and some of the lectures are built upon them. My duties began on the 1st October. The first fortnight I spent going over the county to get a proper idea as to the wants of each particular locality. During the tour I took samples of seeds, tested them, and built some lectures upon them.

42878. Do you live here?—My headquarters are in Tralee.

42879. Are you the lecturer?—Yes. I am the lecturer. I was appointed by the County Committee of Agriculture, subject to the approval of the Department of Agriculture.

42880. Mr. SUTHERLAND.—You are an official of the Committee?—I am like a link between the County Committee and the Department. I am the instructor in agriculture. With regard to those lectures, some people think that they are no use and that there is too much time spent upon them, but I wish you to bear in mind that the lecturing season lasts practically only four months. During the time I am lecturing suitable grounds are chosen on which are laid down demonstration and experiment plots, where seeds, manures, and other things of that nature may be tested in the following year. I would wish to lay particular emphasis on that point, because it is in reality, along with the lectures, selecting suitable places for these demonstrations to which I attach great importance. A demonstration carried out properly has more effect in changing people into better methods than a great deal of talk.

42881. Mr. KAVANAGH.—Have you the agricultural classes for young men here?—They have not yet been adopted. I was not appointed until October. It usually follows that agricultural classes are established a year or two after the agricultural instructor has come into the county and after the pioneer work has been done.

42882. Were you the first agricultural instructor for Kerry?—Yes.

42883. What sort of land do you select for the demonstrations?—I don't mind how bad the land is if it is of uniform quality.

42884. Most Rev. Dr. O'DONNELL.—Had you any plots in the Castlegregory direction or in the Magheries?—I had a variety of experiments on potatoes there to which I attach great importance, because in the Magheries district they depend almost exclusively on potatoes. I have a plot to test the relative qualities of seven different varieties, so that I could decide which would be the best for that district next year.

42885. CHAIRMAN.—How long have you been at work?—I have been at work on experiments and demonstrations since 1st March this year.

42886. This is your first year in the county?—This is my first year in the county.

42887. Before that there was no agricultural instructor at all?—There was no agricultural instructor.

42888. Your work is new?—New in this county. Throughout the county I have in all, including demonstration and experiment plots, 114. I have twenty experiment plots and ninety-four demonstration plots, and out of the ninety-four demonstration plots I have fifty-six of them established in congested districts.

Mr. Charles J. M'Carthy.

42889. What is the difference between a demonstration plot and an experiment plot?—The difference is this, that in an experiment plot you must accurately survey the ground, test the seeds or manures—whichever you apply to the ground—analyse them, and then at the end of the year weigh the produce and tabulate an exact account of it. That entails an amount of work. I cannot have more than twenty experiment plots in the county because the season is very short. The demonstration plot consists in manuring a piece of ground in my own way as compared with the farmers' methods. Demonstration plots are usually established near a chapel or cross-roads or schoolhouse, or some such public place where people can see them as they pass by. Experiment plots have to be selected in places where you can get a very good intelligent farmer who takes an interest in the work and who will be a help to you.

42890. May I say this is the difference—an experiment plot is really more for your information and the information of the Department than for the information of the people, whereas the demonstration plot is for ocular demonstration of certain methods?—The experiment plot is for the exact information of myself, the Department, and the country. The demonstration plots are examples of what can be done in adopting some of the manurial systems which I have lectured about during my course.

42891. The experiment plot is really what you rely on for information?—It is on that we have to rely for exact information.

42892. What area have you to go over?—The whole of Kerry, and since 9th May I am responsible for the congested districts of West Cork. We have special schemes in the congested districts of Kerry to which I will allude.

42893. Have you got any people under you?—I have five, and a sixth is coming this week. I have modified my demonstration plots in this county in order to suit each locality, and the great want of the western portion of this county, from my experience, is, in the first place, good seeds. I have endeavoured to lay down about three-fourths of my demonstration plots in the western parts of the county under seeds alone, so as to demonstrate to the people the good effects of good seeds—seeds imported as against those home-grown.

42894. Mr. SUTHERLAND.—Didn't the people know that before—that imported seed was better than their own grown seed?—Yes, but some people did not know the avenues through which they may be obtained easily.

42895. CHAIRMAN.—In your experience it is better for the ordinary man to purchase seed rather than obtain the seed from his home-grown potatoe?—It would be if he could afford it, but the Kerry people can hardly afford to do that.

42896. Then what is the advantage of showing that imported seed is better?—The advantage is they could buy imported seed this year and save from that the seed that would do them the following year again, and change about once in two years.

42897. Mr. SUTHERLAND.—Is that not the common practice?—Not generally.

42898. CHAIRMAN.—Generally they go and get the seed from the old potatoes year after year?—As a general rule, yes.

42899. Mr. SUTHERLAND.—You say they do that because they cannot afford to buy new seed?—That is one of the principal reasons.

July 4, 1907.

Mr. Charles J. M'Carthy.

42900. What is the use of telling them what they cannot do?—I mentioned that one of the purposes was to show them the avenues through which they could get seeds changed.

42901. Is the avenue not the local merchant?—No. For instance, take the Caherciveen district. This year one of the men who are working under me sent away to a town, not in this county, for good reliable mixtures of seeds, and he got them at a far cheaper rate than they could be procured locally. The people of that district up to that time did not know how they could get these seeds at that particular price, or where they could get them.

42902. That is a commercial business?—No; he wrote to a seedsman to know could he supply them. When the seedsman was able to supply them at a rate at which they could afford to pay he purchased them.

42903. You don't require a demonstration plot for that?—Yes; in some parts of the country. Owing to the bad seeds sowed in some of the western parts the people have given up sowing grass seeds altogether. In the Waterville district you will find places where no grass seeds have been sown, and therefore repeating nature and going back to their original condition.

42904. CHAIRMAN.—Have you ever tried the experiment of having the demonstration plots worked through the medium of the small holder? Have you ever tried to find a man who has confidence in you and what you tell him, and then tried to induce him to till his holding as you think he should do it?—That is without giving him any help in the line of manures or seeds?

42905. Just tell him what to do and let him do it?—I have tried to do that, but the results are not yet obtainable, as I have not been here long enough.

42906. Would not that sort of demonstration plot be a great deal more effective than a demonstration plot worked by somebody, of whom they know nothing?—These demonstration plots are worked by myself in the centres where I have been around, and they know me.

42907. Do you think a demonstration plot, however successful, worked by you would have as much effect on them as a demontration plot worked by one of themselves under your help and advice?—It was worked by myself and the farmer together. We both have a personal interest in the demonstration plot. It is always on the farmer's place.

42908. How many people do you find attend your lectures?—The average of attendance for the whole county was 102.

42909. Is that attendance as good in the congested area as outside?—It is better. For Dingle, the average attendance was 184:65; for Kenmare, 110:33. The average attendance in Dingle exceeded all others.

42910. Did you take any step to find out whether they understood what you told them? Did you ask questions?—Yes; as a general rule the lecture lasted forty minutes, and then we had a discussion of an hour and a-half following. These discussions were, perhaps, more valuable to the farmers than the lectures. During these discussions questions were asked on all points concerning farming. Then, as a general rule each lecture resulted in establishing either a demonstration or experiment plot.

42911. Take Dingle, for instance. How many lectures did you deliver in Dingle?—Fifteen in the Dingle Rural District. There are no lectures delivered in towns or big villages, because they are intended especially for the rural communities and you can't have a successful lecture in a town on an agricultural subject.

42912. The Dingle Rural District is practically the whole peninsula?—Practically, yes.

42913. Take a man living on any one spot on that peninsula—it would be difficult for him to attend more than one of these lectures?—It would depend on how he would be situated. There are five centres for lectures. They were held in National Schools. They were: one at Ventry; one at Anascaul; one at Castlegregory; one at Cloghane; one at Lispole.

42914. What do you think was the maximum attendance of any one man? Did any one man attend more than three or four times?—There were only three lectures delivered in each centre, or each school.

42915. There were five centres and three lectures?—Yes.

42916. Do you believe that the same men come to each of the three lectures?—Yes, and would come again in some places. I know that for a positive fact.

42917. Why do you say they would come again? My point is: are the lectures frequent enough to really impress what you want to teach these people upon them?—The lectures are continued during three weeks—that is, a lecture in each centre during each week. Suppose I take Ventry to-night, for instance. I will come again to-night week and to-night fortnight. Then I go to another rural district. There are six rural districts in the whole county. I had to spend three weeks on the lecturing tour in each rural district.

42918. Do you think you would be able to do better if you had, say, a couple of these peninsulas handed over to you? Do you think that your present territory is too big?—I would regard it as a wise thing if a man were appointed in each peninsula, especially for agricultural work, and at the present time we have some such person in each rural district.

42919. Can you tell the Commission that you can really do as much good with the whole of Kerry as with a district?—With five men working with me.

42920. Do the five men do exactly what you do?—No. These are taken in specially to work the congested districts.

42921. But they don't lecture?—No.

42922. What do they do—is it merely work on the demonstration plots?—Two of them were brought into this county as far back as February. At that time the Department conducted a certain special scheme to benefit the congested districts of Kerry. It was worked by Mr. Harpur and two assistants. The work consisted in supplying good seeds, manures, lime, grass seed mixtures and other agricultural commodities at less than half price, of which I have a list here. I intended to deal with that point a little later on in my evidence, but if you please I will allude to it now. That scheme was availed of very much by the Kerry people.

42923. Mr. SUTHERLAND.—Of course, because they were cheaper seeds?—There were demonstration plots laid down with those seeds side by side with what was bought locally. In all there were 2,307 such plots laid down. Of these there were 948 under potatoes, 671 under oats, 167 under turnips and mangels, 48 under clover, 207 under fertilisers, and 256 under lime, and this is a point I would like to lay particular emphasis on and which was mentioned by Mr. O'Donnell—the great importance of lime. I fully appreciate the great importance of lime for this county, because I estimate that three-fourths of it is mouldy and peaty, and the Department have forestalled that idea. They put 133 tons of lime, at the rate of 2*s.* 6*d.* for each half-ton, over the congested districts of Cahirciveen and Rosin.

42924. CHAIRMAN.—This was part of the scheme you told us of of supplying necessaries more cheaply?—Yes.

42925. Were the 133 tons all taken up?—Yes. It was sold at the rate of 2*s.* 6*d.* for each half-ton, and the money was taken before the orders were given.

42926. It was all used?—Yes.

42927. Was there a demand for much more—could you have sold much more?—The funds became exhausted, and the demand was increasing very much.

42928. What funds?—The funds for that special scheme.

42929. Was there a much greater demand from the people—did they want more?—They wanted more.

42930. How much could you sell through the county?—It would depend on the amount of money available. It was sold at one-third the actual cost—2*s.* 6*d.* for each half-ton

42931. What was the use of selling them lime at such a cheap rate—was it to suggest to them that they should use lime?—Yes, to show how essential it was, and another point in connection with all those schemes, the people were badly off last year on account of the failure of the potatoe crop, and it was deemed essential to give them some help in this manner.

42932. Mr. SUTHERLAND.—But of course the people are perfectly aware of the importance of lime for bog land?—Yes, but they cannot get it. Another point I wish to allude to in connection with my demonstrations is this—twenty of the plots consist of demonstrations of the effect of basic slag on bog lands. Where you cannot procure lime basic slag is a good substitute.

42933. How does it compare in price?—Basic slag is priced according to its quality.

42934. Which is priced higher, that or lime?—Basic slag is dearer weight for weight.

42935. Does it go further?—Much further, especially for bog lands.

42936. Most Rev. Dr. O'DONNELL.—Has that lime scheme been only for one year, or will it be continued next year?—That is under contemplation at present, but I think the scheme should be extended for next year.

42937. These advantages for the congested districts have been introduced this year for the first time?—Yes.

42938. Your own appointment was made this year?—Yes, in September. I took up duty in October.

42939. Your appointment is from the County Committee?—Yes, subject to the sanction of the Department.

42940. CHAIRMAN.—Are we to understand that in view of the fact that the potato crop partially failed last year that there was a feeling held by the new Department that it was time to do something for the congested districts, and that they formulated a scheme by which lime, seed, and other agricultural necessities were distributed among people below cost price?—That is my belief.

CHAIRMAN.—That is your evidence.

42942. Mr. KAVANAGH.—Were you the agricultural instructor when the live-stock scheme was introduced last year?—Yes.

42943. You were present at the meeting of the committee, were you?—Yes.

42944. Would you say that the county committee have any voice in the framing of their scheme. A member of the committee told us yesterday in evidence that he considered that the county committee have no voice at all in the framing of the scheme, that it is sent down cut and dry from the Department, and that the county committee have either to take it or leave it, but that they cannot amend it in any way; is that your opinion?—It is not my opinion fully. I think that the county committee have a certain discretion in the matter.

42945. They could reject one part of it and accept the other part of it or amend it?—I think that discretion is allowed to them, so far as I could infer from their meetings.

42946. Of course, I except the money part of the scheme. They cannot exceed the amount of money, but they can amend it in other ways?—I think that power is vested in them.

42947. Therefore, you would not agree with those members of the county committee who say that the agricultural scheme in the County Kerry is an absolute farce?—Not at all.

42948. Mr. SUTHERLAND.—If it were amended by the county committee it would have to be submitted to the Department again, and the Department can either accept or reject the amendment?—Their decision is final.

42949. The decision of the Department?—Yes.

42950. Mr. KAVANAGH.—The representative of the Department is down at the meeting, and he can say yes or no to any amendment that the county committee propose, so that it has not to be sent up to the Department again?—It is done on the spot, and I don't think he would reject an amendment so long as the financial part of the scheme was not interfered with.

42951. CHAIRMAN.—May I ask whether it was clearly understood by these people who purchased the lime, seed, and other things, that they were purchasing those things at below cost price?—They did understand it.

42952. You don't yourself contemplate that if, in the course of a few years the price of these things is raised, as, of course, it must be raised, that there won't be a great deal of grumbling?—The quantity which each farmer would get would be very small. It was more to teach the good effects of good seeds.

42953. But don't you think yourself that there is danger in continuing for some years to give a people the use of agricultural necessities at a price below cost price; is not it presumable that when things reach their normal level and the price goes up they will find it inconvenient to pay it, and that they will grumble and say—"You have taught us certain methods upon the basis of getting certain necessities at a certain price, and now you tell us that we cannot have those necessities at that price, and you are upsetting the basis of our industry"?—If that were done in a wholesale way, and the ordinary man supplied with all he wanted, the danger would arise. When each man can only get a small quantity I don't think that there is any such danger at all arising.

42954. Most Rev. Dr. O'DONNELL.—At what rate was the lime sold?—At 2*s.* 6*d.* for each half-ton. That is about one-third its ordinary price.

42955. Would not you think that it would be a good thing to put a lime scheme in operation in those poorer districts, which, after a couple of years, would result in an organisation among the people themselves enabling them to have lime at cost price?—I would think it a very excellent thing.

42956. Don't you think in that view that for a time some small loss is worth making?—It may have good results.

42957. While a large loss would result in the evil which the Chairman has pointed out?—It might.

42958. I mean, of course, a small loss per man; it might mean a considerable loss over a wide area?—Yes.

42959. Are all these assistants to whom you refer provided this year for the first time?—They are.

42960. By the county committee?—No; by the Department of Agriculture, and all the expenses are paid by the Department. They are not an extra burden on the county.

42961. This expenditure for lime and seeds is paid by the central body, and is not paid for by the county?—It is not directly on the county at all.

42962. It is being done this year for the first time?—It has been done this year for the first time. These men at present are engaged in procuring spraying machines at reduced rates for poor people in congested districts. They supervising the spraying; they are mending old machines; they are giving demonstrations as to how to apply the mixture and how to mix it. Up to the present, in conjunction with myself, they have supplied to the congested districts 4,737 pounds of blue-stone and 5,593 pounds of washing soda. The total number of new spraying machines procured for poor people up to the present is ninety, and we have repaired about fifty old ones. That would mean that close on 700 or 800 farmers would benefit thereby.

42963. Most Rev. Dr. O'DONNELL.—The officers under you are at present devoting their attention to spraying?—That is what they are engaged at.

42964. That is the most urgent matter at present?—That is the most urgent matter, and there has been special attention paid to it since the 9th of May, because it was necessary to begin work a little early before the spraying season opened so that we could come at it in time. These assistants also give demonstrations in charlock spraying and how to eradicate charlock in corn fields. There is a system by which this yellow weed can be killed by spraying. The assistants give demonstrations on that also. They also give general instruction on better modes of cultivation and other things like that.

42965. CHAIRMAN.—Where do the people get the mixture for spraying?—The local people generally get it in the local shops.

42966. Is it all right in the local shops?—I would not say it is all.

42967. We have heard statements that the mixture sold in the local shops is not much good?—I could not make such a sweeping statement. I know some of it is inferior. The point is this: all mixtures are doubtful; that is the prepared stuff. All that may be regarded with suspicion. I would advise every man to buy the blue stone and washing soda and get a guarantee of their purity, and make up the mixture himself according to our instructions. We send out leaflets and litmus paper and full instructions how to make a test with the litmus paper. We have distributed about 1,000 already.

42968. Is there no way of getting a guaranteed mixture?—Yes, but farmers won't ask for the guarantee. That is where the great danger lies.

42969. Have local shopkeepers the mixture?—Yes.

42970. Is it stamped?—No, but if they give a guarantee of 98 per cent. purity and it is not up to that standard they are liable to be prosecuted. There is an easy way of testing it.

July 4, 1907.

Mr. Charles J. M'Carthy.

42971. Is the mixture sold in tins?—The prepared mixture is usually sold in little bags. The blue-stone is usually sent across in barrels.

42972. When the prepared mixture is guaranteed, is there anything on the bag to show that it is guaranteed: is there a seal?—That material is not guaranteed.

42973. Is there no way in which prepared material can be sold guaranteed?—It may be sold with the guarantee that there is no injurious substance in it, because if washing soda is adulterated with sodium sulphate or glaubers salts it is injurious to the plant. Some of that material may be mixed with the prepared stuff.

42974. Is there no way by which the County Committee or the Department could send down the prepared mixture, which in some way or another would be guaranteed and non-injurious?—It is more profitable to get the materials and make them up themselves.

42975. Which do they do mostly?—Recently there is a great change of opinion as to the value of the pure material unprepared, compared with the mixed material.

42976. That is because they know more how to make it up themselves?—I would say that that is partly accountable for it.

42977. Why do you say it is profitable to use the materials and make them up yourself rather than buy the prepared mixture?—If you buy the pure material yourself you can mix it very exactly if you follow out the instructions; then if there is the faintest trace of impurity in the material you buy you can test it with the litmus paper.

42978. I don't see any reason why the mixing could not be done by somebody else, and then the bags sealed and sold to the people as guaranteed a pure mixture?—There may be some chemical action set up between the blue-stone and the washing soda if mixed for some time, which would perhaps have some bad effect on it ultimately.

42979. You are not sure about it?—I am not sure about it.

42980. Mr. Sutherland.—The danger is that the adulteration would be put in at that point?—That is the danger at present. We prefer to get the guarantee with the washing soda and blue-stone, and mix them ourselves. That has been found to give the best results. It is very easily mixed.

42981. Most Rev. Dr. O'Donnell.—It is the only practical way they have of being sure that it is not adulterated?—Yes; so that you can test each independently. If you had the mixture you could not tell whether you had pure blue-stone or pure washing soda.

42982. Chairman.—Do they get the blue-stone and the washing soda from the shops?—As a general rule, yes.

42983. Have you any reason to suppose that if these materials were sold through the Parish Committees they would be more pure than they are now in the shops?—If sold through the Parish Committees or the creameries I would rely far more on their purity.

42984. Would you be in favour of the Parish Committee distributing those?—That is a point on which I don't feel competent to give a reliable opinion.

42985. At any rate, you think it would have the effect of enabling the people to get a purer mixture than they get now?—I would rely more on it.

42986. About the spraying machines: what is the price of one?—The usual price of the best spraying machine on the market at the present time is thirty shillings. We have procured them for people whose valuation does not exceed £8 at 24*s*. We get three or four farmers to combine, and then it only costs about five or six shillings for each farmer.

42987. Farmers whose valuation is under £8 can get spraying machines at that price?—If they live in a congested district, but we do not confine ourselves too strictly, and if we find a deserving case we do not confine ourselves rigidly to the valuation.

42988. Most Rev. Dr. O'Donnell.—That is an arrangement made this year for the first time?—Yes.

42989. Chairman.—Do the farmers know widely that you can do that?—Yes.

42990. Most Rev. Dr. O'Donnell.—There was a Parliamentary answer given by Mr. T. W. Russell in reply to Mr. Flynn containing that information?—Yes; we have distributed papers to that effect and spread the news as much as we could through the county.

42991. Chairman.—Do many people avail themselves of that?—Yes; we have procured ninety new machines in that way, and we have repaired fifty old machines; and we have procured blue-stone and washing soda also for people who find it hard to get it in remote districts.

42992. Most Rev. Dr. O'Donnell.—In remote districts where the people are unable to get the materials themselves, is there any difficulty in supplying the materials at cost price?—Not much difficulty.

42993. Is there any difficulty in finding the machines?—500 lots of the machines cost us 27*s*. 6*d*. We sell them at a loss.

42994. I ask the question because one can see that if the weather becomes brighter the demand for machines will be very great all through the country?—I was informed by a Tralee merchant yesterday that the demand for machines and material this year has been unprecedented. About live stock schemes for the county, there are fifty-six premium bulls in the county. They are under three different schemes:—1st, the county scheme; 2nd, the premiums are paid altogether out of the Department's fund; and 3rd, we have special bulls placed in the congested districts on special instalment terms.

42995. Have any of these methods been recently adopted?—All these methods have been in vogue before I came into this county.

47996. Just amplify that, and tell us the difference between the three schemes?—First, we have the county scheme. There are twenty-six bulls under that particular scheme.

42997. What have you called the county scheme?—That is, the premiums are paid jointly by the Department and by the county. There are £450 available for premiums for bulls under the county schemes, in conjunction with the Department's live stock schemes for the county. There are £1,050 allowed for it. Out of this the Department contribute about two-thirds. The remainder comes out of the rates. There are £450 for premiums for bulls, £450 for nominations for mares, and £100 for premiums for boars, and £50 for administrative expenses. Under the county scheme there are twenty-six bulls. The premiums are paid joinly by the Department and by the rates. Then there are fifteen premiums paid directly out of the Department's funds, independently of that altogether; and along with that, in congested districts, bulls are given on special terms, which are as follows:—The bull is usually bought for £22. Remember that this scheme applies to the mountains and the congested districts and the poor places. The Kerry bulls, that are about the only ones that will suit these poor places, are bought for £22, and sold to the farmers for £10, payable in three instalments—the first year £3, the second year £3, and the third year £4. We have fifteen bulls placed under those conditions. We have had more applicants than can be supplied. They don't get a premium, but the owner or holder of the bull can charge what he likes for the service—usually about 2*s*. These are the main points of difference between the three schemes.

42998. Chairman.—Under that last scheme he has to keep the bull at his own expense?—Yes.

42999. In the premium scheme has he to keep the bull at his own expense?—Yes.

43000. How much of a premium does he get?—Those farmers to whom the bulls are given on special instalment terms do not get premiums, but they get the bulls at a reduced price, and they get three years to pay; and we find that a better system for poor places where the money is scarce.

43001. Under the other schemes, what do they get for premiums?—£15 each year under the county scheme. The bull is bought, and if he is passed as eligible for a premium the holder gets £15 on condition that the bull, if he is a yearling, will serve thirty cows, other than those held by the owner.

43002. In that case the farmer buys the bull first?—Yes.

43003. And then applies for a certificate?—As a general rule, the farmer attends a sale—for instance, the Spring Show in Dublin, and the inspectors have gone round, and they have put cards over all bulls which are eligible, in their opinion, for premiums. If a man buys one of those bulls, and if a premium bull is wanted in that district, then a premium is granted to him.

43004. Is not that rather a foolish way of doing it, because I should have thought that the very fact of the inspectors going round and ticketing those bulls as being eligible for premiums would in itself force up the price of the bull. I should have thought it much better to allow the man to buy the bull, and then to have applied for a certificate on inspection?—Farmers would not be willing to buy.

Mr. KAVANAGH.—They would not like to chance not getting the premium.

43005. CHAIRMAN.—Then, having done this, he gets a premium of £15 on condition that he serves thirty cows?—Yes, at 1s. per head.

43006. What is the object of having some bulls whose premium is paid by the Department and by the county and other bulls whose premiums are paid entirely by the Department?—The special wants of the county and the incapability of the county to pay high rates enough to get a sufficient number of bulls are taken into consideration.

43007. It is a kind of a grant-in-aid?—Yes.

43008. Which of these three schemes is most availed of?—Under the county scheme there are twenty-six bulls. The Department have placed fifteen payable directly out of their own funds, and there are fifteen placed on special instalment terms, making a total of fifty-six. I have here a map showing you the location of the bulls (*produces map*).

43009. Mr. KAVANAGH.—Those bulls for which the Department pays the whole amount are only for congested districts?—No. They are for districts where bulls are hard to be obtained. That point is taken into consideration in the first place.

43010. CHAIRMAN.—Did you or your assistants find any inferior spraying material in the county?—Not as yet. We have taken four samples, and we have not got the result of the analysis.

43011. You have not actually found any inferior spraying material in the county?—Not as yet.

43012. Will this analysis be made public when you have it?—It will hardly be made public. With regard to the boars, there are in all the county twenty-five premium boars, and of these the premiums are paid jointly by the Department and by the county, and eight premiums are paid directly out of the Department's funds. In congested districts boars are put in on easy terms—that is, if a suitable man applies, and pays down £2, he can get a boar. At the end of a year he is eligible to get a premium of £5 if he complies with the regulations. In lieu of that premium of £5 he gets back the £2 paid down as an instalment at first. The idea of paying down the £2 is that the man will have an interest in keeping the boar. At the end of the season in the following year, if he keeps the boar properly, he will get the premium of £3.

43013. How many boars are there in the county?—There are twenty-five at present. In the past week I have been trying to place three more. There are three more available. There are at present seventeen under the county scheme and eight specially provided by the Department.

43014. Mr. KAVANAGH.—What particular breed do you find best down here?—The white York, as a general rule.

43015. CHAIRMAN.—As far as bulls and boars are concerned, there are fifty-six bulls and twenty-five boars. Can you give us the numbers for recent years: how many bulls were there two years ago?—I could not give you the number.

43016. Have not you got a table?—Not of last year or the year before.

43017. Can you tell us at all whether they represent an increase in the number?—I cannot give you the exact figures, but there is an increase. I would say about a dozen of an increase.

43018. What about boars—is there an increase there, too?—Yes. The increase of boars is about six or eight.

43019. Mr. KAVANAGH.—Are any of the premium bulls Kerry bulls?—Yes.

43020. The Department admit Kerry bulls now?—Yes. There are fourteen Kerry bulls in all, pure-bred Kerry bulls, out of the fifty-six; and there are sixteen Aberdeen Angus, two red polled, and twenty-four shorthorns. The general rule is to get shorthorns along the valleys, where the land is good; where the valleys and hills meet we try the Aberdeen Angus, and on the hillsides we try to get in the Kerries. We find that the best.

43021. CHAIRMAN.—Are the Kerries pure-bred Kerries or merely Dexters?—Pure Kerries.

43022. Mr. KAVANAGH.—Did the Department ever refuse to give premiums to Kerry bulls?—I would not say that; not during my time. There are two half-bred hunter stallions placed in the congested districts. They are owned by the Department. One is stationed at Cahirciveen and another at Kenmare. Nominated mares are served free by those horses. Farmers whose valuation does not exceed £10 are eligible to get the service of those for 5 shillings; farmers whose valuation lies between £10 and £30 can get the service of those for their mares for 10 shillings. Then there is a Welsh cob in the congested district of Brosna.

43023. Are those two horses sufficient for the district, or ought there be more?—There should be more, but that particular type of horse is very hard to be got at present—that is, half-bred hunter stallions. There are several in the country, but they are——

43024. How are those cart horses bred which we saw on the road between Tralee and here?—As a rule they are of the old Irish type.

43025. Have you got any stallions for that type of horse?—We have not that exact type at present.

43026. You could not breed cart horses of that sort from half-bred hunter stallions?—Good strong half-bred hunter stallions with that class of mare would breed a good, serviceable animal, useful for general purposes, both for the farm and road work. There are 154 nominations given to mares.

43027. Who distributes the nominations to the mares?—An inspection is held at various centres through the county in springtime. The best mares are called out of each group and two or three are placed on the reserve list at each centre. There is £3 allowed in the estimate as the value of each nomination, but some farmers take agricultural stallions in preference to the thoroughbreds, and the value of that premium would be only £2, and then a few of those remaining in the reserve list will be able to get nominations.

43028. Do you find that there is a desire to get the mares with these horses?—There is a great desire to get nominations. There is a very healthy competition for those nominations indeed. There have been ten stallion Spanish asses placed in the congested districts in this county.

43029. These jacks are the property of the Department?—Yes, and as a rule the holder gets two shillings a week to help to maintain it.

43030. In your opinion how do these schemes work: is there any improvement on them that you can suggest?—My opinion is, it would be a very good thing if there were more funds available to extend the existing schemes all round and embrace all the county, especially the poorer western districts.

43031. How does the agricultural committee apportion these things: do they take an interest in it or not?—They take a very warm interest in it indeed all over the county. Several members of the committee have offered me every facility to help me in my work of demonstration and experiments.

43032. Upon the county committee do you find that there are generally representatives who take an interest in the work, who live in the congested areas and know the wants and wishes of the people in those areas. Suppose you are working in one of the congested areas do you find that there is generally some representative from the district on the county committee who takes an interest in the work of the committee?—Yes. Both the members of the county committee and of the rural district councils all take a warm interest in it. That has been my experience up to the present.

43033. Do you find as much interest in these schemes shown in the congested portions of the county as in the non-congested parts of the county?—As a rule there is more interest in them in all the branches with which I have been dealing in the congested districts.

43034. The Commission is to understand from you that in your opinion these schemes work well?—As far as my judgment goes they are working very well up to the present.

43035. In what direction would you increase them if you had more money?—I should pay particular attention to the three western peninsulas. It is in those places that the people want a little help.

43036. In what way?—In the first place I think they would want a little help in supplying good seeds

July 4, 1907.

Mr. Charles J. M'Carthy.

and manures of a reliable quality, at fairly reasonable rates, but they live so far away from good supplying centres that they are working at a great disadvantage up to the present in procuring those things. I think that some such system should be adopted, by which they could get reliable seeds and manures in those very remote districts. The cattle scheme should also be extended.

43037. You mean that there should be more bulls?—Yes.

43038. With regard to instructors, do you think that your assistants should be itinerant or resident?—I would like to have the assistants located in a centre in each peninsula and work all round the centre. I should like to have one located in Dingle to work all round the west here; another in Cahirciveen to work poor districts round Waterville and Caherdaniel, and another man at Kenmare to work the Kenmare peninsula.

43039. At present you have to send them all over Kerry?—At present I have them so arranged that their headquarters are in each of those places that I have mentioned.

43040. That is unusual. It is not the arrangement in most cases?—That is the case in Mayo and in the poorer parts of Donegal at the present time, I believe.

43041. I understood that there were no such things as resident instructors, but that there were only gentlemen who travelled about?—These are not exactly itinerant instructors.

43042. They are provided by the Department?—Yes.

43043. Most Rev. Dr. O'Donnell.—Probably this arrangement that you are telling us about has come into force, as here, for the first time this year?—The arrangement with regard to the spraying—that is so.

43044. Chairman.—With regard to the status of these inspectors, has that come into force for the first time this year?—Some such system is necessary to have instructors where you can correspond.

43945. Was that in force before you came here?—No. There was none of these before I came here.

43046. Is this the first year in which the congested districts of Kerry have had a certain number of instructors resident in definite headquarters?—Yes; it is the first year.

43047. Most Rev. Dr. O'Donnell.—About the committee that controls your operations I should like to ask you a question. Have you been present at the meetings of the county committee of agriculture?—I have been present at the meeting at which I was appointed. Owing to the pressure of the work I may say that I never had time to attend a single meeting since.

43048. Where does the committee meet?—In the Courthouse, Tralee.

43049. Would not it be somewhat difficult for representatives of those congested areas to come regularly to the meetings of the committee in Tralee?—They will attend at least the quarterly meetings. It is difficult as you state, but, as a rule, they make it a point to attend all the quarterly meetings.

43050. From the fact of your having a stationary instructor in each of the peninsulas might one infer that it would be a good thing if under the County Commtitee there was some sort of local administration in each peninsula?—I would not agree with that. It would be necessary to work from some central body and consolidate the whole scheme for the whole county.

43051. You would not have an administration under the County Committee for each of the peninsulas?—I would not care to have that condition of affairs at all.

43052. Is there not this difficulty in the present system? It is really not easy for the representative on the County Committee for each of these peninsulas to go regularly to the committee meetings?—There is a difficulty in attending all of them.

43053. Chairman.—Before you were appointed to this, what was your experience?—I was twelve years working on my father's farm, in Mid-Cork, midway between Cork and Macroom. Then I attended an examination at the Royal College of Science in Dublin. I was fortunate enough to win a scholarship there, which meant free education for three years and an allowance of £1 1*s.* a week while in attendance there. I spent three years there and took out an Associateship of the College, and a diploma in agriculture, and then I was appointed County Instructor for Kerry.

Very Rev. Canon O'Leary examined.

Very Rev. Canon O'Leary.

43054. Chairman.—You are Parish Priest of Dingle?—Yes. I wish to refer to a few matters. The first is with regard to congestion. All this parish is congested, except a portion called Minard. I believe a week ago or so Minard applied to be included in the congested districts, and I think that there was a meeting held, and the Congested Districts Board said that the time had lapsed for extending the congested area, and the memorial was sent on to the Royal Commission.

43055. Most Rev. Dr. O'Donnell.—Only for a year after 1891 was it possible to include divisions not originally included?—All the holdings about here are very small. A farmer about here with eight cows considers himself a pretty strong farmer. I should say that the average number of cows would not be more than about six. I don't think that there is any way of improving these holdings by enlarging them to any great extent. As Mr. O'Donnell said, there is very little untenanted land. There is one little place, I believe out at the Glens, and I think it was taken from the tenants by Lord Ventry some years ago. I think it was improved. Then they got a certain amount of compensation. Now they want, when the purchase is being arranged, to get back this place again, which they held before, and in the proportion in which they held it before; but as far as I can see, there is very little untenanted land to be divided. Drainage is very necessary about here. There are large tracts out at Ventry and at Glens which would require drainage very much,. In fact the inspector of the Congested Districts Board made a remark to me some time ago about it. It would immensely improve that part of the county if there was some means of drainage. A difficulty about this part of the country is that we have no bogs. Even where there is a bit of bog the people are not able to save it this year. They have to go seven or eight miles to get their fuel. The most that they can bring is a load a day, and they have to store it up for the year at that rate, bringing a load a day and employing a man and a horse and car to get the fuel.

43056. Chairman.—I am afraid that if there is no bog it is very hard to see any means by which that can be remedied?—We had a meeting and there was a question of getting coal, but to many of our poor farmers, if they had to buy coal, their farms would be no good at all, as it would cost them all the money they could make to buy coal. We applied a short time ago to the Congested Districts Board for a bridge. There is a place near Ventry where the river comes on to the road. Instead of running across the road it runs along the road for a space. The people from all the western part of the parish have had to bring their gravel and their sand by this way, and all that place is worn away, and the horse is up to its hips sometimes coming through it. The funerals have to go through it. It has been the custom of the people for generations to go a certain way, and they won't divert from that by one foot. They walk up to their hips with that immense weight on their shoulders to get to the public graveyard. They applied for that bridge to the Congested Districts Board, and the answer they got—I am not finding fault with it at all, for as far as I can see the only fault to be found with the Congested Districts Board is that they have not enough money; as far as I can see they have done everything they could where they had the means—but the answer was, in that particular case, that they would give half if the Rural District Council gave the other half. The difficulty about the Rural District Council is that the rates are so high they don't want to add to them. They paid 11*s.* 6*d.* in the £ last year. That western part is the district on towards Slea Head.

In that case the Rural District Council did not see their way to increase the rates.

43057. Most Rev. Dr. O'DONNELL.—Would they give a contribution in that case?—I got a return of the names of the people about the district who would be served by the bridge. They undertook to bring all the materials, and I think that bringing all the materials would represent nearly half the cost. They undertook to bring sand, gravel, and stones, and everything that is required and to give the labour.

43058. What do you think it would cost?—I would undertake to do it if they gave me £30. The great industry about here is the fishing, and the great want is dredging. Last year there were some dredging operations carried on. They cost £1,200, and the Congested Districts Board generously contributed £500; but if a thing is only half done it is almost useless, and I understand it would require as much more to be done in order that the boats could go in and out with perfect safety. We applied for it again this year, and received the usual reply, that they had to postpone the consideration of it on account of the want of funds. The boats cannot come into our present quay except at practically high water. At any rate there are times when the boats cannot come into the quay in order to bring in their fish to send it up by train, and if the quay was extended 160 feet I understand that there would be only about two hours when the boats could not come in and deliver their freight to the quay; that is an hour before the tide is fully out and an hour after it begins to turn. I understand that about £5,000 would be required for that. It would be an immense permanent improvement to the fishing industry at Dingle, and I believe that Dingle is one of the biggest centres of the fishing industry in the whole country.

43059. It is a great mackerel centre?—Yes, and a great trawling centre. They are trawling every day in the year except during the close season. We have twenty-three trawlers and nine nobbies, and there are three or more building. We shall have about forty boats. It is certainly one of the biggest fishing centres in Ireland, I should say. I would recommend the extension of the quay by 160 feet, and dredging the harbour.

43060. CHAIRMAN.—Have you made representations as to these?—Yes. We had actually a parish committee appointed here. It was in the time of a predecessor of mine. Last year the Congested Districts Board inspector communicated with me. I set about starting a parish committee, but on inquiring I found that a committee had been established in the time of my predecessor, and that when all the advantages were explained to the people they thought that the advantages were not sufficient to induce them to adopt it. Of course, if a man intends to build a house it is a great matter for him to get £5 or £10; but to give a man £5 or £10 would not induce him to undertake an expenditure of £50, £60, or £100, which he had not made up his mind to expend already. I think that is precisely how the case of the parish committee stands. If you are going to build a house you get a certain percentage; you get generally what would buy the materials.

43061. The Board's view is to encourage people?—I am not finding fault with the Board. It is a splendid thing for the Board to offer this money as an inducement, but it is not a sufficient inducement.

43062. Mr. SUTHERLAND.—What would be?—I should say about 50 per cent. This is only about 25, and the limit is £5. Five pounds won't induce a man to undertake to build a house that would cost £100.

43063. Most Rev. Dr. O'DONNELL.—I venture to say that when Canon O'Leary is a longer time in the parish the committee will be revived?—I undertook to revive it, and I will revive it later on, and I think that the people are now beginning to change their minds. They see the working of it in Castlegregory. The report from Castlegregory is that it is doing an immense lot of good there, and I think that we shall establish the committee. There was a question as to whether there was any proposal ever made to buy through the Congested Districts Board. We made an arrangement that Lord Cork would settle on the reduction of 5*s*. 6*d*. in the pound of the present rent, but the tenants wanted to purchase through the Congested Districts Board. The agent said he thought if it did not diminish in any way the amount Lord Cork was to receive, he did not see any objection to that; but then he consulted afterwards, and the conclusion was that they would not on any account sell through the Congested Districts Board. It was I carried on the correspondence myself.

43064. CHAIRMAN.—The alternative would be direct sale?—Yes.

43065. CHAIRMAN.—Sale through the Congested Districts Board would be instrumental in effecting several sales?—Yes. I negotiated the sale of the Douglas property when I was in Newtownsandes. I had something to do with the negotiations of the Sandes property and the Fitzgerald property. The last is not sold yet, but I did my best for it. I negotiated for the Blacker-Douglas tenants. Except in one little townland, where the valuation was very high, they got such a reduction that after purchase their instalments would not be very much more than £1 a cow. I doubt if there is anyone paying more than £1 10*s*. If they got the same reduction here—I won't say with regard to Lord Cork's property, which is very fair—but with regard to Lord Ventry's property, it would not be sufficient. Tenants who know all about it say that five shillings in the pound on Lord Cork's property would be better than ten shillings in the pound on Lord Ventry's. I would say the same with regard to the purchase I made up at Newtownsandes in North Kerry. There were very few paying more than £1 a cow after purchase. It is considered quite enough about here. If they only got five shillings in the pound they would have to pay over £2 a cow.

43066. CHAIRMAN.—It is a new standard of measurement?—An acre of land in Meath would, I suppose, feed a cow. It would take, I suppose, in some places round here five or six acres. You cannot go by the acre at all. I believe on the ordinary fair land here it takes three acres to feed a cow, that is supplying hay and everything.

The Commission adjourned.

EIGHTY-SIXTH PUBLIC SITTING.

FRIDAY, JULY 5TH, 1907,

AT 10.30 O'CLOCK A.M.,

At Killarney Courthouse.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Mr. JOHN MURPHY, examined.

July 5, 1907.

Mr. John Murphy.

43067. CHAIRMAN.—By what body are you nominated to appear?—I am Member of Parliament for this district.

43068. And do you appear for this district?—Yes, my lord, and I do not propose to detain you very long. I do not think it is necessary. I do not intend to give any statistics, as I think Mr. Callan's book, as well as other information that has been given to you, is sufficiently explicit on the point of statistics.* I just wish to say that I agree with a good deal of the evidence that has been given to you in Kerry already, especially with the evidence that was given to you at Listowel by the Very Rev. Canon Hayes the other day, which I had an opportunity of reading. The first point that I want to put before the Commission is the fact that Kerry, and especially my constituency, which is East Kerry, has been very much neglected by the Congested Districts Board up to the present time. I am seven years a Member of Parliament now, and I myself never saw or had any personal communication with any representative of the Board. I think it is rather a deplorable thing that where there are many congested districts there should not be some method of communicating, and that some official of the Board should not seek out a representative man and inquire as to what is necessary and what can be done. I think all that would be avoided if we had a direct representative of the county upon any Board dealing with the question of congestion in Ireland, and having regard to the fact that Kerry is practically, as has been pointed out, about one-sixth of the entire congested area as at present defined, I think we have a claim to a representative. The necessity of having a representative is extremely well illustrated by what has happened in connection with two farms in this county. Two people were evicted from farms at places called Cragg and Ardcrone. They are near Farranfore station, between this and Tralee. The two tenants were evicted and the Congested Districts Board stepped in and purchased those farms. I made all the representations possible in writing to the Congested Districts Board in reference to the farms. I pointed out to them how inadvisable and unwise it was to step in, having regard to the local circumstances, and I never could get any satisfaction whatever in reference to our claim, or, as far as I could see, any full consideration, having regard to the local circumstances, of our opinions. I had the pleasure of meeting the Most Rev. Dr. O'Donnell and Father O'Hara in reference to these two farms, and for his lordship and Father O'Hara of course I must say that they listened most attentively and very kindly to me, and gave every consideration, as far as I could see, to the views that I put forward, and I have no shadow of doubt that if I could give them clearly a conception of the local circumstances they would agree with my view as to those farms. But sympathetic and kindly as those two members of the Board were to me, they had the difficulty, of course, of being far remote from the district and of not being able consequently to have the full understanding necessary of the local circumstances. The result anyhow is that the Board stepped in and spent a lot of public money in purchasing these two farms, and the farms have remained upon their hands, useless and idle, for many years now, and they will remain so for many years to come, in consequence of the local feeling in reference to them. I think if we had a representative on the Board who could put forward a case in reference to this matter and to other matters, our point of view would be more effectively expressed and would be sure to be listened to. As I say, I never saw a representative of the Board to explain those opinions of mine, which are the opinions of many local people, and although I quite gratefully admit that Dr. O'Donnell especially, and Father O'Hara in every way in the power of both of them did all they could as individuals, still nothing has been done to satisfy local opinion and to settle a matter that is calculated at any moment to lead to disturbance and that will never certainly lead to anything that will ease the congestion or give any assistance to the poor people in this county.

43069. Allow me to interrupt you, just in order that my mind may be quite clear. I do not quite follow you when you say that you have never seen a representative of the Board. You told us that you saw Dr. O'Donnell and Father O'Hara, both members of the Board?—Yes, but it was in their unofficial capacity, and I am bound to acknowledge their kindness. I would not have seen them at all only through being a Member of Parliament, and I acknowledge how kindly they received me and listened to what I had to say, but they only received me as a private person, as far as I can understand.

43070. Do you mean by a representative of the Board an official of the Board like Mr. Doran or somebody of that sort?—Anybody connected with the administration of the Board, my lord.

43071. I think that you did, as a matter of fact, see some gentlemen who have a very powerful influence in its administration?—I saw Mr. Wyndham and Sir Antony MacDonnell, but I had no hope of impressing the local circumstances on them, and I was not disappointed.

43072. Mr. KAVANAGH.—For what purpose was it that the Congested Districts Board bought these two farms?—It was stated that it was for the purpose of migration; for the purpose of removing some tenants from a congested district and splitting up these two large farms amongst them. These two farms are not in a scheduled district at the present time.

43073. And that scheme failed?—Absolutely; and it is certain to fail, because no tenant will go to the farm, and at present the Board is losing.

43074. CHAIRMAN.—There was a demand that the men originally evicted from these farms should be put back?—Yes.

43075. And it was owing to that demand that nobody else agreed to go and take up the land?—Yes, but of course I am not making any extravagant claim in reference to these farms. My point in this matter is: that if we had a representative or were in touch with the Board in any direct way we could easily effect a settlement that would be

* See pp. 220 *et seq.*

for the relief of congestion and would be a settlement of the local interests besides.

43076. What is the size of these farms?—They are two very large farms.

43077. How big?—I should say that one is over 100 acres.

A member of the audience.—About 100 acres each.

Witness.—It is very good land.

43078. CHAIRMAN.—I daresay his lordship the Bishop will have a question about it, but does not it appear to you that you might think that it was hardly acting in conformity with principles that you should put back on a large farm men of that kind, when you want really to buy the farms and break them up?—Of course, my lord, I do not advocate this at all from the point of view of relieving congestion. I am offering it from the point of view that we are anxious that these tenants should be put back for other reasons, altogether outside congestion.

43079. But then I suppose that the point of view of the Board—I do not know that it was the Bishop's point, but it seems to me that the point of view of the Board was that they bought the land in order to relieve congestion and that they were relieving congestion by so doing?—I take it for granted of course that they bought it for that purpose, but they did not succeed and will not succeed, having regard to the local circumstances, which illustrates my point, that if we had a representative this thing would never have happened.

43080. Mr. SUTHERLAND.—What thing would never have happened?—The purchase would not have taken place. I think the Congested Districts Board would never have invested in these farms if they had our point of view.

43081. Most Rev. Dr. O'DONNELL.—You have stated to the Chairman that it was your opinion that it was in order to relieve congestion that the Congested Districts Board did buy these farms?—Yes, my lord, as far as I know.

43082. You are aware that there had been a complaint made against the Board for not buying land in Kerry?—Yes, my lord, and I joined in that complaint.

43083. It was difficult to find land for the relief of congestion?—Yes, my lord, but the difficulty has not been so great, in my opinion, as has been represented.

43084. Well, you put it to the Commission that if on the Congested Districts Board there was a member for Kerry, that member would naturally be instrumental in endeavouring to prevent the occurrence of such a trouble as you have outlined to the Commission?—Yes, my lord.

43085. Taking things as they are, is it within your knowledge that before the purchase of these farms there was local consultation?—Well, it was reported to me. Yes, I think I can say that it was within my knowledge.

43086. Do you think that Mr. Doran would consult people who might be supposed to know the locality?—Somebody from the Congested Districts Board consulted somebody in the locality.

43087. And the farms are in the same condition still?—Yes, my lord.

43088. What is being done with them?—I understand they let the grazing of them to many people.

43089. The Congested Districts Board?—Yes, my lord.

43090. It would be important if the matter could be arranged?—Very important, and very easy to arrange it.

43091. Perhaps it might be well if, in answer to a question, you were to outline for the Chairman of the Commission what the history of the case has been. Were those two families who were put out of these farms tenant purchasers?—Yes, my lord.

43092. They were back somehow in the annuities?—Yes, my lord.

43093. The Land Commission ordered a sale?—Yes.

43094. The owner who had sold the property bought in the farms?—Yes.

43095. On the ground that there had been some of his money retained?—Yes, exactly, my lord, because it was under the old Purchase Act.

43096. How long do you think were those farms in the owner's hands at the time the Congested Districts Board intervened?—They were years, my lord.

43097. During that time did the owner make any offer to the tenant purchasers?—I think so, my lord.

43098. It is unnecessary to discuss whether they were satisfactory or not?—Well, I think that the owner was not a very capable man for carrying out negotiations.

43099. It was said that he offered to give them back if all that he had paid for the farms was repaid to him?—I heard it stated, but I did not know of that.

43100. If all the instalments were repaid to him, I take it that that would be quite satisfactory; but equity would seem to demand that in the meantime he should account also for the fair value of the farms, that if he were paid the debt he should account for the full annual value of the farms in his hands?—Yes, my lord.

43101. It would seem to be the case too, apart from that, that at the time the Congested Districts Board did intervene these farms were actually held by the owner?—Yes.

43102. Are you aware that it was only after considerable negotiation that a bargain was made with the owner?—Well, I am aware that it was after negotiation. That is all.

43103. Did you hear this also, that it was stated that the owner was going to advertise in a Northern paper for the purpose of obtaining a purchaser from a distance before the Congested Districts Board intervened?—Oh, but intimidation of that kind is a very usual thing in the County Kerry in order to force prices and to force unsuitable and unnecessary bargains, and I would not take any notice of it if I heard it.

43104. But you would not be surprised to hear that that was communicated to the Congested Districts Board?—No, I would not; but in fact I would take it for granted that every inducement was used to force the Board into the purchase.

43105. Did you yourself intervene when the farms were being purchased, or had you any offer?—I had no opportunity.

43106. So that the farms were purchased before you knew of it?—Yes; which is another complaint of mine.

43107. But you would not be prepared to state that the Board was not at considerable pains to ascertain what the feeling of the locality was?—I am sure they consulted some persons locally, but the Board seemed to lose sight of the important thing that they might consult some person like myself. But I make no personal complaint.

43108. But it might happen that a busy official might not find you near?—Well, I am always found in Killarney or in the House of Commons.

43109. Did you ever ask for an interview with Mr. Doran himself on the subject?—I do not think so.

43110. I know how very anxious you have been to have this case settled, from my own conversations with you, and I am sure that the members of the Board always appreciated your efforts to have the case adjusted and settled. Is it the feeling in the locality that these families should go back, or is it the feeling that it would be better that they should be compensated, and that the lands should be used for migration?—Well, having regard to all I am told, I cannot well interpret the feeling in the locality, but my own feeling is that there are two very large families. One of them is in the workhouse, and the other family is in a deplorable condition, and I think that when you have two large families every effort should be made to settle them on the land instead of turning them out

43111. Do you consider that those families would just suit these large tracts of land?—Of course, my lord, I would not profess to give expert evidence.

43112. What do you think of this? Suppose they got portion of these lands under an equitable arrangement in reference to any equitable interest in the farms, and that the balance of the farms should be used for the enlargement of small holdings?—Kerry is like Donegal, and every man considers, and every woman in this case considers, that they have a just right to their own farms, and that nobody else has a right to express any opinion.

43113. But do you as a public man see any difficulty in treating tenant purchasers who from one cause or another fail to pay their annuities in exactly the same way as a tenant?—Oh, I have a great objection that they should be so treated. I

July 5, 1907.

Mr. John Murphy.]

think that anybody who purchases his holding ought to clearly understand that he can never hope to be treated as an evicted tenant, and I have no sympathy whatever with such a claim except under very special circumstances; but there are extremely special circumstances in this matter.

43114. That is what I want you to put briefly before the Commission?—The first of these is that the purchase of these farms took place under the old Purchase Act. The prices were exorbitant, and the tenants were evicted immediately after the purchase transaction taking place, which proves two things in my opinion—that the prices were excessive, and that the tenants met misfortunes that caused them to be unable to meet their obligations. The farms were substantial farms worth £2,000 for the tenants' interest in them, and in consequence of the non-payment of a year's annuity both the tenants lost their interest in the farms, and the Congested Districts Board then stepped in and purchased for a trifle, as far as I can understand, the landlord's interest and the tenants' interest in a legal way, and so unfair was it that the Congested Districts Board offered through me and others to compensate both of the tenants, one to the extent of £350, and the other to the extent of £150, I think, which proves clearly that the Congested Districts Board, through their officials, acted in an unreasonable and improper way towards these tenants.

43115. Would not it also prove that they were rather anxious to make equitable compensation?—Well, of course, my lord, that is a question that you can look at from either point of view, and if I were in Donegal, perhaps I would say so, but when we are in Kerry I would say it illustrates the difficulty of any outsider measuring local circumstances in a proper manner.

43116. I did not ask about the sufficiency or insufficiency of the sums, but at all events it was some acknowledgment of the moral rights of those tenants?—Yes, and the actual wrong of the officials of the Board in purchasing the farms without consultation with anybody entitled to speak about the matter.

43117. I think that second point would be disputed by the Board?—I suppose so, my lord; but I make the statement not for the purpose of making any point against the Board, but in order to state what I believe are the actual facts.

43118. You know that the Board would have no interest in the matter except the interest of the small occupiers in other parts of the county?—Of course, I agree, my lord, with what everybody says—that the Board was filled with good intentions; but the Board or their officials when they came into the locality got into touch with the wrong people, and I know that one of the justifications for the taking of these farms by the Board was that a large farmer in the locality said it was the best thing, and that very large farmer is a man who is not representative of any possible interest except his own.

43119. But was not it stated that they had the advantage of consultation with some representatives other than the large farmer?—Yes, but the representations with respect to those consultations were exaggerated or enlarged, my lord, having regard to what they tell me.

43120. Your point then, I think, is that if there was a member of the Congested Districts Board from Kerry he would have warned the Congested Districts Board off this purchase?—Yes, my lord.

43121. Mr. Sutherland.—And supposing the transaction were forty miles away from this place would he know better than anybody else?—Kerry is a peculiar county. In any question like this we are generally capable of expressing our views, and nobody could fail to know about them.

43122. Could not they know in Dublin as well?—It is wonderful how ignorant people in Dublin are of local matters in the County of Kerry when you come to discuss them, no matter how good their intentions are. Mr. Doran, as a matter of fact, is a Kerry man himself, and ought to have known all about Kerry conditions.

43123. Were they valued before they were purchased as judicial rents?—Yes.

43124. How often had the judicial rents been fixed?—Once.

43125. Under what Act were they purchased?—Under the Ashbourne Act.

43126. Were those tenants in possession for a long time?—Oh, yes, for generations.

43127. And under what Act do you say?—The Ashbourne Act.

43128. And were the terms high in your opinion?—They added arrears to the purchase money, and the land was very good, and that was the first initiation of the purchase.

43129. Were the annuities greater than the judicial rent?—They were less.

43130. How was it they were unable to pay when they were less?—Both families had misfortunes.

43131. Which the Land Commission would not consider?—Well, they did not, anyhow. They do sometimes, of course, but they did not in this particular case. Of course, you see under the Purchase Act when the lands were bought the landlord did not get all his purchase money, and he still retained an interest in having the annuity paid, because if it were not paid he would have to pay it himself, and it was the landlord who took proceedings and put them out.

43132. Chairman.—I understand that the annuities which they undertook to pay were less than the original rent, and, of course, that is an absolute necessity for the purposes of purchase, but that within a year of the time when they made the purchase they fell behind in their payments?—Yes, my lord. Of course, it all comes back to the point that I want to make and that I want to draw the attention of the Congested Districts Board to, that if the Board made a reasonable effort to have a settlement in this case congestion would be relieved and the tenants would be satisfied.

43133. Mr. Sutherland.—In what direction?—Of course, there are difficulties about detailing all the circumstances; but if an adequate and proper offer were made that could be discussed with our own bishop and the parish priest of the district, the matter could easily be settled.

43134. Would not Dr. O'Donnell do?—Dr. O'Donnell would always be welcome in Ireland, and no where more than in Kerry.

43135. Most Rev. Dr. O'Donnell.—You yourself know the circumstances thoroughly, as I have reason to be aware of?—Yes.

43136. Is not Mr. Doran also a native of the district?—Yes, my lord.

43137. Does not it look as if Mr. Doran, in consultation with yourself and others, who take an interest in it would be able to submit some scheme for the settlement of the case?—Quite easily.

43138. Would you be prepared to meet Mr. Doran and discuss the matter with him?—Certainly. Now, in reference to the attitude of the Board regarding the sale of a very large estate, the Earl of Kenmare's estate, prices are practically agreed upon, but many portions of the estate, such as Coolies and Coom, are congested districts under the existing conditions, and although I myself have written to the Board pointing out that the sale has been practically agreed upon, we have not been able to get an official of the present Board to take any steps whatever to secure that those congested districts should be properly dealt with in connection with the sale.

43139. Chairman.—The sale is a direct sale?—Yes, but Lord Kenmare agreed with us that he would sell to the Congested Districts Board, and I wrote to the Board and got a reply simply in a formal way saying that the estate was not yet offered to them, whereas everyone in the county knows that for months past, for the last year in fact, that the sale has been proposed and the Congested Districts Board through their officials, have done nothing whatever to utilise their powers and to step in to protect the tenants in the congested district portions of the estate.

43140. Most Rev. Dr. O'Donnell.—When did that correspondence pass?—I think I wrote to them about a month ago.

43141. Chairman.—I do not quite yet follow. The proposed sale is a direct sale?—Yes, my lord.

43142. From Lord Kenmare to the tenants?—Yes.

43143. What do you wish the Congested Districts Board to do?—We have a written agreement on the part of Lord Kenmare that he would sell to the Congested Districts Board, and I think that the Board should take steps and have a representative here

to see to the carrying out of the purchase, and that they should use their powers for the purpose of relieving congestion in this part of the county.

43144. Then you want the method of sale varied. You wish it to be transferred from direct sale to sale through the Estates Commissioners?—Yes; the tenants are anxious, my lord, to have it carried out if possible, and they have occasion to complain that the Congested Districts Board have no representative here to look after the interests of those congested districts.

43145. But apart altogether from the question of whether there ought to be a representative or not, surely if the sale takes place under the Act of 1903, a direct sale, that is no affair of the Congested Districts Board?—It is not as a question of prices that the sale takes place through the Congested Districts Board, but they have power to do many things to improve the condition of the people.

43146. Yes, when it takes place through the Congested Districts Board?—Yes.

43147. But I thought that you wished us to understand that, in your opinion, if there was a representative of the Congested Districts Board in Kerry he would, in some way or another, protect the interests of the people in congested areas when such property passed direct from the landlord to the tenants under the Act of 1903?—No; that was not the point that I wished to make, but that they should secure that the sale should take place to the Congested Districts Board for the benefit of the people in the congested districts when the landlord was ready and willing, and the tenants were anxious, that the sale should take place to them.

43148. Yes; then you wish to divert—if I may so use the word—the sale from direct sale to a sale through the Congested Districts Board?—Yes; and I think that the present procedure of the Board is not calculated to be effective in dealing with a vast area of congestion, and that owing to their delay these congested districts of Gneeveguilla and Coolies may be entirely left out of the benefits that the Board can confer upon a congested district.

43149. Mr. SUTHERLAND.—Is it your proposal that the Board and the proprietor of the land should agree?—Yes.

43150. And then you call upon the Congested Districts Board to make terms?—Yes; and they have delayed unnecessarily.

43151. Most Rev. Dr .O'DONNELL.—You have agreed about the price at which the tenants would buy from the landlord?—Yes.

43152. You think that might facilitate the Board if it became the purchaser, because it would know the terms on which it could sell to the tenants?—Yes.

43153. That is your idea. Perhaps you have heard that since the sitting of this Commission the operations of the Congested Districts Board in buying land have been rather seriously impeded?—I know it, my lord, of course, but I think it is very unfair that it should be so.

43154. You think it is very much against the public interest that it should be so?—Yes, and there are certain estate improvements that may be made by the Board in this particular case, and that are most desirable in order that a number of people may not be left to drift helplessly without receiving assistance such as those in other districts have received.

43155. What you say is this. The owner and the tenants have agreed as to their terms. Instead of the sale being directly from the owner to the tenants you propose that it should be directly to the Board, the Board knowing at what terms the tenants will buy, so that before the tenants become purchasers the Board may, in many ways, improve the holdings of the estate generally?—Yes.

43156. CHAIRMAN.—Those estates are in need of improvement?—Very much, my lord.

43157. May I ask you a general question on that? Do you think that where an estate is in need of improvement in a congested area it is an advantageous thing that a direct sale should take place at all?—Well, having regard to what I see in the County Mayo, and in some portions of Donegal and Roscommon, I think it would be to the advantage of the tenants that the sale should take place through the Congested Districts Board.

43158. Would you be of opinion that where an estate could be shown to be in great need of improvement the sale should only take place through the medium of the Congested Districts Board?—Well, I have not fully considered all the cricumstances, my lord.

43159. In any case I suppose you think that once the land has passed from the landlord to the tenants it is extremely difficult for any body like the Congested Districts Board to improve it afterwards?—Ten times more difficult than it would be if they stepped in now as they ought to do.

43160. The opportunity to do it is when it is passing from the landlord to the tenants?—Yes. Then, I think that the purchase price of land is so important to the ratepayers, having regard to recent events, and indeed having regard to everything in connection with land purchase that the County Council, or some public body in every locality ought to have some power to influence the price. I think that is a most important matter, because, generally speaking, as was pointed out to you in Kerry the other day, when purchase prices are agreed to they are merely grading the rents without having any regard whatever to value. To a large extent the tenants, and many other people, only consider the extent of the reduction and never arrive at a result from the economic point of view at all. And then of course it is unnecessary to point out that the area of congestion is at present most unsuitable because population is no test at all, especially in the County of Kerry, from the peculiar way in which there are places where no person is living, or where one or two men may be in some area or other of the county dragging out a very impoverished and unhappy existence, and those places would not be brought at all under the existing law, and, in my opinion, they should be; and wherever there would be poor tenants in any portion of the County Kerry, or counties of similar character, the Board ought to have powers to relieve those tenants without any regard to population in the districts of those counties. I think it could be said that the tenants have reclaimed the land altogether themselves. I know that to be the case of my own personal knowledge in many instances, and they have been prevented by the load of arrears hanging over them in many cases from going into court to have their rents fixed. I am bound to say this, that sometimes when they go into court the valuers of the Commission have actually put an increased rent upon the tenants' own improvements. And I know of one case where the valuer of the County Court acts as a land agent in the County Cork, and a valuer in the County Kerry, where he put on the well-known Warden estate a 5*s.* higher rent in a particular case than was put by the landlord's own valuer himself. That is not by any means an isolated case, and that being so it is most necessary that every circumstance about the purchase price and other matters of that kind should be most carefully inquired into by the representatives of the ratepayers and of the public, generally. I think that in the question of roads the Congested Districts Board might very easily have done much more in the County of Kerry. They have, in some cases, where I approached themselves, been very kind and generous, but it is not for a public representative to be discovering for the Board what is to be done, for the Board ought to have the machinery, and their officials ought to have the powers to investigate any matter affecting any congested district, and carrying out works themselves when they are necessary. There is one particular matter that I remember having called the attention of the Board to some years ago in one of the congested districts, called Coom. An awful disaster, known as The Moving Bog, took place, and that resulted from the pressure of water from within the bog and the cutting away of turf from the outside. A whole family lost their lives, and a whole countryside had their lands injured and their cattle lost in many cases, and the accident happened on that occasion owing to the water not having a free outlet as it ought to have. The Congested Districts Board certainly ought to do something after the years that have passed in order to ensure that such another accident will not happen, as they could very easily do it.

43161. Most Rev. Dr. O'DONNELL.—You say that preventive measures would be feasible?—Easily feasible. There is an outlet. All it would want is to be cleared, and it is all in a congested district. And if that outlet were cleared it would be a sufficient safeguard. Then, down along from where that accident happened, there are a few rivers that have changed their courses, and they have destroyed the reclaimed

July 5, 1907.

Mr. John Murphy.

land of many a poor occupier, and if the present officials stepped in very little expenditure would be be necessary to set the courses of those rivers right and to give the tenants living alongside of them greater safeguards than they have.

43162. Mr. KAVANAGH.—Do you say that there is a danger of the recurrence of that disaster?—Yes. Everybody tells me that there is, and neither the landlords nor the Board have done anything whatever in reference to that particular matter. Then, I think, of course, that the Board ought to have compulsory powers in many directions. I know it has been stated that there is very little untenanted land in this county, but I do not agree fully with that as far as this portion of the county is concerned. I pointed out to the Board some time ago that a very large farm adjoining this particular district where the bog disaster took place was up for sale. There would not be any difficulty, in my opinion, if the Board had proper powers, and I am not quite sure that even with their present powers there would not be great difficulty in their becoming the purchasers of that farm. But whatever was the reason, whether it was their lack of powers or whatever was the cause—and I will put it down mainly to that, but I think it was also due to their want of attention to Kerry—the fact is that a big farm adjoining that district went to a private person, and the opportunity is lost certainly for a generation of doing any good for that particular congested district. Then, in this county, and within a narrow radius of Killarney, there are a few farmers who have been enlarging their own holdings to the detriment of the entire community They have more land than they could reasonably require. Of course they are not very many in number, but I think that in a case like that the Congested Districts Board should have power when land was required, and should have the money to deal with those people in such a way as would secure some of the land for distribution among the people. I think, also, that there are some demesnes, such as Lord Kenmare's, a portion of which could be easily secured at the present time for the relief of congestion. When I was a young boy myself I often heard that towards the Victoria Hotel the whole roadway was peopled. There were houses and numbers of families, but under the unfortunate conditions that existed all those people were taken away and the land taken into the demesne. Well, that land that has been taken in is extremely good land, from any point of view, whether it be grazing or tilling, and I cannot conceive how, under existing conditions, Lord Kenmare could have any objection that much of that land should be utilised for the purpose of giving opportunities to the present or a re-constituted Board for relieving congestion. I think, too, that the Board ought to have compulsory powers in reference to the opening of limestone quarries. There is a district called Coolies, near Killarney, where the people have neither turbary nor limestone quarries, and the land is so bad that without artificial aid it will not produce anything. Adjoining this district, on another property, there are plenty of splendid opportunities of opening limestone quarries, and the Board ought to have the power, or some authority ought to have the power, of opening such quarries as I speak of for the benefit of such districts. Then, the railways in a few of the districts are guaranteed lines, the ratepayers having to pay the guarantees, and they certainly ought to have some powers to compel the railways to bring lime for the benefit of the locality at a cheap and suitable rate, as could easily be done, for instance, in the Glenflesk district.

43163. CHAIRMAN.—That might have the effect, might it not, of reducing the profits of the railways?—No, my lord, it would only increase the profits of the railways, because they are running trains every day, and it would be the easiest possible thing to attach a few wagons that would bring lime at a cheap rate, and it would not cost any more to the company but would only bring additional revenue to them.

43163A. Why do they not do it now?—Well, the Irish railways seem to be always acting against the ideas of the people, as a whole.

43164. But have not those guaranteed railways that have been built under baronial guarantee got any representative of the ratepayers?—Oh, on the line which I refer to in this particular instance we have to pay the guarantee.

43165. Don't you have a representative on the Board?—No, my lord.

43166. Now take, for instance, the Dingle and Tralee railway?—Yes.

43167. The Member of Parliament for West Kerry is the Chairman of the Board?—That is a special case. That is only a small line of railway running to that particular district.

43168. Still it is one of those guaranteed railways?—Well, the County Council have the nomination of the Committee of Management and thereby practical control.

43169. Mr. SUTHERLAND.—In what capacity is he Chairman?—As the nominee of the County Council. Then in reference to the live stock in those congested districts, the Board might, I think, advantageously do something in the matter of improving the breeds of cattle and other stock grown upon the farms at little expense and with great advantage, and having regard to the very small size of many of the farms of the poor farmers the Board ought to have power to provide up-to-date machinery that could be leased or rented to the different tenants. Then if the Board had powers in reference to industries it would be a very easy thing here in Killarney, or in some part of the district, to start some woollen industry. Wool is, I believe, very cheap and very easily procured, and it would be of great advantage if something in that direction were done. Of course there are others who ought to provide the necessary means, but it is a public department that ought to take the initiative in connection with these matters. It is unnecessary to indicate that the planting of trees and the question of turbary are matters that a Board fully empowered and properly constituted could very easily deal with satisfactorily. Our fishing on the lakes is very different from the fishing that you have been hearing of lately, but the congested districts in several cases have the main rivers and lakes, and the residents in those districts are dependent on the fishing for a portion of their time. Well, the fishermen are very much handicapped by the existing laws and regulations in regard to fishing, and they have such a reasonable claim that if any public Board were to investigate them and take them up a change could very easily and effectively be brought about. The Department of Agriculture is, of course, operating through the County Council in Kerry, but I am bound to say for myself that I cannot see anything like a reasonable or proper return for the vast sums that are expended by it. It seems really to be a matter of fact that most of the money goes on salaries; and some better scheme under a well-regulated department, having powers in all directions, would be more for the advantage of the people. The money is being spent at present in doing a lot of useless things, without any result. The Congested Districts Board and the Department have not worked in harmony, and very often, as we know in the County Council of Kerry, have worked against each other, with the result that the money went, but no good was effected. I am bound to say, too, that I think myself that if technical instruction in the matter of cookery and things of that kind is to be given by any Board, the primary system ought to be utilized in order to carry it out. We have not very unsuitable schools, comparatively speaking, in the County Kerry, but still there is a great deal to be done for the benefit of primary education from very many points of view in reference to the schools being used to give opportunities to the children from the point of view of comfort and in every other aspect. Well, the vast sums used by the Department in connection with so-called technical education could be very easily utilized to give improved technical education through the schools, and it would have the additional advantage of making the schools more comfortable and of providing funds for the betterment and improvement of them in every way.

43170. CHAIRMAN.—Do you think this, that the National Schools should be used as a training ground for the work which the children will have to do in after life?—Yes, my lord. I think that a scheme could very easily be developed for doing the thing under successful conditions in the direction that I have indicated. I do not think I have any more to say.

Mr. James O'Shea examined. *July* 5, 1907.

Mr. James O'Shea.

43171. Chairman.—May I ask you where you live?—Muckross.

43172. What is your occupation?—A farmer.

43173. What is the acreage of your farm?—46 acres, Irish measure, or about 76 statute acres.

43174. And how do you use your farm principally?—Well, in dairying and agriculture.

43175. How much of that is tilled?—Practically I have to till about one-third. It is reclaimed land, and it is very much inclined to go back to its original condition, and consequently I have to till it.

43176. Then what is it you want to tell the Commission?—Well, I have very little to say after the evidence that Mr. Murphy has given, because we discussed the matter over on several occasions and I fully agree with what Mr. Murphy has said as regards any details, but there are a few minor points that perhaps I might put to your lordship. As to Coolies, for instance, there is no turbary for occupiers in that division. They have obtained turbary on the adjoining properties with the result that those bogs are practically worn out, and as to the little that remain there are negotiations going on presently between the landlords and tenants of the estates for purchase. As to limestone, there is none on the property either, except some, which I understand is on Lord Kenmare's demesne, but there is an immense amount on the Muckross property, which adjoins Coolies, and it is nearer than Coolies, and I think if the Board had compulsory power to obtain some portion of this demesne, which could be very easily obtained, it would be of great assistance to poor people in this division, and the entire division has been reclaimed land, or made land, mountain land, and I think, if for the information of the Commission, you would go through the division—and it is not very far from Killarney—it would be a most essential thing to do, because then you would have an idea of what the requirements of the place would be.

43177. Mr. Sutherland.—That is the Muckross division?—Coolies. I live in the Muckross division. There is a road which would be very necessary. Portion of it is already made, and at very little cost it could be completed and put in repair, which would be a great benefit to not a few of the poor people living in the mountain district. Another thing, my lord. There is an immense quantity of rough grazing land and the agricultural holdings in the place are very small, a great many of them, that is the agricultural portion of course. The rough grazing is grazing in common, and I think it would be necessary to divide those agricultural portions. A great many of the people seem inclined and they think they ought to be divided, the agricultural portions. The rough grazing is very bleak and very open, and in winter time there is practically no shelter at all, and I think if the Congested Districts Board planted portion of the rough waste land with trees it would be a great boon for the cattle and sheep in the way of shelter.

43178. Chairman.—Do I understand you to say that there is some land which you think ought to be broken up for enlargement of holdings?—Well, practically not on that side, but there is on the Muckross side.

43179. But it is what you call the agricultural portion?—Well, that is the portion which they till—the portions which they reclaimed.

43180. And what do you want the Board to do with them?—To divide them; to give each occupier their own portion.

43181. To re-stripe it?—To stripe it.

43182. Is it in what they call rundale now?—It is in rundale now, a good portion of it. And in the way of shelter then I think that in view of so much waste land and rough land, and bog which has become practically worn out, if there were an extensive share of plantation done there it would be a source of fuel and shelter.

43183. Most Rev. Dr. O'Donnell.—Is the rough grazing held in common?—All in common.

43184. It would be most advantageous to the district generally. If there was any farm or grass land which could be acquired by the Board would you suggest that the Board should break it up and put the people upon it, or hold it as common grazing for the people about?—I think I would break it up, my lord, and transfer a few of the tenants who are in common to these lands.

43185. And give their lands to others?—Yes.

43186. Do you think that that would be as good a way as if the Board were to hold it and let the people about send their cattle there?—It would not be convenient enough for that. There is no land there, practically speaking, except what is in the Muckross estate. If the Board obtained compulsory power to obtain this land and to transfer a few of the existing tenants from the Coolies down into the Muckross estate, it would be a good thing.

43187. And the holdings left by them could be utilized for the enlargement of the holdings of the others?—For the enlargement of the holdings of the balance of the people who would be left. I have nothing more to say except a loan for that road that I was speaking of, which requires very much to be repaired and completed, and it would be a benefit to a great many of the tenant farmers.

43188. Are the people spraying this year yet?—Very little up to the present, but it is the intention to do so in the near future.

43189. Mr. Sutherland.—The District Council have not repaired the road?—No, sir.

43190. Is not it their right to do it?—Well, the District Council in Killarney have spent a great deal of money in that way with the result that the ratepayers are beginning to think that they are becoming overtaxed altogether and that they cannot stand the drain.

43191. Is it the fact then that you are being taxed for the road and yet you have not this road?—Well, we have been taxed for a number of roads that we have to keep, and if we are to pay for this road it would be a new taxation.

43192. Would not it be the same thing if the Congested Districts Board did it, for they won't go to the cost of repairing it, or were you expecting the Congested Districts Board to do it and keep it repaired afterwards?—Well, the public rate would keep it in repair once it was done.

Mr. Jeremiah Lucy examined.

Mr. Jeremiah Lucy.

43193. Chairman.—You are a member of the Killarney District Council?—Yes, my lord; we are very much handicapped and in need of a road across into Rathmore in the Clydagh district.

43194. Is that the road mentioned by the last witness?—No, my lord; another road. I live just on the boundary of Cork and Kerry. The population is something about 400, and the valuation is £632, and if we had a road it would be a great benefit, because we have not limestone or the lime, and if we had to go to Rathmore the round would be 24 miles, but if we got this road across to Rathmore it would be about 9 miles; and it is impossible for the land in our part of the country to do anything if it did not get lime.

43195. Most Rev. Dr. O'Donnell.—Did you say Caragh?—Clydagh Eelectoral Division.

43196. The number of small holdings is very large?—Yes; we never got anything from the Congested Districts Board only a sum of £46.

43197. That is from the Parish Committee?—No; nothing from the Parish Committee.

43198. What was the £46 for?—For making a road, and if we get this road it would be a great benefit to us.

43199. Is it a new road?—Yes.

43200. Did you apply?—Yes; we applied for a grant before, but they gave us no heed.

43201. Would the locality be willing to contribute anything to it?—Yes; we would contribute something to it if we got it.

43202. How much of the expense would the local authority bear?—I think the length of it would be about 600 perches, and they would contribute a pound a perch to make this road.

July 5, 1907.

Mr. Jeremiah Lucy.

43203. And how much would the local authority contribute?—The District Council would give £200. And then about three years ago they purchased and we applied to the Congested Districts Board and they gave us no heed at all in purchasing, although we are in a congested district. And we are very much handicapped by the want of a road, because any grievances we have to make we get no heed to them, and the ratepayers in our part of Kerry do not know that such a Board as the Congested Districts Board exists at all. If we got this road it would be very much needed.

Mr. George F. Trench examined.

Mr. George F. Trench.

43204. CHAIRMAN.—I understand that you are Honorary Treasurer and Secretary of the Kerry Branch of the Landlords' Convention?—Yes.

43205. And you appear here before us on behalf of the Landlords' Convention?—I have been asked by them to appear.

43206. Perhaps the best way, if it suits you, would be to proceed with your evidence as to which you have been kind enough to give us a precis?—Very well, my lord.

43207. And we will then ask you questions upon it?—I am the agent of eleven properties in the County of Kerry and the adjoining County of Limerick, properties covering 50,000 or 60,000 acres, with a rental of £26,000 in round numbers, and tenants numbering 1,237 (not counting about 500 tenants of middlemen) all or almost all of which property I have sold or agreed to sell. There is only one small one not sold. Besides I have sold, under the former Acts, years ago, several other estates.

43208. Those were direct sales?—Yes; all direct sales.

43209. May I ask you on that, would not you agree that where the property is in great need of improvement the method of direct sale is not a very good one?—I quite agree.

43210. Would you rather see property of that kind sold through the medium of the Congested Districts Board, who would have an opportunity of improving it?—Some intervening body should take it up and improve it; but as you have asked me that question, my lord, I would say that the properties that I have to deal with have very little congested country in them.

43211. I only say that where the property is in need of improvement?—Oh, yes; I think it is most essential.

43212. Would you agree with what one of the witnesses who have given evidence has said, that once a property has passed from the landlord to the tenants, and the tenants have become tenant purchasers, it is extremely difficult after that for anybody to effect improvements on the land?—I think there is no power at present. The greater part of these properties are outside the congested districts, but some parts are within that area, and have been sold to the Congested Districts Board. I have also been a member of the Council of Agriculture from its beginning (recommended by the Co. Council of Kerry, of which I was for three years a member), and nominated by the Department. I was a member along with Lord Justice FitzGibbon and Mr. T. M. Healy, M.P., of the Vice-Regal Commission appointed in 1905 to report on the properties in Ireland of Trinity College, Dublin, and in that capacity acquired a certain amount of knowledge of the land problem in congested districts. I just wanted to say a few words about the drainage of large areas in Kerry, but as Mr. Henry Doran dealt with that subject at Listowel I do not propose to detain you at all about it.

43213. What subject do you now propose to take up?—I will deal with the enlargement of holdings by reclamation.

43214. Might I ask you whether you can remember from what you learned on the Commission to which you have referred, what proportion of the gross rent is taken by Trinity College as head landlords of the property?—About 80 per cent. I did not actually calculate that, but that is my impression. As the rents have been subject to two reductions in the Land Courts there is very little margin now.

43215. But Trinity College is not affected by that?—Oh, not at all. Trinity College is in clover.

43216. It is a very unfortunate position for the middle landlord, to get squeezed both ways?—It is. They are getting out as fast as they can; and both these and the sub-middlemen are suffering. There is a perpetuity tenant, whom I represent, Mr. Blacker Douglas, and there are sub-middlemen, two, and sometimes three, under him; and I have a case in which there are five interests one over the other. And I would ask this Commission, if it is not irregular, to take up that report of the Trinity College Estates Commission, Dublin. It has been shelved, it seems to me, in a most unbusiness-like way. We took a great deal of trouble with it, and there was never a single word, except formal thanks, in the House of Commons for what we did. It seems to me that this Commission might, I do not say embody it in their Report, but certainly call attention to it, for it bears very much on the problem which you are seeking to solve now.

43217. Most Rev. Dr. O'DONNELL.—Do you mean the Trinity College Estates Report?—Yes. It has nothing to do with the educational question.

43218. From your statement to Lord Dudley it appears that in Kerry Trinity College takes four-fifths of the rents?—I think so.

43219. Well, taking four-fifths of the rental of these estates, or some proportion not far from that, does Trinity College do anything for the improvement of the estates?—Nothing; and the Land Act that was passed, I think it was the Act of 1881, practically relieved them from all responsibility, and left it entirely on their perpetuity tenants.

43220. CHAIRMAN.—Is it any exaggeration to say that a body like that, which happens to be a head landlord, and naturally looks for its own funds from the State, is the worst possible class of landlord?—I am afraid that it is not. I should say so. But I should say that that there are portions of the Trinity College property that are held by themselves direct, and on those they are doing something, and are working on them, the middlemen having been squeezed out. That is undoubtedly the case in the property at Cahirsiveen. But even in North Kerry there are some parts of it that are held direct.

43221. Mr. SUTHERLAND.—I was very much surprised to learn, but I do not know these things as well as you, that Trinity College held these rents before 1881?—Oh, yes; for ages.

43222. And I have heard over and over again that dual ownership was the curse of Ireland, and that the Act of 1881 caused it?—Not dual ownership.

43223. But was not the Act of 1881 the beginning of dual ownership in Ireland?—I am afraid there was triple and quadruple ownership before that.

43224. Which is worse than dual?—A great deal worse. It is the worst form of Irish land tenure that ever existed.

43225. And it was not the Act of 1881 that introduced dual ownership?—No. Of course dual ownership existed in Ulster long before it came south. The Act of 1881 legalized it in the south.

43226. It only legalized it, but in fact it had existed?—Yes.

43227. So that the Act of 1881 acted logically by protecting dual ownership, which existed before?—Wherever a property is owned by a landlord and improved by the tenant dual ownership exists, whether it is legalised or not. But what I hope to show is that there is another side to that question, and that there are landlords who have done the improvements themselves, but the Act of Parliament has not made any distinction, and has not rescued the landlord who has improved his estates from the penalties attached to those who have not improved.

43228. Mr. KAVANAGH.—How did Trinity College become possessed of all those lands?—I believe the first grants were made by Queen Elizabeth.

43229. Mr. SUTHERLAND.—Confiscated lands I suppose?—I suppose they were. I do not go into that. I wanted to say that besides the rivers that Mr. Doran dealt with, that need to be taken up and dealt with on a large scale, there is need of some authority to come and take over this great question. I think the County Council should be given power to

introduce a scheme for the improvement of large areas of flooded land, and to promote improvement schemes and bring them before the Board of Works or the Department, and get a decision as to what particular body is to do it. I think the Department ought to be utilised in regard to these flooded counties in a way that has not yet been indicated, and that the origination and initiation of such schemes might belong, and ought to belong, to the County Council, and that from them statements should go to the Department and the Board of Works to show in detail what money should be advanced. There is bad need of somebody to start these things now that the whole atmosphere and environment has been changed, and there is nobody to do what the landlord used to do formerly.

43230. And how would these things then be done?—Mr. Doran has explained that an expenditure of £10,000, on a certain river, has been completely lost for want of proper engineering. They actually cut away the piece of rock that was keeping out the tide with the view of running out the fresh water, and of course the tide rushed in. What was wanted was a dam, a barrage.

43231. Mr. SUTHERLAND.—It is not desirable to have a thing like that repeated?—No; there should be proper engineering.

43232. How can that be secured?—I am afraid I am not able to answer that.

43233. I mean as to the management of it?—My proposition is that the County Council should form a scheme and should pass it through the Department, and get it sanctioned or not by them, then it should go to the Board of Works, and should get all the authority of these two bodies.

43234. How would that be an improvement on the method that was followed before?—I suppose experience teaches.

43235. I presume that the schemes that were carried out before went through certain formalities and obtained certain sanctions and approvals?—Yes.

43236. Were not they reasonably efficient?—I was not a party to them. That was a long time ago. I cannot give you the information about the old schemes; but I think I could make a scheme myself if I was put to it.

43237. A scheme that would be better?—Yes. People learn by experience.

43238. But I assume it went to the Public Department before?—It passed, I believe, from the Drainage Board to the Board of Works, and they made a mistake.

43239. And the drainage board was a local one and the Board of Works was the official one?—Yes.

43240. And they both approved of what was carried out and it was not successful?—I wrote to the Board of Works for the purpose of giving evidence before this Commission and asked them to let me know what works were being done in Kerry and what applications for such works had been made to them, and the answer was that they sent me a list of some small things and never mentioned this great work in North Kerry at all, just as if what Mr. Doran said was true, that they had gone asleep over it. Then there are slob-lands on which the sea encroaches, some of which are in our neighbourhood at Ardfert, hundreds of acres of which ought to be reclaimed and used for the purpose of enlargement of farms, the alluvial deposits being admirably suited for growth of crops. Then I want to come to the purchase of lands on hands, which is one of the serious questions with us It seems to me to be entirely a matter of price, and it ought to be recognised frankly that a landlord has two interests to sell where the land is in his own hands, and the precedent of purchase of lands for labourers' lots, in which both owner and occupier were paid, ought to be followed *mutatis mutandis*. By the purchase of landlords' farms in this way, voluntary sales could be continued, and the odious method of compulsion long postponed. The price should be settled by the Government arbitrator, as in the case of labourers' lots.

43241. Most Rev. Dr. O'DONNELL.—If there were not compulsion would there be arbitration?—Yes; the arbitrator comes in on the agreement of the landlord to sell and he only comes to fix the price, and he really fixes the price very carefully and advisedly, and I think he is the proper authority.

43242. In the case of the Labourers Act there is compulsory power to take the land?—There is.

43243. You do not favour the exercise of compulsory powers for the relief of congestion, similar compulsory powers?—Not at present, my lord. I think that everything should be done to get the land voluntarily before resorting to what I call the odious method of compulsion. We have recommended—that is, the Trinity College Commission—compulsory powers in certain cases, and that is why I want to make myself clear. I thoroughly agree with Lord Justice Fitz-Gibbon and Mr. Healy that in the case of those multi-landlord properties there should be compulsory powers, because I do not see any other method by which the tangle can be solved.

43244. CHAIRMAN.—Let me put this to you. I do not think it arises so much in the County Kerry, because there is so little untenanted land in the County Kerry, but in one of the other counties where there is a congested area. You have a lot of small holdings lying adjacent to which is a lot of untenanted land, and beyond that there is more untenanted land. The Congested Districts Board are anxious to obtain the untenanted land which lies nearest to the congested portion, because migration is easiest carried on to land lying near. But the landlord of that happens to be a cranky individual who will not sell under any conditions. The man beyond him may be a public-spirited man, who does not wish perhaps to part with his property, but who, recognising that the policy of the State is to relieve congestion, agrees to sell his land. Is not it very hard that that man, simply because he happens to be a public-spirited person, should be obliged to sell his land, whereas the cantankerous individual, whose land is really much more suitable, gets off scot free?—Well, that does seem a very great difficulty, and it would almost meet my condition, that everything ought to be done before exercising those powers. I do not want to reject the power of compulsion altogether.

43245. Would you not compel a man of that sort to sell his land rather than put the strain on the more public-spirited person?—I am not quite able to answer without knowing all the conditions, but in a general way it seems to me that it is a case in which there ought to be compulsory powers. But there is no doubt that a great many of those cranky men are cranky only because they do not like the price offered.

43246. But would not you agree to this: that although every effort should be made to obtain land on a voluntary basis, where it can be clearly shown that a voluntary basis is impossible, then the State ought to have power to apply compulsion?—That is what I hold. I have offered a portion of a landlord's home farm to the Estates Commissioners to be sold and planted with tenants at their discretion, a manifest depreciation to his own adjoining interest, to whom, as appurtenant to the rest, it is worth £500 a year. I have also proposed to make a number of labourers' lots, of 3 acres each, on the farm, and that the tenants should be allowed to buy the holdings under the Act. I am bound to say that in our district there is no congestion, but there is a number of labouring people who want land. The land is good limestone land. There is a large slated house and a first-rate farmstead for 70 cows, with stone-wall fencing, that cost £500; and buildings, which probably cost £4,500, are valued at £24 10*s.*—total, £5,000. The landlord had the lands in his own hands from 1846 to 1859 and expended very large sums in improvements, fencing, drainings and buildings, wells and rivers. It is near Tralee, a rising and prosperous town. Railway station, 2 miles. The Poor Law Valuation is £223. There are no congested lands in the neighbourhood, except a portion of commons, peopled by squatters. It is not in a "congested district." This land paid £567 a year, or 35*s.* 6*d.* per statute acre, under lease to a Meath landlord till 1881; since then it has been let to graziers, or farmed by the vendor. The grazing rent was £370 and upwards. If it had been in the Land Court and the rent judicially fixed twice at two 20 per cent. reductions, the rent would now be £364. The vendor to get that income at 3½ per cent. should receive £10,400. It is in its present state a gilt-edged security. Besides, he is entitled to the tenant right, say, 3½ years' purchase, £1,272, or a total of

July 5, 1907.

Mr. George F. Trench.

£11,672. I agree with Mr. Doran's views and not with Mr. Finucane's on that subject.

43247. Mr. SUTHERLAND.—You say that the landlord is entitled to the tenant right of untenanted land?—Oh, yes; tenant right not in the technical sense; occupation right is the correct expression. I do not think "tenant right" is a legal term at all. It is never used in any Act of Parliament.

43248. What is it then?—Occupation right.

43249. That is to say, that one man can be two persons?—No. I explain that the dual interest consists of the land and the things that are on the land.

43250. Dual means two?—The dual interest is in one man and he ought to be paid for it.

43251. That he should be paid for the right of the tenant that he has not got?—No; that he should be paid for the land and for the things that are on the land.

43252. He has not got a tenant on it?—I am speaking, not of the tenant, but of the work put on the land by his occupancy.

43253. He is getting the right of the tenant?—The occupation right.

43254. Which arises in every case from the tenant being on tenanted land?—It arises really from what the tenant has put into the land.

43255. He has a right to claim the value of his improvements?—If he is disturbed, under the Act of 1870.

43256 That can only exist where there is a tenant on?—I am afraid I cannot agree. I quite agree that the right of compensation for disturbance exists, where there is a tenant on the land. That is quite true, but I am claiming now for the owner of this land that he has two interests, the land itself and what he has put into the land by an expenditure of £5,000 on buildings only.

43257. That appears on the valuation of the land, does not it?—No. What the Poor Law Valuation adds for this £5,000 is £24 10*s*. Everyone knows that the Poor Law Valuation of buildings is insignificant and very small indeed.

43258. CHAIRMAN.—The point is this, that he has two alternatives before him. He can either let that land to a tenant for a certain rent, allowing that tenant to make improvements and to make the land reproductive, and that constitutes the tenant's interest in the land?—Yes.

43259. Or he can do without a tenant and spend money himself, in which case the reproductiveness of the land belongs to him. Is not that the point?—That is so.

43260. Mr. SUTHERLAND.—What it would be worth to a new man who came in?—No. He, by improving the land, acquires all the right of an occupying tenant who has made improvements.

43261. Excuse me. Are you not confounding the tenant with his improvements. There may be a tenancy when there is no improvement?—Yes.

43262. But still there would be a tenant right?—Do you mean according to custom?

43263. Yes?—Yes. I hope to bring in some cases showing that. That man has a right to sell his tenancy whether he has done any improvements or not.

43264. The question of tenancy is independent of improvements altogether?—It is. I think this discussion might have been avoided if I had avoided the expression "tenant-right."

43265. But you are claiming that the landlord is entitled to tenant-right in his own right?—Yes.

43266. Although he has got no tenant?—Because tenant-right arises to a large extent from the improvements made by the tenants. I am not claiming the second thing that you are speaking of. I am not claiming the tenancy right, but I am claiming the improvement right. I think that makes it clear. The vendor to get an income of £364 at 3½ per cent. should receive £10,400. Besides he is entitled to the tenant-right, say, 3½ years' purchase, £1,274, or a total of £11,674. He has been offered £6,600 by the Land Commission.

43267. Most Rev. Dr. O'DONNELL.—How is the £1,274 arrived at?—I take 3½ years' purchase of the rent of £364.

43268. You take 3½ years' purchase of the rent, and you add that to the £10,400?—Yes.

43269. How many years' purchase would that be?—Of the land?

43270. Altogether?—About 28½, which is about the figure that Mr. Doran gives. That is what he would give; only he would give that on the valuation.

43271. That is 28½ years' purchase of £364?—Yes.

43272. How does the £364 compare with the valuation?—The valuation of £223 almost ignores the buildings, and takes no account of the other improvements.

43273. For agricultural purposes you would not put any such high value on the buildings?—There would be a difficulty if this farm was to be split up into a number of holdings, in making the buildings apply to so large an area.

43274. Take it another way. Suppose one were anxious to split up a farm into moderately-sized holdings, would not it be difficult to get anyone to pay for the plot on which the buildings stood a value corresponding to the value of the buildings?—Oh, yes, it would.

43275. It is difficult to get a purchaser for that class of property?—Yes. But I have taken steps to find out what we could do with this farm if we divided it ourselves. We believe the value can be got by dividing the farm among six or seven tenants.

43276. You said £223 was the valuation?—Yes, and that includes for the buildings, £24 10*s*. 0*d*. The valuation is ridiculous.

43277. Then thirty years' purchase of the valuation would be £6,690?—Yes; it is very nearly what they offer.

43278. In fact, with the bonus added it would be more than that—it would be nearly £8,000?—£7,400, I think.

43279. They offered through the Estates Commissioners?—Yes. My quarrel with the latter is that they have taken the valuation as a basis on a farm improved by the landlord in a way wholly exceptional. The whole farm is divided into fields of proportionate area by stone walls. There is a magnificent farm standing on it, and there is a fine house of three storeys built by the vendor on it, and we have offered this farm to the Department for an educational farm, and I only wish that our controversy with the Land Commission could be terminated by the Department accepting it. I may say that I see that the report of the Commission on that subject has strongly recommended the extension of these educational farms, and perhaps we may find a way out of our controversy in that way. I do not know. I now refer to Mr. Commissioner Finucane's evidence.*

43280. Have we any idea of the figures on which the Estates Commissioners put down the fair annual value of that farm?—No, my lord, but Mr. Finucane stated in his evidence—"I base my offers on the poor law valuation." He stated that over and over again. We have no absolute calculation, but he has offered his own number of years' purchase of the valuation.

43281. And the bonus will be the only addition?—That is the only addition.

43282. But there is nothing before us to show whether the Estates Commissioners or their officer arrived at any figure as representing the fair annual value?—No, I do not think they fixed a fair rent at all, and I believe, taking the two 20 per cent. reductions, which is what is mostly current in Kerry for first and second terms, I think I am not far out in saying £364 would be the fair rent. It is the only basis I can go upon. Mr. Finucane, in his evidence on this subject, took no account of improvements made by the landlords. I have the misfortune, I should say, perhaps, to represent improving landlords, and I want to ask to have their case considered as wholly different from that of other landlords. If we got fair play we should be dealt with on different terms altogether.

43283. CHAIRMAN.—So I think. They are a rarity in Ireland, and ought to be dealt with fairly well?—Yes. I can adduce cases of sales of tenants' interest for large sums in which tenant had added nothing to the value of the holding, and paid nothing coming in. In answer to Mr. Bailey's evidence to the effect that they have to offer only so much as they can see their way to recover by sale to tenants, I say that I have found men in the neighbourhood and on other parts of the estate who are willing to pay £400 a year, *i.e.*, more

* See Appendix to the Third Report of the Commission [Cd. 3414, 1907], pp. 313–4.

than enough to cover the capital demanded, when cut up into six farms; and I have proposed to the Land Commission that I should make the partition, and make provisional lettings for these sums, and charge no fines at all. I await their reply. I believe all those men, or nearly all, would be very glad to pay fines over and above the rental, but I do not propose to take any fines. I object to Mr. Finucane's method of valuation of farms improved by the landlords. He takes the tenement valuation, which is about half the value in this case. The landlord in this case has improved the land by building, drains and fences, and very small recognition of that is given in the poor law valuation. Then I note that in Mr. Finucane's evidence he says he would give the vendor 21 years' purchase of the poor law valuation for tenanted lands and 26 years for untenanted. That difference of five years is quite arbitrary, because a farm valued at £20 a year will bring in as much as 17 years' purchase for the tenant's interest. A farm valued at £200 will bring in but four or five. I have noted a number of cases just to prove what I say. There are four cases on the Blacker-Douglass estate in which the tenant has sold his interest for 17 years' purchase, 12 years' purchase, 16 years' purchase, and 17 years' purchase; and some upon the Lindsay Talbot-Crosbie estates sold at 3½, 3¼, and 12½ years' purchase, another at 11½, and another at 21½.*

43284. Mr. SUTHERLAND.—How do you account for that variation?—It seems to me a rule that the larger the farm the smaller the tenant's interest, and I think that is borne out by experience. I think it is the large farmer that has been proved to have the less interest; he has been harder hit, and the moderate-sized man has been able to survive.

43285. Or that when a small holding comes on the market there are more competitors, and when a big one comes there are fewer?—That is just it. The matter will be cleared up in this way—If a vendor wishes to re-possess tenanted lands, and the tenant proposes to sell his interest, he can pre-empt them at a price fixed by the Land Commission, say from three to twenty years' purchase of the rent. Having done so, he proceeds to sell under the 1903 Act to the Estates Commissioners. First he gets, say, twenty-three years' purchase of the fair rent for his own interest; is he not entitled also to recover the tenant-right which he has paid?—I think it is unanswerable.

43286. When the occupation does not exist?—I am supposing a case where he has paid the money for the tenant's interest.

43287. Mr. KAVANAGH.—What would you say would be a fair way of ascertaining the price of untenanted land? Assuming that compulsion is necessary in some cases, and that the landlord has a certain amount of grazing land in his hands which is necessary for that purpose, how would you get at a fair price for that land?—I do not think there is anyway of getting at it, except to ascertain what has been the net income for a series of years, and the sum is the capital that will provide that income at 4 per cent.

43288. CHAIRMAN.—Four per cent. is very high on a settled estate?—If a man's property is mortgaged he cannot invest at four per cent.

43289. You are putting it up to a surprisingly high term?—I am willing to take it at four per cent.

43290. For settled property?—Not settled property. I am assuming now property of which the owner is owner in fee, and with full power to deal with the money in any way that he likes, and I give the Treasury the benefit of that.

43291. But then, as a rule, would not you say that most of the properties in Ireland are settled estates?—I suppose they are.

43292. Well?—Well, then the capital should be calculated at 3½ per cent., I think.

43293. I suppose you might make a difference, for instance, between the two cases—that on a settled estate it would be fair to pay 3½, but on an estate of which he had the fee a great deal more?—Yes. It is a case in which a man is absolutely free. He has sold his property, and he has paid off all his charges, and he is under no obligation to anybody, so that he can invest his money in Canadian Pacific Preference Shares, and get four per cent. on it.

43294. Then, looking at it from the Estates Commissioners' point of view—supposing they gave that price, 3½ per cent., to bring in the present net income, how could they reconcile that—would there be a loss on re-sale?—I do not think so. Not certainly in our county. There is a tremendous demand for land.

43295. When it is put up in the open market?—But I mean for the relief of congestion. I think if the Government wants to deal with congestion as a matter of philanthropy or charity they must be prepared to lose money. Five or six interests exist on the Trinity College estate, and the tenants cannot purchase as occupiers, because the sub-middleman fears he will be unable to redeem his head-rent, and so prefers to hold on. The next middle interest is in the same position, having to redeem the one above him, viz., the perpetuity tenant, who, in his turn, has to satisfy Trinity College, Dublin. The Viceregal Commission above referred to recommended a solution of the tangle, but nothing was done by Government, either the late or the present, and the Congested Districts Commission could do no better work than to take up that report and embody it as their own.

43296. Mr. SUTHERLAND.—Did you make any recommendations in that report?—Very fully.

43297. And are the recommendations of a practical nature?—Yes; we gave compulsory powers and power to fix the prices, and we gave every man his net income.

43298. Has Trinity College got much property in this country?—Oh, yes, they have.

43299. Is it all over the country?—Yes. They have all the property shown on that map in the County Kerry. That top piece is the piece I am dealing with, along the Shannon.

43300. Is this all the holdings of Trinity College in Ireland?—Oh, no; that is in Kerry alone.

43301. Most Rev. Dr. O'DONNELL.—From this map it would appear that a considerable portion of it is in a scheduled area?—Yes, it is; but what I wanted to say on that head is that unfortunately the scheduled area does not include the worst parts of it, and I think that you ought to recommend that a change should be made and let the Congested Districts Board pick out congested places wherever they are.

43302. You are under the impression that there are areas outside the scheduled districts that are as poor as any in them?—I can show you maps establishing that very case, and that there are such places on the border of the scheduled areas.

43303. And you pointed out in your report on the Trinity College estates that those estates are in some cases in congested districts?—They are. And I say more. I say that there are congested areas on the estates that are not included in the scheduled areas, and I think they ought to be. Some power ought to be taken to get them included. It was hardly fair for a member of the Cabinet to state in Parliament that this Commission recommended compulsory sales, as an argument for general compulsion, when we are dealing with a condition of things so peculiar as we had to deal with. I do not know whether you care to see it, but I have here a short account of how a perpetuity tenant, Mr. Blacker-Douglass dealt with this property while it was in his hands, and did a great deal for it. There are in all some 557 agricultural tenants besides 110 village tenants in Ballylongford. 106 of them are under £5 rent; one over £30; one over £20; one over £10; and one over £5. The area is 19,061 acres. There are twelve perpetuity tenants, paying £2,755 a year, with, in some cases, middlemen under them, and finally the occupiers under all. There are also parts of the College property in which Trinity College is direct landlord of the occupiers of some parts, all intervening interests having been squeezed out. Only two townlands are congested, Ballynoneen and Dooncaha (middlemen's lands now fallen in) and these require special treatment. Mr. Douglass is direct landlord of the occupiers (under Trinity College, Dublin, as rent charger) of the greater part of the property. His twelve perpetuity tenants are direct landlords of a portion of the estate; and in some instances there are between these and the occupiers, other middlemen still surviving.

43304. CHAIRMAN.—Tell me, as a matter of historical interest, when those grants were made to Trinity College, were they then just in as head landlords, or was there somebody else, and did the middlemen come in subsequently?—I do not think there were any middlemen then.

* See page 209.

July 5, 1907.

Mr. George F. Trench.

43305. How did the middlemen come in?—I am not well-informed enough unfortunately to give detailed information, but landowners, under the Penal Laws could not make long leases to anyone except to Protestants; there were few Protestants there, and the result was that they had to let large areas to Protestants, and the middleman to whom they let them could let to anybody.

43306. Mr. SUTHERLAND.—He could let to Catholics?—He could let to Catholics, but the grantees could let only to Protestants, which brought in the worst land system that ever was known.

43307. CHAIRMAN.—Trinity College at that time could let only to a Protestant?—That is so.

43308. And to get over that restriction that is what they did?—They made grants of large areas to a Protestant, who could let to anybody.

43309. It was in that way it came about?—They made perpetuity grants under the Act of 1851.

43310. The tenant in perpetuity was not a landlord at all?—He was a tenant in perpetuity, paying the College a rent of about two-thirds of the actual value.

43311. Is that their position to-day—are they tenants in perpetuity?—Yes. Mr. Blacker Douglass is a tenant in perpetuity. The property came to the present family in 1844, and the late Mr. St. John Thomas Blacker Douglass began to work for the improvement of the estate a year or two later. He borrowed £21,000 from the Board of Works, and engaged two agriculturists from Scotland to lay out and supervise the expenditure of the money on the farms. Besides these farm improvements, Mr. Douglass made many miles of roads through the estate, to the enormous advantage of the tenants, notably at Tullahinell, Mid-Leitrim, Bauragogeen, etc. During the famine of 1846-48, some of the tenants broke down, and threw up their farms into the landlord's hands, and these he at once proceeded to improve by reclamation, cultivation, buildings, etc., and then let these again to tenants. The object of this detail is to indicate the extent and variety of the improvement works, which up to the present time has been done by landlords, and all of which must now be provided for, to be done by some new authority or organisation. In ousting the landlords, the State must shoulder the burden even if it costs money, not recoverable under Treasury traditions. He also established soup kitchens for the people, and this was renewed in the scarcity of 1879 and 1880, when in addition he caused quantities of oaten-meal to be freely distributed to the poorest of the tenants. Mr. Blacker Douglas built a grinding mill and a large corn-store, thus opening a valuable market for a population otherwise cut off from the buyers of grain. He also built a hospital for the poor in the famine years, which has since become the Constabulary barrack of the district. He also built a Petty Sessions house, in which Courts are held periodically. In all respects, he acted in the public interest, and as the landlord proper of the estate, for the tenants' benefit. The present Mr. Blacker Douglass has agreed to pay the College twenty-seven years' purchase for the leases that are terminable, and in which thus the College has a reversionary interest, and twenty-five years' purchase of the perpetuity leases. And I have agreed to sell all the lands to the occupiers.

43312. Is that the way in which the property is being treated, the middlemen buying out the head landlord?—We have difficulties with a number of middlemen, who are practically insolvent so far as the ownership of their land is concerned, and yet they want to get large sums from Mr. Blacker Douglass to buy them out; and there is a deadlock for want of this legislation.

43313. How is that managed, because, of course, the College not having had any reduction in those rents through the Fair Rent Acts, it claims to be bought out on the old basis?—Mr. Wyndham's Land Act provided a sum of £5,000 a year as a provision for the College to make up any deficiency that might be found in that way in the event of sale.

43314. Mr. SUTHERLAND.—That money is available now?—That money is available.

43315. CHAIRMAN.—Won't the loss of Trinity College, if it does that, be a great deal more than £5,000 a year?—I do not think so. I do not know whether you remember this diagram of ours,* which shows the variety of interests on the College estates, and the tangle we had to solve. That white section are the occupiers and the others are all landlords over them.

43316. It is a most convenient diagram?—I think that the Commission would now perhaps like to hear me about the organisation of agriculture.

43317. Most Rev. Dr. O'DONNELL.—Before you pass to that, in alluding to the Douglass estate, you mentioned that many of the tenants broke down during the famine years?—Yes.

43318. And surrendered their holdings?—Yes.

43319. And the holdings were taken up by the owner, or by the middleman rather?—Yes.

43320. Was there any compensation given for tenant right to the tenants when they migrated from those places?—I was not there, my lord. It was before my time. I do not know any details about that except that he got the lands into his possession, which he improved and re-let. I think on that subject I ought here to say that the object of this evidence is that the work which up to this present time has been done by the landlords should be done by some other authority or organisation under the new conditions.

43321. Mr. SUTHERLAND.—That is to say, that the State must carry on the work of the landlords?—Yes.

43322. Why does it require to be done if it has been done before?—We do not say that we have done everything that needed to be done, and a number of landlords have not improved at all, but I say that the improvements of improving landlords will now come to a dead stop unless something more is done.

43323. We hear every day that the people can do nothing for themselves and that everything is to be done for them?—That is the very worst possible doctrine.

43324. If all these things have been done in the past, why is it needed that they should be done now?—I think the improving landlord is the exception.

43325. I am quite inclined to admit this improving landlord when I see him; but if the landlords of Ireland did so much for their tenants why should so much remain to be done?—I have already said. I have been for eleven years president of the Abbeydorney Co-operative Dairy Society, Limited—the first to be established in Kerry—and of the Rural Bank there, and have had some experience of agricultural co-operation, and believe that the co-operative society is the proper medium by means of which the occupiers in congested districts may have their lot improved, in a practically intelligent manner, without which the enlargement of holdings will effect little improvement. What these small holdings most require is a cattle range, their present holdings being reserved for tillage, and I heartily endorse the recommendations of Mr. Anderson, the Secretary of the Irish Agricultural Organisation Society, to the effect that societies should be formed in such districts, and I would give them power to introduce co-operative methods, to hire or purchase land for the purpose of creating a common grazing park, where required, and taking in thereon the cattle of the surrounding occupiers; this method being preferable to giving each occupier a separate portion of it. The Society should also introduce better breeds of cattle, sheep, swine, horses, and asses, and instruct the members in the art of agriculture, in respect of seeds and manures, and proper methods of cultivation. The Society should also have power to borrow from the Board of Works for the improvement of a congested district. It should also establish a rural bank, and, where feasible, a dairy, and undertake the marketing to the best advantage, of all the produce of the district. It will be thus seen that I propose to enlarge the powers which are claimed in the Bill presented by Mr. Anderson. In respect of the unfortunate method of credit transactions with the shops, I believe the remedy is the rural bank, from which the member will get all the credit he requires and pay cash to the shops. This would not be likely to stir up the opposition of the shopkeepers; for, although they would lose some hold upon their customers, they would gain by having no bad debts. I present to the Commission a statement† of the agricultural operations in this county, conducted under the co-operative system, and a map of Ireland,

* See Report of Trinity College (Dublin) Estates Commission [Cd. 2526—1905], p. 28.

† See page 209.

showing the extent to which the organisation is at present conducted.*

43326. Most Rev. Dr. O'Donnell.—The advantage is sometimes introduced by having cash transactions instead of credit ones?—Yes, my lord; we have had a most successful little bank at this place called Abbeydorney, and we have had no loss at all, and have helped a large number of people. This bank was founded on the 27th of October, 1896, and we have lent out £840 to 60 borrowers, and there has been no loss; and the Committee then tell me that nothing has been done to help the poor people in the neighbourhood so important as that.

43327. The help is good, and the education is good?—Yes.

43328. Is not it an education to the locality to have a people's bank worked successfully?—It is. I should like to say that there is a meeting of the committee of farmers once a fortnight, and they have acquired considerable knowledge of business habits, and they have met to discuss with each other matters of common business interest. Whereas they used only to compete with each other, they are working in common instead of in competition. I may say for myself that I am habitually present at those meetings, and that they are of a pleasant character in establishing relations of the best sort. And I should like to say this, that I believe this system is useful in a moral sense as well as in a commercial sense. I will give you some of the figures of this co-operative movement throughout the country. There are 349 creameries, 165 agricultural societies, 255 banks, 31 poultry societies, 57 home industries, and altogether nearly 1,000 societies have been founded in Ireland, with 84,665 members; £388,500 in capital, subscribed by the farmers themselves, with a little help from others, and a turn-over of £2,165,000 a year. That is a tremendous record of progress in a short time, and I look upon it as one of the most important organisations for the regeneration of Ireland, and especially for congested districts. In Kerry there was no creamery at all in 1894, and there are ten co-operative ones now, and there are 1,200 farmers in them, with £16,000 capital subscribed by the farmers, and a turn-over of £48,000 a year. There have been two objections raised to the establishment of the creamery system. The first is that the calves deteriorate by getting the separated milk. Those who make this objection are theorists, without practical experience, for, in fact, wherever the calves are getting separated milk, supplemented by calf meal and oil cake, or other effective substitutes, the form and growth and health are as good as ever. I point to the Ardfert Abbey herd of an average of 60 calves per annum, fed on this system for the last seven years, as proof. I never saw better stock. The farmers universally around me have ceased to complain upon this head. I should say that we give the young calf the dam's whole milk for six weeks before we begin to give the other feeding.

43329. Chairman.—It is cheaper too?—It is cheaper. Another objection to creameries is that the women of the farms have less to do. This is the ordinary complaint that follows the introduction of any kind of machinery in field or factory; but the wants of men are so many that the female part of the farm family have abundance of occupation with rearing the children, milking, feeding calves, pigs, and fowl, keeping everything clean and tidy, needlework, etc., with possibly a little more leisure for recreation and reading which are most desirable.

43330. Mr. Kavanagh.—There was another objection that refers to the feeding of the children?—That the children do not get the good milk?

43331. That they do not get sufficient?—I suppose it may be so, but that is want of humanity on the part of the parents, because they have every facility for doing it. They can keep back sufficient milk for that purpose. I should explain how we get the capital for carrying on these banks. We borrow from the joint stock banks. They lend the money to us at the reduced rate of 4 per cent.

43332. Mr. Sutherland.—What do you charge?—We charge 6 per cent. The difference goes to keep up the bank and to pay for expenses; and the way it is refunded is that every member of the bank is also a member of the creamery.

43333. Won't the joint stock bank give it to you at a lower rate on such good security; personal security?—You see it is a joint concern, and there are——

43334. And therefore all the better, and the rate of interest ought to be low?—I say that the bank at first offered to do it at one per cent. under the current rate, and when they saw how we were working, they said:—"We will give it to you at the permanent rate of four per cent." And the repayments are made by simply stopping the amount out of the cheque that goes to each man for his milk. He gets a monthly cheque for his milk, and out of that cheque the interest on his loan is deducted before it goes out.

43335. Chairman.—Then at the end of the year, I suppose, he gets a bonus on the profits?—That is in our rules, and that is our object, too. We have not paid any bonus yet, but I hope by-and-bye it will come, and especially that the workers and managers should get something besides their salaries.

43336. Is there any other advantage that membership carries with it in the price of the milk?—Yes; the fact is that we have to pay the utmost farthing possible for it, my lord. There are so many proprietary creameries round us that we have to give the utmost farthing for the milk. Every shareholder gets five per cent. on his capital, besides the highest price possible for his milk.

43337. Mr. Kavanagh.—Has the starting of creameries had the effect of decreasing tillage in this country, do you know?—I do not think the creameries have had that effect, but I think there are numbers of causes affecting the decrease of tillage besides the creameries, or rather, instead of them, I think there has been a decrease of tillage, but I do not put it down to the creameries.

43338. We have had evidence to say so, and that is why I put the question?—It is not easy to trace the causes affecting that, and I do not think anybody can be sure of what the causes are; but I think one of the causes is that the labourers are claiming and getting much higher wages than they used to get before, and of course the price of corn is low.

43339. Chairman.—What is the ordinary wage?—I think the ordinary agricultural labourer now will get £20 a year and his keep in the house; and he formerly got £14.

43340. And if he lives out?—If he lives out he gets 9*s.* a week, and we pay 12*s.* at Ardfert.

43341. And do you mean that 9*s.* a week represents an increase?—I should have said 10*s.* It was 9*s.*, and it is now 10*s.* It is a very rare thing to employ a labourer like that, though.

43342. Mr. Sutherland.—What was the lowest weekly wage within your memory. Do you remember it as low as 5*s.*?—Never; but I have heard from my parents that men could be got for 6*d.* a day.

43343. But you have not seen that?—Oh, no; I do not think I have known anything under 7*s.* since I was quite young. There is one great difficulty about improving in the congested districts. The small farmers are precluded from borrowing from the Board of Works less than £100, except for buildings. Here is where the organisation comes in, for the Society will guarantee the loan, and the man could borrow £20 or £30. Under the regulations, unless he wants to spend £100, he will not get anything. I think that is one advantage of a co-operative society in the congested districts.

43344. Chairman.—What do you mean by the farmers' organisation?—I mean the Agricultural Co-operative Society. I mean the joining of farmers with one another for the doing of all local work of every kind. Some districts will not carry a dairy at all.

43345. Could not the lending of small sums of that kind be carried on by the local bank?—Well, the local organisation will guarantee a loan to the Board of Works. The Board of Works will not lend money for improvement to an occupier unless he spends £100.

43346. But you say the rural bank will?—The rural bank has never gone into the improvement of land by drainage. What they lend money for is generally for buying cattle.

43347. Is there any reason why they should not extend their operations so as to make loans for the improvement of land?—That would involve a very

* See map facing page 209.

July 5, 1907.

Mr. George F. Trench.

large increase of their necessary capital, because at present our capital is only about £500.

43348. They could borrow from the local joint stock banks?—Yes.

43349. And if the Committee of the rural bank were sure that it would be put out on good security, at 6 per cent. for the improvement of land, it would be worth while borrowing from the joint stock company?—I do not see why we should not do it. I quite accept the suggestion.

43350. Is there anything in the present rules or regulations of the rural bank to prevent their doing it?—It would come much easier to the borrower to borrow from the Board of Works at an interest of, say, 5 per cent., with the sinking fund included.

43351. As a matter of fact, would not small operations of that kind be carried on with much greater knowledge through the medium of a local rural bank than through a Government Department?—It is very important that we should have those societies formed on account of the local knowledge and the combination of farmers to help one another, which I look upon as most important.

43352. Then we agree as to what should be done. My point is, what is there to prevent that being done now?—I would say, "Give us powers as a society to go to the Board of Works and say, 'Give us the money and let the interest include a sinking fund.'" For, of course, banks do not do that.

43353. Most Rev. Dr. O'Donnell.—So you would interpose the credit of the society on behalf of the individual borrower?—That is what we propose to do.

43354. Then the Board of Works would not have to consider the credit of the individual borrower, which would be a consideration, and in that way you could make loans of, say, much under £100?—Yes. I think the loans might be £10 or £15 or £20. I want to interpose the society as a guarantee to the lending body.

43355. Chairman.—Then what you would like to do would be to use the Society as a security for borrowing small sums from the Board of Works?—Yes; just as we do in obtaining money from the local Joint Stock Bank. It is the combination which enables us to do that.

43356. In other words, any member of your Society would be able to borrow any small sum from the Board of Works as long as he is guaranteed by the Society of which he is a member?—Yes; the Society will know the man, and the members will be able to give him advice as to how to do the work intelligently.

43357. Would not the Board of Works be able to lend money as cheaply as you can? At what rate do they lend it at present?—They lend it at 6½ per cent. for twenty-two years and at 5 per cent. for thirty-five years.

43358. That covers the sinking fund?—Yes.

43359. In both cases?—Yes.

43360. Five for thirty-five years and 6½ for twenty-two?—Yes.

43361. You lend at 6 per cent. without a sinking fund?—Yes.

43362. And the Board of Works' method is more advantageous?—Yes. And I think that we ought to get money for the improvement of Ireland much cheaper than that. It is absurd that a man may buy his land at 3¼ per cent. and if he wants to improve it he must pay double. Even if we did not get exactly the same terms there might be a considerable reduction in the charge.

43363. Most Rev. Dr. O'Donnell.—You think that the same policy which makes it desirable to transfer the ownership to the occupiers also makes it desirable that the occupiers should have facilities?—Yes; I think one is the necessary complement of the other.

43364. Under your suggestion the system of the Board of Works would remain what it is for the recovery of the instalments?—Yes.

43365. And the Society would be free from any trouble in setting up a system for the recovery of the instalments? That is that under the system you advocate there would be no necessity for the local Society to institute a system of instalments on its own account?—No; that is all in existence already. We find it working without a flaw and without a fault.

43366. Chairman.—Supposing these men became defaulters and the Board of Works came down on the security of the Society, how would you propose that the Society should recover from the men?—I think it would require more power to be given to it. For instance, one of my suggestions is that they should have power to buy or hire land, and there should be legislation for this; and to let it out for the benefit of their members as a grazing park, for instance. That is one of my suggestions, and I do not think we could do that without legislation. And of course they should have power, and have power as a Friendly Society, to sue a defaulter. We have to sue a defaulter sometimes in the County Court with regard to the shares of the Dairy Society.

43367. And there would be a responsibility thrown on the Society in recovering. I understood the Bishop's point was that?—I think the Board of Works would lend to the Society, and any action they would take would be against the Society, and so on. It is very desirable to have a buffer between the lending body in Dublin and the local borrower.

43368. They would take action against the Society, and the Society would have to take action against the defaulter?—Yes, and we do it now.

43369. Mr. Kavanagh.—That is for small sums?—Yes.

43370. But for large sums?—Oh, anything over £100 should be advanced at a lower interest. The Relief of Distress Act money was borrowed at £3 8*s.* 6*d.* per cent.

43371. But borrowing from the Board of Works you get the advantage of the engineering and the specification for the building work or anything like that?—Yes. I suppose that the Board of Works would require that our schemes should be submitted to them. I do not ask that they should pay a sum of money into our hands and say "spend that," but that the scheme should be submitted to them.

43372. Most Rev. Dr. O'Donnell.—Lord Dudley put it to you at another stage that the small men who would borrow from the Society would be as good a mark for payment as the men that now receive loans from the Board of Works?—I say that they would. I should not have the least hesitation in making those loans.

43373. Do you not think that the small occupier is very punctual?—Yes, he is. The County Council should deal with arterial drainage and sloblands, and originate work, and the Department of Agriculture should have an improvement branch. I want to get a lot of work into the County Council of a local character, and to give them a number of powers that they do not possess. I think that in four respects this method will work well. The farmers needing to have a reclamation scheme will come in to the Council. They know everybody there and they are all known there, and they would submit a scheme and the County Council will forward it to the Department, and there will be much more chance of getting such work done than under the present arrangement. And then there are the questions of finance and charges for refunds, engineering and construction, and maintenance. As to initiation, it must not be left to the individual farmers, but as I have described. As to cost, there will be several funds to draw on, viz.: those of the County Council, the Co-operative Society State Loan Fund, and the State, through the Board of Works, as heretofore. The Department should have the function of deciding on which fund the work should fall. The Board of Works, as hitherto, may do the engineering, but must be co-ordinated with the other bodies, so as to work sympathetically, and not with hostility as sometimes hitherto. Maintenance requires a body of capable and experienced inspectors, and you will not be surprised when I say that no body of men are more suitable than the former and present estate agents of improving landlords. And I believe that in a great number of respects this transfer of land from the landlord to the tenant will require somebody to look after things in future; otherwise there will be all sorts of abuses springing up, and improvement will not be maintained and very likely sub-letting will go on.

43374. Mr. Sutherland.—There might be a general desire to clean the slate?—I have heard a fear expressed that instalments might not be paid at all, but I do not believe that. At Valencia Island, in a congested district, there has been established an Agricultural Society, which is successful and doing good work. Starting with a small loan, I think from the Department, they buy the best seed potatoes and seed oats

and artificial manures, and draw upon the local Joint Stock Bank for money on emergency. Each member repays his amount by instalments, and all appreciate very much the quality and comparative cheapness of the goods.

43375. Yesterday we had a good deal of evidence about a number of people buying good seed. I am speaking of Dingle?—Yes; they are doing good work in getting the best material to put into the land, and in marketing the produce afterwards. I say that there should be three operations instead of one. The enlargement of holdings is one. That is what you are so much engaged in now. But then the organisation of agriculture is not of less importance, and finally, the starting of industries and the development of the fisheries. I think the machinery is there, and it only wants to be co-ordinated. And then there is the question of the rate at which the tenants should be charged interest on their improvements. I have been for forty years agent on properties wholly and mainly improved by the landlord, and have either expended or supervised an expenditure of at least £50,000; partly by allowances out of rent—otherwise cash from the landlords—or as loans from the Board of Works. The works were buildings, drainage, river embankments, bridges, roads, lime, wells, and fences. For some of it, interest was payable by tenants, and made on those terms at their own request, which is the only sound financial system. If work is not paid for in some way by the tenant, he will not care to maintain it; and, as maintenance is the principle condition of lasting benefit, it is the thing mainly to be provided for. On one estate the landlord divided his expenditure about equally between his own private account and Board of Works loans, charging the tenants, by their own request and consent, 5 per cent. uniformly. On another, the expenditure was wholly by loan under the Relief of Distress Act, at £3 8*s.* 6*d.* per cent., and the tenants were only charged 2½ per cent. On another, the country being poor, the tenants were not charged at all, which, in my opinion, is demoralising, and calculated to discourage improvement, now that the tenants can only borrow at interest from 5 to 6½ per cent. from the Board of Works. Why is it right for the State to charge interest on loans for improvements if it was wrong for the landlord to do so? My point is that with the change of property now going on tenants may think that, as before, they should pay nothing for improvements. I believe it would have been better if they had been taught from the beginning that they must pay something for improvements. I think that if an improvement is worth anything it will pay for itself. The Talbot-Crosbie Estate was managed on the English system. The Heneage Clause of the Act of 1881 was supposed to protect such improvers from the reductions of the Land Act of 1881. But it failed to do so. The provision that works made by the owner should also be maintained by him defeated its purpose. It was possibly inserted in error, for we have a number of English leases which bind the tenant to do ordinary repairs, while the owner was to do substantial ones. That is, repairs affecting the framework of buildings, or the corpus or substance of other works.

43376. Why did it fail?—My colleague on the Commission, Mr. T. M. Healy, got a clause put into the Act of 1881, that the landlord who had made the improvements should also have maintained the improvements. And our custom was not to maintain, but to bind the tenants very strictly that they were to maintain, and we proved that under the English system, as we called it, the landlord had to make the improvements, but the tenant had to maintain them.

43377. And as the tenant had to maintain, the Heneage Clause failed?—Yes, failed altogether. We have never been able to keep a single farm out of the operation of the Land Act, and we have lost all our money.

43378. Mr. Sutherland.—In England it is not one operation alone, but it is in every lease—it is repeated every time a lease is made?—It is that dilapidations are to be made good, but the landlord would not be expected to put a pane of glass in a broken window.

43379. Chairman.—In your case it was the same?—In our case it was the same. We repaired substantially, but we did not repair a broken gate.

43380. Mr. Sutherland.—Did you do it more than once?—Yes, *in perpetuo*. The improvements continued over the whole time, and we have never had much difference about them. For instance, when a storm knocked the roof off a house, we considered that we should put it back, because it was not the tenant's fault, and because it was not a case of letting it slide into dilapidation. And things of that sort. When a great flood came and swept away the river banks we would put them back again.

43381. Mr. Sutherland.—The English system is that the landlord always keeps the premises wind and water-tight, as it is called?—Well, I think there must be a great deal of variety in the English methods, because we produced before the Land Commission several English leases showing that the tenant was bound to do all the repairs. However, we failed altogether.

43382. Chairman.—What do you mean by fences, gates, and things of that kind?—When a farm was improved by the landlord gates were provided.

43383. Did you provide iron gates?—All iron gates. We did not provide timber gates. On the Ardfert Abbey Home Farm there are 40 hands in regular employment, and living in free cottages on the Home Farm. The wages bill, with stewards' salaries, is about £1,650 a year. The labourers have grass parks on which to keep their cows, and garden plots attached to their houses. The average wages are about 12*s.* a week. For about fifty years a shorthorn herd was maintained on the farm, and an auction of young bulls took place every year, conducted by Mr. John Thornton. The majority of them were bought in the neighbouring counties. It has had a remarkable and almost universal effect on the class of stock kept by the farmers. That herd was dispersed at the death of the late owner, just about the time that the Department began to make provision for shorthorn bulls throughout the country, which, to some extent at least, makes up for the loss of the Ardfert herd. But in other respects the system of farming serves still for educational purposes, and through it the farmers become acquainted with the best machines, and see the effect of high-class manures, seeds, spraying, etc. We sell all our wheat to the farmers as seed. As regards improvements, about £45,000 was expended by the landlord, until the Land Acts put a stop to all such enterprises, by depriving the landlords of all return for their outlay, and that capital expenditure may be said to have been lost, as far as the landlord was concerned. The rents on improved farms were much more heavily cut down than on those that were not improved.

43384. That is a sweeping statement. Why was that?—We used to add 5 per cent. for our improvements, with the result that the improved farms bore a larger proportion to the Poor Law valuation than the unimproved; and it seems to us that the Commissioners did not take account of the improvements There is a great gap in the law's provision for rural industries, in that, while labourers can get houses built by the Rural District Council at 3¼ per cent., under the provisions of the Labourers (Ireland) Acts artisans' houses can only be built by Board of Works loans, at an interest of 6½ per cent., and not at all by the local authority. There are shopkeepers, cartmakers, carpenters, masons, slaters, and plasterers, smiths, tailors, dressmakers, painters, and others, whom it is most desirable to encourage to remain in the country, and form part of the village communities; and there is no substantial reason why they should pay double the interest for their houses, compared with that paid by labourers, whose employment is subject to less vicissitudes.

43385. Mr. Kavanagh.—But under the last Act is not almost anybody eligible?—No, it is not so. I have examined that very carefully, and under the last Act the applicant must be earning wages of a certain amount per week. That is the only test that is provided. Though he is not an agricultural labourer, if he can show that he is earning regular wages of a certain amount, then he is eligible. But these people work by the job, and are not earning weekly wages, and they are cut out. I have not heard of any case where a loan on the lower terms has been made for an artisan's house. I have made myself an attempt and failed, on the ground that the man was not an agricultural labourer; and I think it is probably an oversight, but it is a very serious oversight. There is a large body of people who are obliged to pay double what they need pay for their houses. The Estates Commissioners are making every

July 5. 1907.

Mr. George F. Trench.

possible objection to taking over the villages, on the pretext that they are not agricultural holdings and are not good security; but the Commissioners need never lose, provided they only pay, as they do, for ground rent and gardens, leaving the landlord at liberty to charge rent or interest for his outlay on the buildings. I think that probably some legislation would be required for that, but it seems to me to be absurd to take over a whole estate and leave the village on the hands of the landlord. It is a most short-sighted policy. The village is a necessary element of a rural community; it ought to be a centre of intellectual and recreational life for the farmers and their families; it is important to keep the trade from gravitating to the country town, where the individual is lost in the crowd, and mutual goodfeeling and good offices are to a great extent neutralised or lost, and a system of credit transactions grows to enormous dimensions, with corresponding bad debts, bad feeling, and often ruin to the farmers. All these evils would be lessened by an intelligent development of village life. The village should be treated as a vital component part of an estate and a necessity to the interests of the purchasing tenant. This development may best be done by co-operative societies, by cheap houses, by places and means of recreation, and by libraries and lectures. Now I want to refer to the question of debt. One of the most difficult questions for the Commission, and the most important, is the burden of debt under which so many farmers are staggering. I have prepared a table of a few cases, which I hand in, omitting the names, showing the magnitude of the evil.*

43386. CHAIRMAN.—Do you refer to debt to the landlord?—Debt to the shopkeeper, quite apart from land.

43387. In the case of "A," who owes £500, is that a debt to a shopkeeper?—Yes; all these are outside the rent. There is no rent included. I show in the "observation" column the shortness of the stock on the lands. I could give all the names and addresses, but I think it not fair to publish them.

43388. Mr. KAVANAGH.—I suppose a good deal of that £500 is interest?—A good deal is interest running on at 5 per cent. And the way they take that money is appalling, and the shopkeepers are, I am sorry to say, very free in allowing them to run up very heavy debts. These men and women have come to me to ask me to make a scheme by which they could compound with their creditors, and in many cases I have been successful in saving them from ruin, and saving something for all instead of letting all go to one.

43389. Mr. SUTHERLAND.—Is there any individual there who had purchased his holding?—All these tenants are purchasers now, and my observations are directed to help future purchasers.

43390. Will that double their obligations?—Oh, I think so, and more in some cases.

43391. CHAIRMAN.—As a matter of fact, it is a separate thing. You could not say that the fresh obligation they are entering into refers to their rent. They are under that obligation now, to pay the rent?—Yes.

43392. They would come under a less obligation when they are purchasers?—In all cases the obligation to the landlords is reduced by purchase.

43393. So that the obligation, so far as rent is concerned, when capitalised, is less upon them as purchasers than it would be as tenants?—Yes; I think I mistook the question. They do not add anything by purchasing. They diminish.

43394. Mr. SUTHERLAND.—I see that?—In my opinion, when a farm is selling by the Land Commission to a tenant, the Congested Districts Board or the Estates Commissioners should require a statement as to debt, and should assist in the way I have done to bring about a composition. It is quite futile to relieve a purchaser of his arrears of rent if he is left prone beneath his load of debt to other creditors. It is essential that all classes should unite to readjust the agricultural situation, and the shopkeepers are not unwilling to act their part.

43395. CHAIRMAN.—I do not understand how in the world it pays a shopkeeper to go on giving credit in that way?—I am sure it does not.

43396. Why do they give it?—They actually like to get men into their books, because they hold them.

43397. What real advantage is it to the shopkeeper to be owed £175 by Case "F" where Case "F" has no stock at all?—I am sure it is done with a great deal of carelessness sometimes; but generally the idea is with big merchants that if a man gets into debt they can always secure his produce, and he will bring his produce and corn to them and that will work for their mutual benefit. If it were not for that he could go anywhere with his corn, and he could compete with another; and it is a great thing to hold him.

43398. Mr. KAVANAGH.—As to that £175 to which you have drawn attention, how much do you suppose the original debt was—what do you imagine was the value of the debt. Would it be half?—I do not think a great deal of this is interest, but any farmer who buys on credit has to pay a higher price. There is a discount for cash in all cases, so that the original price does include interest, although I do not think that there is generally added interest afterwards.

43399. CHAIRMAN.—Have you ever thought, in connection with the co-operative scheme, of starting a co-operative store?—We rather avoided the idea of going into trade. The co-operative system has been looked upon with a certain amount of suspicion by the commercial classes, and we do not want to extend our field. We avoided it, and we tried to keep ourselves solely to the business of the farm.

43400. Do you believe that if you had started a co-operative store the farmers would have been kept out of these debts?—I think it would have to begin by advancing money to clear them out of the shops. All future obligations being on a cash basis, the man would very soon be able to get the debt paid off. I do not say it is sound finance, but at the starting of a co-operative store, I think it would have to begin by releasing the customer from his bondage, because if he leaves the man to whom he owes the money and goes to deal with the co-operative store, he will be sued.

43401. Would the shopkeepers be strong enough to prevent it succeeding?—No, I do not think so. I see new shops started in the towns all carrying on very well in spite of all competition. I do not see why a new industry of that kind should not be started with a fair chance of success.

43402. Mr. KAVANAGH.—There are co-operative stores now?—There are no co-operative stores in the country. There are some co-operative stores in Dublin, but there is no such thing as a co-operative store in any part of the country that I ever heard of.

43403. Most Rev. Dr. O'DONNELL.—Those are heavy debts?—Yes, very heavy.

43404. Is it general?—Very general, I am sorry to say.

43405. It looks then as if the farmers were not making out of the land what would keep them out of debt. Does not the farmer pay more for his food?—I do not think that that is the cause of debt, but in the last ten or fifteen years there has been an extraordinary change of standard about the whole farming class. The farmer spends more on his subsistence, clothing, and food, and everything else.

*TABLE showing the indebtedness of certain farmers.

Case.	Yearly Rent.	Amount of Debts.	Observations.	Case.	Yearly Rent.	Amount of Debts.	Observations.
	£ s. d.	£ s. d.			£ s. d.	£ s. d.	
A	18 18 0	500 0 0	And only half stock.	G	86 0 0	558 0 0	¾ stocked.
B	38 7 6	350 0 0	Do.	H	96 5 0	482 0 0	¾ stocked.
C	23 18 6	125 0 0	Short one cow.	I	4 0 0	39 0 0	2 cows only.
D	18 0 0	170 0 0	No stock	J	126 15 0	755 0 0	20 cows.
E	62 0 0	450 0 0	Full stock.	K	38 4 6	420 0 0	No stock.
F	18 19 6	175 0 0	No stock.				

43406. The cost of living is still going up?—Yes, it is almost like a law, it is so general and universal. People can hardly resist it. Men of every class are doing it, and they must do it.

43407. The price of labour and the cost of living have gone up?—Yes.

43408. Both those conditions militate against the farmer's financial position?—Yes, for there has not been at all that increase of prosperity that would justify the increase of the standard of living that farmers have begun to adopt.

43409 Mr. SUTHERLAND.—Take it the reverse way, that it was too low before?—I am sure it was too low before, and I am glad to see them living better, but I do not like to see it at the expense of making debt to the shops; and it is done by running up debts to the shops to a large extent. In reference to the machinery for the sale of estates, I have had experience both of that of the Estates Commissioners and of the Congested Districts Board, and am strongly persuaded that the latter is the more expeditious and satisfactory. In a great operation like the sale of the land of Ireland, it is absurd that for three months of the summer everything should come to an end, while the officials keep holiday. I should like to interpose there that I am very strong for getting my holiday as much as anybody, but I think that something ought to be done to substitute a working body while the others are getting their holidays. It would be otherwise if the owners and occupiers went on their vacation also, but neither chargeants, mortgagees, creditors, shopkeepers, nor others, give the owner a close season, nor can the farm work and expense of the purchaser be hung up. Obviously the remedy is to have more Sale Commissioners, and an alternative staff, so that (like time, tide, and need of food, work, and money), the work of the Department should never cease. I believe that in the Custom House and Post Office and all the Departments of the State, there is no such thing as a break of this character. If some men go on holiday, others remain to do the work, but the Land Commission almost shuts its doors. It is clear that the Irish Land Commission cannot do its work. Fifty millions of money required for work actually done, and only seventeen millions paid out is a record of failure and inefficiency hard to beat. I do not mean to attack the Commissioners. I believe that they are the most hard-working men in Ireland; but I do believe that the system is bad.

43410. Mr. SUTHERLAND.—The money is not being shovelled out quickly enough?—It is not only that, but there is a great amount of work in the office that is not examined yet. Is there any other Department of the State in such a state of congestion, and if it should occur, say, in the Custom House, the Post Office, the Local Government Board, how long would it be allowed to continue uncorrected? The remedy I suggest is, let the congested part of Ireland be handed over bodily, either to the Congested Districts Board or to a Connaught and Munster Sale Commission sitting alternately in Cork and Galway, and let the Estates Commission be doubled from top to bottom, the fiat of any two Commissioners to be sufficient to authorise each transaction.

43411. CHAIRMAN.—You say that the Land Commission differs from all State Departments in shutting its doors for three months, whereas other State Departments always have someone to carry on the business; but, as a matter of fact, the Land Commission is a judicial body and it has a Court?—I do not think that the Judges would admit that the Land Commissioners are judges. They are Commissioners.

43412. But surely it is a judicial body. The judges are independent and the Land Commission are independent, and therefore they differ from the Estates Commissioners?—The Estates Commissioners are not independent.

43413. And therefore they differ from the Estates Commissioners?—The Estates Commissioners are not as independent.

43414. The Estates Commissioners as a branch of the Land Commission might be regarded as subordinate, but the old Land Commission are an independent judicial body?—I think so.

43415. Then, if so, are not they much more analogous to the judges?—But I do not think the Land Commission does shut its doors. That is done by the Estates Commissioners. I want them to go on investigating title and doing all their work as Commissioners.

43416. I thought that you spoke of the Land Commission. You meant the Estates Commissioners?—I meant the Estates Commissioners.

43417. Then that is all right.?—Some persons seem to think that sales are more expeditiously carried out through the Estates Commissioners than through the Congested Districts Board. Not only is the contrary the fact, in my experience, but so long as the present rules of procedure obtain, sales through the Estates Commissioners must be slower. In cases of sales to the Estates Commissioners every holding must be mapped, and this takes time. The boundaries of every holding must be checked by the Estates Commissioners' surveyor. Every holding must be inspected by the Estates Commissioners' inspector. The Commissioners, in dealing with the estates, have to consider each holding. Now all these steps are very much simpler in cases of the Congested Districts Board, where the maps are merely sectional maps, and there is no checking of boundaries, and the inspection is not of the holdings, but of the estates as a whole.

43418. Mr. SUTHERLAND.—Is the inspection less efficient than that of the Estates Commissioners?—I do not find it so. When you sell to the Congested Districts Board you sell the whole estate to them, and they deal with the individual tenant.

43419. Mr. KAVANAGH.—It is manifestly a much easier operation to sell the whole estate to the Congested Districts Board than to sell to each individual?—That is where the difference occurs, and there is an immense saving of time.

43420. Mr. SUTHERLAND.—Because the inspection of the Congested Districts Board is less efficient?—No, but that it is not necessary on their system to have it at all; or, if they have it, they have it after the sale has been completed. I could give details, but need hardly do so, to show that after a sale to the Congested Districts Board we were paid in seven months. The estate of Talbot Crosbie has been three years now in the Estates Commissioners' office, and is not finally paid for yet.

43421. CHAIRMAN.—There is a reason for that, that what the Congested Districts Board managed to extract out of the Land Commission they spent on the purchase of estates?—The priority powers of purchase given to them originally, I believe, have been restored.

43422. Most Rev. Dr. O'DONNELL.—They managed to extract a little of what ought to have been extracted?—On the estate of Mr. Collis Sandes the agreement was signed in June, 1904, and the papers lodged with the Estates Commission in July. The *prima facie* title was passed in April, 1905, but the funds were not allocated till July, 1906. In the case of another estate, as an instance of how the time was spent, when the question of adding arrears was raised by the Commissioners Judge Meredith took five months to consider his judgment.

Mr. DAVID MORIARTY examined.

43423. CHAIRMAN.—You are chairman of the County Council?—Of the County Council, my lord.

43424. Will you tell us anything you wish to say. I do not think we have a precis of your evidence?—No; I regret very much I did not send in my evidence; but I was rather busy lately and I had not time. As regards the congested districts, the chief questions that I suppose, of course, you are dealing with are the grass lands and migration and all that, and your lordships and the Commission have already seen that to a great extent that does not apply to Kerry. We have, however, other grievances, and, perhaps, if you like, small grievances of our own, and I dare say that the Commission has seen already that the great point that the Kerry men are trying to make is that they do not get enough from the Congested Districts Board. In fact this is not a new point at all; we have been saying it for a long time.

43425. Mr. SUTHERLAND.—Neither is it peculiar to Kerry?—I dare say it is not. It is not peculiar to Kerry.

43426. Most Rev. Dr. O'DONNELL.—That point about grass land is that grass land was either not in abundance or not available for tenants?—Not avail-

July 5, 1907. — Mr. David Moriarty.

able in Kerry, and we have not big grazing ranches at all in Kerry. In some divisions there is no grazing land. There are no grazing ranches like those there are in the West of Ireland. And then the question arises which has often been put to me by officials and members of the Congested Districts Board, how are the Board to do more for Kerry than what they are doing?—Well, I have one or two small suggestions. One is to help industries. I go so far as to agree with Mr. Micks and say, finance industries. I wish to put it in this way to the Commission—our industries in Kerry and over a great part of Ireland are dead. We are practically, as far as industries are concerned, in the position of a new country, and though there is of course an indisposition towards anything in the shape of protecton—I assume that that would not be considered to be right—yet I wish to point out that many great authorities, and many exponents of the modern school, and great advocates of the theory of *laissez-faire*, like John Stuart Mill, have acknowledged that in a new country protection is justifiable. And, therefore, I say that taking Ireland as being, though an old country in other respects, yet, as far as industries are concerned, an entirely new country, I think that even a Liberal Government would be justified consistently with its principles in holding out a helping hand in order to revive industries in Ireland.

43427. Would not you go further, and say that Ireland has a claim that no new country would have. Is it not the fact that Irish industries were legislated away?—That is absolutely so. That is a topic that one is almost afraid to mention nowadays; for when I mention it to Englishmen they say—"Don't be bothering me with the past; let us talk about the future." But what we want the English Government to do the future depends a great deal on what English Governments have done in the past.

43428. You would like to see industries started and put into such a condition as to be self-supporting?—That is so, and I do not think any sensible man would be in favour of Government help keeping on an industry year by year unless there was general protection in the country. But in this country, as long as free trade principles remain it would be impossible. I admit at once that the Government could not finance an industry year after year. From what I know of Ireland, and of industries like the woollen industry, and cabinet making, and things like that which are suitable to the people and to the districts, I am perfectly positive about it that they would be self-supporting once they were started, once the hands who are unskilled hands now would acquire the necessary skill and get proper apparatus, and be taught how to use it.

43429. Mr. KAVANAGH.—They were flourishing before and they were suppressed?—They were flourishing before till those terrific imposts were put on at the instance of Manchester, and other, merchants.

43430. Most Rev. Dr. O'DONNELL.—Would you say there was a very strong claim for the people being helped forward on industrial lines, so as to be able fairly to compete with those who had the advantage of repressive legislation against Irish industries?—Yes, and any one conversant with industrial matters will see that it is an extremely difficult thing to establish a new industry at all in any new district. I was talking some time ago to a Sheffield manufacturer who makes steel plates for the Government, and he said: "At the time of the bicycle boom what a pity it was that that went away from Sheffield, where they had the best steel," and I said, "Why don't you begin to start bicycle making in Sheffield?" "No," he said, "they began in Coventry and Birmingham. They have the trade atmosphere there and skilled hands, and there is no use in our trying them in Sheffield now." And if that applies to Sheffield, it applies with greater force to Ireland, where they have no trade atmosphere at all.

43431. CHAIRMAN.—But you have got one advantage which is free from dispute, the advantage which its cheap labour gives you?—It is virtually impossible for a population who have practically to learn a trade to expect to get the same remuneration as the people who have learned their lesson; and it would be most unfair.

43432. And therefore it would not be an unreasonable request to make, that when an Irish industry is started, and the people are learning industrial habits, the remuneration in Ireland should be lower than it is in corresponding trades in England, and that cheaper labour ought to give Ireland a great pull in some of those poorer districts?—Yes; that would go to help us. As against cheaper labour, also, your lordship will remember that that labour would be quite unskilled, and it would take generations before that labour would reach the same scale of perfection that labour in England has reached, and, therefore, it will not be as cheap as it looks. Your lordship knows that a carpenter in America is paid higher wages than a carpenter in England is paid, and yet a carpenter in America, I am sorry to say, will make a window or a door cheaper for you than a carpenter in England would, because he works quicker; and a bricklayer in America will lay 4,500 bricks in a day, but in Ireland only 400.

43433. Most Rev. Dr. O'DONNELL.—And if he does not lay them he has to walk?—Yes. Your lordship sees that even though we would have cheaper labour in Ireland, our want of skill and training would greatly go gainst us, and we would still have to get Government help to supplement those deficiencies.

43434. Mr. SUTHERLAND.—Then though you have protection, you would still require subsidies?—I call protection and subsidy practically the same thing.

43435. Most Rev. Dr. O'DONNELL.—You have stated in answer to Lord Dudley, with reference to the development of industries, that the plainer industries would derive benefit from cheap labour?—Oh, yes; they would, of course, the simple industries—anything, for instance, like hand looms for tweeds, and so on. They do not require any high degree of skill, and of course what Lord Dudley says is absolutely true. The effect of cheap labour would be to give an advantage, and the financial help that one would want from the Government would not be very large, and would only be wanted for a certain time.

43436. Mr. SUTHERLAND.—You do not want a tariff, but money subsidies. You do not want to benefit by both?—I do not think we would ask for a tariff.

43437. So that you think that you should get subsidies to help those industries till they became self-sustaining?—What I said was that subsidies would be practically protection.

43438. You see perfectly well that while in England and Scotland it is a small matter, for all the trade done in Ireland at present if they were shut out, the people of Ireland would have those superior articles shut out, and they would trust to their own skill?—How do you make that out?

43439. I am only pointing out to you that a subsidy is a very different thing from a tariff?—That is what I am saying, that if you had protection you would be shutting out articles from other countries and giving people in your own country an opportunity of making such articles.

43440. Of an inferior quality to begin with?—Decidedly.

43441. Otherwise there would be no reason for protection?—Under the system that I advocate, that is giving a subsidy to trade undertakings of that kind, there would be nothing in the sense of protection, and they would compete freely with articles from England and Scotland.

43442. Most Rev. Dr. O'DONNELL.—What you look to is the starting of a few likely industries?—To give them a start, and then a fair field and no favour.

43443. We were told yesterday in Dingle that the export of linens from that single port over 100 years ago amounted to about £60,000 a year. Would it be fair to go back a good deal and ask, if circumstances had always been as favourable for industries in Ireland as they were then, what industries would now exist, and with regard to the subsidies necessary to try to set up now an industry which was then flourishing under favourable circumstances whether it might not flourish still with moderate support at the start?—That is my idea, of course having regard to the different and altered circumstances. I may state that the raw material now, both of linens and woollens, is sometimes got from Belgium and manufactured both in Scotland and the North of Ireland as Scotch and Irish.

43444. CHAIRMAN.—This is a large subject we have started with, but may we understand from your view that it is difficult to do anything in a very big way towards reviving Irish industries unless the powers that be are prepared to assist those industries

for a few years till they are in a position to compete with others?—I think so, especially as regards congested districts. It may be different in big cities. However, speaking of the congested districts, at this moment I believe it would be utterly impossible to revive industries in the congested districts without Government help, and that help we would like to get through the Congested Districts Board.

43445. And then when people talk of reviving industries as a means of relieving congestion you are sceptical about the process under the Government, and at the same time prepared to subsidize?—I am extremely sceptical as far as the congested districts are concerned.

43446. Mr. KAVANAGH.—And under these circumstances, do you think that any industry would in a few years' time flourish and become self-supporting?—Of course, Dr. O'Donnell says an industry that flourished before would flourish now, taking into account the altered circumstances. I take especially the woollen industry, and that is one very suitable for congested districts, and I am fully conscious that here in Kerry the people have really a liking for that particular industry, and down in the mountains at Glencar you can get at this moment very first-class tweeds made by hand-looms in their little cottages. They have kept up the trade to this very day.

43447. And would that also assist agriculture?—It is a thing that would assist agriculture. For instance, a farmer in one of those particular farms told me that he had twenty-two children. And what is he to do with twenty-two children down in Glencar?—All he can do now is to ship them to America. If there were local industries he would get positions for them at home.

43448. CHAIRMAN.—Do you think that it is a strong argument in favour of your case that although the Congested Districts Board is established for a good many years now, yet with the exception of lace, they have not been able to succeed to any great degree in establishing industries in congested districts?—Well, have they not started carpet industries in Donegal?

43449. Well, one or two small things, but still it is time, I think, to say that there was only that industrial revival in the congested districts area?—It is not, my lord, and that, I think supports my argument.

43450. Although the very earnest desire of the Board for fifteen or sixteen years has been to assist every effort to revive industry within their means. And then it is a strengthening of your argument?—I think so.

43451. Mr. SUTHERLAND.—How does it strengthen it when the thing has not succeeded?—Because if the thing had been a very much greater success, it would have shown that there was, firstly, an aptitude on the part of the people for those commercial undertakings, and secondly, that they had financial and other means, skill, and so on, for carrying them out. I say that we have no evidence of those qualities at present. I say that the old skill is not there, and the old commercial aptitude is not there. I do not believe that it would take a long time to revive, but it would be only by financial help and a strong stimulus that industries could be revived at all, and they never could be revived by the natural growth of these qualities.

43452. By instruction?—Well, instruction. In our County Council, I do not know how many instructors we have. If I go into any hotel at all, and I see anybody in the coffee-room as distinguished from the commercial room, what is he? He is an instructor. There is always an instructor for something, and I ask what good do they do.

43453. CHAIRMAN.—Is not it a most undoubted fact that the most powerful form of instruction that you can produce, or that anybody can produce, is the stimulus and example that are provided by the existence of the industries themselves?—My lord, it is the only form of instruction that is worth a penny piece as dealing with the Irish people in congested districts.

43454. Mr. SUTHERLAND.—Or in any district. Is not that what the old system of apprenticeship was founded upon?—That is so, sir. And I wish now to say this much. You cannot say that I am a prejudiced person in this question of instruction, because in the County Council we pay, I do not know how many instructors throughout the county, and we patiently give it every possible trial, and we were told by the Department of Agriculture that it was the thing for the regeneration of Ireland, and we have got it on trial for many years, and I do not believe there is one single man in the whole county of Kerry who will contradict me when I say that as far as that instruction is concerned, it has been productive of nothing except expenditure of money.

43455. CHAIRMAN.—So far as the Department of Agriculture is concerned, the instruction has been in existence only one year?—No, surely. It has been in use for several years. Perhaps it would be right to correct what seems to be a wrong impression. There is one instructor, a horticultural instructor, and he has been very useful, and of course he goes round to some of the people who are entirely above the average of the ordinary farmer. He goes round to people that have gardens and that need only a little more skilled instruction; but as regards the others, dealing with the poorer people in the congested districts, I am told by those people, and I have no reason in the world to think they tell me an untruth, that the instructors go there, and that all they hear from them goes in at one ear and out at the other.

43456. Most Rev. Dr. O'DONNELL.—To go back to industries in the congested districts, perhaps as a single instance of a big effort to establish an industry in a congested district, you might take Foxford?—The lady who started that is a near cousin of my own, and I know a great deal about it.

43457. She is in great esteem, and has achieved a wonderful success?—Now, you have there a place where the people are promising, and there has been financial help from the State, and general encouragement and direction, and these are the elements that at Foxford have been a success.

43458. Instruction, financial loans, and skilled direction?—Yes.

43459. Foxford had these advantages, and it has been a success, and in London, Mr. Walker was asked whether if the means of the Board allowed him to give similar facilities in other parts of the congested districts, it would be possible to develop them the same way as Foxford, and he said yes. Does that confirm your argument?—Yes; I think there is absolutely no doubt about it at all. I know one little industry in Caherciveen, the Iveragh industry, and I think if that had been helped on and had got a good financial push, it would have been like that at Foxford.

43460. You spoke about the important elements of that industry. The person directing and controlling it should be a person who has a genius for the work and who devotes the service of a life to it?—If you get a person with a genius for the work, of course, it is a considerable factor in it, but you can have fair success with an ordinary person of good business habits and with a fair commercial aptitude. And the other point that I think, the congested districts could be improved by, would be the starting of model farms here and there, and I do not believe in instruction pure and simple, orally conveyed, but I do believe in such instruction as the people could get practically by means of a few small model farms; and they need not be expensive things.

43461. CHAIRMAN.—It is rather early yet to draw conclusions. It is only two or three years since the Department was given over to the Congested Districts?—As regards the congested districts. But we have had experiments of the Department in all other districts, and I cannot see the value of them.

43462. But, as chairman of the County Council, have you not found that your agricultural work up to the last year or two has been more successful in non-congested than in congested areas?—I do not think so. I did not think that, so far as instruction is concerned, we have derived much benefit at all from instruction pure and simple without manual visible evidence.

43463. You have not found that your agricultural scheme has been better supported, and that greater interest has been taken in it?—Not a bit of difference in the one or the other at all. Of course the only thing is that our schemes in many instances will apply more to non-scheduled areas. Taking things like bulls, now, the people in the non-scheduled areas could pay for them when the people in the scheduled areas could not. I know several districts where we

July 5, 1907.

Mr. David Moriarty

offered bulls, and even under the very fair terms given by the Department they were not able to pay for them then.

43464. And the result of that is that you have special schemes for the congested area?—Till lately we have not had special schemes, and I think I may say that, as far as instruction alone is concerned, there would not be very much difference in the case of the people in the congested and non-congested areas; but, on the contrary, that, though the people of the non-congested areas were richer and presumably more intelligent, and, at all events, able to obtain more education than in the congested districts, they have never been able to take any more pains with the instruction than the people in the congested districts.

43465. We have been told that your farm department has been urging the district instructors to remain in the congested areas. That in itself seems a tremendous improvement?—That will all depend on the way they work. If they merely go to the National schoolroom in the evening with a magic lantern and talk to the people it will be a waste of time; but if they go to a farm and show the best way of spraying potatoes that is what would be of use. You must show the people what to do.

43466. Most Rev. Dr. O'Donnell.—What do you say of the system of taking up farms as model farms and having them worked by practical farmers?—I should say that it would be of great use for the purpose of testing theory. There is no agricultural expert I know but always tells me that the crops, for instance, in an ordinary congested district of Kerry, are too poor, that the tillage is on a bad system, and that the system of manuring could also be improved. They may be right, or they may be wrong, but the only way I can see of testing their theory would be—for you will not get the people to test them—the establishment of a few model farms. Undoubtedly, if they are right they would be of enormous benefit to the people.

43467. Do you not think it would be well that there should be some system of agricultural training for boys in rural national schools?—Yes, I think it would; but, even then, my lord, more would be needed. I have seen those boys going back, and I asked—"Have you been making some improvements," and the answer was—"Well, sure, I could not get the old fellow to do anything."

43468. Mr. Sutherland.—The old fellow perhaps had put all these theories to the test long ago, and found them mere gas?—That may be so, but we may be quite certain that it would be well to have both systems, and that you had model farms where those theories could be tested before people's eyes. They must be convinced.

43469. You must, as chairman of the County Council, have had a great deal of experience of experts of all classes?—Yes.

43470. And you have not followed their advice in every case?—That is why I ask people not to follow the advice of the expert, but to ask to see it put in practice.

43472. Most Rev. Dr. O'Donnell.—Most of the boys in Ireland turn to agriculture. Do you not think it would be a decided improvement in the National Education system if there was at least one school in the parish where the boys attending the school would see in their early years agricultural work done in which they could take a part, according to a good system?—Yes.

43473. In their own neighbourhood?—Yes.

43474. Mr. Sutherland.—Are you aware that there is on the Continent what is called a school plot, and the master allots a portion to each boy, and they compete against each other and produce the best flowers. Would not that be practicable; and it gives them a taste for flowers and an interest in botany?—That would be all right as regards flowers.

43475. But as regards other things also?—Yes.

43476. What is the necessity for differentiating between them—taking them away from the common school and curtailing the education of the boy?—Except this also that I want to educate the old people as well as the young, and in my model farms the old people would go to see how these things are done, and if the Board was able to adopt that system they would take to it. And as regards spraying, I remember well when the Congested Districts Board commenced spraying they could hardly get the people to do it. They thought it was a machination of the devil. And then the Board asked a few farmers to allow their potatoes to be sprayed, and when the people saw the thing done, and saw the advantage of it they took to it themselves, and now there is not a farmer in the district who is not able to do the litmus paper test as well as anybody.

43477. But it did not prevent the blight last year?—I think that in those cases where the farmers sprayed, and, above all things, where they sprayed twice, and took care when the rain came and washed it off, to do it again, it was very successful. Mr. Murphy reminds me of our plea that we would like to have a representative of Kerry on the Board. Your lordships are aware that there is a very strong feeling in Kerry on that point. With reference to Mr. Trench's very intelligent and valuable evidence, he spoke of debts in the shops, and I am even more in touch with commercial men than Mr. Trench, and I do not wish the Commission to leave Kerry and to think that the shopkeepers were reckless through Kerry in the giving of credit, and that the people were equally improvident in the taking of credit. He gave an instance of an individual farmer owing £500. I do not know was it to one shopkeeper or to several.

Most Rev. Dr. O'Donnell.—He did not specify.

43478. Chairman.—He said one man owed £500. He did not say whether it was to one shopkeeper?—I wish to say to the Commissioners that, from a very intimate knowledge now of the country people and a considerable knowledge of the commercial classes in Ireland, that those were exceptional cases in my opinion.

43479. Mr. Kavanagh.—But those large shop debts are not peculiar to Kerry?—Well, in this whole district, in this whole barony of Magunnihy, you will not find a single farmer owing £500, or £400, or £300, or £100 at all; but in Tralee there happen to be a few very large merchants, with very keen competition and a lot of money put out, and I suppose now and then to do a rival out they will undertake an amount of credit that they will not undertake elsewhere in the country. Those merchants I refer to are far above other merchants there, wholesale as well as retail, and I suppose the transactions that he refers to are in connection with them. Speaking of the farmers in this district, I find them very thrifty and very prudent men on the whole.

Mr. Michael Fleming examined.

Mr. Michael Fleming.

43480. Mr. Kavanagh.—You are a member of the County Council?—Yes. I live at Kilcummin, Coome.

43481. Kindly state what you wish to bring before the Commission?—The great necessity for lime in our district, and also of drainage. The district is entirely one of small occupiers, and is congested. It is all reclaimed land, and has gone back very much within the last thirty years in its quality. Reclaimed land goes back very much when it is not attended to properly.

43482. I understand that there are limestone quarries in the district?—There is only one.

43483. Is that working at present?—It is not. It was working all last year until about March. Since then it has been closed up. I don't know why.

43484. You cannot say why it was closed up?—Lord Kenmare did not employ the men.

43485. Was the demand not enough?—There was plenty of demand in the winter, and for sixteen miles all round there is no other limestone quarried except in this place.

43486. Why don't the farmers combine to lease the lime quarries and work them for their own benefit?—It belonged to Lord Kenmare, and he would not allow any man to interfere.

43487. Mr. Sutherland.—What is he charging?—I think it was two shillings a barrel for the lime. We were able to get lime there, but that has ceased for the last two or three months.

43488. Most Rev. Dr. O'Donnell.—Was there any difficulty about fuel that caused them to stop?—No. There is plenty of turbary all round—thousands of acres of bog.

43489. Mr. KAVANAGH.—Do they always stop working the quarry in summer?—No. They stop in harvest time—in August and September—and they sometimes stop in March when the crops are down.

43490. Perhaps they will open again in the winter?—Yes; as soon as the harvest is secured, but this was the real time when it should be open, in March, April, and May. Then we want good bulls out in that district. We have not got them there. We would want good stallions there. We have none but the worst class. If there was any plan by which we could get good bulls and stallions it would serve us very much.

43491. Is there any farmer large enough to buy a bull in your district?—Yes, but he will keep his bull to himself. He won't give the use of the bull unless to a few.

43492. Mr. SUTHERLAND.—For a fee won't he give it?—I don't know. I think that the fair way would be to give the price of the bull to a man or two, and let them give security for the price of the bull.

43493. Mr. KAVANAGH.—The Department are giving fifteen premiums of that class?—That would do very well, from £15 to £18. We would not want high class cattle down there. It is third class land—all reclaimed land.

43494. Have you got no premium bulls there?—None but little bulls of our own of no great consequence. This district is under sale now by Lord Kenmare, and I don't see that we in this district are getting any advantage beyond the rest of the districts all round where there is good natural land. It is all reclaimed land.

43495. How do you mean you get no benefit?—That we will only fall in with the rest of the district in the purchase. If there was money advanced to the people at low interest it would be of great service to the people. Many of them are short of cattle, and a great many of them would want to improve their farms, to ditch them and lime them.

43496. You think loans on easy terms would be of great advantage to the people?—Loans would stand very much to the people. The original appellation this place got was Sliabh Luachra; I don't know whether you understand Irish, but it means the rushy mountain.

Mr. KAVANAGH.—Both the Bishop and Mr. Sutherland understand it.

43497. Most Rev. Dr. O'DONNELL.—Sin é an t-ainm ceart* ?—We should not be compared with places where there is naturally good land. This is only third or fourth class land.

43499. Mr. SUTHERLAND.—You live in a congested district?—Yes.

43500. And your complaint is that though you are in a congested district you have no advantage from the Congested Districts Board over those districts that are not congested?—Not a bit. We got a few roads. It did not do too much good for the people; only one townland.

43501. Most Rev. Dr. O'DONNELL.—Is there a Parish Committee?—No.

43502. Mr. KAVANAGH.—The district in which you live is congested?—Yes, very much congested.

43503. If the people on uneconomic holdings in your neighbourhood got land that was outside the County Kerry would they migrate?—I think they would. We have no labour, and all who have not gone to America have gone to Limerick or Waterford. We are not able to pay them. It is not a nice thing to employ labourers when you are not able to pay them.

43504. Would the people go any distance?—I know very well they would; any place they would get relief.

43505. If they got good holdings elsewhere?—Yes; when they go to America or Australia they would go to the next county or the county beyond it.

43506. There is no untenanted land available in your vicinity for the enlargement of holdings?—There is only one farm, and the family are not living in the division. There is another farm, a very extensive farm of 400 or 500 acres of bog and mixed land. The people are so poor there that it would be a great benefit if they got a stallion.

43507. Mr. SUTHERLAND.—Have you a mare yourself?—Yes.

43508. More than one?—I have two.

43509. Have your neighbours also got mares?—Yes. They have all horses.

43510. Do they breed horses as a rule?—Where they get those most miserable stallions, they serve mares for 7*s.* 6*d.* each, and they give that instead of going to a good horse that they would have good foals off.

The MACGILLICUDDY OF THE REEKS examined.

43511. Mr. KAVANAGH.—Kindly bring before the Commission anything that you wish to state?—The last witness referred to lime as the great need of these districts. Bog preponderates in most of our land. It is cold land needing lime. In my boyhood, before I went to sea, in the spring, the whole country was covered with wreaths of smoke going up from lime-kilns. There was more corn grown, and the animals and men had better bone. Lime is wanted for bone. There is no use in getting muscles if you have not a bone to hang them on. I have practical knowledge, which is very much wanted in this country, and is not supplied by peripatetic instructors. I know of no greater need than lime, which, of course, implies dry land, which implies drainage, and also implies means of communication for carrying the lime, and roads. The great difficulty in Kerry to-day is that lime is in many places as rare as gold. In many places it has fallen into utter disuse, because it cannot be got. The distances are too great, and railway rates for carrying it are too high; though I was present when the promoters of the railways, under guarantee for which the people are very heavily taxed, in the Dingle, Caherciveen, and Kenmare peninsulas, and they made the carriage of lime and sea-sand, which is a substitute for lime, the primary reason for building those railways. On your map, if you look at Castlemaine, at the head of the Dingle Bay, Kenmare at the head of the Kenmare River, and Killorglin, those are the three nearest points at which lime can be got to the western ends or the body of those peninsulas. You will notice all those are marked congested. I don't think I will be far wrong in saying that their total area is very nearly half this county. Mr. Fleming was speaking about the quarry, the only quarry in that part near the boundary with Cork, close to the enormous bog which burst some years ago. That quarry is a very fine quarry; an immensity has been taken out of it; there is an immensity of fuel close to it on the top of the great tableland about 1,000 feet high. The farms are very large, and there is no need of amalgamation, but there is a need to make it possible to work those farms. That cannot be done without the lime quarry, which is idle. In some respects, farmers who do not adopt suggestions when you suggest something new to them are not far wrong, but in regard to lime-burning, they would be very wrong, because their method of working makes it impossible to give a large supply if all the quarries in the county were worked in the obsolete old method. The rock drill and the Hoffman kiln are unknown. They have the old method of quarrying and the old kilns of forty years ago. There are a great many bogs in the county, and a good many of these are cut away, and it would be a good thing if the farmers could get the limestone burned, but various agencies came to bring it into disuse. Difficulties arose where quarry owners neither worked the quarries themselves nor permitted others to work them; and the remedy for this state of things would be, I think, for whatever agency buys the estates, the Congested Districts Board, the Estates Commissioners, or other Government agency, to take some of those quarries into their own hands and work them on modern methods, which I saw some years ago. I travelled through all the lime-burning districts in England to see how they did it there, and I was intensely struck with the works at Llandulas in Wales. There are miles of railway in the middle of the quarry. A thousand holes were made, one after the other, with the rock-drill, and they were all blown up, and enough of rock was brought down to last for a month, with some thousands of men at work at this or burning the lime in the Hoffman kilns. It was all run away into trucks. There is not any

* That is the right name.

July 5, 1907.

The MacGillicuddy of the Reeks.

handling. If that were done here, you could give us forty-two gallons to the barrel—the modern barrel is thirty-two gallons, owing to the starvation process—and the forty-two gallon barrel could be given at ninepence. I don't think any man in this country would think of giving you a forty-two gallon barrel now under 1*s.* 8*d.* or 2*s.* It is not possible to do any good farming without lime, or the Government coming to the assistance of those who want it, taking some of the quarries and working them themselves, or assisting men who will do so with the necessary machinery and knowledge, and perhaps some capital, on terms that they would burn at a certain minimum rate, and not go above a certain price. That cannot be done unless the machinery is provided to enable those who are anxious to assist the Board to do so. Suppose a dozen farmers join together in local combination to work a quarry and supply themselves and everybody else, unless you got them the right to work it, and then the machinery, then you may talk for ever, but nothing practical will come out of it. I need not tell you that the bog is too retentive unless lime is put on it. Even if it is drained underneath the ridge of bog it will be too retentive, and unless it is made friable, you may give up tillage. That is the reason that many thousands of acres that formerly were tilled have gone back into furze again. Otherwise people would have stopped here to till them.

43512. Mr. SUTHERLAND.—Whose lime-burning place was it you saw in Wales?—I cannot say to whom it belonged. Llandulas is a little past Conway.

43513. You have no reason to suppose that it was a Government institution?—Quite so. It is almost absurd to speak of our doing things without Government help where they can do it in England without Government help, because for over 300 years our wealth in the shape of rents has been going across the water.

43514. You heard what Mr. Fleming said about the price; that there was a great demand for it in this particular place that he referred to?—It is the greatest demand from the west to the east and the north to the south of this county.

43515. There is the lime quarry he referred to; there is the demand for the lime, and if the proprietor of the quarry was acting according to ordinary human motives, he would be only too glad to sell?—Lord Kenmare is a very kindly-hearted man, and willing to do his best to continue it. At present he is selling to his tenants. There have been great difficulties. From time to time all the county has been taxed for that estate. I have a great deal of knowledge, private knowledge and as ex-Chairman of the Board of Guardians, the principal cause was a big rise in rents about twenty-five years ago which was not exactly justifiable, and then the thing being managed by a receiver for mortgagees, a gentleman whose practices were described from that Bench by the County Court Judge as thoroughly unjustifiable —that is at the bottom of the whole show.

43516. What is the name of the receiver?—Maurice Leonard. I protested against it myself in the Press and on the Grand Jury.

43517. Most Rev. Dr. O'DONNELL.—Do you think if there was a scheme for supplying lime on a large scale the tenant farmers in those parts of the County Kerry would be willing to pay a reasonable price for it?—Certainly. In that opinion I am looking to the future a long way ahead. We are all in the middle of purchase now. I have been anxious to sell to my tenants. I have been tripped up again and again by mortgagees. There is nothing more wanting than to release the men who want to work for this country, who have given thirty years one way or another from the power of the mortgagees to paralyse them and prevent them from breaking their energies and healths as they have broken mine. I am just recovering from four years' illness. The land judges seem to think that one form of property is sacred and another is not. I know the people would be delighted in every part of the county to do it. While we are on this question I may mention that I went some years ago to a director of the Great Southern and Western Railway. I reminded him that the railway from Farranfore to Cahirciveen was made upon the promise of the promoters, the manager, and so on—poor Colhoun is dead—that the lime should be carried at cheaper rates. He said they could not do it. Now all that part of the county paid something enormous for the lime, and the thing that it was built for won't be allowed to be carried, except at prohibitive rates. Also, sand is being used in places where there was not the labour to burn the lime, or there was not the fuel. The sea sand is gathered right round from Cahirciveen and Glenbeigh to the north side of the county.

43518. Mr. SUTHERLAND.—Is sea sand inferior to lime?—It is inferior to lime; but it has very good qualities. It is far more lasting than sea-weed, and it is of great use in cutting the bog. There is a great deal of silica and ground sea shells in it. Hydraulic lime should sink very gradually into the ground, and is far better than the ones which go right off into flour. The railways, as well as many of the owners, make the output of lime in this county prohibitive. If lime is not made easy to get, the men whom we are all selling to, some from motives of personal convenience, some from noble motives, and some because they have to, will find it very hard to pay in the long run, and to deny lime is to court disaster.

43519. Most Rev. Dr. O'DONNELL.—If there was a scheme by which the principal lime kilns were kept producing large quantities of lime, at what rate per barrel, takng the large barrel, would these farmers be willing to take the lime?—If it was burned on the proper modern methods, I think any man would be willing to give a shilling for it but it could be sold for far less than that—but it would be such a novelty for them to get the thing so cheaply.

43520. From what you have stated to the Commission, delivery is difficult?—Very difficult. If I had lime quarries of my own I would get motor cars and put them on. But that would entail spending a lot of money strengthening our bridges. And then you come to a wider question—If our people are to make money out of the land, in the face of modern competition, you have got to assist them in modern ways of doing it.

43521. Mr. SUTHERLAND.—On your own estate it was principally for bog land that it was so necessary?—And also for clay. If you have got heavy clay you can do very little without lime or sand.

43522. In this part of the country it is mostly bog?—Yes; but I know clays around Killarney that want lime to render them less retentive and to purify the land.

43523. Is there any limestone except what is an outcrop in Kerry?—I cannot speak of that.

43524. It would bring it nearer to those peninsulas if lime were looked for and found deeper down?—That would be impossible. It crops out, and at the point just where the peninsula starts from the mainland. Some delivery might be by boat. There is a little done by boat, but it is rather dangerous work. If a sea gets up it splashes it, and the whole thing is on fire.

43525 Mr. KAVANAGH.—What is your next point?—The point that is most likely to bring in money most easily all over the country. What I allude to is what I have seen for many years in France, Belgium, Switzerland, and Italy, especially in Northern Italy, where I have spent the last two winters, and which directly relates to Killarney and a great part of Ireland which it would not relate to if Killarney and all that Killarney means were not there, because Killarney is the trademark of the tourist system, and it is of the tourist system that I am going to speak now. It goes without saying to gentlemen of your observance and travel, that the prettiest places in a country are generally the poorest, with the soil and surroundings mountainous. There is nothing pretty about a dead flat. There is plenty of that pretty country within a radius of fifty miles of Killarney, all marked blue on your map there as congested. In these places where I was—I always keep my eyes open—I was interested most to see how the people live, and I saw large numbers, not only invalids, but business men from large manufacturing towns, Frankfort, Dusseldorf, and Krupp's iron works, going to get away as I might say, from Manchester or Oldham and all matters relating to business, and freeing their lungs from the chemical vapours in those towns, without which they could not carry on their work there. You know Lancashire and Yorkshire, where there are nine millions of workers. There are places like that on the Continent, and they are accustomed to go down to Switzerland, Italy, and so on, and the majority of the people in these places, in Switzerland and a great deal of France especially, are peasant

proprietors, as I hope all our people will be soon. They saw that these people were coming down, and that there was not enough accommodation for them. and the want of accommodation stopped a number of others who would have come. So a number of them set to work to build very simple, cheap, but clean, small boardinghouses. Some of them call them pensions, some call them hotels, and some call them inns. But they were places where a man and his family after a long day's enjoyment, when he was dead tired, could sit and sleep and get something to eat. They built these on their farms. Imagine that the country round there is Killarney, for the nonce, where you have a mountain pass like the Gap of Dunloe, the Black Valley, Mangerton, and Torc, and people all book there from Killarney. In a short time people who came to the town did not want to stop there, but went on to these boarding places in the country where they were put up by the farmers for say, something like thirty shillings a week. They consumed his eggs, drank his milk, and ate his butter and lamb, and he got a market on his own farm for the goods produced on that farm, at about 400 per cent. higher than what he would get for them in Killarney market.

43526. Mr. SUTHERLAND.—Because he got the middleman's profit?—Yes, and saved carrying the produce to market. If you get a cup of tea and bread and butter and an egg you never pay less than 1*s.* 6*d.* for them. If you set to work to find what the actual cost of these is it works out at about 4*d.*, so that by selling it in this way you get about 400 per cent. more than you get in the market, and you bring the market to the farm, instead of taking the farm to the market, as well as saving excessive labour, where labour has got so scarce that you have got to build labourers' cottages all over the country, and it is very difficult to get labourers for them.

43527. Have you in the neighbourhood of Killarney anything at all like that system of people putting up houses for tourists or visitors?—Yes. There is a gentleman here who has the Home Farm Hotel; then there is Mr. John Gissane, of the Black Valley, who has enlarged his hotel.

43528. But you say that these men on the Continent were men analogous to the peasant proprietors who are being created in Ireland?—Yes. They are almost all peasant proprietors.

43529. Is it your point that the same thing might be done in places in Ireland?—Yes. It might be done from the Blaskets up to the east of Tralee, from Valentia up to Headford, from Dunmanus up to Glengariff, all through those mountains; and the main thing that is wanted is to dispel the notion that exists greatly around here, that Killarney as Killarney is sufficient , and that Killarney can do without its hinterland behind it, which runs away fifty and sixty miles on three different peninsulas. What is known as Killarney at present is the area between the road leading through the Gap of Dunloe and the road leading from Killarney to Kenmare. Here is the present Killarney area, coloured yellow on the map (*produces map*). The portion coloured green is the locked up portion. I want to open that, because you will only get large numbers of tourists from the large centres of population. Outside the green line, what they call the coast line, is prohibitive except to very few; four guineas a week, and that sort of thing.

43530. You mean in the larger hotels?—Yes. The directors who put up these hotels did not want the middle class. They only wanted the cream. I said there is not enough cream to make butter with the churn.

43531. Have you ever suggested that scheme to the neighbours round about?—I am afraid some of them are not quite ripe for that. A friend of mine, Mr. John Gissane, of the Black Valley, has taken tourists for the last few years. It is being done at Glencar, and at Caragh Lake, Mr. David Doran is doing it; there are several at Derrynane, and a whole heap at Waterville. It is beginning very slowly. It is a great pity that the thing is not quicker, because what it means is money brought in against nothing taken away. Any other money brought in is brought in against a bullock, a chicken, or a pound of butter. This is brought in against nothing taken out. To make this effective, you would want to make it easy to drive from Killarney to Waterville by using the present road up to Derrycunnihy, building part of a road to Garrymeen, where they take the boats. We passed that road unanimously here in 1885 at road sessions. It was thrown out by Lord Kenmare's agent on a technical mistake in filling the notices. From 1885 to 1907 is twenty-two years, and all that time this big dietrict has been kept out of being visited by the vast number of tourists who would have come beyond what have come. Because when Cook or Gaze asks a Manchester man, with four or five of a family, to come here, he asks what is he to see in Killarney, and is told, "You can have our two-day or three-day tour." He asks what does that mean, and is told it means nothing to see after three days. He inquires the distance, and finds that it is 400 miles there and 400 miles back, and twenty or thirty miles a day while he is there. Roughly speaking, it means 900 miles for a three days' holiday. Then the man may say:—"Thank you; if I got my ticket for nothing I would not go there. I will go to the English lakes or go to some farmer's house." There are two bits of district there that require some road. One is from Derrycunnihy to Garrymeen, and the other is from the Black Valley to Glencar. Most of that I built out of my own pocket. There is another road from Caragh Lake which is nearly built, but requires to be finished.

43532. Is Caragh Lake not accessible?—The north end is accessible from the railway, but not the other side.

43533. It would be a great advantage to put a road right round the lake?—Yes, but that would be a great expense.

43534. We have heard it talked of as one of the most picturesque spots in Ireland?—I have never seen a place to beat Caragh Lake; at the furthest part from us, is the head of Glencar, where you have seven glens tacked on to it. I only mention this place as illustrating what might be spread all over this county. It would come under the trade mark of Killarney, and for one whom you have coming now you would have fifty, and you would have practical knowledge picked up from the people who come and who make their living in no feather-bed way in English commerce. The fisheries, coast and inland, are matters of the foremost importance. A great many years ago, from 1889 to 1891, as an old naval man, I used to be rather fond of the sea. I went and studied it, to be near the salt water. I went to Australia for a few years, and saw a good deal of the world in various parts; in fact I have been around it. I went around the coast and saw enormous possibilities of catching, saving, and curing fish, and I saw the people robbed right, left, and centre by the middleman; and as for the farming purposes, I went and studied lime burning, so I went to Brixham, Grimsby, and most of the English fishing ports and stopped at each some time and got to know most of the fishermen, and I learned all they had to teach, and I thought it a great pity that our poor fishermen would not get the same chance. I found in Billingsgate that elevenpence out of every shilling got for certain kinds of fish caught around our coast went to the middleman. One day I was at Billingsgate when a good many tons of Irish mackerel were destroyed as unfit for human food. The labour and expense attaching to the fish amounted to £5 5*s.* a ton. It has been reduced since. All the fishermen got for it was to pay the railway expense and get a wetting taking them out of the nets. They were sent down to manure a salesman's farm. A friend of mine was kind enough to give me an introduction to Mr. Burdett Coutts, who had been prominent in fishing circles in the North Sea, where he started a fishing fleet to give a cheap supply of fish to London; he also helped Father Davis around Baltimore to develop Irish fisheries. I asked Mr. Coutts if he would kindly give me his experience. He did. It was very striking. He said, "It is not a very difficult thing to work up the catch of fish, but it is the mischief to market it and sell it; where I broke down after spending some £500,000 or £600,000 was because previously I had not spent some £50,000 on small shops in London that would have distributed my catch. In Billingsgate people made a ring against me and would not let me buy; that broke me up." So I thought about this. I had always thought a great deal about co-operation. In fact it was the beginning of Ireland. It was the tribal life. My forefathers were called chiefs, and the name has come

July 5, 1907.

The MacGillicuddy of the Reeks.

down to me. I am glad to have it. It is my duty to live for the people. Some things lead a man on in spite of himself; naval men are sometimes a bit romantic.

43535. One of the arguments used in regard to co-operation is that it ought to be an easy thing because it was the natural system of the people in Ireland?—It was our beginning. Take your banks or take your English joint concerns. These took their framework and their organisation from the old Irish tribal system, which was abolished on the abolition of the dynasty of the Stuarts in James I., Irish time. In an English joint stock company you might say that the chairman was the chief, the vice-chairman the tanist, the secretary the brehon, the treasurer the bard. In times of strife like this it becomes rather hard to keep on working. Many a decent man at present feels that he can only stand aside until the country comes to its senses. Just now it is in a sort of a fever from the gamble in land. The outcome of my round of the coast was that I determined to apply co-operation. I knew an American gentleman, the European correspondent of the *Boston Herald*. I wrote him and asked him to come over and go with me around the coast. We travelled from Limerick to Cape Clear in the year 1891. We visited every fishing village and opened our minds to the fishermen and the reverend fathers who gave us the heartiest welcome. We decided to start it. The first meeting of the Congested Districts Board came on in October, 1891. Very unfortunately another thing happened at the same time in Ireland—generally known as the "split"—and what one man in Ireland took up another man pulled down. In consequence, my friend and I embodied our views in this little pamphlet (*produces copies of pamphlet*).* The thing is dead. The typewritten proof of that went into Sir Horace Plunkett's hands. But in that you will find the framework of all his work. In that you will find the nest-egg of all that Mr. Trench was saying to-day. This was printed and anyone reading this will know who was the author of the Irish Department of Agriculture and everything connected with it. You will have to come back to co-operation for such things as the farmer's purchasing lime quarries all round; and if the Congested Districts Board want to be the use to the country they ought to be—I don't say that they have not been of very great use—they will not run against the lines of nature and try to make the people work individually too much and not co-operate. They will neither assist co-operation than throw cold water on it, and where men have given earnest or feasible work on the face of God's earth, of what they have done for the country they should be encouraged rather than men who have talked and who cannot show anything. These are all who have become poor like myself, who have had to carry a composition, from spending £20,000 or £30,000 to keep my people alive. I have gone through the Bankruptcy Court myself to keep them out of it. It was one or the other. Men who have done this have some little right to be listened to with respect.

43536. I don't like to inquire into anything of a personal nature; but what is the extent of your estate?—17,000 acres. There are about 1,000 close to Killarney here.

43537. On the other side of the lakes?—Roughly, there are 8,000 acres round the Reeks. It was all confiscated in the time of Charles the First. We fought for the King, and burned our castles rather than let the Cromwellians take them, and we went to Holland with Charles the Second, and we came back with him. meantime our estates were confiscated and passed to the Cromwellians. By nature our land is so poor that it would not pay the Quit and Crown rents. Charles the Second regranted all that was not passed in patent to the Cromwellian settlers. My land on the right-hand side is good, but on the left it is not so good. I own 5,000 or 6,000 acres around Caragh Lake. One thing that has played the very mischief with this country in the past is that whenever a man has been able or successful enough to get a great amount of business everybody went to him—a land agent for instance. Everybody rushed at him and threw more burdens on him, until he became able to do nothing at all. He was overloaded. It is the same with some of our M.P.'s, our county councillors, and other councillors. How would they be able to do all. I believe in a man doing one thing at a time and doing it well. If you try to get everything with the one hand it is like splashing eggs to make an omelette. In over much, 'tis no matter how good the man may be.

* See page 210.

The Commission adjourned.

EIGHTY-SEVENTH PUBLIC SITTING.

MONDAY, JULY 8TH, 1907

AT 11.0 O'CLOCK, A.M.,

In the Courthouse, Cahirciveen.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Very Rev. Canon HUMPHREY O'RIORDAN examined.

July 8, 1907.

Very Rev. Canon Humphrey O'Riordan.

43538. CHAIRMAN.—Canon, you are nominated by various people to appear before us?—Yes, my lord, by the Bishop, the Cahirciveen Rural District Council, and the fish-curers.

43539. Will you tell us what you want to say?—Yes, my lord, if you let me take my own way. I will first call attention to the anomalous position you hold yourselves. If a stranger from Mars came amongst us and saw how you gentlemen were passing through the country, and making inquiries into congestion, he would think that the country was overcrowded with people, but when he would find that the country was not only not over-populated, but had not enough people, then he would say that there must be something strange and anomalous in the body politic in Ireland. Yet, though the country as a whole is not nearly thickly enough populated, we have people going about inquiring into congestion in the western seaboard. Why is this? Because the people were driven from the counties round Dublin and the central counties to the fastnesses of Donegal and Mayo and other places in the west. The obvious remedy is to transplant the people back again into the good lands. The lands here around are essentially bad, and they cannot support the population that they hold at present, and even though you clear off the surplus population now, and leave conditions exactly as they are, in another generation you would have the places as congested as they are now, and you would have another Commission coming about making inquiries into the congestion prevailing in the western seaboard. If you leave one young man and one young woman behind in each holding, in twenty-five or thirty years these would very probably have six or seven children. Our people are virtuous and healthy, and the climate is salubrious, and so in twenty-five or thirty years you would have the place as congested as ever, and we should have a new Commission coming about to inquire about over-population in the western seaboard. The first remedy I would suggest is to transplant the people into the rich counties of the Pale from which their forefathers were driven, and that are not nearly as populous as they ought to be. It is a strange thing that the rich lands of Meath and Kildare are less thickly peopled than the mountains and bogs of Mayo and Kerry.

43540. You say this part of the country is congested and over-populated?—I do, and all over the western seaboard generally from Kerry to Donegal, but there are few places so thickly populated in proportion to valuation as Cahirciveen. I would suggest that at least one-third of the holders be transplanted back into the lands from which their forefathers were driven.

43541. There are two points. In the first place you told us just now if you were to move or transplant these people in twenty-five or thirty years it would be as bad as ever?—If you only leave one young man or one young woman for each holding, virtuous as they are, thank God, you would be as congested as ever in a generation.

43542. How would you get over that?—I would amalgamate the holdings and give them holdings down in Meath and Kildare and other places that are not populated enough at present.

43543. Then this reproduction of population that you have in your mind would appear, if you left anyone in the present holding?—No, but if I left a young man and a young woman on each holding without amalgamating the holdings.

43544. Congestion would recur unless the holdings were amalgamated?—Exactly, you must weed out every second or third occupier, and put him somewhere else if you want to get a radical cure of the evil.

43545. Do you think these people would go?—I think they would not, except in groups. How much better it would be if the young men and young women that are going every morning to New York would go instead to Kildare and Meath, where there is room for them. They would not go alone, but they would go if you sent them in groups to the same neighbourhood.

43546. Actual groups of holders or the sons of holders?—The old people would not go until the young people had gone up first.

43547. But the people who go to America are not the people who possess holdings?—They are the sons and daughters of the present occupiers here.

43548. But if you send the sons and daughters of people who hold land here to Meath and Kildare, how do you cure congestion here?—I would amalgamate the holdings here.

43549. But you cannot amalgamate holdings except you remove holders?—Some of them would go to Meath and Kildare, and be very glad to.

43550. It is obvious before you can amalgamate holdings you must get rid of a certain number of people who have holdings?—Yes; the Government of England have caused the depopulation of the country, and you should now undo the evil you have done.

43551. Do you think these people who hold land would go to Meath or Kildare?—I am quite sure they would go. They are going to the slums of New York and other places.

43552. Most Rev. Dr. O'DONNELL.—Let us see what your project would be. From the same neighbourhood you would send a considerable number of people to live in farms in close neighbourhood, in Kildare and Meath?—Quite so.

43553. At the start these would be young people?—Yes.

43554. Do you think the old people would be willing to follow them?—Some of the old folk would go if they heard the young people were comfortable in Kildare and other places.

43555. Do you appreciate Lord Dudley's point, that unless the old people went that the holdings here could not be used for the enlargement of neighbouring holdings?—I know that. There is no spare land in Kerry. You may take that as the fundamental principle.

43556. And, in some way, it would be necessary to make sure that the old people would go after the young people and leave their holdings to be added to other holdings in Kerry?—Yes, and make them from,

July 8, 1907.

Very Rev. Canon Humphrey O'Riordan.

say, £10 to £15 in valuation. I would have no family living in a holding of less than £10 valuation.

43557. Suppose you took a young man who is going to succeed to his father, and that he was moved up to Kildare or Meath on condition of his getting a good holding there, do you think you could get the young man and the old man to sign an agreement to give up the holding here?—Yes, they would sell out the holding here. The old man would go up to mind the cows for the young man.

43553. Could you get the young man and the old man to sign an agreement to part with their holding here?—If they got a better one in Kildare. We are not fools in Kerry I can tell you. Surely they would be better off than going to New York or Chicago to dig drains and sewers for the Americans. One farmer in this and four in the next parish have lately sold out their holdings, and gone to Canada and got farms there.

43559. You seem to assume, Canon, that unless by the amalgamation of holdings it would not be possible to provide a permanent cure here?—No, I had it in my mind that it would be said that this scheme is visionary and not at all practical. Then, if it is not practical, I will suggest remedies, not to ameliorate or remove congestion, but to improve the holdings and conditions of the people here.

43560. Before you pass to that let us make sure about your proposition. You see, to us it seems a very big proposition?—Yes, it is a bold one, and no man is more conscious of it than I am, but if you want to effect a radical cure, if you want to go to the root of the evil, you must transplant every second or third of these holders here and amalgamate the holdings. Fancy a family of five or six or seven people living on a holding with a valuation of £5 or £6.

43561. Sir Francis Mowatt.—I don't quite understand the suggestion you are making, transplant every second or third holder down to the rich lands of Ireland?—Yes, that is what ought to be done.

43562. You say every second or third holder?—Yes. In this union there are 1,023 holdings of £5 valuation and under, and 1,220 under £10.

43563. The young people of Kerry, or a large proportion of them, you suggest must be removed to holdings elsewhere. Who are these young people—holders or the sons of holders?—The sons of holders. We have hardly any labourers here. They are all small farmers.

43564. Then the sons and daughters of holders being given holdings elsewhere increases the number of people who as a whole will have holdings?—Oh, I would amalgamate some holdings here—by consent.

43565. Let us take out of the holders six or eight and migrate them; then the result would be that eight additional holdings would be created in Ireland?—No. The number of holdings in Ireland would remain the same as before.

43566. Then five or six additional holdings would be created in Ireland?—Yes, but five or six would be amalgamated here, and wiped out.

43567. Then the result of that would be not to reduce but increase the congestion?—No, I would tack that holding on to the next holding and let these people go down and get a good farm elsewhere.

43568. And the people who go down increases the number of holdings?—Yes, but not here. The number of holdings in the good lands would be increased, but the number in the bad lands would be diminished to the same extent.

43569. Most Rev. Dr. O'Donnell.—Following up your answer to Sir Francis Mowatt, perhaps you would explain how the small holding here is to be vacated. We can see how, as you say, the young people will move up to Kildare, and it would be a good thing for Kildare to find these young people there. Now, how will you get the old man to move and surrender his holding for the enlargement of the neighbouring holding?—He will follow his son if he finds him prospering there. He will go up and mind the cows for the young man in Kildare, and be useful to him in many ways.

43570. We quite appreciate that there are two points in this programme. The first is to provide holdings for the young men in Kildare, and that in itself would be a good programme. Now, as to the question of relieving congestion, at least of getting the old people to surrender their holdings for the enlargement of neighbouring holdings, we make it a condition when the young man is going up to Kildare that the old man will execute a deed of surrender?—If he gets sufficient inducement in Kildare he would leave these hills and bogs here. It would be a case of penal servitude if you sent one of your folk over here to settle down even rent free on one of these little farms of £5 or £6 valuation to eke out a living from the barren soil.

43571. If the eldest son of a tenant was sent to Kildare would the father go when you make absolute the condition?—He would. You cannot understand how miserable they are. If you gave them a fit holding in Kildare he would be only too glad to go.

43572. Supposing you find a holding occupied by an oldish couple who had a son who did the work if you were going to give that family a holding in Kildare, you would make it a condition that these old people should go with the son?—Certainly; you must vacate one-half or one-third if you are to effect a cure.

43573. Mr. Kavanagh.—You understand, Canon, I suppose, that if it was not so, if you are only merely providing a new holding for the young men of Kerry, there is a further point which you have not thought of, besides the fact that you would not relieve congestion if you provide holdings in Kildare for the young men of Kerry, and that is that you have got to deal with the young men of Kildare?—I don't want to disturb one of them. I want to disturb the grazier who lives in Dublin and who has hundreds of acres under grass. In the fields are the bullocks owned by the rich butcher in Dublin, who may or may not be there a few weeks in the year. At the end of the farm there is a shealing for the herd who minds the oxen. You should have men instead of oxen there, but we have the men here where we have nothing to support them. It is not that there are too many people in Ireland, but the people are in the wrong place. It is like a sugar loaf turned the wrong end upwards. You, who are Englishmen, and who have caused all this ruin, undo it now and pay the cost of it.

43574. Most Rev. Dr. O'Donnell.—To bring it further, Lord Dudley's subsequent question to you is that young and old alike should migrate. Is that your prooosal?—That is my proposal.

43575. Then the young men of Kildare could not say exactly that they had the same claim as the young men who came up from Kerry, for this reason, that the men who came from Kerry would bring their old people with them?—Yes, and we cannot remove congestion permanently without that. I don't want to disturb any young men, only graziers who have hundreds of acres of land and do not live on them. I would not disturb the young men of Kildare at all.

43576. Mr. Kavanagh.—You see, your proposal was to bring the young men from Kerry to Kildare. Well, the young men of Kildare are emigrating too?—Some of them.

43577. A good many of them, and they quite possibly think that they have first claim. I should put their claim aside altogether if you bring the old people and the young men?—We want it more, where we are so congested that we are eating one another.

43578. Chairman.—Well, go on with the next point?—If you think that is not practical; if you, Englishmen, are not prepared to pay the cost, then the whole scheme will fall to the ground. England has done all this mischief, and should undo it.

43579. Mr. Sutherland.—Had you not a Parliament of your own in Ireland?—We had.

43580. And were things better then?—It was a Parliament of English settlers, and not an Irish Parliament at all. Now, if you think my scheme of transplantation or migration impracticable, I will pass on, and submit a few suggestions that may improve the lot of our people to some extent. Now, first and foremost, I would have the Congested Districts Board negotiate between two or three large landlords we have here, and buy the land from these landlords, using compulsion if necessary. I would prefer this should be done by free sale, but by compulsion if necessary, and then that you be the landlord for about ten years, and develop it somewhat, and show the people how to develop it, and then pass it to the tenants. We have the estates here of Trinity College and Lord Lansdowne—two great whales of landlords. The poor people cannot negotiate directly with them at all. We are too weak and poor, and too much afraid of

the landlords—they are too big for us, too strong and powerful, and we cannot do it; and, therefore, we must get some friendly person to intervene, and I think the friendly person or mediator would be the Congested Districts Board; and I think they are real fathers to the people where they intervene. There was only one estate bought by them here—the Burns-Hartopp estate, with the happiest results. Trinity College ought to be bought out *nolens volens*, and Lord Lansdowne should be made to sell. The good of the country requires that they should be made to disgorge. They are rich and powerful, and won't negotiate with the people.

43581. Most Rev. Dr. O'DONNELL.—Is Trinity College head landlord here?—Yes.

43582. There is no middleman now, is there?—No.

43583. The tenants deal immediately with Trinity College?—I do not want to blame Trinity College at all. It is not a bad landlord, but you want to give the land to the people on fair terms. The Congested Districts Board should ask the landlords to sell, and if they won't, compel them to sell on fair terms, and keep the estates on your hands for some time—I would say not less than ten years. You should do something by way of arterial drainage. We are swamped with water here in this and the neighbouring parishes. We have thousands of acres of bog. I would have the Congested Districts Board expend money in making canals and arterial drains into these canals. The farmer with £5, £8, or £10 valuation cannot make drainage, which ought to be made by the public authority. First let the Congested Districts Board become owners and make these great arterial drains through our big bogs, and you will find the small holder draining into these.

43584. Has Trinity College done any drainage on this estate?—They are doing nothing now since the Land Act came out but take the rent, and if the tenants are in arrears they cannot stand up and face Trinity College or Lord Lansdowne. Well, then, there are a number of smaller landlords, minnows who are following the whales, and holding out because these two landlords are holding out. I know that if the tenants were in the place of the landlords they would be as exacting. Human nature is very much the same in landlord and tenant. These two landlords are able to hold out against a country side, and a number of smaller landlords are following their example.

43585. The first thing you consider that should be done if the estates were purchased by the Congested Districts Board is to see to arterial drainage?—Yes, we are saturated with water. It is a nice place to live in in the summer, but in the winter it is dreary in the extreme.

43586. For that reason you do not think the holdings should be sold to the tenants until an improving body like the Congested Districts Board has improved the estate?—Yes. If you decided to open these drains they should be four or five feet below and ten feet above, and then they ought to be kept in the same repair as the dykes of Holland are kept in repair by the Dutch people. These arterial drains ought to be kept in repair by the Government of the country.

43587. If the arterial drainage were done by the public authority you think the occupiers would do the drainage of their lands?—I am sure they would. On the lands as they are now they are only living from hand to mouth. They would improve the inside of their homes where the landlords do not see, but on the outside they do nothing for fear the landlord should think they are prosperous. You may see around the door and windows a little fringe of whitewash, and the reason is they say if the landlord saw the outside whitewashed he would say they were prosperous and raise or exact the rent. Now if you went in you would find the houses rather more comfortable, but outside they do nothing, lest they should be thought prosperous. In the past it was thought dangerous to be or seem to be prosperous.

43588. Lime is also pretty scarce?—Now, there is no use going into lime if you don't drain the land; hence I put drainage first. We should get facilities for obtaining lime. It is not so far away—Killorglin or Kenmare. Then, let me tell you the price of lime. I am very much in the building line, and for lime for any purpose you must pay 2*s*. 6*d*. a barrel in Cahirciveen. I know what it costs, as I have bought hundreds of barrels of it. Now that should be landed there at the station for at the very most a shilling a barrel, and you should have a siding at Kells, so that wagons can be put there for the use of tenants. Now they have to come down to Cahirciveen and draw it up nine or ten miles. You should have a siding at Kells, Mountain Stage, and Glenbeigh, so as to enable wagons to be there, and the lime from Kenmare should come by boat.

43589. Is it the Great Southern line?—Yes, my lord.

43590. CHAIRMAN.—Is it part of their main system?—It is. There is a guarantee for a small bit from Farranfore to Killorglin. It was built some time ago—in Mr. Balfour's time. They might do a great deal more for us in that way.

43591. Most Rev. Dr. O'DONNELL.—Any body that would provide better facilities for the supply of lime would confer great advantage on this part of the country?—Yes, and that would provide for the drainage. We should make arterial drains, and let the small holders drain into these canals.

43592. It would not be economic to buy lime at 2*s*. 6*d*. a barrel?—Not at all. When I came here first it was 3*s*. a barrel.

43593. What do you think the people would pay if there was a sufficient supply of lime?—Well, I think, my lord, they would pay up to a shilling a barrel.

43594. Would that be a large barrel?—It should be a large barrel, but it is not. It is an ordinary bag of lime. I know it to my cost.

43595. May I ask you where the lime came from for the church?—Kenmare, that is the best lime for building purposes. Killorglin lime is sufficiently good for agricultural purposes.

43596. CHAIRMAN.—What is your reason for thinking lime should be a shilling a barrel?—That is the value of a barrel of lime. The thing is intrinsically worth no more.

43597. Is a shilling a barrel the price at the kiln?—No, but if they got large quantities they would have it at a reduced price. I believe they are selling it at 1*s*. 3*d*. or 1*s*. 4*d*. a barrel at the kiln.

43598. If they are selling it at 1*s*. 3*d*. at the kiln, how can you expect to have it here at a shilling?—I would wish your Board to help us a little bit and pay, say, one-fourth of the price. Could not your Board help us to that extent—to pay the 4*d*. and give it to us at a shilling. Let the Board subsidise it to the extent of paying the additional 4*d*.

43599. You say you think the Board should give a kind of rebate to the users of lime, they ought to make a present of so much?—It should be paid directly to the kiln-owner. Give it to us at a shilling. It would pay the farmers very well if they got it at a shilling.

43600. Supposing, for the sake of argument, that the Board were to do that, and that it cost you a shilling at the kiln, would there not still be the cost of carriage?—Well, it is unappreciable. It is very small, indeed. It costs £6 or £7 to bring a wagon of lime from Killorglin, which would be at a rate of only a penny a barrel.

43601. At present lime is selling here at 1*s*. 3*d*. a barrel at the kiln. How is it that it costs 2*s*. 6*d*. here if the rate is only a penny a mile?—But the man who sells it must have his profit.

43602. Then why don't you import it yourselves? It is selling at the kiln for 1*s*. 3*d*. Can't anyone buy it at that?—But the middleman must have his profit. I bought it myself from Kenmare in wagons and got it almost at cost price. We were building on a large scale.

43603. How much did it cost you?—About £6 10*s*. a wagon.

43604. How much a ton did it cost you?—A wagon contains six or seven tons, and I got it for £6 10*s*. or £6 15*s*.

43605. How does that work out for the barrel?—It would be very much less than 2*s*. 6*d*. a barrel. I would say about 2*s*. a barrel, but that is from Kenmare, and the best building lime.

43606. Is that cheaper?—It is cheaper.

43607. What I do not understand is if agricultural lime is being sold at 1*s*. 3*d*. at the kiln at Killorglin, why farmers should not associate among themselves and get a large quantity over here by train?—It is a capital idea, but we are not so educated nor so advanced as that at all. That is where education would come in.

July 8, 1907.

Very Rev. Canon Humphrey O'Riordan.

43608. Most Rev. Dr. O'DONNELL.—Let us see how the association would work. If the lime-owners, the owners of the kiln, were sure of a certain demand, do you think they would pull down the price?—They could afford to do it, and I think they would. The owner would sell according to quantity, the bigger the quantity the better the terms.

43609. You said to me that the farmers could take it for their land at a shilling a barrel?—They could, and that would pay them, and pay them well.

43610. I suppose no matter how much the demand would be, that the people who own the kilns would scarcely supply lime at that price?—They would not, but your Board should subsidise us and bring us together.

43611. Supposing there was 3*d.* or 4*d.* a barrel lost for a time on this transaction by a public body, would you in two or three years have such co-operation as Lord Dudley has suggested among the farmers which would result in their procuring this lime without a subsidy from that time?—Yes; especially if the Congested Districts Board were their landlord.

43612. You would not look to the subsidy going on for ever?—No; only for a time. I know something about political economy. I know, too, that you must cast that dismal science to the winds if you would solve this problem of congestion.

43613. So your proposal would be that for a few years there would be some loss met by a public body, and that at the end of that time the people would be so organised and so impressed with the advantage of using lime that the system would continue without a subsidy?—Yes, they would see the benefit of it, and they should be told how to use lime, and that they should not be putting it on the dung. They know nothing about the use of lime here for farming purposes. They never have had lime—they have only a little sand. You can help them to improve their holdings. You are sending a miserable dole down here to our parish committee. You could send at least a couple of hundred pounds to this large parish and to the other parishes if we are to do anything. We got £40 this year. You ought to give us at least £200, and not bind us up in red tape.

43614. I think the grant was £80?—Yes, but we were not able to avail of it on account of all your red tape; but if you give us £200 we would be inclined to work, and that is most necessary. There are many little homes that are most uncomfortable at present, and hardly fit to live in.

43615. What is being done by the Parish Committee at present?—Well, I am insisting on the dung being taken away from the houses. This is essential. Then they are improving their houses—putting up rooms, dairies and cowhouses, and making dung pits at some distance from their doors.

43616. CHAIRMAN.—We have heard a good deal about parish committees in some places?—I would say something now on the fisheries if you will kindly allow me. You should help us more than you have done. The Congested Districts Board has been very good to Donegal, Mayo, and Galway, and perhaps they needed it more; but I say this, that if we were more clamorous and made greater noise, I daresay we should have got more from the Congested Districts Board than we have got. But we are mild here, and have not made much noise. Since the year 1892 you have given to Kerry £25,000, and our share should be £200,000. Now, up to that time you spent a million and a quarter, and out of that Kerry got only £25,000. You ought in fact to devote special attention to Kerry for some time, to recoup us for past neglect.

43617. Most Rev. Dr. O'DONNELL.—You are aware that million and a quarter was largely for the purchase of estates?—Yes, I am aware of that. You bought one estate here in Caherdaniel.

43618. Is Coonana in the parish?—Yes.

43619. How is that doing?—Very well.

43620. It cost £5,000?—£4,400 in all. They went at it several times. It was built on a sandy foundation, with the result you would expect, Coscroum is sadly neglected. They have a colony of hardy fishermen at Coscroum. There are about 100 of them—sober, industrious men—and they ought to be encouraged. You would encourage them a great deal by building a small pier, or, better still, a small pier with a slip at the end of it. Mr. Bryce, the late Chief Secretary, was down here this time twelve months, and he promised to help us; but he was removed. Now, at Begnis, where the pilots are, they would want a slip there for their boats. They are hardy men, and they have to be up night and day when a ship is coming in, and they have no facilities. You should give us a slip at Begnis Island. Well, at Leenard you sent down an officer about a month ago. He took plenty of fresh air, saw and admired the beautiful scenery, took bearings, said something about gravel, then disappeared, and we have heard nothing from him since.

43621. Do you know whose officer he was?—I think from the Congested Districts Board. You were giving us under the Marines Act £2,500. We thought the work would be in full swing now, but nothing has been done.

43622. Perhaps you do not know that the works carried out under that Act are not carried out by the Congested Districts Board?—Well, you have so many departments, it is hard to know one from the other.

43623. The Congested Districts Board has given the subsidy, but the Department is not carrying out the work?—Well, it ought to be carried out. There is a great fishing industry down there, and they are crowded there. It should be three times as large. When Mr. Bryce came we presented him with a petition, and he gave a lot of honeyed words, but nothing has been done since. Now the Coscroum men are losing patience. They asked and have been asking for this little pier or slip for many years past, and nothing has been done, and they are the most deserving men on the seaboard.

43624. What would it cost?—I would say £1,500. They have a rocky foundation, so it would not be nearly so expensive as at Coonana where the pier was built on a sandy bottom. Well, then, my lords and gentlemen, would you allow me to suggest that you send down an instructor in herring curing to Reenard. We know how to cure mackerel, but not how to cure herrings. We would like to introduce that industry. There are herrings off the coast, and the fishermen tell me they would catch the herrings if they knew how to dispose of them. You ought to send down an instructor to show them how to cure herrings. They know very well how to cure mackerel.

43625. Where does Coscroum lie with reference to Reenard?—Due north, my lord. There is a pretty little cove there. The population is hardy, moral, enterprising, and brave, and they are men that ought to be encouraged. Would you kindly send us an instructor and show us how to cure herrings?

43626. Sir FRANCIS MOWATT.—How do you know that herrings come down to this part of the country?—I have inquired. The fishermen would spread their nets for the herrings if they were encouraged in the way of disposing of them. Then you might give us a steriliser. That would be the greatest boon, as it would enable the people dealing in fish to preserve the fish sound for a few days until they could cure it. The steriliser should be free of charge, and you should send it down. A steriliser for Reenard would be a great boon to them there, as well as an instructor in herring curing.

43627. CHAIRMAN.—Have you heard of a steriliser used for fish?—It is coming into use, my lord. It is used at Birkenhead.

43628. Mr. SUTHERLAND.—You are aware that in places where there is a great glut of fish they work at the curing of it continuously night and day, for the longer fish is left uncured with the blood in it the worse it gets?—Well, then, the steriliser keeps it sweet. I cannot speak from my own personal knowledge. I have been instructed to ask you for a steriliser for Reenard. It would keep the fish sound for a few days.

43629. Yes, but not cure it?—Not as a substitute for curing it. It is merely a makeshift until you can cure it. Then as to boats and nets and slips. There was a sad accident in Valentia Harbour some time ago in which lives were lost. They had a great take of fish and were rushing through in order to get home with their treasures; they had many pounds worth; but there were only two or three inches of freeboard; they were swamped, and down they went, the poor fellows. If they had accommodation at the place they might have been alive to-day.

43630. Mr. SUTHERLAND.—At what place?—At the mouth of Valentia Harbour, outside the lighthouse, where the accident happened. They should have a slip there, but instead you put slips in the wrong places. When your officers come down about a slip

they should consult the local people, as these know best where it ought to be placed.

43631. CHAIRMAN.—This accident happened in the North Channel. That channel would have to be negotiated always, would it not?—If that slip were there outside the lighthouse the night that accident happened they would have turned in there instead of running the gauntlet of that channel. Well, then, as to boats, they should have better boats—covered boats.

43632. What kind of boats have they?—Long, open boats.

43633. Do they use sails?—They use sails sometimes.

43634. How far do they go out?—They go various distances—eight or ten miles.

43635. Where do they say the herrings are to be got?—Outside that, but we would want an instructor to show us how to cure them. If you would give us larger boats and a better class of nets and send us down an instructor in herring curing we would be happy so far. But there is nothing more urgently needed than a slip at Coscroum. If you refuse everything else give us that. At present the fishermen have to go round Bigness Island and its treacherous channel. These fishermen are an honest, deserving lot of men, and especially hardy, brave, and strong, and I would like to help them. Before we leave the slips and piers, I beg, respectfully to impress on you that when your officers come down to do anything of that sort they ought to consult the local people, and not make the mistakes they have made before. Then further, we ought to get leases for our houses in the town. There are so many restrictions that there is very little inducement to build. There is one enterprising man who has laid out £1,000 on his house, and though he has spent that £1,000 he has not got a lease. They ought to give him a lease of the house. Trinity College should give him the lease of the house, and give us better facilities for building houses and give us the leases of building plots.

43636. Is he a yearly tenant now?—He is a tenant-at-will, and they could turn him out at any time. They ought to give him fixity of tenure afer building a fine house to improve the town.

43637. Mr. SUTHERLAND.—But how did he build it without a lease?—Well, very foolishly.

43638. And don't they encourage the development of their estate by giving leases?—Well, they ought to do so. We are very much dependent on the landlords here.

43639. Do I understand that Trinity College is owner of the town?—Oh, yes, and all about it.

43640. And don't they encourage building on their own property?—They don't encourage it properly, and neither do they discourage it. John O'Sullivan built a house at £1,000. He was burned down some time ago, and the place was an eye-sore. On my advice he built it. He was going to build a modest place, and I said to put another story on it. It cost £1,000, and he has not a lease. We want a 99 years' lease, but they would date it back to 1877.

43641. Mr. KAVANAGH.—Had he no special conditions before he began to build?—I don't think so.

43642. But, Canon, didn't you say it was on your advice he built?—I advised him to build a decent house, as he was going to build at all, but I did not know until recently that he had not a lease. I was accountable for the shape and size of the house, but not for its tenure.

43643. Most Rev. Dr. O'DONNELL.—Is he quite sure that he is not protected under the Town Tenants Act of last year?—He built it before that, but we want a lease and he ought to get a lease.

43644. CHAIRMAN.—What is the next point?—The breed of cattle. You ought not to import foreign breeds here. I differ from Mr. Trench entirely. The foreign breeds have no business here. The native Kerry cow is the best cow in this place, and the only cow that will live and thrive here. I myself have a few cows, and I wanted to get a decent one. I bought her and she died.

43645. Mr. KAVANAGH.—Yes, but you could introduce better milkers than the Kerry cows?—The Kerry cows are very good milkers. They should not be bringing in new-fangled things the same, as with the horses, sending us half racers. They ought to send us native Irish horses. They have got them over in the County Cork. They have an excellent breed of horses in the County Cork.

43646. Most Rev. Dr. O'DONNELL.—Perhaps you are not aware that that class of work has not been under the Congested Districts Board for some years?—It is under the Department, I know. Then you ought to encourage us to introduce industries and also foster industries. The making of woollen stuffs ought to be encouraged. There is a trader in this town in a small way named O'Shea, who gets women, farmer's wives in the country, to spin wool and make thread. They weave it in old looms. It is a capital thing. We have lots of wool and plenty of sheep here in the mountains. You ought to encourage us, subsidise us to some extent, to put the woollen industry on its feet. We have the only factory in the district in the Convent, but you have not encouraged us much. I believe it is not you, but the Department, who are responsible for that. The nuns and myself got a house worth £300, and we have equipped it at a cost of close on £100, and we thought the Department might very fairly pay to equip it. We paid for the machines, and sent them the invoice, but they sternly refused to do anything. I went to the County Council at Tralee, and they received me graciously enough. I made the best case I could, and when I thought I was doing well up started a starchy, paste board little man from the Department who put his foot down, and from that day to this I have not got the money for the machines. Now, that is my experience of encouraging industry.

43647. CHAIRMAN.—Had he anything to do with the Congested Districts Board?—No, the Department, whatever that means.

43648. Sir FRANCIS MOWATT.—But I thought you were making your case to the County Council?—Yes, but they work with the Department, or are supposed to. They were quite willing to help us, but the starch and pasteboard man said it could not be done.

43649. Most Rev. Dr. O'DONNELL.—Is the industry going on?—It is.

43650. What are you doing?—We are making hosiery and lace of good quality, and we have fifty-eight girls working in the factory, and there are twenty working in their homes. That industry is the only one of its kind in the district, and should be encouraged. And O'Shea has home-spuns and he ought to be encouraged, too.

43651. Mr. SUTHERLAND.—Where is O'Shea's place?—Down the town. Now is the time to encourage him. He has seven or eight women working in the country. If that was encouraged it would develop into a very thriving industry here.

43652. CHAIRMAN.—How should it be encouraged? How do you suggest it should be encouraged?—Oh, I think it ought to be encouraged. It is for your experts to point out how this is to be done. We have only the old primitive spinning wheels and the old primitive looms to work with.

43653. How?—In the first place, give us a trade mark. The butter market here is ruined for want of that trade mark, and for the want of any system of grading.

43654. You want a trade mark?—Yes.

43655. Is that all you want?—I want grading for butter. You should subsidise O'Shea a little bit. You have not subsidised the factory at the Convent.

43656. What do you mean by subsidise him?—Help him, give him some capital.

43657. What use would he make of it?—He will pay the women and be enabled to sell the woollens a little cheaper, and get the industry on its feet. Subsidise it as the lime is—just give a modicum for nothing. We are beginners here in many respects.

43658. Most Rev. Dr. O'DONNELL.—Are the looms working, improved looms, or are they old looms?—Old primitive looms.

43659. Would not it be an advantage if the people had improved looms and an instructor sent down?—That would be feasible.

43660. And show them how to use these looms?—Yes, and get us a market, put us into connection with the markets in Dublin and London.

43661. If there were some inspector to classify your webs and mark them accordingly, you think that would help the industry?—Yes, where there is a will there is a way. You can help us if you want to.

43662. What about the wages?—Oh, these old women work for very little, but they ought to be paid,

July 8, 1907.

Very Rev. Canon Humphrey O'Riordan.

and the weaver ought to be paid. Now, the butter industry is more important still.

43663. Before we pass on, had you any conversation with Mr. Walker, of the Congested Districts Board about these industries?—I met the gentleman once, but officers of the Department are no favourites of mine.

43664. He is not an officer of the Department, but of the Congested Districts Board?—Well, he has done some good. I think he is going to get one of our workers a position under your Board—a Miss Kennedy. Now, you ought to help us to set up a proper butter market here. The quality of the butter is deteriorating for this reason, that the farmers' wives will get no better price for the butter if it is good than if it is bad There should be three qualities—first, second, and third, but now supposing a farmer's wife sends in butter and gets 8*d.* a lb. for it, she will get the same price for it whether it is good butter, bad butter, or medium butter.

43665. Most Rev. Dr. O'Donnell.—What about the creameries?—There are no creameries. We are too small, and we have only a few gallons of milk in each house. We should have an inspector to visit this market and other districts, and put the markets on a proper footing, and grade it so that the woman who makes good butter will get a better price than the woman who makes bad butter. Then they buy the butter on the side of the roads, so that they hardly come into the markets at all. We should have a weighbridge, an inspector, and a market to set that industry up. It is a very bad state of things that the slovenly, slatternly woman who turns out inferior butter should get the same price as the woman who makes good butter. The bad, the medium, and the good butter are mixed, and sent to the London market, and this gets a bad name for Irish butter.

43666. Sir Francis Mowatt.—Who buys the butter?—We have several local gentlemen buying it.

43667. Why don't they buy only the best?—They buy all the butter.

43668. If they buy the good butter and send it on they will get a high price for it. If they buy bad butter they cannot get a good price for it?—As things are there will soon be no good butter—if the good woman is not encouraged by getting a good price.

43669. If the buyers in your market bought good butter, and did not buy bad butter that would not be the case?—Well, all the butter is bought, and then they mix it together, so that the butter is getting a bad name.

43670. Do you think the inspector could persuade them not to do that?—We should not only persuade, but insist on their not doing so. We should grade the butter, and say—"This is first class, give this woman 10*d.* a pound."

43671. Supposing the purchaser said he would not give 10*d.*, what then?—Oh, he would give the highest price he could; it is to his advantage and interest to do so.

43672. I am afraid the inspector cannot insist on his giving any price. If he does not value good butter more than bad, and the inspector says, "you give this woman 10*d.*", he would not do so?—I was wrong in saying 10*d.* or any fixed price. Let him say, "That is the best butter," and the buyer decide on the price himself.

43673. Cannot the buyer do that now?—No, there is no standard or distinction as to classes of butter. I would have an inspector officially appointed, and let him brand the butter first, second, and third, and let the buyer give his price. I want an inspector appointed who will brand the butter this way in Cahirciveen, Dingle, and Kenmare, and not let it be done in a haphazard way. Let the inspector come there and say—"This is first class butter, this is second, and this is third," and then let the buyer give his price. Seeing that butter is one of our stable products, this is an important subject. The inspector appointed could visit five or six towns in the week and grade the butter, and let the local buyers price it then. Their business is price and not quality. The pier accommodation here is very defective, and should be enlarged. We should have a steamer traffic as competitor with the railway. That would bring the railway to its senses. The railway has a monopoly at present. Up to a few years ago we had a steamer plying around the coast.

Mr. Alexander O'Driscoll examined.

Mr. Alexander O'Driscoll.

43674. Chairman.—Kindly state what you wish to bring before the Commission?—I got intimation from the County Council Secretary that I had been nominated to give evidence before this Commission here to-day. I have read the terms of reference, and I propose to deal with the working of the Congested Districts Board as far as it is known to me. First, as to its land purchase operations. I think it of the utmost importance that the tenants should be assisted in the purchase of their holdings.

43675. Where do you live?—At Valentia Island.

43676. And you own land there?—I own some land, and I farm some land. I am engaged in the fishing industry, also, my lord, and I am a business man.

43677. What sort of business?—Well, I import timber and do general business, and I have a steam saw mills.

43678. Mr. Kavanagh.—Were not you on the Agricultural Council?—I was for six years. The tenants should be assisted to purchase their holdings, but I don't think so desirable an end can be brought about if the Congested Districts Board is allowed to purchase one estate in each congested district and to spend money in improving and enlarging holdings on that estate while the adjoining estate is left to work out its own salvation, either by direct purchase from the landlord or from the Estates Commissioners, with the prospect in either of the latter instances of no benefit to follow, such as enlargement of holdings or erection of new houses. The purchase of the Dillon Estate in Mayo created immense difficulty up there, and the purchase of the Hartopp and Butler Estates in this district put a stop to negotiations which were proceeding between landlord and tenant direct in this district, and has led to tenants asking their landlords to sell to the Congested Districts Board instead. I think the Board should either buy all the estates offered to them in any rural district or none at all, and that all should be dealt with alike.

43679. Chairman.—But isn't it really on condition whether the estates want improving or not?—All the estates in this congested district want improving, but I would advocate leaving the decision as to the extent of the improvements necessary in the hands of the Congested Districts Board, my lord.

43680. Most Rev. Dr. O'Donnell.—Lord Dudley's point is that if an estate does not require improving your recommendation should not apply to it?—All the estates in the congested districts require improving.

43680A. Then in your opinion all the estates in the congested districts requiring improvement, as they do, should be sold to the Congested Districts Board?—That is my opinion.

43681. In other words, that no estate in the congested districts should be allowed to pass from landlord to tenant?—That is my opinion, my lord.

43682. Chairman.—You don't suggest that the Congested Districts Board should simultaneously buy every estate?—I do suggest it, my lord.

43683. Simultaneously buy every estate?—Yes, certainly. If they go into an area at all they should do all the work there, and finish there before going to another rural district.

43684. Do you seriously suggest that?—Seriously.

43685. Most Rev. Dr. O'Donnell.—You would require some plan for providing that the Board bought lands at a reasonable price?—Well, I would give them compulsory power if necessary.

43686. Chairman.—How many inspectors do you think that would require?—I have not thought of that. Six inspectors for one year should not cost more than one inspector for six years.

43687. Nor what capital it would require?—I have not thought of it. The poor law valuation of all the agricultural land in this Cahirciveen Rural District would not exceed £14,000, and at twenty years' purchase it would be a smaller financial operation to purchase it than was involved in the purchase of

the Dillon Estate alone in County Mayo. In my opinion it is expedient that the land should pass into the hands of the occupiers, and that the Government that has admitted the principle of land purchase should give every facility towards that end. When all are not treated alike it helps to strengthen the impression that the Congested Districts Board is a sort of institution for the dispensation of patronage, straining after popularity, with a policy the key-note of which is to take the maximum of credit to itself on all occasions, even when actual harm has been done to the community as a whole by retarding the operation of the wider policy of the Imperial Parliament. In Valentia the Congested Districts Board bought a farm from a gentleman who wanted to sell it, and had influence enough with the Board to induce them to buy it. It was said that they intended it as a site for houses and allotments for fishermen; but though it is now four or five years since the purchase was effected, nothing has been done with it beyond putting a caretaker in charge. I remember a memorial which was sent to the Congested Districts Board praying for the erection of a perch at the end of the Cahirciveen bar to mark the channel for fishing and other vessels going up there.

43688. Most Rev. Dr. O'DONNELL.—Passing from that, would it be in accordance with your policy that they should not operate on that farm until they had got more land in the neighbourhood?—That farm is sufficiently large to give allotments.

43689. Isn't it an expensive thing to bring down a staff to conduct operations over a comparatively small area?—Yes, but the Congested Districts Board must have considered that before they bought the farm. Now, with reference to the channel proposal, the Congested Districts Board referred the memorialists to the Irish Lights Commissioners, the Irish Lights Commissioners referred them to the Board of Trade, and the Board of Trade informed them that it was the duty of the local authority, probably imagining that there was a Harbour Board in Cahirciveen. At last the master of a steamer frequenting the river, tired of waiting, erected a barrel on a strong staff embedded in concrete, at the end of the bar. The amusing part of it was that the next time a high official of the Congested Districts Board was in Cahirciveen, he met one of the memorialists and said, "Well, we put up that mark on the bar for you."

43690. Why should there not be a Harbour Board?—Because the tolls would not justify it, my lord. The object of my evidence is to show you how difficult it is for us to get at the proper authority, to know who it is is spending the money, and who ought to come to our relief.

43691. Is there any expense in constituting a harbour authority?—Oh, yes, there would be the upkeep and the salary of harbour officials, and probably the cost of a private Bill in Parliament.

43692. Is not that a small affair?—There would be a secretary and office expenses. It is a small affair, my lord, where questions of magnitude are concerned, but you must consider you are in a poor district.

43693. The County Councils arrange elsewhere for the harbour authority through their local members, and provide that there will be a caretaker of the pier for a couple of pounds a year?—That is done here at present, my lord, but that is quite a different thing from a harbour board. Well, when it was made known to the Congested Districts Board's officials that it was not they erected the perch at all, they reported the captain, who erected it, to the Board of Trade, and got him into some trouble about it.

43694. Most Rev. Dr. O'DONNELL.—Who reported him? Was it officers of the Congested Districts Board?—I don't know who reported the matter, but the captain was brought over the coals for having erected it, at all events, because he showed me the letter from the Board of Trade. In the same way, when we memoralised for a pier at Valentia Harbour Station to enable us to land the fish, the Congested Districts Board said it was the duty of the railway company to build it, the railway company said it was the duty of the Board of Works, the Board of Works said it was the duty of the District Council, and the District Council said it was the duty of the County Council.

43695. Mr. KAVANAGH.—What did the County Council say?—The County Council had not sufficient funds at its disposal to undertake a work of such magnitude as erecting a suitable pier there.

July 8, 1907.

Mr. Alexander O'Driscoll.

43696. Would it not be altogether a matter between the Congested Districts Board and the County Council?—Oh, no; it is not at all so simple as that. If that were so it would be all arranged. The Congested Districts Board were willing to give a contribution of £1,000 towards it.

43697. Was the County Council willing to accept £1,000?—No, there was no Marines Works Act then, and the promise of £1,000 was, I believe, made to the railway company, provided £10,000 was spent on the pier. I was one of a deputation that waited on the late Chief Secretary, and he promised that money would be available under the Marines Works Act.

43698. Most Rev. Dr. O'DONNELL.—Is not the work ordered?—No, Canon O'Riordan referred to an engineer who came here a short time ago, and looked at the work, and went away without doing anything, but spoke about gravel. Three Lords Lieutenant, three Chief Secretaries, and the present Under-Secretary, Sir Antony MacDonnell, all agreed on the necessity for it, but nothing has been done. Then, from Valentia, a memorial was sent for the erection of a pier at Traganane. There were two local schemes any one of which would be good, but the Congested Districts Board's officials came down and adopted a scheme of their own which they carried out at a cost of about £2,000, and which was perfectly useless. Canon O'Riordan referred to a disaster that occurred outside Valentia Harbour a short time ago. This was largely due to the fact that the pier which was erected at Traganane was a complete and utter failure. A memorial was sent in connection with the erection of that pier, and as I was one of the memorialists, Mr. Plunkett (now Sir Horace Plunkett) called on me about it, and I accompanied him down to Traganane, and pointed out the schemes to him.

43699. Who was their engineer?—I cannot tell you.

43700. Don't you think the engineer, after consulting the local people, made what he thought was the best selection?—It may be, but that does not clear up the position.

43701. Neither does it prove that if any of the other sites were selected it would be a better site?—Well, of course, experience of the pier they did build is a thing that proves it. The fishermen well know where the shoe pinches.

43702. Mr. SUTHERLAND.—You cannot go around spending money?—Certainly not.

43703. Most Rev. Dr. O'DONNELL.—Was not the parish priest consulted?—Yes, and the parish priest was also in favour of the scheme I advocated.

43704. And the fishermen favoured it?—Yes. The great majority of them. There was only one man in favour of the scheme of the Congested Districts Board.

43705. Don't you think that the Congested Districts Board man, having consulted the people locally, then acted on his own judgment?—If they consulted the wishes of people locally interested we would be much happier in Kerry than we are.

43706. Sir FRANCIS MOWATT.—Have you not just explained that he consulted all these people?—What is the use of consulting them when their advice is not taken?

43706A. And the Bishop has asked you, when he had consulted them, was he not bound to exercise the best judgment he could?—If he consulted and acted on the advice of those best qualified, instead of outsiders who never go fishing, and don't know what is really required.

43707. Mr. SUTHERLAND.—Do you think the fishermen well qualified to express an opinion on an engineering question?—I don't say so, but they know where the shoe pinches themselves. Then the live stock schemes of the Congested Districts Board have in some cases not only been useless, but they have been positively harmful; they include the introduction into this country of the hackney sire, and here in Kerry where we had a true breed of cattle, instead of helping us to improve the breed by careful selection, they introduced the Galloway bull to destroy it altogether. Another matter in connection with live stock improvement is that the Royal Dublin Society closed its Kerry herd book against outside entries, and will not take any entries now except of the offspring of stock already registered. A monopoly of so-called

July 8, 1907.

Mr. Alexander O'Driscoll.

"Kerry cattle" is thereby given to those who were cute and rich enough to have their stock registered early, to the exclusion of cattle of better type very often. I think the Congested Districts Board should have made an effort to prevent this, and if they could not do so, they should have opened a Kerry herd book on their own account for the small breeders of good stock.

43708. CHAIRMAN.—What is the reason assigned for doing that?—I could not tell you that, but the fact remains that they have closed the herd book. I wanted to make some entries myself and I found that the herd book was closed.

43709. Most Rev. Dr. O'DONNELL.—Latterly the Congested Districts Board has nothing to do with that part of the work?—I think for the past two years they handed it over to the Department of Agriculture.

43710. How is it progressing now?—There is really not much difference in the way things are conducted, but Galloway bulls are not now sent to this part of Kerry. I put down this failure in connection with the live stock schemes to the presence in the higher offices of the Board of too strong a Scottish element, as they are prone to say—"This is what we do in Scotland," and "this breed of cattle pay very well in Scotland." Then, the Congested Districts Board did nothing whatever to discover or develop the mineral resources of the country. I may say that when I was a member of the Council of Agriculture, I brought forward a motion which was carried unanimously at the Council of Agriculture, that money should be spent in searching for and developing the mineral resources of the country. I suggested at the time that the diamond drill should be lent free to those willing to use it.

43711. CHAIRMAN.—Have you any first-hand knowledge of the diamond borer?—No first-hand knowledge, I have only read about it.

43712. To whom did you make the suggestion?—I put it to the Council of Agriculture, and it was carried unanimously there. You will find that in the records of the proceedings of the Council of Agriculture. I understand that a Mr. Ede made an important discovery of copper on the estate which the Congested Districts Board bought from Mr. Hartopp, and that he proposed to commence mining operations, but that the Board could not give him a mining concession there, owing to some legal difficulty, which they have not yet taken the trouble to get remedied. In the meantime, the best of the labourers are leaving the country, and if capital does eventually come it can effect nothing without labour. Again, their schemes for the development of the fishing industry are a record of the most dismal failure. Instead of going ahead of the times—instead of availing of every new method that was found profitable, and making it the starting point for a fresh advance, the policy of the Congested Districts Board appears to be that it may be dangerous to admit too much light at once to a benighted people. In fact they furnished them with the most primitive appliances to begin operations with; such as the "Zulu" type of boat, the "Yawl," and even the "Curragh." They are not told that these boats have been discarded by other people for the more modern type known as the "Steam Drifter," and that if they want a fair start in the struggle for existence it is by learning how to make use of, and trying to acquire, those appliances which experience has shown to be best.

43713. Are you acquainted with the "Zulu" boat?—Yes.

43713A. You think it is not a good fishing boat?—We could not do with the "Zulu" boat here.

43714. Mr. SUTHERLAND.—What would the "Steam Drifter" cost? Would you be surprised to hear you would not get one under £3,000?—I would be surprised. I was putting it down at half that sum, but do you mean fully found in nets, because I was only referring to the vessel herself? In that case I would not be surprised, because, of course, every boat must have nets, and the larger the boat the longer the train, making it more costly, but adding also to its earning power.

43715. Is not that a very large sum to obtain for fishermen who, according to your own statement, have not yet got beyond the rudimentary part?—It is a large sum, but it would equip them to earn larger sums still. They have been found profitable for private enterprise, and my theory is that the Congested Districts Board should give loans to help us to fit them here. We have not the capital ourselves to build such boats, and we should get means to equip ourselves properly to compete with others, if we are expected to do so successfully.

43716. Yes, but who have come through a gradual process of evolution, and obtained skill and enterprise?—Then the theory is that we ought to go back 150 years.

43717. Most Rev. Dr. O'DONNELL—Is it not important that in the fishing industry there should be a gradual development?—The people are disappointed when they get the "Zulu" type of boat, and find it an utter failure in competition with the "Steam Drifter."

43718. It is not possible for you to run before you have learned to walk. The natural evolution of fishermen is to proceed from a small boat to a big one, and from a big one to the "Steam Drifter"?—If a fisherman puts his money into the "Zulu" boat he expects it to last him for the rest of his life.

43719. Where these "Zulu" boats have been introduced, as soon as the men have learned to get on with that boat they move to a larger boat, and they are facilitated in transferring the smaller boat? Well, my lord, I am only giving my own opinion for what it is worth, and I think life is not long enough for the evolution you describe.

43720. CHAIRMAN.—Explain to me what would be the use to you of a "Steam Drifter"?—For herring and mackerel fishing.

43721. Would that be by the local men in the surrounding sea?—By local men, but not in the surrounding sea only, but wherever herrings can be taken—in Scotland if necessary.

43722. And you presume the "Steam Drifter" would go over to Scotland and elsewhere?—Our local people would go wherever they could earn money. It would give our people a chance in competition with other people.

43723. And the fishermen are prepared to do that?—They can get no facilities.

43724. Do you think they are prepared to go and fish around the Scotch coast?—I think so. The Arklow men do so at present, and so would our men if they had suitable boats.

43725. Most Rev. Dr. O'DONNELL.—And would they know how to manage the "Steam Drifter"?—No, not at present; they have nothing but the most primitive methods, and my point is that their education should not begin by putting into their hands primitive appliances, which are only interesting from the point of view of piscatorial evolution. If Japan adopted the "gradual evolution" policy in the construction of her navy she would be left far behind in the late war, just as our fishermen are left behind in the struggle for existence by the policy of evolution the Congested Districts Board adopted for them in connection with the fishing industry. I quite agree with Canon O'Riordan that the Board should give encouragement to the industry by providing cold storage at a reasonable rent, where fish could be put away in safety in times of glut until it could be satisfactorily dealt with. I think the Congested Districts Board should also exercise supervision over the transhipment of fish at the North Wall and Holyhead, and have a man to visit the larger markets during the season and report to the different senders who got bad prices why the prices were reduced. Again we are not at all satisfied that scientific investigation into the habits of fish is proceeding on proper lines, and we ask ourselves two questions. Is this research being conducted for the profit and enlightenment of the scientists engaged in it, or is it intended to advance the interests of the fishing industry? If it is intended for the latter object, why is there so much mystery about their proceedings? Why are we not told who they are that are engaged in this research, and why do they not publish every tittle of information gleaned?

43726. Most Rev. Dr. O'DONNELL.—That has no special reference to the Congested Districts Board?—I thought it had.

Most Rev. Dr. O'DONNELL.—It has direct reference in speaking on the development of Irish

fishing, but research has not been conducted at any time by the Congested Districts Board.

43728. Mr. SUTHERLAND.—As international investigations these researches have been going on for a few years?—Well, I don't know anything about who is conducting them, but so far no information has trickled down to us in congested districts that would assist us in connection with the fishing industry. The Congested Districts Board has a steamer, the "Granuaile," and we think that she could be made some use of in conveying lime from Galway to Kerry, which would enable the Congested Districts Board to sell lime to farmers in congested districts at a reasonable rate. Instead of that she is kept toying around the coast as a half yacht, and used sometimes to bring a cargo of staves to coopers to justify her existence. I think that Canon O'Riordan made a mistake in regard to the carriage rate for lime when he said it would be a penny a barrel. It cost me sixpence a barrel to bring it from Kenmare, and I had to pay 1*s.* 6*d.* a barrel for it at the kiln at Kenmare.

Mr. KAVANAGH.—He was not referring to Kenmare, but to the other place. He said it would be a penny from Killorgin here, and not from Kenmare.

43729. CHAIRMAN.—Have you bought lime at Killorgin?—I have not bought lime at Killorgin.

43730. Most Rev. Dr. O'DONNELL.—What do you do with it? Do you put it on your land?—I put some on my land occasionally, but I have used it mostly for building purposes.

CHAIRMAN.—The Canon said the Kenmare lime was building lime, and that the agricultural lime came from Killorgin.

43731. Most Rev. Dr. O'DONNELL.—You alluded to the importation of staves for coopers in Kerry. Do you consider that any advantage?—Oh, yes, but the fish barrel-making industry is of no importance compared with the agricultural industry.

43732. If she was employed in local trading, such as lime, would not that prevent her being employed generally on the coast? Would that be so?—I do not think so. A steamer of that kind ought to do a lot of work. That is my experience, and I have something to do with ships.

43733. Throughout Kerry the lime question is a very serious one?—I think it is a very important question.

43734. Do you think that if there was a small loss in providing lime for a couple of years that the farmers would have an organisation of their own to keep up the supply when the subsidy ceased?—Well, I don't go so far as to say that the farmers are in a position to organise. They are very poor, and it wants people with a little courage in business to organise for such a purpose, and courage is born of success.

43735. If an arrangement were made with the owners of the kilns that they should issue lime at a certain price, provided the lime was taken in certain quantities, and that the body arranging it agreed to be at a loss for a few years, would it be possible to have the people organised in those few years to buy the lime without the aid of a Department? It would depend on the benefit that the lime was to the lands here.

43736. Is there any doubt about the benefit?—I don't think there is myself, but that is an individual opinion.

43737. If the land were once drained?—If the lands were once drained. I think the Congested Districts Board might spend part of its endowments in giving the lime at a reduced price. I suggest that it would enable the Congested Districts Board to give it to us at a reduced rate if they brought it from Galway to Cahirciveen and Valencia in their steamers free. That is one reduction that could be made. Then the lime could probably be burned there, say on Arran Islands, where there is cheap labour, and give employment in the loading and burning of it. This could be done at probably a less cost than 1*s.* 6*d.* a barrel, and that would enable the Congested Districts Board sell it to us at about a shilling a barrel. I now come to a work which the Board undertook here, and by their conduct of which they put the prospect of early potato culture in this district back for at least ten years. Instead of growing early potatoes on the farm they have on their own hands in Valencia Mr. Porter came down here in August, 1902, and induced several of us to agree to carry out experiments in early potato culture under the guidance and instruction of "experts," who were to be sent for that purpose by the Congested Districts Board. I hold in my hand a copy of this agreement, under which they were to supply manure of a special kind and seed potatoes at 6*s.* a cwt., and to give instructions free. I agreed to plant 12 cwt. of early potato seed, and on the 20th October, 1902, I sent the cashier of the Bank of Ireland the receiving order the Board sent me, with a cheque for £3 12*s.*, being 12 cwt. potatoes at 6*s.* a cwt. The potatoes were to be delivered early in November and the manure also, but, owing to some small advance in market prices, they were not sent to us to be put into the sprouting boxes until mid-December. Then the expert did not come to give us information as to how to put them up for sprouting, and I had rather long white stalks growing from them before I was told anything about the necessity of having the stalks green and not too long and how to effect this. The second half of January, 1903, proved to be very fine and dry, and I got the ground ploughed and harrowed, and I wrote to the Board informing them that my land was as ready as I knew how to make it, and asking them to send on the manure promised, which had not yet arrived, and an instructor for planting, as per paragraph 6 of the agreement, but they replied they could not send the manure which they agreed to supply and would have to get a substitute for it, and that the "expert" would not come for a time. I wrote them on two subsequent occasions urging them on, as the ordinary potato crop was all planted in our district, but it was not until the 6th March, 1903, the expert came and brought a substitute for the manure promised. I got no intimation that he was coming, and I just happened to be in Dublin on the day he came. My workmen, however, informed me that he gave them five minutes' supervision and instruction how to plant the potatoes and then left them. The weather had then become very wet, but as it was late in the year (it would be too late entirely to plant our main potato crop, which was all in before that date) we put them down. An inspector from the Board came in April and looked at the potatoes and ordered me to get garden rakes and loosen up the ground about them, which I employed six men to do. After he left he wrote me to get 3 cwt. of nitrate of soda and dress them with it, which I at once got done. Early in May a frost came and did them great damage, and the inspector came again and told me I should light fires around them every evening that looked like frost. He hadn't told me anything about fires before the frost came, but apparently he expected me to know it, for when he saw the damage he said, "Aw, mawn, why didn't you light fires around them, and let the smoke get down amongst the stalks." Towards the end of May I wrote to the Board to send me the packages promised in paragraph 3 of the agreement for sending the potatoes to market, but they replied they had none, and they asked me to provide them myself. I then asked them for the name of a salesman to whom I could send the potatoes, and they gave me a name. It occurred to me to send this man a sample lot to ascertain the probable price, and I sent a box containing 16 lbs., for which I produce the sale note and return (*produced*) just as he made it, leaving me 4*d.*, out of which I was to provide the cost of the box.

43738. Most Rev. Dr. O'DONNELL.—You got 1*s.* 10*d.* for the 16 lbs.?—I got 4*d.*

43739. Was the price 1*s.* 10*d.*?—I think that was the price.

43740. Very well, then. The expenses were large, owing to the smallness of the transaction?—That was a sample lot I sent on. I may say a neighbour of mine sent a sample lot of half a ton, and got a proportionately bad return, but after a hard tussle with the railway company, and after I had called attention to the excessive rates charged on this new industry at the shareholders' meeting in Dublin he did ultimately get a refund of something from the railway company.

43741. That price was 1*s.* 10*d.* for 16 lbs.; now there are only 14 lbs. in a stone, and does not that make the price for your potatoes something like 12*s.* 10*d.* a cwt.?—I have not calculated it. It is easily done.

43742. If the business was on a large scale it would not follow at all that there would be the same deduction for expenses?—I cannot say. That was a sample lot. I now pass to the last point in my personal experience of the working of the Congested Districts

July 8, 1907.

Mr. Alexander O'Driscoll.

Board. In February, 1906, I saw a lot of fish in New York that could not be sold owing to the careless handling over here. I came to the conclusion that we were not up-to-date enough in our appliances and methods of curing. Some time after my return I wrote to the Congested Districts Board asking if they had any plans of a really up-to-date fish-curing factory, as I was disposed to build such a factory. They replied that what was in use was a plain shed with a partition cutting off the portion where salt was stored, and I then applied for a loan to enable me to build a proper factory. My application was addressed to the Department of Agriculture, but the Congested Districts Board stepped into the opening and sent two engineers to examine the site, which they measured and approved of at the time. The engineers asked me to prepare a plan, which I did.

43743. Sir FRANCIS MOWATT.—You wrote to the Department of Agriculture, you say, and the Congested Districts Board then stepped into the opening. What does that mean?—I think they said that they had the administration of the Reproductive Loans Act in congested districts. That was the explanation they gave. That was on the 4th October, 1906, and the next thing I heard was that the owners of a house, the garden of which adjoins my premises, were making a fuss about what I was going to do and what I was getting the money from the Congested Districts Board for, and inquiring if they could get money for the protection of their lawn from the encroachment of the sea. On the 8th December I got a communication from the Congested Districts Board declining to entertain my application without giving any reason, and leading me to the uncomfortable conclusion that my neighbours objected to my using my building site for a fish factory, and that this objection had more weight with the Congested Districts Board than considerations of the needs of the fishing industry. I may add, perhaps, that I offered for sale to the Congested Districts Board a small property which I own without naming any price at all. I just simply said Land Conference terms—with a view to selling to the tenants, and they declined.

43744. Most Rev. Dr. O'DONNELL.—You asked for Land Conference terms?—I just asked for Land Conference terms.

43745. When did you offer this?—In 1903, when the Land Act was passed, and they took two years to consider it.

43746. In such a district as Valencia has land sold at anything like the Conference price?—Land was not sold at all.

43747. Throughout Kerry have any such prices been paid for land?—I do not know what the prices paid in other parts of Kerry were, my lord.

43748. Don't you know very well that the prices were not as high as that?—I do not know, my lord.

43749. Mr. SUTHERLAND.—What were the Conference terms?—I understand the mean Conference terms to be a reduction of 4*s.* on second term rents and 6*s.* on first term rents, and then to have the Congested Districts Board re-sell to the tenants on that basis.

43750. On how many years' purchase?—I have not calculated that. I understand the number of years' purchase those reductions represent was not considered in the Land Conference agreement; it could not be, as the Land Act of 1903 was not framed when the agreement was come to by representatives of landlord and tenant, and that it is the exceptionally low rate of repayment provided by that Act that makes the price appear high when you apply the test of "number of years' purchase." I understand the Act of 1903 was intended to carry out the agreement come to to the satisfaction of both parties, and not to give benefits to one party to the agreement only.

Mr. ROBERT FITZGERALD examined.

Mr. Robert Fitzgerald.

43751. CHAIRMAN.—Kindly state what are the particular points that you wish to bring before us?—It was not until Thursday, the 4th inst., that I thought of offering to give evidence before the Royal Commission, and I have since then been very busy. I have, therefore had great difficulty in getting together any facts or figures that I thought might be of use. Under the circumstances, it is with great reluctance I come forward, and I would not do so had I not thought it my duty to give some little idea of what had been done at Valencia by my father with the object of relieving congestion, instead of following the example of the late Mr. Buxton, the father of the present Postmaster-General, who, before the Land Act of 1870, got rid of all the small tenants on a townland which he held near Dingle, and then let it in one farm. On a portion of Valencia (townlands of Corobeg and Bray) several holdings were held jointly by two or more tenants, and in order to relieve congestion my father fenced in a considerable quantity of land in his possession, built substantial houses thereon, and then insisted on lots being drawn as to which of the tenants should be migrated, while the others were left on the original farms. I produce an old map of Corobeg, and a new map showing where the new holdings were laid out (*maps produced*). As an instance that this was not a profitable transaction, I may mention that on one holding consisting of seven odd acres £40 was spent on a house and £14 on fences, and the total judicial rent fixed afterwards was £1 10*s.*, so that the landlord was actually at a loss in consequence of his being proprietor of the holding.

43752. Were the original holdings amalgamated?—As far as possible the holdings were striped, and, as well as I remember, this happened about the year 1866. The old tenants were, as far as possible, left their original holdings.

43753. The process you have described is that your father built these houses, and made these new holdings, and then insisted on them drawing lots for them?—Yes.

43754. What did they draw lots for—the original holdings?—They drew lots as to which were to move out to the new holdings and which of them were to remain in original holdings as altered by the striping.

43755. When a man who had a holding before drew a lot and went to a new holding was his former holding amalgamated?—Yes; or it was given to the other joint holder, because in some cases there were two tenants holding jointly. One of them was removed and the other was left the original holding.

43756. How do you apply the term, two men holding jointly; were they father and son, or two fathers?—I should think something like that. I have known cases of father and son holding jointly.

43757. Most Rev. Dr. O'DONNELL.—Would that be a family arrangement?—Yes.

43758. Where were the migrants placed?—On a portion of land which was in my father's occupation, from about a quarter of a mile to a mile from their original holdings.

43759 Did they like the change?—I don't fancy they did. I may say that, as a rule, the tenants always objected to leave the holdings they originally had.

43760. Were the new holdings better than those they formerly occupied?—I would not say so. The land was poorer. The houses were better. There was more land, but it was of a poorer description.

43761. Were they removed towards the mountain?—To a portion of land adjoining the mountain.

43762. They were taken from better land and sent to worse land?—I don't think there is very much difference. They were practically taken from better land and sent to worse land.

43763. Was all the land relinquished for the enlargement of holdings?—It was left to the other tenants on the townland.

43764. There was none of it taken up for any other purpose?—No, I think not.

43765. CHAIRMAN.—When you say your father insisted on them drawing lots it was because there was reluctance among them to go?—Yes.

43766. In drawing the lot it was not the lucky man who drew the lot, but the unfortunate man?—Yes.

43767. Mr. SUTHERLAND.—Are these holdings in existence still?—Yes.

43768. Are they as good as the other holdings round about or better?—This land is not so good. The houses were very good houses.

43769. Most Rev. Dr. O'DONNELL.—Did those who received enlargements pay for the pieces they re-

ceived?—The rent was apportioned. Where there were two tenants holding jointly the man remaining paid the whole rent.

43770. But did the joint tenant who remained pay any fine as well as the increased rent?—There was no case of a fine. I am sure he paid the entire original rent, but no fine.

43771. Mr. KAVANAGH.—Would you say that it was successful altogether?—It did not turn out very successfully. For instance, my brother, as instanced above, is now at a loss in consequence of being proprietor.

43772. From the tenants' point of view?—I think undoubtedly the holdings now are better and the people are in better circumstances. I am perfectly satisfied that it was the proper thing to do. I can show you, if necessary, a map of Ballyhearney showing the patchwork manner in which the lands were held in 1873, when the middleman's lease expired, and the map showing how the lands are held at present. The rental in 1873, and I believe for many years before that, was £266, and though there has been a new house built for almost every tenant on the townland and a considerable amount of fencing done, the present rental is only £208. My father purchased Valencia in the Incumbered Estates Court about 1853 The agricultural rental then, shortly after the Famine years, excluding the townland of Coromore, appears to have been £1,064, and though he subsequently spent at the very lowest computation over £11,000, and I believe close on £14,000, on the building of houses, making roads, drains, fences, and soforth, the present agricultural rents are less than £1,000.

43773. Mr. SUTHERLAND.—How much less than £1,000?—About £950. It is the invariable practice to attribute hardships to landlords, and my father did not escape these attacks, one grievance being that he endeavoured to compel tenants to cut weeds on their farms, and another that he exacted a nominal charge per annum to preserve his rights to sand and soforth, but he, at any rate, devoted almost the entire of twenty-five years after 1853 to the improvement and advancement of Valencia, and I beg to hand in a form of certificate* which was the custom long before the Land Act of 1870 came in to give to any tenant who effected an improvement on his holding.

43774.—CHAIRMAN.—Do you manage your father's property?—Yes.

43775. Mr. SUTHERLAND.—Who was the landlord before him?—My grandfather.

43776. Your father purchased it in the Incumbered Estates Court?—Yes. My grandfather unfortunately spent too much money in Parliament. My father bought it back with money left him by an uncle. I would also like to call attention to the fact of £1,000 having been spent on a pier at Valencia, and £1,300 spent on a pier at a place called Meenaghahane, by the Congested Districts Board, and these piers are of very little value indeed, and I consider it would have been very much better if they had spent the money on the pier at Reenard; that is the pier which practically every inhabitant of Valencia has to use before they come on to the island.

43777. Most Rev. Dr. O'DONNELL.—It is a point of the utmost importance for the future development of the coast?—Yes.

43778. Is it your view that the expenditure should have been concentrated at Reenard?—Yes. It would have been very much better to have spent the money at Reenard than on those two piers. Of course it is right to say that Meenaghahane is not in the district. I understand that it is of very little value, and the £1,300 spent on that and the £1,000 spent on the sea-coast of Valencia would have been of much more value at Reenard.

43779. About the expenditure on the Valencia slip, have you any idea whether the slip is in the right place or not?—I believe it is. I derive my view from local information I have had from Reenard fishermen there. I believe that the improvement of the Renard pier is now being considered by the Government. I think it is a matter of the greatest importance to the island population of eighteen hundred, and also to the fishermen. As a matter of fact it is at times practically impossible to land on the pier there in consequence of the congestion caused by the number of fish boxes heaped up on the pier. I wish you could see it as it is sometimes.

43780. Mr. SUTHERLAND.—That is a sign of prosperity?—It is a good thing.

43781. Mr. KAVANAGH.—Have you experience of other parts of Kerry?—Yes.

43782. Did you hear Canon O'Riordan's evidence this morning as to population?—No.

43783. He recommended migration, and expressed the opinion that people would go if they got better holdings elsewhere: even so far as Kildare. Is that your opinion?—I don't think so. I would not agree with it, because I know that tenants have the greatest reluctance to leave their original holdings.

43784. But he said that if they were migrated in colonies he thought that even the old people might possibly be induced to go?—I don't like to give an opinion against the CANON in that respect, but I scarcely think they would.

43785. Would you say that it was the only remedy for the seaboard portion of the population?—I think it would be only an injury to the County Kerry if that kind of thing was done. The cattle trade depends very largely on cattle jobbers buying cattle for large grazing farms in the centre of Ireland. If those grazing farms were cut up I believe that it would be a very serious injury to the cattle trade in Kerry. So I am informed by all the cattle jobbers to whom I have spoken, with the exception of one man.

Mr. KAVANAGH.—Yes, but the cattle dealers might be prejudiced witnesses on that point.

Mr. TIMOTHY FOLEY examined.

43786. CHAIRMAN.—Where do you reside?—I hold 50 acres at Keas, Glencar. All the estates in this district are congested and mostly comprised of small holdings, with no means of enlarging them, as there is no untenanted land available for such purpose. There is a large scope for improvements here, such as drainage, road-making, reclamation of waste land and improvement of dwellings. I believe that lime would have a great effect in improving the land. There are several hundred acres of land there that could be turned into productive land if properly drained and limed. Lord Lansdowne offered to sell the portion of his estate which is situate in this parish, under the Ashbourne Act, at 16 years' purchase, but the tenants refused to purchase then; now he has refused to sell to his tenants. No sales took place in this parish before 1903.

43787. Has he refused to sell on any terms?—I believe so.

43788. Most Rev. Dr. O'DONNELL.—What occurred before?—He offered to sell the whole estate in the Glencar district; that is congested.

* FORM OF CERTIFICATE REFERRED TO.

No.——Valencia,————18——. It having been certified to me that————of————(a Tenant at will), has executed at his own cost the work described on the back hereof, which at present is valued at £———, I hereby promise that if he or his representatives surrender or are deprived of their holding, they shall be allowed for said work according to scale given at foot.

Scale of Allowances for Buildings.—Tenants if leaving within 10 years from date of execution of Work to be allowed full amount of valuation taken at time of leaving.

If within 20 years two-thirds of same.
„ 30 „ one-half.

For Draining, Fencing, etc.—If within 5 years, full amount as above.
„ 10 „ two-thirds „
„ 15 „ one-half „
„ 20 „ one-third „

After those periods respectively no allowances to be made. For any other works besides above, special conditions to be made

July 8, 1907.

Mr. Timothy Foley.

43789. Your portion of the estate?—I am not on his estate.

43790. He offered to sell the Glencar portion of his estate at 16 years' purchase?—Yes.

43791. In what year?—Seventeen years ago. The tenants refused to purchase. I don't know the reason why they refused. Negotiations are also pending between General Dennehy and his tenants for the past two years. The landlord then demanded 24 years' purchase, notwithstanding the fact that all his tenants, about forty in number, are future tenants, and have never got any reduction, as they have never been in the Land Court.

43792. Future tenants cannot go into the Land Court to have a fair rent fixed?—No. They are debarred from that. Subsequently the estate was offered to the Congested Districts Board, whose Inspector was sent down in January, 1905, but the landlord refused the Board's terms. He afterwards offered to take 20 years' purchase, but the tenants refused, as they would rather purchase through the Congested Districts Board. Immediately the tenants refused to accept the landlord's offer proceedings were at once instituted, and the hanging gale included in all cases, nearly all the tenants being decreed with civil bills and ejectments, some of them are at present lodged in the Sheriff's hands, whose bailiffs made two unsuccessful attempts to effect seizures during the past twelve months. It is a general rule by landlords here when tenants refuse their offer to serve them with ejectments and civil bills, so that poor tenants loaded with arrears are often forced into bad bargains. Farmers to a great extent in this district depend on remittances from America and other countries to pay their rents, and there is no doubt about it, if these resources were cut off and the unfortunate farmers had to depend on the land for a living they could hardly pay any rent, and in many cases (especially when there is a failure of the potato crop) barely support themselves and their families.

Mr. T. M'Donogh Mahoney examined.

Mr. T. M'Donogh Mahoney.

43793. Chairman.—What are the points to which you wish to draw attention?—With reference to Cooscroom, the County Council made several attempts to get a pier there. They passed a resolution asking the Congested Districts Board to contribute to that pier. That was about seven years ago. The Congested Districts Board asked the County Surveyor to make an estimate. He made an estimate of £1,400 for an ordinary pier. The Congested Districts Board referred it back again and said it should not be so much, that they could not expend such an amount on such a district, and they asked the County Surveyor to make an estimate for a slip. That was done, and the Congested Districts Board said that the slip, which would cost £400 or £500, was too small, and that they would send down an engineer themselves. They did so, and from that day to this we have never heard what they are going to do except putting it off. There is a very large number of fishermen, about 100 altogether, I should say, and there are about forty boats. Of course, they are the small open boat.

43794. Most Rev. Dr. O'Donnell.—Are they safe there?—There is very great difficulty in landing, and boats are often broken. It is a shelving beach, and if there is a north or north-west wind it is rather dangerous to land.

43795. If the proposed work were made would a large boat be safe?—Certainly. At the present moment no large boats could be there.

43796. Was Cooscroom in competition with Coonananna at the time the pier was built at the latter place?—I heard something about it—that there were two propositions at the time.

43797. They are quite close?—They are only about four miles by land, but they are further by sea.

43798. Rightly or wrongly, I suppose that Cooscroom is suffering from the fact that a considerable sum of money was spent on the coast a short distance away?—I should say it was. With regard to Coonananna, there was rather a mistake made in the construction of the pier. The time that that pier was about to be built, or was rather spoken of, the local people suggested the direction and place for it, but the Congested Districts Board selected another site and another direction, though that site was, I believe, condemned by the local coastguard officer at the time, and in fact by two or three coastguard officers. The pier at present is running, roughly, east by west, whereas the run of the tide is north-west by south-west, so that practically speaking the pier is brought straight on to the motion of the tide. Besides that, it is partly built on a sandy bottom, whereas the suggestion made by the people was a plateau of rock, which would have saved a lot. Consequently the expenditure up to 1902 was £2,908, the original cost being about £1,400.

43799. Sir Francis Mowatt.—The original cost or the original estimate?—I cannot be certain. What I meant to convey was that a great deal more than the original amount has been expended on repairs. Since 1902 there has been additional expenditure.

43800. Most Rev. Dr. O'Donnell.—Are you aware that the Board had for the construction of the pier the services of a most eminent engineer—Mr. Parsons?—I should say they had an engineer. I know nothing about engineering myself, but it seems to me that mistakes are very often made in that way. The fact remains that owing to the position of the pier it has had to be repaired at least twice since I came to live in this district fifteen years ago.

43801. Mr. Sutherland.—Is not it repaired annually?—I mean repaired on account of suffering damage from the sea. There would, of course, be the ordinary repairs to any pier.

43802. Were the grants given before the plans were approved of?—I could not tell you that.

43803. I notice great confusion in the evidence given to-day about that; reference has been made to grants been given and drafts of plans being approved of. Do you know what happened here: were the grants given before the plans were seen?—Grants were tentatively promised on the plans being approved of by the Congested Districts Board.

43804. At the time?—Yes.

43805. So that the plan was done with?—With regard to Cooscroom—I can only speak on that—the Congested Districts Board promised a grant if the plans were approved of.

43806. Was the grant for a plan?—For the object of the plan.

43807. Did the Congested Districts Board give a grant for the object of this before seeing the specification or what was going to be done with it?—They asked for a plan.

43808. And had it before them?—Yes, and disapproved of the plan.

43809. And yet gave a grant for it?—No. I am speaking of Cooscroom, to my own knowledge.

43810. If that was the general procedure of the Congested Districts Board it would cover your case as well?—That is Coonananna.

43811. You say the place was not a good one; that the place approved of by the engineers was not the place approved of by the local opinion?—I don't know what procedure was adopted at Coonananna. That was about seventeen years ago. Since then the County Councils have been established, and have been working with the Congested Districts Board and the Department.

43812. The County Council now have to approve of the plan?—Yes.

43813. And the Congested Districts Board also?—Yes.

43814. I cannot conceive any other procedure that a public Department would follow. So, in that case, it was not an engineering question at all, because the engineer simply supports a proposal of which the others approve?—That is a fact; but I daresay generally there is no other proposal, except the engineer's proposal, submitted. They have either to approve or not approve of what the engineer proposes. However, the fact remains that with regard to Coonananna it cost that amount of money. With regard to this union, I believe that it is the most congested union in the county. According to the reports of the Board, though Kerry contains one-eight of the congested districts of Ireland, yet, roughly speaking, up to 1902 it only received one-fortieth of the money expended by the Board.

43815. Most Rev. Dr. O'Donnell.—Have you figures for that?—I could not lay my hands on them at

present. I am only speaking from memory. With regard to breeds of cattle, Canon O'Riordan recommended Kerries. That, I think, is quite right; but the Congested Districts Board should take steps to guard against one thing—that is, the inter-breeding of cattle. In certain districts at present, especially the Glencar district, the cattle are being rather spoiled by that at present.

43816. Mr. KAVANAGH.—How can you prevent that?—If an inspector visited the district occasionally, and insisted that worthless animals were not allowed to grow up bulls, that would be one of the ways of doing it. There is a great tendency to that in mountain districts, and it does spoil the breed of cattle a lot.

43817. I quite agree with you, but I don't see how you can prevent it?—I am afraid we would have to give inspectors powers, and for that we would have to get an Act of Parliamen.

43818. You would give inspectors power to have bad stock destroyed?—To have them castrated. There was a question about industries, and I think that Canon O'Riordan spoke of the convent industry, which is a most deserving one; but he omitted to say, with regard to that, that the nuns applied to the County Council for a grant of £80 for equipment, and the Department of Agriculture and Technical Education refused to sanction the grant. I think that at the time the Congested Districts Board and the Department were not working together, and I think one of the grounds of their refusal on the first occasion was that they were not attending to the congested districts, and that it was the work of the Congested Districts Board. At all events, the County Council no less than three times asked for this grant. The result was that the convent expended the money on the assumption that they would get the grant, because the resolution was passed by the County Council, asking leave to hand over the money to the convent. On that resolution being passed the convent expended the money, so they have been out of pocket ever since. A question was asked with regard to the work of local weavers. I made some time ago an effort to start a little local industry. The capital was too small, and it collapsed. We started it with about £90. We kept two weavers at work for about nine years, but we were only able to live from hand to mouth. We were not able to advertise our wares.

43819. Mr. SUTHERLAND.—Is there abundance of wool?—Yes. We were paying those weavers 12s. a week.

43820. You said that this was a very poor union. Would you summarise for us in one or two sentences what you consider to be the remedies for the population of the whole union?—One of the remedies is to do everything possible to aid the fishing industry. That is a great industry on the coast. On the other side, you should encourage local weavers. You have a different market altogether for what they call home-spun materials from what you have for the ordinary machine-woven fabrics. You have always a market, especially in England, for home-spuns, if by combination you could encourage the weavers. We had in the year 1901 seventeen weavers in this district, and about four of those out of the seventeen were at work. The others were on the outdoor relief list. I am not saying that my figures are absolutely accurate. There were seventeen who could work, if they had the work, between Glenbeigh and Caherdaniel, roughly speaking, and out of the whole lot only about four were getting employment. Perhaps six could be said to be getting employment, but not constantly. There is always a market for those home-spuns. If one or two small points were attended to, the weaving industry, I believe, could be made a fairly remunerative one.

43821. Most Rev. Dr. O'DONNELL.—Has any instruction in weaving been given?—No.

43822. Have you been in correspondence with Mr. Walker on the subject?—Yes. He has been with us off and on. He did not give us much encouragement. One of the great complaints was that the cloth produced was not wide enough. We could not get the local weavers to increase the width. Another complaint was that there was too much sameness about the pattern, and that there was a want of design. It would be well if improved looms were adopted, and designs sent to the weavers, and the stuff made under Mr. O'Shea is doing that at present.

43823. CHAIRMAN.—Why don't they make it wider; will not it suit the loom?—You can make a piece thirty-eight inches wide on the loom. I have known pieces only twenty-two inches wide.

43824. Why don't they make it wider?—The system was that the weavers were employed locally by local people. The women worked the stuff, and they put up the warp as they got it. That warp was generally only twenty two inches wide. They simply sold it locally in the market; generally common local flannel. Consequently the weavers and the women got into the habit of making flannel of the narrow width. The weavers had to put up the warp as they got it. To make it wider you must get the women, in the first instance, to alter the warp.

43825. Most Rev. Dr. O'DONNELL.—You have a Parish Committee?—Yes.

43826. Could the Parish Committee bring any influence to bear on the women, to get them to alter the warp?—I think so. I did not know that they had any such power.

43827. Such an agency could be used for the purpose?—Yes.

43828. CHAIRMAN.—Why won't the women change?—They would if they could be convinced it would pay them; I am speaking of some time ago now. They have been making it wider to a certain extent for the last couple of years. But what I meant to convey is that the extent of the trade is not sufficient to employ all the weavers I spoke of a few minutes ago. We want advertising. We want some means by which to get better known. I would wish to refer to the pier at Reenard. When the County Council agreed to the scheme for the amalgamation of the Great Southern and Western and the Waterford and Limerick Railway Companies, one of the reasons why some of us consented to withdraw our opposition was that the Great Southern and Western Railway Company undertook to bring in a Bill to build a pier at Reenard. Some of us were rather sceptical about their doing this, but we were assured that when they brought in the Bill they would build a pier. The Bill to provide £10,000 was brought in and passed, but when they got the amalgamation they forgot all about it, and from that day to this we never heard anything about it. It was principally on that ground that we, in Caherciveen, withdrew our opposition to the amalgamation. Then we had steamers plying here, and in some instances the railway rates from Cork and Dublin to Caherciveen were 25 per cent. cheaper owing to steamer competition, but the steamer has now been taken off. One of the best things that the Congested Districts Board ever did was to subsidise the Clyde Shipping Company to run this service. It was kept on for a couple of years.

43829. Mr. SUTHERLAND.—Was not it on account of local opposition that they were taken off?—No; but owing to local neglect. The people did not support them sufficiently. I cannot speak of my own knowledge. I have that from the Clyde Shipping Company themselves.

43830. Most Rev. Dr. O'DONNELL.—Did they do a big trade?—In the beginning they did. Latterly they fell off, when the railway company commenced to ply. With regard to Caherciveen pier here, it is absolutely necessary to keep the port open to have some decent means of accommodating shipping. At the present moment the enlargement of the pier is very necessary. If you have no pier, at which ships can berth, you won't have much shipping traffic, and if you have no shipping traffic the railway company will have a monopoly. The channel wants to be dredged, and a few rocks should be taken away. In reference to the diamond-boring referred to some time ago, coal was found on three miles of this district 40 years ago, and it would be worth while if the matter was looked into. The man who found the coal is present in court.

43831. Mr. KAVANAGH.—Was it ever worked?—No. There was no effort made at all to find whether there was a valuable vein of gold in the district or not.

43832. It was just surface coal?—Yes.

The Commission adjourned.

EIGHTY-EIGHTH PUBLIC SITTING.

TUESDAY, JULY 9TH, 1907,

AT 11 O'CLOCK, A.M.,

In the Recreation Hall, Waterville, County Kerry.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Rev. H. KERIN examined.

July 9, 1907.

Rev. H. Kerin.

43833. CHAIRMAN.—You are parish priest of Prior?—Yes.

43834. What are the particular points that you wish to bring before the Commission?—The parish is practically one large congested area. It contains a coast line of about thirty miles.

43835. Is there a natural boundary?—It is in three portions, and contains the divisions of Emlough, Ballinskelligs, St. Finan's, Teeraneragh, and Portmagee. The district of Portmagee has about seven miles of coast line. On that coast line there are 261 holdings. To show you how congested it is, there are 176 of the 261 under £5 valuation.

43836. That is towards Portmagee?—Towards Portmagee, from the Ownagar river. Here is a rough sketch. I may say that the Congested Districts Board has done nothing for that district with respect to the fishing up to the present. There is a little pier that I can show you, but that was built by Trinity College, on whose property it is, and it was built not for fishing purposes at all, but for the purpose of landing sand and seaweed. Along that coast they have 220 fishermen and numbers of women and girls who cure fish. That pier is in very bad repair, and I would suggest that a little slip might be added to it which would make it very useful for the fishermen.

43837. Most Rev. Dr. O'DONNELL.—Where precisely is the pier?—Nearly half way, at a place called Kilkeveragh.

43838. CHAIRMAN.—The Board have done something further on towards Portmagee?—No, but they made an offer some time ago to do it, and the County Council promised some help. When the engineer came they could not do the amount of work necessary for the money that was promised. Mr. O'Connell, who lives on the spot, and will be giving evidence to-day, will be able to tell you more about it.* I might say that I have written every landlord and agent in the whole parish to know if they would sell their properties to the Congested Districts Board, and I did not get a sympathetic answer.

43838A. Sir FRANCIS MOWATT.—You mean that they were not prepared to do it?—They did not show the slightest anxiety. In fact they did not want to sell for the simple reason that they expected to drive a harder bargain with the tenants than with the Board. There is no other explanation for it.

43839. CHAIRMAN.—Who are the landlords?—Trinity College is the most important, and Sir Morgan O'Connell.

43840. Whom did you write to?—To all the landlords and agents—every one of them.

43841. Are they all small landlords except Trinity College?—And Sir Morgan O'Connell. He has a considerable property.

43842. Are there three or four smaller ones?—Yes.

43843. What do you mean by saying that you did not get sympathetic answers; what sort of answers did you get?—They did not see their way to sell; but we had some negotiations going on. We nearly came to an arrangement with Sir Morgan O'Connell to sell to the tenants, but not through the Congested Districts Board.

43844. You are satisfied that a sale to the tenants would have been better than nothing, but you would prefer the Congested Districts Board to buy?—Yes. I would much prefer the Congested Districts Board to have the whole coast line, and they would be able to help the people on their little holdings and in reference to fishing gear.

43845. Have many estates here been sold to the tenants?—Lord Lansdowne has sold under the Ashbourne Act, and there was an estate sold by Mr. Charles O'Connell to the tenants direct.

43846. From your experience of this part of Kerry, do you believe that on an estate that needs improvement which is sold direct to the tenants, the tenants are really much better off after purchase than before?—Yes. On the Lansdowne property, for example, they are much better off than those who have not purchased.

43847. Is that because of the reduction?—Yes.

43848. But the reduction is only a matter of a few shillings. Do you believe that the reduction of ten shillings a year makes all the difference to those people?—If you got good offers it would be more than that.

43849. Take a very small holding with a rent of £2 10*s.* a year; I suppose that that is a very common case?—Yes. We have lots of them.

43850. If on such a holding you get a reduction of five shillings in the pound, that is only 12*s.* 6*d.* in the year?—That is a considerable thing to poor people.

43851. Do you think really that 12*s.* 6*d.* makes very much difference?—As a matter of fact, it is by fishing that they live. They are all fishermen whenever they can get fish.

43852. That is exactly why I ask the question. It seems to me when they are not living by land that the sum of 12*s.* 6*d.* more or less does not very much matter. It is strange to me that the very fact of getting the place cheaper by 12*s.* 6*d.* should make very much difference in the condition of the people?—I don't think it would make very much; but they don't live by the land that they have. They also fish. They have the two things. I consider that they would get more help from the Congested Districts Board than in any other way.

43853. If it really does not make very much difference, would you be prepared to say that you would rather see purchase delayed until a time when the Congested Districts Board is able to purchase the estate and improve it?—I think certainly I would strongly advise them to wait.

43854. Would not you say that a man is better off by remaining as a tenant until the estate can be sold through the Congested Districts Board and improved, than they would be by becoming a purchasing annuitant with an unimproved holding?—I would rather see them wait.

43855. Mr. SUTHERLAND.—So it is not so much the purchase of the holding as the improvement that you would expect from the Congested Districts Board?—Yes, the improvement. I would be very glad to see the Board buy up that seaboard.

* See p. 97.

43856. CHAIRMAN.—Tell me, why are these people so anxious to buy a holding of that kind?—They are anxious for a sale through the Congested Districts Board, under the impression that the Board would be able to help them.

43857. I understand that. But why is there so much anxiety to purchase holdings of that character which need improvement, direct from the landlord?—They know that after a time they would be owners completely of it.

43858. Is that much use if it is an unimproved holding?—It is true that in former times they could not improve without being overtaxed, but now I think that they would set about improving it with a better heart if they were the owners.

43859. Do you really think they still imagine if they improve their holdings now by their own labour or little capital that the rent can be put up on them?—That cannot be done now.

43860. They cannot still think that?—No.

43861. Then why is it they are so anxious to buy?—There is a kind of lingering after the old state of things.

43862. Most Rev. Dr. O'DONNELL.—The insecurity of the past tells in the present?—Yes. I know for a fact that a great many of them are anxious to enter into purchase negotiations because they are in arrears. To use Mr. Doran's phrase, it acts as a lever in forcing up prices. I know one townland where we entered into negotiations for the sale, and the poor unfortunate people, because they were in arrears, consented to sign terms of purchase which were excessive. Fortunately, it turned out that the day on which they were to sign was so bad—it was one of those days when we had bad snow—that they could not go down to sign those papers. I called the attention of that townland, at a public meeting, to the matter. Mr. Doran came down as representative of the Congested Districts Board, and came to see the little property, which is as bad as there is on the map of Europe. The poor tenants were to sign for twenty-three years' purchase. Fortunately they were prevented from doing that, and then the value that the officials of the Board put upon it was fifteen years' purchase. When negotiations were entered into with regard to the sale of the property there were several processes at the Cahirciveen Quarter Sessions.

43863. You were giving two reasons for their anxiety to purchase. One is that the great insecurity of the past makes them anxious to get as much security as possible in the future?—Yes.

43864. The next is, you say, that the arrears make them anxious to purchase?—Yes; it is a temporary relief.

43865. At the start that is at all events a considerable relief in th existing state of affairs?—It is.

43866. But, bearing on the question which Lord Dudley asked you about the security, or insecurity, which a man feels in making improvements, I have a question to ask. Is not there a feeling among these farmers in Ireland that if a farm is left derelict almost and unimproved, it will fare better when there is an inspection by the assistant commissioners for the fixing of the fair rent than will an improved farm?—I agree with you thoroughly; there is that impression.

43867. CHAIRMAN.—That means that during the time between the fixations of the rent, from twelve or thirteen, to the end of fifteen, years, a man is giving up a certain productiveness of his land deliberately, in order that the Commissioners may see the land in the worst possible condition?—But, if the land has been overtaxed already, I don't blame them for trying to get some reduction.

43868. The Bishop asked you whether you did not think that tenants thought if the Commissioners saw the land in a very poor condition they would be more likely to set a low rent upon it than if they saw it in a good condition, and you agreed with him. From all I have heard I believe that to be true. But is it not a fact that if a man does that for twelve or thirteen years very likely he cuts off his nose to spite his face. Very likely he is giving up a certain productiveness of his land for a hypothetical reduction at the end of fifteen years. It is an absurd way of doing things?—Yes.

Sir FRANCIS MOWATT.—Is not the explanation that brings the two theories together this: the man for the first ten or twelve years makes the most out of his farm, and does the best that he can with it; and for the last two or three years he thinks it worth while to let the farm die down, so to speak, so that it may be valued below its value when the time for valuation comes, so that it probably is not a bargain at the beginning of his fifteen years.

43869. CHAIRMAN.—Is that so? Would this preparation for the visit of the Commissioners only begin within two or three years of the end of the term?—I think if the land in this part of the country were let go beyond three or four years you would never be able to restore it again.

43870. Most Rev. Dr. O'DONNELL.—The explanation that Sir Francis put to you would hold for the better class of land?—Yes.

43871. If you got the land, then, the question arises are farms to be greatly improved by reclamation? If they are in a wild condition this different aspect suggests itself to you. There the question is one of reclamation or not?—Yes.

43872. On your poor land it would be very much a question of reclamation or not?—Yes. After three or four years it would be very hard to make anything out of it.

43873. The fact that a man knows that the Sub-Commissioners will come out and inspect it may have a very deterrent effect?—Yes.

43874. Mr. SUTHERLAND.—You say that the reason these tenants desire to do what to some of us is an incomprehensible thing, namely to buy this £2 10*s.* holding, is caused first by a want of realisation of the fact that they have security of tenure, and on the other hand owing to the fear of arrears?—These are the chief reasons.

43875. If these were absent, would you yourself advise the purchase of £2 10*s.* holdings on these places?—I must confess I would advise a tenant to become owner of his holding no matter what the rent was.

43876. But you have told us you would not advise the purchase of small holdings requiring improvement except through the agency of the Congested Districts Board?—Because, as far as I know, they would be able to help the people, as the latter would never be able to help themselves.

43877. If you realise the advantage of that, the point we want to get to is: would you advise the tenants of small unimproved holdings to purchase direct from the landlord?—As I said a while ago, I would advise them to wait if they got better terms from a Board like the Congested Districts Board, which would have more money at its disposal.

43878. It is not quite a question of better terms, but a question of whether they buy an improved or an unimproved holding?—If they buy the holdings they will get more help from that Board for the improving tenant himself.

43879. Most Rev. Dr. O'DONNELL.—You would like to see the State aiding?—Yes. We have a great deal of slough land requiring arterial drainage. Every tenant buying under these circumstances should be compelled to drain his own holding into that if there was such a system. Coming now to the next section of my parish, that is St. Finan's, I have very little to say about that, because the Board has built a slip there. It is not finished.

43880. Mr. SUTHERLAND.—Has it been a benefit?—It has not been finished yet. They resumed work last year. The weather became very bad and swept away what they had done. Up to March, 1906, they spent a sum of £1,446 on this slip. I wrote them some time ago. There are twenty-four boats with 100 fishermen in that district. I pass on now to the next one, round the coast, Prior proper. The holdings there are not very large.

43881. When the slip is finished the immediate demand will be satisfied?—I think so. Another little slip I am interested in is at Foil-aniatin. The Board is giving us some little help.

43882. Most Rev. Dr. O'DONNELL.—How does that project stand?—They will resume work when they come to finish this other slip. We go round the coast to the most populous part of my parish, called Prior.

43883. That is a peninsula?—Yes. I have a coast line there of about fifteen miles, within one and a-half miles of where we are sitting at present. There are 400 fishermen along that coast. There are 310 holdings under £5 valuation. That shows considerable congestion.

43884. Mr. Sutherland and myself saw these holdings on Sunday?—We very badly want a little slip

July 9, 1907.

Rev H. Kerin.

on that coast. There is one at Ballinskelligs, built by the Board of Works. It is useless except at a very high tide. It is near the coastguard station.

43885. CHAIRMAN.—Where is the slip required?—It would be for an inspector to say that, but it would be a great advantage for Ballinskelligs if a slip were put somewhere about there.

43886. Mr. SUTHERLAND.—Do you hold it as a principle that if the fishing is not very successful the erection of a pier will make it successful?—Yes, if there were a slip where I say they could bring in their fish there and have a curing station. The boats are nearer the fishing grounds, the good grounds about the Bull rock, and they could land the fish at the curing station just as at Portmagee, and it would be far easier to bring the fish in to the train at Valencia Harbour.

43887. Is not it a bold assertion to make in view of the history of some of these enterprises in Ireland?—I would not think so. It is most feasible.

43888. We were told in Dublin of the great amount of money spent on works of this kind around the coast of Ireland which are now practically derelict?—Unfortunately none was spent around the coast of Kerry, and in that we have a great cause of complaint against the Board.

43889. CHAIRMAN.—I understand that there is no question about the fishing. The fish are there, and there is a large number of boats, and what is asked for is greater facilities for landing?—Yes.

43890. Most Rev. Dr. O'DONNELL.—You think these small boat slips very useful?—Yes, and because of the small boats we have I would call attention to the fact that not merely steam trawlers but sailing trawlers should be kept further out to sea.

43891. Before you pass on I would like you to repeat your statement with reference to expenditure on these piers, that Kerry has been behind as far as the Board was concerned?—As far as this part of Kerry is concerned. I cannot speak for any more. I refer only to this peninsula that I represent.

43892. Yet you have named to us some useful works that have been done?—I have mentioned one useful work on thirty miles of sea coast.

43893. There is another going on?—A little one. It is not much. We have about a mile from here or a mile and a-half from where we are sitting, in my parish, two lime-kilns. They were built fifty or sixty years ago by Lord Lansdowne. He brought limestone in boats from Kenmare, which is a distance of forty miles, and he burned this limestone and sold it to the tenants at a low price and to outsiders at a higher price. These kilns have not been working for forty years. Everybody admits that our country over there would be greatly benefited by lime, and I think it would be a capital thing if the Board would take up those kilns by working and selling the lime to the poor people of the congested area.

43894. Where are the kilns?—About one and a-half miles from where we are. The limestone was brought up to within thirty feet of the kilns.

43895. Where would the limestone be found?—In Kenmare. There is no convenient quarry nearer. That would be a capital way for the Board to spend their money. Here is the tidal river, and here are the kilns (*explains map*). There are two kilns, which would turn out 600 barrels of lime.

43896. Sir FRANCIS MOWATT.—What is the reason for leaving off working?—It is so long ago that I could not answer that, but I don't think for a moment that the people would not take the lime all the same, because it is very advantageous to the country; but I think they found that they were not able to make it at a profit; but I would ask the Congested Districts Board to work it. The profit would be for the people. I would not mind how the profit and loss would work out.

43897. Most Rev. Dr. O'DONNELL.—The need for lime seems to be obvious. It is noticeable that the buildings, as well as the lands, are in need of lime?—Certainly; we would want a lot of lime-washing for houses if for no other purposes.

43898. Could you say to the Commission that if a loss were made under a scheme for supplying lime for a couple of years, at the end of two or three years the system would work without loss between the tenants and the suppliers of the lime?—I should like very much to make the experiment, but of course I could not answer that, but I think it would, really, because everybody admits that there is nothing better for that country than lime.

43899. Sir FRANCIS MOWATT.—Could you say anything about the price at which it can be bought?—Lord Lansdowne sold it for 1*s.* 10*d.* a barrel to his tenants, and at 2*s.* 6*d.* to outsiders. You cannot get lime now from Cahirciveen less than three shillings a barrel.

43900. Most Rev. Dr. O'DONNELL.—Is that the large barrel?—I don't think it is.

43901. CHAIRMAN.—I wonder if any of that price is freight from Cahirciveen here, because in Cahirciveen we were told that you could buy it for 2*s.* 6*d.* a barrel?—There are times at which you could buy it for that, but I think there are times at which you would have to pay 3*s.* for it in Cahirciveen.

43902. The highest price at which we have heard it put is 2*s.* 6*d.*?—I still maintain that it would cost 3*s.* to have it here.

43903. Most Rev. Dr. O'DONNELL.—The lime for this district would come from Kenmare and not from Killorglin?—Yes. It is a question whether the lime could not be bought, from Killorglin, at Cahirciveen, but I mention this matter as the kilns are here.

43904. CHAIRMAN.—When this kiln of Lord Lansdowne's was going did they pay the tenants around for working and burning it there?—Yes.

43905. Mr. SUTHERLAND.—You don't know why they carried the stone instead of the burned lime?—I suppose they thought they could do it cheaper.

43906. Most Rev. Dr. O'DONNELL.—Would it be that the fuel is found here?—Yes. There was great abundance at that time.

43907. Mr. SUTHERLAND.—It is much cheaper to take the lime if it is burned: it is not half the weight of the stone. It may have been with the idea of giving employment in the locality?—Possibly. That would be one good reason which still holds.

43908. Mr. KAVANAGH.—The kilns at Kenmare are worked at a profit?—I could not answer that question. In the quarry I mean the limestone is bought in its rude state.

43909. You burn it here?—Yes.

43910. CHAIRMAN.—What can you buy lime for at Kenmare at the kiln?—I cannot tell you about Kenmare, but I can tell you about Killorglin, because I have been there for a great number of years. It was 1*s.* 2*d.* for a long time; then it was 1*s.* 4*d.*, and I think it has gone up to 1*s.* 6*d.*

43911. That is lime and not limestone?—Yes, the lime itself, the stone burned.

43912. Has not it ever been found feasible or possible to bring round a boatful of lime from Killorglin down here?—I think that would not work at all. The price of lime is sure to go up in Killorglin if you have to supply this place from there.

43913. I don't understand why it would be impossible. Killorglin is very nearly on the sea. Why would it be impossible to bring a shipload of lime round here from Killorglin or from Kenmare?—Of course it is not impossible, but the question is would it work?

43914. It would surely be a great deal cheaper if you can get lime at Killorglin for 1*s.* 2*d.*?—I presume Lord Lansdowne or his advisers said that to themselves before they built the kilns, and if they could do it they would not have built the kilns.

43915. Has not anybody ever had the public spirit to try to see what it would cost to bring it from Killorglin. It surely must be possible to do it more cheaply than 2*s.* 6*d.* per barrel?—I repeat the evidence of Mr. Doran that the Board should be placed in a position to risk public money in thorough and well-considered schemes.

43916. Mr. Doran is not a member of the Board?—But his evidence is very valuable.

43917. The people themselves not being in a position to organise a system of procuring this lime?—No. They lack initiative very much in this country. We are very much behind the times.

43918. Do you know the price of burned lime at the kiln mouth in Kenmare?—I could not answer that.

43919. But you do know it at Killorglin?—Yes.

43920. If that property were bought up by a Board like the Congested Districts Board I suppose that one of the things you would expect to be done before selling to the tenants would be the institution of some system for burning lime for those poor lands?—It would be very necessary and most useful.

43921. Tell us roughly what, in your eyes, is most needed to develop the district?—The development of the fisheries, and the sale of every bit of this area we have travelled over to the Congested Districts Board.

I certainly maintain that. I am thoroughly convinced that that would be the great improvement of those poor people on our coast.

43922. If you had your way, that is the thing on which would you concentrate your energy—the development of the fisheries and the sale of the land through the Congested Districts Board?—Yes. The people would be very happy and contented if that were done

43923. Mr. SUTHERLAND.—Take this district that Dr. O'Donnell and I saw going down towards Ballinskelligs on Sunday; is that in your parish?—Yes.

43924. You know these holdings very well; cut-away peat bogs, without any appearance of cultivation round about. Do you expect that these people would be able to improve that land and cultivate it?—A great deal of that land you passed on Sunday has been purchased, and a great many improvements have been made since they were purchased. Three townlands that you went through have been purchased, and they are certainly improving them. You passed all through Lord Lansdowne's property and two others.

43925. Most Rev. Dr. O'DONNELL.—Going to St. Finan's Bay we went through the very property that you have been describing?—Certainly.

43926. Mr. SUTHERLAND.—Do you really believe that people can carry out improvements successfully there?—I do certainly think the land capable of being improved; that is provided the poor people got some help. They cannot do it so well themselves. My contention is that the Congested Districts Board should be able to help them.

43927. No doubt, but there would be the most enormous expenditure of money and labour upon it before that could be made anything like prosperous?—That is just the thing we want.

43928. The question altogether is whether the same labour and capital might not be better expended on some other part?—I think that the people would be very slow to leave these places. If they got a little help they would rather improve their holdings and stay there.

43929. Most Rev. Dr. O'DONNELL.—You say the fishing is a great industry?—Yes, along that coast.

43930. But there is a large population inland which has no connection with the fishery?—There are not many. Perhaps they would have one member of the family; but there are not many townlands in the whole parish that don't dabble in fishing some way or another.

43931. How far inland is the fishing industry felt?—About two miles.

43932. Have you a parish committee at all?—I have not. I am only here about sixteen or seventeen months.

43933. The difficulty of procuring lime is in itself an obstacle in the way of working the committee?—Yes.

43934. CHAIRMAN.—Do you make any kelp here?—No, we don't. I may say that we depend a great deal on seaweed for manuring.

43935. Mr. SUTHERLAND.—Where do you get a market for your fish?—We send them up to catch the train at Valentia Harbour. We cure a lot of fish at Portmagee and send it off to the American market.

43936. Have you a curing station there?—Yes.

43937. Who has them?—Manchester and other companies have agents on the spot. They cure them and send them off.

43938. Sir FRANCIS MOWATT.—Have they got a market?—Yes.

43939. They sell all they cure?—Yes. The fresh herrings and mackerel we get on the Ballinskelligs side are carted on to Cahirciveen. The others they take down by boat.

Mr. MAURICE FITZGERALD examined.

43940. CHAIRMAN.—What are you, Mr. Fitzgerald?—I have a middle interest in a small property in this parish, and I own a farm under the same unfortunate tenure. I manage a very small property in the adjoining parish for my brother. The valuation of Dromod parish in 1901 was £4,767 17*s.*, and of Prior parish was £4,073, so that you see that Prior parish is of £700 less valuation than Dromod parish; and I may mention that the valuation of this locality is no criterion whatever to go upon, because there was no railway connection with Killarney when the valuation was made; and secondly, I know of one property in the locality that was valued very low because the landlord requested Griffith's valuers, whom he happened to be acquainted with, to value it as low as possible; and of course the valuation was made only for rating purposes.

43941. But your point is that the valuation is lower now than it ought to be?—I would not say that, but I would suggest in some places it is as high as it ought to be, and in other places lower than it ought to be.

43942. Do you wish to draw any conclusions from that?—I do not. I just mentioned it in opening, as one might think that the valuation represented conclusively the valuation of the land. The average holding in this parish would be 36 acres, or what we call the grass of six cows.* From 30 to 36 acres I should say for a holding of six cows with the class of land in this locality would be quite sufficient, because I think if the holdings were any larger they would be neglected. They could not keep them at all in rotation and the land would deteriorate.

43943. Has tillage decreased in your experience in this part of Ireland?—Well, I do not think it has decreased very much here to any marked extent. Of course there are lots of people emigrating in recent years, but still I think the tillage is just about the same as it was fifteen years ago.

43944. If the holdings were enlarged do you think it might have the possible effect of keeping some of the people at home who now go to America, and therefore increase the tillage?—I do not think it would. I do not think so. In the first place there is no untenanted land to be bought up here; and secondly, if you migrated some of the tenants and added their holdings here to these, you would find, I think, that the holdings would be rather too much, because, of course, a lot of work has to be gone through here on this peaty land with the spade, and of course that entails an immense amount of labour.

43945. I suppose there are very few holdings now of 36 acres which are being farmed by a father and a couple of sons, and they are nearly all the work of one man, are not they?—Oh, no. Oh, not at all. In fact the people who have their own help, with their own sons, are far better off than those who have not.

43946. Is there enough work upon a 36-acre holding such as you describe to enable the sons to remain at home?—Well, there is plenty of work for them to do, but I do not think they would be paid very well for their labour, because when in the course of time the farm would go to one son, there would be nothing left for the majority of the others but to emigrate, except of course that the son or daughter would get their fortune.

43947. The fact of the matter, then, is that they don't think they would earn better wages in America than they can in the locality, either upon their father's farm or any other farm?—Very likely so. Young men get 2*s.* and 2*s.* 6*d.*

43948. Do you see any possible way of preventing that. If the wages they can get are better in America than they are here, how can you hope to check the emigration? Is not it a natural process?—I think it would take a long time to do it, for the simple reason that their friends in America are urging them to go. I had a domestic servant some years ago to whom I paid £12 a year. She had been in America for some years, and she told me that she could do far better in this country at £12 a year than she could do in America at £30 a year, which she got. And still her sister and her friends have since gone to America in spite of that. There seems to be an inherent craze among the people to go to America.

43949. Is it a craze or because they can get better wages?—Well, I know that some of them do very well in America, but I think that many of them do not do so well.

43950. Most Rev. Dr. O'DONNELL.—While in America they made a considerable sum of money?—Yes, some of them do. The majority never come back, but some do come back and buy land.

* *Note by Witness.*—I have since discovered that the average holding in this parish is 50 acres.—M. F.

July 9, 1907

Mr. Maurice Fitzgerald.

43951. It is the successes generally that come back?—I think so.

43952. You know of all those cases of people coming back after making money, but you seldom hear anything of hundreds of failures?—Yes.

43953. CHAIRMAN.—Let us get your opinion quite clearly. It is obvious, is it not, that there must be always a surplus population in any district looking for employment?—Certainly.

43954. You could not hope to provide that surplus population with land?—No.

43955. Even if you made a redistribution at present there must always be afterwards a surplus that could not possibly be given land?—Certainly.

43956. If you developed the fisheries to a considerable extent you might be able to provide employment for a certain number more than get employment now; but it is difficult to imagine that the fisheries could be so developed as to give employment for all the surplus population, in other words for all the young men?—Yes.

43957. And therefore there seems to be nothing for it but emigration or an added demand for labour here?—Yes.

43958. And there cannot be an added demand for labour here unless the price of labour can be so enhanced as to counteract the price of labour in other parts?—Yes.

43959. And the price of labour here cannot be raised unless in some way or another the price of agricultural produce raised by tillage can be enhanced?—Certainly.

43960. Sir FRANCIS MOWATT.—You were speaking of 30-acre farms here and of the tillage upon them. What do you say is the average amount of tillage on a 30-acre farm?—I should say about five acres. Of course I am not including hay. Under tillage I am including first crop and second crop, but not meadow.

43961. Mr. KAVANAGH.—Would you say that emigration is altogether a question of wages?—Oh, by no means.

43962. It is also the results of a desire to see a new country and to see more life?—I think so. When I say that the majority who go to America could do very well at home I am talking of the majority of girls, but I do not say that the men who go out could do better at home, except in a few instances.

43963. What percentage can you tell me have returned—would you put it at one per cent.?—Oh, yes.

43964. Not more?—Not more.

43965. CHAIRMAN.—In what way would a girl do as well at home?—Well, I am giving you the experience of the girl I have just spoken about—that £12 a year here would be just as good as any wages they could get in America; and there is not the least difficulty in their getting £12, and in fact the difficulty is to get girls for £12, here.

43966. But surely the demand for domestic servants in a country district in Ireland is not a very great demand?—It is immense in this parish. I wanted a girl to go out and milk the cows and do rough work, and I had to hunt three parishes to get one at £12 a year. That is what I am paying. Fifteen years ago you could have got a girl of that class for £6 a year. Now in this district they are fearfully scarce.

43967. CHAIRMAN.—But do you really tell us that the demand for domestic servants' labour is great?—Oh, very great indeed here; very great indeed in Prior, Cahirciveen, and Dromod parishes.

43968. If you go a little further inland, is it so there too?—Well, of course, I cannot speak for other parts.

43969. Is the demand here exceptional owing to the fact that it is a place to which tourists resort?—Oh, not at all. Of course some people here employ a good many domestic servants, but I don't think that makes such an immense difference, though of course it makes some difference. And another reason why there is a scarcity of domestic servants to do rough work, and that it is felt so much is this, that they don't like to milk cows at all now. It is not easy to get a girl now to do rough work, and they would prefer to be at a place where there were no cows, for less money, than at a place where there were cows kept, for more money. We farmers blame Waterville a good deal for that, because they say that they have an easier life in Waterville than they have with the farmers.

43970. In your opinion if there was more time devoted to the training of girls for domestic service in primary schools, what effect do you think would that have—do you think it would increase or decrease the tendency to emigrate?—I should think it would increase it. I should think so; because, after all, there are very few in this parish that want trained servants at all. I mean to say that the kind of servants they want are servants who can do just a little plain cooking and washing and that kind of thing, and if they were anyway highly trained they could command far better wages in other places.

43971. But in any case it would fit them for work?—It would, no doubt, fit them for after life.

43972. But you think it would cause the tendency to emigration to increase, not to decrease?—Yes.

43973. Most Rev. Dr. O'DONNELL.—Assuming that girls may have £12 a year in domestic service here, they would have this justification or explanation of their desire for going to America, that in a few years, while they are in their strength, they can put together a considerable sum of money more quickly in that way than at home?—Well, I do not think so, my lord. I have been speaking to girls who have returned from America on that score and they say that they get high wages there, but they have tremendous expenses.

43974. Would girls in domestic service in America have big expenses?—It seems they have. I was not aware of that till a couple of years ago, when I happened to meet one whom I knew as a child before she went, and she told me of her experience in America, and she said she was commanding very high wages indeed in America. I think she was getting £60 a year. She seemed to have been exceptionally fortunate, and she said that, even with those wages, she found it very hard to save at all.

43975. If the matter stands in that way, it would appear that it would not require much to turn the balance in favour of the girls remaining at home. If the money inducements were made more attractive the girls would stay, and not go to America?—I should think they ought to stay.

43976. I was going to ask about the thirty-six-acre farm. You say it would be a six-cow holding?—Yes.

43977. Would there be much rough grazing land of a mountainous character on the thirty-six acres?—Well, there would not be any mountainy grazing on these farms. We call them glensters, and some have 200 acres of mountain, glensters in fact holding tremendous acreage.

43978. It is not by acreage you would value those mountainous farms?—Oh, not at all. It is the six cows I talk about. Some of the land includes bog, some of it earth, and some of it reclaimed bog.

43979. Do you think would practical agricultural instruction be useful for the occupiers that you contemplate?—I think it would be of the greatest benefit. I know they had not heard of the Congested Districts Board or Agricultural Department here till the last couple of years, and of course the Congested Districts Board have purchased an estate in the neighbouring parish, and that is what brought them into the parish; and the Department of Agriculture have sent out an instructor this year to Tralee (Mr. M'Carthy), and he came and gave lectures here on three occasions, and, as far as I am concerned, he imparted to me an amount of useful information. But I think that if there were a few experimental plots here and there it would have far more effect, because the majority of the people here are not educated enough to understand lectures.

43980. Practical demonstration would be better?—Yes, practical demonstration. I saw it suggested in Killarney that the Congested Districts Board should purchase model farms. Well, I think that would be too expensive a business altogether. I would suggest that the Department's representatives should have powers to purchase an experimental plot, or several experimental plots in every parish; compulsory powers, so that they could take them whether the occupiers wished it or not, and use them in demonstrating the best means of growing the various crops.

43981. Or you could take a farmer in the locality who was the best agriculturist and turn him into an agricultural instructor for his district?—Certainly you could do that.

43981A. CHAIRMAN.—Would it not be better to work the agricultural plot through the agency of an existing farm?—No, I think not. I think it would be

better to have the Department's representative, because there would be bound to be a certain amount of jealousy as to the choice.

43982. But surely if you were able to select a man who had a holding in the district, and by teaching him through the medium of the instructor, you were enabled to turn that holding into a kind of model holding, would not that bring home to the other people the advantages of a scientific treatment of the land in a far more striking way than if a man whom they knew nothing at all about came down to till the plot?—Well, that is really what I am suggesting. I suggest that the Department's representatives should carry out and work experimental plots on the farms here that they like.

43983. But that is that he would do it himself on the part of the Department. But would it not be a far more striking illustration if he was to enter into negotiations with a certain farmer who, say, up to that moment had been making £30 a year out of a holding, and who by this scientific treatment was enabled to double his receipts?—Oh, certainly, I think that would be well.

43984. The others would then see what one of their own class could do?—Yes.

43985. Sir FRANCIS MOWATT.—When you speak of a plot, what extent have you in your mind?—Anything from a quarter of an acre to an acre. Now the Department of Agriculture's representative, Mr. Harpur, tried an experimental plot on my land this year. I prepared the ground, and he planted his potatoes carefully, and they have been watched very intently, but unfortunately I am afraid they have not turned out so well. In fact my own potatoes, which were next them, have turned out far better.

43986. That was teaching you what to avoid?—I do not think so, sir, because he wanted to show the advantage of sowing whole potatoes instead of cut potatoes.

43987. You think there is a cause for the failure?—Well, I cannot account for it.

43988. But if you could show a reason, the lesson would have been useful?—No. I was quite prepared to set whole potatoes if these turned out well, but now I doubt.

43989. In what way is it then—did they come come up weak?—About half of them are sound, and no better than my own potatoes, and the other half seem to have failed.

43990. Mr. KAVANAGH.—Were they the same kind of potatoes?—They were the same kind, but not of the same seed. I just wanted to remark that the use of the plough would come in advantageously in the case of many occupiers of small farms, and that it would be of great advantage if ploughing and mowing machines could be hired out to the farmers.

43991. Just as a matter of clearness, how do you reconcile your statement that the use of the plough would come in well, with your previous statement that these thirty-six-acre holdings require spade labour?—Oh, I said not all of it; but I say some of the land requires spade labour, such as reclaimed bog. You cannot plough reclaimed bog for the simple reason that the horses would sink.

43992. But then, on those holdings where the plough would come in, there would be an increase of size?—I do not think so, because in most of the holdings there are certainly a few acres of reclaimed bog, and the man must till a part.

43993. But could not that be tilled by spade labour as it is now, and the better land be tilled with the plough as well?—Well, I think that would be rather too much tillage. I do not think too much tillage would pay a man of that class. I cannot see how it would.

43994. You do not think that the introduction of the plough would enable the same amount of labour to till a bigger holding?—Oh, yes, I certainly do. I do not know whether you are very well conversant with the class of land that we have round here. Some of it, if it were worked by the spade, would be extremely hard work for the man, because it would be strong and stiff, and that kind of thing; but of course boggy land is easy enough work for the spade, but it would be impossible to plough it. I believe there is a method of using boots for the horses, but I have never seen it.

43995. Mr. SUTHERLAND.—If you began with draining the bog top first?—The horses could plough it.

43996. After a few years?—Some of them have been drained very well here now, but still horses could not draw the plough.

43997. Then what is the necessity for this method that we see of planting potatoes in big ridges—is it to carry off the surface water?—Not at all. That method is peculiar to this country, and they seem to think that it is better than drills, and personally I quite agree with them. I think that my potatoes that are planted on plots do far better in ridges than in drills, far and away better. First and foremost there is not so much waste of ground.

43998. Did you see how closely they were packed together, those that we and others yesterday saw?—It may look so to you, taking a glance in passing, but I assure you there is a lot of room, just in fact as much room as in the drill.

43999. Have they twenty-four inches clear between?—There is a distance of twenty-four inches between every potato.

44000. But measured across?—There is a foot between every potato, and that is plenty of room.

44001. Is there an opening between?—No, never.

44002. Most Rev. Dr. O'DONNELL.—As far as the practice is concerned it is not peculiar to this part only, but all along the poorer parts of Ireland the habit is to plant the potatoes in ridges?—Yes.

44003. Mr. SUTHERLAND.—I thought it was to carry off the surface water?—Oh, no; that is not the principal reason. The decline of the salt butter industry here has been a terrible loss to this country. Up to about twenty years ago we used to sell all the butter in firkins, and every man used to keep his butter till he had two or three firkins, and then take it to the town and sell it for a lump sum, where they now take it in small quantities, and the money is frittered away in dribs and drabs.

44004. Do you mean that they take it in in such small quantities that they have more temptation to spend the price of it?—Yes. A creamery has been started for the past three years in this parish, but it has not been taken up so much as I would like to see it, so far; but this year they are getting far more milk than they were last year, and they think that after a time people will take it up. We also have two Agricultural Banks in this parish, and one of them is doing very well indeed, but the other one is not doing so well. I am afraid that the reason the second one is not doing so well is that there is some difference between the Committee, and therefore they are not so energetic as in other parts of the country.

44005. Mr. SUTHERLAND.—You talked about ploughs and other implements, and I think, as you made the suggestion, that the Congested Districts Board might be well advised to supply reaping machines; but the plough seems to be rather a small thing, does it not?—Well, yes.

44006. But one of the banks might be used for the purpose of enabling people to get ploughs?—It could certainly, of course, but I should not like to see farmers generally going in for buying mowing machines. I should prefer to see a place here for hiring them out for the season to each man.

44007. Most Rev. Dr. O'DONNELL.—If you had a Parish Committee, do you think the agency of the Parish Committee would be a good one to lay in a stock of agricultural implements from which, on reasonable terms, they might hire out agricultural implements to farmers?—Yes There are no labourers' cottages built in this locality so far, but I believe there are some to be built now. But of course except for the work round Waterville there is very little labour employed in the land, most of the farmers doing the work themselves.

44008. CHAIRMAN.—Why is there a demand for labourers' cottages if there is a little labour?—Well, they are getting an acre of land.

44009. Do you think that is good?—Well, I would not like to give you an opinion. I am afraid it might lead to the establishment of a lot of uneconomic holdings. I am very much afraid of it.

44010. If there is really no demand for labour in this district, is it not a source of considerable danger to encourage people who are not farmers, and who cannot be farmers because there is not land available for them, to continue to reside in the district?—That is my view. I may state that I think the best thing would be to establish some kind of an industry, such as, say, the peat industry. But I think it is a foolish

July 9, 1907.

Mr. Maurice Fitzgerald.

experiment to build very many of them before there is some kind of work started. Of course they are talking of giving the roads to the labourers, but I do not think the roads of this locality could keep such a large quantity of labour. The roads at present are given to a contractor.

44011. Sir FRANCIS MOWATT.—But the contractor employs labour?—No; he has sons. No man takes a contract unless he has sons.

44012. CHAIRMAN.—But the idea is to do it from the County Council direct?—Yes. It has not actually been decided, but it is spoken of.

44013. Most Rev. Dr. O'DONNELL.—Is not it the case that where the number of small occupiers is large the small occupiers take the place of the labouring class?—Yes, certainly. There are lots of occupiers in this country who have not a holding big enough to keep their families employed and who are very well pleased indeed to get work for their sons.

44014. Sir FRANCIS MOWATT.—May I ask you this one question from what you have said: If the roads are at present managed by a resident contractor and his two or three sons, and if it is decided to give those roads to the unemployed labourers in the district, will not the contractor and his three sons then become unemployed?—Yes, but in the majority of cases the contractors are farmers, and I think that every man should live. Of course some of them make a good deal of money. If a man happens to have five or six sons a man can work both as contractor and farmer. Now I come to the question of fisheries. Sea fisheries do not affect this parish of Dromod, though they affect the other parishes very much; but the fishermen of those localities suffer a good deal from the want of proper boats and from the depredations of foreign trawlers.

44015. CHAIRMAN.—Tell me exactly where is the parish of Dromod—are we in the parish of Dromod now?—We are.

44016. And sea fishery does not affect this parish?—No; there is not a man of this parish fishing.

44017. Are there no sea fishermen in this parish?—No. There are, of course, some freshwater fishermen there.

44018. Why do they ask for a slip if there are no fishermen in this parish?—I am just coming to that point. I think there would be fishermen about this locality if there was a slip.

44019. Then the slip is not to accommodate the existing fishermen, but to stimulate the creation of fishermen?—Exactly, and also to accommodate the fresh-water fishermen who cannot fish for salmon and trout in the winter and who can fish in the season. And there is no doubt about it that a slip is very badly wanted here.

44020. Most Rev. Dr. O'DONNELL.—Where precisely?—Well, I am not competent exactly to point out the spot, but I think that on a line with the Protestant Church would be as good a place as any. I think that would be a good centre.

44021. CHAIRMAN.—Then it is hypothetical. What use is to be made of it?—Well, yes, there is no doubt about it that it is hypothetical at present, but I think there is no question at all that a great use could be made of it.

44022. On the principle that it cannot do any harm, and may do good?—I will give one more example of how it could do good. The Cahirdaniel fishermen sometimes catch hundreds and thousands of mackerel just round the headland there, and they have to go all the way round to Derrynane, and the fish has to be carted to Cahirciveen, whereas if there was a landing place here they could bring their boats to the slip

44023. Most Rev. Dr. O'DONNELL.—Then the demand for the slip is in reality to accommodate fishermen in other parishes?—Yes. I should say that to my mind it would be a great convenience to fishermen of other parishes.

44024. You say, further, however, it might accommodate fishermen here if they sprang up. How far is Waterville from the fishing grounds to which the Cahirdaniel people go?—It is about 2½ miles.

44025. The only advantage to the Cahirdaniel fishermen is that they are nearer the fishing ground?—Yes.

44026. The Cahirdaniel people would have that much advantage in catching the fish?—Yes.

44027. But the men here would have an advantage? They would have an immense advantage.

44028. Because when they would be coming home with the fish they would be nearer their destination?—Certainly.

44029. Is it not at Cahirdaniel they land their fish?—At Derrynane Harbour.

44030. Mr. SUTHERLAND.—Does this occur often—the catching of those large hauls of mackerel?—It occurs in the springtime and autumn.

44031. As a regular thing?—Yes.

44032. And there is very good fishing there?—Oh, yes.

44033. CHAIRMAN.—Where is it?—It is between Scariff Island and Derrynane.

44034. Mr. SUTHERLAND.—You have no statistics of catches of salmon or mackerel?—Oh no; but they vary immensely. Three boats at Ballinskelligs about three months ago got a huge haul of fish, and ever since then, unfortunately, they have got very little. Quite apart from the question of fishing altogether I should like very much to see a pier built at Waterville. I think a pier would be of immense advantage to this locality, because the railway rates are very prohibitive.

44035. Boats and steamers could get up?—Yes. The rates add very much to the cost of goods by the time they come from Dublin.

44036. Do you think there is sufficient trade in Waterville to make it worth while for a steamer to come here?—Oh certainly, I think there is. Waterville is getting to be a very important place, and it has practically ruined Cahirciveen; and the Cork steamers used always to come to Cahirciveen; it used to pay them to come; but they have given it up lately. And they used to call at Derrynane, but they have given that up too.

44037. And when they called at Derrynane was it of service to Waterville?—Not in the least.

44038. CHAIRMAN.—Is not Ballinskelligs Bay rather an unsafe bay for a steamer to come into?—I do not think so. I think in the majority of instances they could run in easily.

44039. But they might find it very difficult; might not they; it is not nearly such a good harbour as Valencia?—It has a sandy bottom.

44040. And you would not have lying alongside—would not a vessel lying alongside be in some danger from the strong westerly winds?—I do not think so.

44041. Mr. SUTHERLAND.—Why did the service you refer to stop?—There was some difference. I could not in any way recall the difference to my mind now, but it only occurred three years ago, and it caused the company to stop sending the steamers, and that was a tremendous loss.

44042. But you do not know what was the reason?—No, but I can easily find out later on.

44043. We have heard about it before. Was it of great benefit?—Oh, of tremendous benefit. Why, it is not really worth any man's while to get goods from a distance, because the carriage costs so much.

44044. Where did the steamer run from?—Cork, and ran to Cahirciveen and Derrynane.

44045. And back?—Yes.

44046. CHAIRMAN.—Was she subsidized?—I do not think she was.

44047. Most Rev. Dr. O'DONNELL.—That is a steamer of the Clyde Shipping Company?—Yes, exactly. She was running for many years till only within the last three years; but she has stopped running, and certainly it is a tremendous loss. If anybody gets goods now the railway company can charge anything they like, and they seem to do it.

44048. CHAIRMAN.—Can you say for certain that the rates of the railway company have gone up since the steamer stopped running?—Well, I would not like to make that statement.

44049. Then if you cannot be sure of that, Mr. Fitzgerald, it is only the loss of a steamer, unless it affects the places so far as it enables the railway so to do it if it wishes?—No, my lord, it affects them in another way. Of course the steamer's rates were naturally always far less than the railway company's rates.

44050. Mr. SUTHERLAND.—The rates might have affected the railway company if they had continued long enough?—Oh, certainly. Now I will give an example of that. I got two chimney tops here from Wales about two years ago, and when I had them landed here the carriage was exactly equal to the cost of one of them; that is half the cost of the two. And then if the steamer had been running from Cork I could have got them down cheaper.

44051. Sir FRANCIS MOWATT.—You say you got them from Wales?—Yes.

44052. Mr. SUTHERLAND.—You never tried to find out why the steamer stopped?—I did not, but I heard it at the time. But I cannot recall to my mind the reason. I ought to remember. The inland fisheries in this immediate neighbourhood are very fairly protected.

44053. Sir FRANCIS MOWATT.—How protected?—Protected in spawning; though some of the smaller streams are neglected, and they are in the spawning district; but I think the inland fisheries are as well protected as in most parts of the country. Two large estates have been sold in the last five years, and negotiations are pending for the sale of other estates. There is only one sale to the Congested Districts Board. Lord Lansdowne's estate in the neighbouring parish was sold under the Ashbourne Act, direct to the tenants.

44054. CHAIRMAN.—Is the soil on the two estates fairly alike?—Well, there is a great difference in this respect, that there is a lot of bog on one estate and not on the other. On the Hartopp estate there is none, or very little, and the Congested Districts Board have made a road to the top of the mountain, at very great expense, in order to get at some bog.

44055. Would you say that the Hartopp is better as a property than the Lansdowne sold under the Ashbourne Act?—About the same.

44055A. How do the prices work out?—I think they were practically the same price, as far as I know. I think the Hartopp estate was sold at twenty years' purchase, and I think that was also the price at which Lord Lansdowne's was sold.

44056. You have seen the improvement works on the Burns-Hartopp Estate?—Yes, I have seen some of them and some of them will do a great deal of good. In some of them there is money foolishly expended for fences, as you will see to-morrow going along the road. The only advantage of a fence is to keep cattle and sheep off the road, and of course that cost a good deal of money to build it; and it is a sod fence, built completely of sods, and I noticed the other day a lot of sheep jumping over it and knocking down a good many of the sods, and I have no doubt that in a few years that will be of no use; and furthermore, the people there are very short of turf, and in the winter time they will be very much inclined to go up and take sods off the fence. And then, again, part of the stone portion of the fence is very good and part of it is very bad; I am giving you my humble opinion.

44057. Most Rev. Dr. O'DONNELL.—Do you think that the people on that property could be got to associate for the preservation of the improvements?—I doubt it very much, my lord. They may, but I doubt it. People are not very much given to associating in that way.

44058. Would not a Parish Committee do it?—I should say it would indeed. Of course the Congested Districts Board built a fine road up to the top of the mountain to get at the bog I speak of. I have been speaking to Mr. O'Connell, of Derrynane, who knows the locality very well, and he says it will never pay the cost, because it is a rather inferior bog and the road will cost an immense amount of money.

44059. But is not it almost indispensable to provide the people with fuel?—Well, of course they will have to be provided with fuel, and there is abundant turf in this parish if there was any means of locomotion.

44060. Not on the same estate?—Not on the same estate.

44061. Mr. SUTHERLAND.—Did you ever see so much improvement made in the same space of time by a landlord before in this locality as there has been made by the Congested Districts Board on this estate?—Oh, never. I never did. I cannot agree with the evidence given by my friend, Father Kerin, as regards his writing to every landlord and agent in the locality to only sell to the Congested Districts Board. I happen to look after a very small property in his parish, and he wrote to me. I think Mr. Thomas O'Donnell, M.P., sent round a circular to ask the parish priests to write to the landlords and agents to know would they sell to the Congested Districts Board. I had just been negotiating with the tenants as to the limits of the terms they could get, and when Father Kerin wrote to me I wrote back that I could not see my way to offer any better terms than I had given to the tenants, and therefore I thought it was useless to sell to the Congested Districts Board unless they were prepared to give the same terms; but I very much doubt any landlord would have any objection to selling through the medium of the Congested Districts Board, that is agreeing on a price with the tenants and then selling through the medium of the Congested Districts Board instead of through the medium of the Estates Commissioners.*

44062. CHAIRMAN.—That is with respect to the price?—Yes.

44063. It is your opinion that if they sell to the Congested Districts Board they will not get as good a price as if they sold directly to the tenants?—I will explain what gave rise to the idea, which I think is a very just one, that no man is as good a judge of the land as the man bred up in the locality, and that certainly, no matter how expert the inspector sent down by the Congested Districts Board may be, he cannot form as good an opinion of the value of the locality as the man who has been reared in it. And I will give you a very good instance of that. There is an island now at Derrynane that you were speaking of to-day, and if an inspector were sent down to value that land he would not value it at a shilling an acre. It is an island of about 100 acres. Well, that is some of the best land in the whole parish. When cattle are put on that land you will simply not know them in two months. Well, a stranger to the locality could not tell that.

44064. Why?—Well, I cannot explain the reason, but I know that I myself did not believe it until I actually had experience of it; and I just give that case in order to point out to you how impossible it is for a stranger to value land in a locality so well as a native.

44065. Sir FRANCIS MOWATT.—In making a comparison between the stranger and the man bred on the spot, are you alluding to the landlord as the man bred on the spot, or are you alluding to the tenant?—To both.

44066. To both?—Yes. I know I would rather leave it to one of the tenants in the locality of the property than to any inspector. Of course he should be an unbiased and a fair-minded man.

44067. Mr. SUTHERLAND.—And the landlord should be the same?—Oh, I thoroughly agree with you. I am a man of no politics at all.

44068. That is not politics?—I mean I hold no political views.

44069. Political views do not influence personal interests?—Well, they have. They do, excuse me, sometimes. I think I was asked to bring out this point also, and it personally affects me. I am prevented by law from selling to my tenants. In this locality when a man is willing to sell to his tenants at a reduction of, say, 5*s.* to 6*s.* in the pound on second term rents, I do not think compulsory powers can be necessary in this district.

44070. Most Rev. Dr. O'DONNELL.—That would be a higher rate of purchase than prevailed before 1903?—Five to six shillings in the pound would work out to about twenty-five years.

44071. Or perhaps a little less?—On second term rents. There were very few second term rents that were sold before the 1903 Act.

44072. Five shillings is 22½ years' purchase, and six shillings is 21½?—Yes. Of course that would be something higher, but that would be just the object of the 1903 Act. Because if all the land had been able to be sold under the Ashbourne Act there would have been no necessity to have any 1903 Act. I understand that it was really for the benefit of the poorer landlords that the Act of 1903 was passed.

44073. But might not the landlords have sufficient inducement without putting up the price of the

* *Note by Witness.*—I wish to correct one statement I made in reply to Mr. Sutherland, viz:—that the Congested Districts Board had done more work on the Burns-Hartopp Estate than the surrounding landlords had done on their respective properties. I quite forgot that the landowners in this locality had expended a large amount of money in improving their properties in the past. My own father spent £3,000 between 1855 and 1887. D. O'Connell, Derrynane Abbey, spent about the same amount between the years 1860 and 1882. The late Sir Maurice O'Connell and his father built several houses for their tenants.—M. F. *9th July*, 1907.

July 9, 1907.

Mr. Maurice Fitzgerald.

land? Is not there a bonus?—There is a bonus, certainly.

44074. He clears off mortgages?—But, you see, in a great many instances the landlords are poor men, and they could not possibly afford to wait five or six years for their money, which they have now to do. I have no hesitation in saying that if they could get their money in twelve months all the land here would be sold to-morrow.

44075. It is the delay then, and not the price, that does it?—The delay means an immense lot.

44076. Mr. KAVANAGH.—The delay prevents the sale?—Yes. In fact in one case a gentleman in this locality could not possibly afford to sell. He told me yesterday that he would be most anxious to sell if he could get a guarantee for the payment of his money in twelve months, but if he could not get that it would be absolute ruin. But, unfortunately, at the present day there seems very little chance of getting the money. In fact owing to the depreciated money market on the Stock Exchange it seems almost impossible.

44077. Most Rev. Dr. O'DONNELL.—One advantage in securing the money now would be that if it were available for investment it could be invested to good advantage?—Well, that would be certainly a great idea, but of course some men it would not affect in other parts of the country as much as it would the landlords in this part, because, of course, the poorer the district the poorer the landlord is.

44078. On the point of price, do you think the owners generally in this locality would be willing to follow the precedent set some years ago in the sale of the Burns-Hartopp Estate to the Congested Districts Board?—That is, twenty years' purchase?

44079. Yes?—To what reduction would twenty years' purchase correspond?

44080. Twenty years' purchase would be 7*s.* in the pound?—Well, I do not think they would be willing to give 7*s.* in the pound on second term rents which have been fixed by the Land Court; and I certainly think that 5*s.* 6*d.* or 6*s.* would be excellent terms on rents which were fixed by arrangement, because in most cases here in which tenants have got two reductions their rents have been cut down one-half; and a man paying £10 a year in 1880, who has since got two reductions, is now paying £5, and if he got 6*s.* in the pound that would cut it down a great deal.

44081. Of course the second reduction would be on a smaller sum?—It would of course, on £7 10*s.* instead of £10. But in the majority of cases the rents have been cut down one-half by the two reductions.

44082. Do you not think that the owner would be well off if he could receive the money right away at twenty years' purchase, for he then might have the bonus and clear off any mortgages and invest any surplus that remained in his hands?—Well, if you ask for my opinion, I would be very glad to take it, my lord; but I cannot answer for others; and it all depends. Perhaps I am delaying you too long, but I just want to bring out one point, that is, the hardship under which landlords like me are suffering. We are getting squeezed out of existence both ways.

44083. You are a middleman under Trinity College?—No, under Mrs. Trent Stoughton; and of course I have to bear the brunt of all the reductions, and I have to pay the head rent the same as if there never had been a reduction. And furthermore, I cannot sell, as my lease is not sixty years absolute, although it is fully equivalent to a sixty years' lease. But under the Act of 1903 you cannot sell with less than sixty years. She has given me permission to sell, but I would have to redeem the head rent in cash, and that I could not do. It would be absolutely impossible.

44084. Sir FRANCIS MOWATT.—Could you not redeem it out of the purchase money?—No; I would have to redeem it first. If I could redeem it out of the purchase money that would be all right. And I certainly think that that is a grievance, and I am very glad to have this opportunity of bringing it out with reference to the position of middlemen in Kerry. On a recent occasion a witness stated that in his district that tenure of land was the worst imaginable. Well, I cannot see how the tenure of land has affected the rents of the tenants, but it affects the unfortunate middleman very much indeed.

44085. Now, take the case of yourself. The head landlord has no power of negotiating a sale?—No.

44086. It is the middleman?—Yes. The head landlord could not negotiate a sale to the tenants, and the middleman could not negotiate a sale to the tenants without the head landlord's consent and without redeeming the head interest.

44087. Mr. KAVANAGH.—The head landlord could sell to you?—Certainly, of course, and he would be willing to do it, but I would have to redeem him in cash, and that would be a serious matter—a matter of £5,000. You have to wait for the money if you sell to the tenants, but it appears that you have to redeem in cash the head rent.

44088. CHAIRMAN.—But supposing there was no delay in getting you your money from the Land Commissioners, would it be possible for a middleman in a case like yours to borrow from a bank the money that was necessary to redeem the head interest if he was sure of getting the purchase-money quickly?—If I could be absolutely certain of getting the purchase-money in twelve months I would not have the slightest difficulty in borrowing, but if it went on for five years the interest on the £5,000 would swamp me.

44089. Mr. SUTHERLAND.—You are referring to the dealing with the head landlord now?—Yes.

44090. What is it you would purchase?—I would purchase the head rent and then become the owner in fee. But of course in any case it would be a matter of negotiation between the head landlord and myself as to what price I would give; but if my lease extended more than sixty years if we did not agree the price would be fixed by the Land Court.

44091. And would you get public money under the law of 1903 to buy that?—No. I should have to redeem it.

44092. Most Rev. Dr. O'DONNELL.—But that does not apply in the case of a lease like yours?—It does not apply in the case of a head rent under a lease of less than sixty years. I know it is in my case a lease of forty-one years after the present Knight of Kerry's life, and I think it is very hard lines on a man who has lived all his life in Ireland, and amongst the people, born and bred.

44093. CHAIRMAN.—It is not for me, Mr. Fitzgerald, to interfere in your business, but I think it might be worth while looking into that again, and seeing whether you are right. Our information is rather in the opposite direction—that the head landlord can be paid out of the purchase money?—I know that in this case I am absolutely correct, my lord. I can show you counsel's opinion on that.

44094. Mr. SUTHERLAND.—Then you take up all the functions of the landlord towards the tenants?—I take up all the functions of the landlord towards the tenants.

44095. And they would have to purchase from you?—They would have to purchase from me. I am debarred from selling to them through the Act of 1903.

44096. In your present position?—In my present position.

44097. Most Rev. Dr. O'DONNELL.—Are those negotiations with the head landlord going on still?—I started the negotiations with the head landlord as far back as three years ago; but then the necessity of providing the money in cash stopped the whole thing.

44098. Would you have closed as to terms with the tenants before you closed with the head landlord?—Well, in my case I had no negotiations whatsoever with the tenants, because the head landlord laid down a certain fixed price that you will excuse me from mentioning now, because it was a private matter, and that I had to agree to, and I was willing to agree to it if I had power to sell to the tenants, because I think that the sooner a middleman gets out the better. I have just jotted down a few suggestions, which perhaps you will allow me to offer as to remedies. These are the remedies I would suggest for this locality. First, that the Board should send down agricultural machinery for hire. Second, compulsory power of spraying potato crops. Then a large supply of the best basic slag to be sent by steamer and sold at cost price. The beneficial effects of lime upon land are well known, and my experience is that basic slag, which contains 38 to 42 per cent. of phosphate of lime, is far better.

44099. Mr. SUTHERLAND.—Is it for bogs?—For bog or earth. It affects bog far more than it affects earth. It will act very suitably indeed with boggy land. In fact I understand it was manufactured in the first instance for that kind of land.

44100. I think it was an accident; but I want to know whether it is of more benefit in boggy than in clay land?—Yes, of far more benefit.

44101. And it is better than lime?—Yes, far better.

44102. It disintegrates the bogs?—Yes; and I really think that if basic slag was introduced it would lessen tillage, because it is far better adapted to certain classes of land than tillage is.

44103. Sir Francis Mowatt.—What is the price of basic slag?—Well, the Department of Agriculture, and Mr. M'Carthy, the representative of the Department, buy the very best basic slag in Tralee at £2 15*s.* a ton. But I think they only get it at that price thinking they would buy a large quantity; but the general price would be about £3 a ton.

44104. Chairman.—Is there such a thing as Irish basic slag—is there basic slag in Ireland at all?—No.

44105. There is no means of getting it in Ireland?—I think you could get the very best basic slag.

44106. Mr. Kavanagh.—What would you say about the cost of lime compared with basic slag?—I should say it would cost at least as much, if not more.

44107. £3?—Yes.

44108. Sir Francis Mowatt.—Ton for ton basic slag would have a greater effect?—Oh, far and away, to my mind; but that is only my humble opinion. I have tried it over, and I have found it better. Then the fourth suggestion is that a really good breed of cattle should be introduced into the locality. The bulls which the Congested Districts Board sent down were very inferior, and I believe that in some cases there were bulls which actually had been produced in this locality and fattened up.

44109. Most Rev. Dr. O'Donnell.—When was that? Well, they have been sending them here for the past fifteen years.

44110. Not for the last three or four?—Well, bulls were sent down to us two years ago.

44111. It could not be by the Board. It might be by the Department?—Oh, certainly. I think they have an idea that no bull can be any good for this locality except a Kerry bull. But I think that is not so. I would suggest a Polled Angus bull.

44111A. Mr. Kavanagh.—We had a witness yesterday on the subject?—I have had shorthorn bulls for the past seven years and they did sell very well.

44112. You have no Galloway bulls?—Yes, we have Galloway bulls in our district. We have very good cattle, and they sell very well. I have been informed that the two-year-olds do not sell so well.

44113. Sir Francis Mowatt.—They do not grow; they do not fill up?—They do not grow. The Polled Angus are not so good as yearlings, but they turn out very well afterwards, and that is why I say Polled Angus are the best for this locality.

44114. Chairman.—You want, rather, bulls that would give you stock that would sell well as yearlings?—Well yes, a lot of people could sell them as yearlings, but a good many keep their cattle till they are two years old.

44115. Mr. Kavanagh.—This is a dairy country?—I was just coming to that. We have altogether a dairy county, but really some of the milch cows here could hardly be called milkers at all, because there is no attention paid to breeding or anything else. You choose the worst heifer for breeding, and you take her to Cahirciveen and sell her, and she costs as much to feed.

44116. Chairman.—And you recommend the Polled Angus to be imported into a dairy county?—Well, I would recommend that none of the breed reared in this county should be kept in this county; because if they are kept in the county you will never get a good milking breed, and I would suggest that they be imported from some other part of the country where a good strain could be introduced. I do not know how the thing could be worked out. I am afraid it would be rather complicated, but I dare say you understand my idea.

44117. Most Rev. Dr. O'Donnell.—Let us compare what you have stated about these animals with the statements made by a witness yesterday, to which Mr. Kavanagh referred. Did you state that the Congested Districts Board sent down a Kerry bull?—Yes.

44118. Yesterday this witness told us that the Kerry bull has no show with the Congested Districts Board. You say that the Galloway suits the district. This witness yesterday told us that the Congested Districts Board had done a great deal of harm by bringing in the Galloway?—I think I know the witness you refer to, because he wrote a letter at the time the Galloway was introduced, abusing the Galloway bull. I mentioned that the Galloway bull was the best introduction we ever got into this country, and I have had practical experience of it, and I mentioned that two cattle dealers came down specially last year to fairs for Galloways, and they could not get them, and in fact the supply was not half equal to the demand. Then I suggest that the Agriculture Department's instructor should be given compulsory powers to use as many plots as he might think fit for experiment every year in each parish, and that power should be conferred on the Board to buy at public auctions if they thought it necessary for the extension of holdings any farms that might be from time to time for sale here. I do not know that they would be prepared to pay the price they would go to at an auction, because they go to very high prices in this locality.

44119. Chairman.—That is in the district alone?—Yes. Then I suggest that estates in congested districts should get precedence of others as regards payment. I think that is only a fair suggestion, because as I said before, the Act of 1903 was admittedly introduced for the benefit of landlords in poorer districts, and it is the rich landlords that have taken up all the money.

44120. Do you know who was the first big landlord that sold?—Well, the first big landlord was the Duke of Leinster. But I said the Act of 1903 was intended to be for the benefit of the poorer landlords, but that it is really the richer landlords that gained the benefit.

44121. Most Rev. Dr. O'Donnell.—Do you say that it was for the benefit of the poorer landlords in the congested districts that the Act was passed?—Yes.

44122. Do you not say that what carried the Act through was that it was to be made an instrument for the relief of congestion in the poorer districts?—Well, I could hardly go as far as that. I am not in a position to go as far as that; but I would say this, that it was passed to enable the landlords in the poorer districts to sell.

44123. Do you remember that it was ever said in Parliament that the Act was for the benefit of landlords in the poorer districts?—No; not at all, but it was mentioned ultimately, and there is no question about that, that the point was that the landlords in the poorer districts were not in a position to sell without this Act.

44124. Was it then on the wings of the policy of improving the condition of small holders in the congested districts that the Act was mainly carried?—Well, yes. I should say that is so. Well, my eighth suggestion is that head landlords and Government charges, such as Board of Works, should suffer *pro rata* with the loss incurred by the middleman on the sale of a property. I do not see why all those charges should be redeemed in full. And the Attorney-General for Ireland, Mr. Cherry, I think made a statement in the House of Commons twelve months ago about how harshly Irish middlemen had been treated in the last twenty years. And the last point is, in every parish to have, if possible, one of Lady Dudley's nurses. I think if that could be managed it would be a very important thing.

44125. Most Rev. Dr. O'Donnell.—Besides the actual nursing, is it your opinion, Mr. Fitzgerald, that a nurse in the locality is an educational influence by showing the people in the houses something of the way in which sanitation should be attended to?—Exactly; and a great many of them are in want of such education. Now, I will give you a very amusing instance of that. There was a case of typhus, one case of typhus, in the parish some years ago, and there were some disinfectants taken down, and the household drank the disinfectants.

44126. Chairman.—And then there is the question of money?—Of course, I understand that if everything that was recommended were to be done, it would cost a good deal. There is one statement I made earlier in my evidence that I wish to correct. I said that the tillage on a farm containing the grass of six cows would be five acres. It would be nearer the mark to say four acres.

July 9, 1907.

Mr William J. Delap.

Mr. William J. Delap examined.

44127. Chairman.—You appear on behalf of the landowners?—Yes.

44128. Have you any land yourself?—Very little. I manage a good many estates in this district.

44129. For Trinity College, I think?—Yes; I have been managing estates in this district for the last nineteen years.

44130. You were present at our proceedings in Caherciveen?—Yes. In County Kerry there is very little land available for enlarging small holdings, and what there is is chiefly rough mountain, which is entirely unsuited for tillage, and only suitable for young cattle during the summer and autumn months; even of this, there is only a limited quantity, as nearly all the mountain grazing is held as an easement with the lowland takes.

44131. Sir Francis Mowatt.—What is the lowland take?—I mean the part suitable for tillage. The tenants at the foot of the mountain will generally hold an undivided easement on the mountain in proportion to what they hold separately. In my opinion not less than a rateable value of £8 to £10 would constitute a holding sufficient in itself to support a small farmer and his family. The introduction of strangers from a distance would always create jealousy, and in any case would not be practicable in Kerry, as there is, practically, no land to which they could be transplanted.

44132. Chairman.—Of course you are speaking entirely for Kerry. Have you any means of knowing whether the introduction of strangers to other counties in the South of Ireland would be resented?—Well, I have a good knowledge of the County Galway, especially the eastern parts of it, and I am certain it would be impossible to introduce strangers there. What I mean is that it would create desperate jealousy in the locality and opposition—physical opposition.

44133. Mr. Sutherland.—But seeing that there is no land in Kerry, the question does not arise?—No, sir, it does not. In my opinion it would be exceedingly difficult to induce occupiers of small holdings in congested districts to migrate to other and distant counties; the inducements to do so would have to be very tempting, and even a very tempting offer would hardly uproot them.

44134. Chairman.—That is assuming that they would not go?—It is more of a sentimental feeling.

44135. Mr. Sutherland.—But it does not exist in Kerry?—Oh, yes. I am referring to transplanting.

44136. But this difficulty does not arise in Kerry at all?—If you wanted to transplant men from Kerry to a distant county you would hardly get them to do it.

44137. Chairman.—If a man who was living with great difficulty in Kerry was offered a holding on which he could live in much greater comfort in another county, you think that the sentimental objection would be so great that he would not be willing to take advantage of that offer?—I do.

44138. Mr. Sutherland.—You have had experience of it?—I have been twenty-five or thirty years in the County of Kerry.

44139. Chairman.—You have never been asked to do that?—No.

44140. Mr. Kavanagh.—Would not example do it?—If you had induced a few to do it, their example would affect others.

44141. There is not the same thing about emigration?—Yes. Whole townlands were transplanted abroad in the famine years; but now almost every person you speak to in this district would have friends and relations in the States or in Canada, and it would not be the same thing as to get him to go to the County Leitrim, for instance.

44142. Chairman.—In these cases, the first plantation would be the difficult one, but after a few pioneers had migrated, it would be easy?—I think it would, but it would take a great many years. There would be no use migrating tenants from the congested districts in Kerry to any but pastural districts, as hardly any crops are raised beyond what are necessary for home consumption. Dairying, and the raising of young cattle is their chief business.

44143. Is that the reason why you say the rough land is not suitable for tillage?—It is, to a great extent.

44144. If, therefore, those people were put upon land which was suitable for tillage, is it not presumable that they would till more?—It would take a couple of generations to bring them round to that.

44145. But is that any reason why the Board should not undertake the experiment really—that because there might be difficulties to be overcome in the first instance, for that reason the Board should deliberately refuse?—No, I think not; but I think the plan should be tried of educating them to a certain point as to tillage.

44146. How can you do that if the land is not suitable for tillage?—It is more suitable for pasturage certainly.

44147. Most Rev. Dr. O'Donnell.—There is a good deal of land in the district reclaimed land?—Yes, reclaimed from the bog, a good deal of it.

44148. Does not reclaimed land require to be tilled from time to time?—Yes.

44149. And that is the only way of preventing it from returning to its original condition?—Yes. In my opinion, even given willing migrants, the migration of occupiers from the Congested Districts to any extent would be an extremely costly business, as in almost every case homesteads, offices, and fencing would have to be provided for, and in a great many cases assistance would have to be given towards stocking the new holding. The tenant's interest in the holding from which he migrated might be set off as against the interest he acquired in the holding to which he migrated, though of course the interest in the latter, owing to its greater extent, would be much larger.

44150. Have you at all followed the career of the people who have been already migrated by the Board?—From hearsay, but I do not know by experience.

44151. Would you be surprised to hear that they have in the great majority of instances succeeded well?—Well, I would. The farms that I have seen certainly were being worn out by meadowing and conacre.

44152. On which those migrants had been put?—Yes.

44153. But are not the first years extremely difficult in these cases?—Yes.

44154. It would not be necessary that because meadowing and conacre were resorted to in the first year they should be resorted to in after years?—No, it would not; but unless capital is provided for those people when they are first transplanted their only means of living is to run out the farm, and that, of course, affects them for years after; and if you have to stock the farm as well as provide the farm and build a house it becomes a very costly business.

44155. Unless on the loan system?—Yes, but that, of course, burdens the man.

44156. Might not it be a very beneficial thing for the occupier to have money to stock the land on a system that would enable him to repay the amount in five or six years?—Oh, yes, certainly. Of course a loan of ready money in the first instance would meet the whole thing.

44157. Would that meet your point?—Yes, it would as far as the stocking of the land is concerned.

44158. You will not also be surprised to hear that on surrendering a holding the migrant, after getting an enlarged holding, sometimes pays a little to correspond with the value of the improved tenant-right?—I can imagine that being done very well. It would be absolutely necessary that migrants should be taken where they could carry on the system of farming to which they were accustomed; otherwise serious delay would take place before they could learn a fresh system, and meanwhile their new holdings would be seriously run out by a system of meadowing or conacre.

44159. Mr. Sutherland.—And then they would fail of course?—Likely. I am quite satisfied that if a fair price were offered compulsion would be quite unnecessary; hitherto the difficulty has been, as far as I can gather, that a fair price was not offered. There is very little land in owner's occupation in Kerry that would be suitable for taking up, either to enlarge holdings or to migrate occupiers from congested districts, but I know of such lands in many different counties which could be acquired readily if a fair price were offered. The introduction of strangers during the negotiations for a sale would undoubtedly

upset the sale as also would the compulsory taking of grass land.

44160. Sir FRANCIS MOWATT.—Do you mean the introduction of strangers?—Supposing I were to try to sell an estate in the County Leitrim on which there were grass lands available for migrating tenants from this county, and if the land was bought by the Congested Districts Board or the Estates Commissioners and divided up to the migrants from here, I should be very much surprised if the sale under that arrangement would be peacefully carried out

44161. CHAIRMAN.—Of course we have had evidence on this subject, but all that assumes that you have not satisfied the local claim. What you mean by this is that if grass land were purchased in Leitrim, and Kerry men were put upon it, the uneconomic holders in Leitrim would feel a grievance?—No, not only the uneconomic holders, it is not merely that, but I maintain that even the larger holders would feel themselves aggrieved by strangers being brought in.

44162. But the economic holders of land would not be supported by public opinion?—No, the jealousy would extend.

44163. That jealousy never would express itself, and never could express itself?—It is expressing itself very strongly in the grass lands with reference to cattle.

44164. Have you any reason to suppose that a demand from big men for more land would be supported?—I have. I am of opinion that the breaking up of any land which will carry good permanent grass is most undesirable, as I look upon the cattle trade of this country as our most valuable asset, and the breaking up of the large grass farms in the grazing counties would undoubtedly damage the trade in young cattle, on which the tenants in congested districts in the South mainly rely for the realisation of ready money. The practice in the trade is, roughly speaking, as follows:—Calves are bred and reared from 1½ to 2 years, and are then sold to dealers, who pass them on to the better grass lands in the midland and home counties, whence they are again passed on to fattening lands of stall feeders. I manage a large farm on the Butler estate here which will well illustrate the practice in the cattle trade from the congested districts in Kerry. At the local fairs I buy young stores of a year to a year and a half old, and when they are about two years old I send them on to another farm near Ballybrophy, where they are made up to a point when they are fit for fattening, and they are then sold to be finished, either by men who make a practice of stall-feeding, or for fattening lands in Meath and Kildare. These stores I either breed myself or buy from the occupiers in the congested districts, at from £4 to £4 15*s.* per head. When they go to Ballybrophy (which is medium land) they are worth £5 to £6, and after six or eight months there they fetch £8 to £9.

44165. Where is Ballybrophy?—It is the junction for Parsonstown.

44166. What county?—King's County. This is a system which would be hopelessly disorganised if the grazing lands in Queen's County, King's County, and Roscommon were divided up into holdings of, say, 30 acres each. I have had various estimates given me of the reduction which this breaking-up would effect in the carrying powers of such lands, and I am inclined to believe that it would reduce the carrying power by 25 or 30 per cent. The carrying power of 100 acres statute of medium grass-land would be about 30 head of two-year-old stores. If this were divided into three farms, the tillage required by each would amount to about six or seven acres, the meadowing about the same, the house and offices would occupy close on an acre; say 13 acres in all, leaving about 17 acres of pasturage, which would carry at the most four or five young cattle up to two years old. Thus it will be apparent that 100 acres divided as above would reduce the carrying power by half. Probably less tillage would be required, so that I am inclined to think that the carrying power would be reduced by at least 30 per cent.

44167. Sir FRANCIS MOWATT.—The carrying power for cattle?—I want to put before the Commission the effect it would have on the cattle trade.

44168. Most Rev. Dr. O'DONNELL.—Just allow me to put this question. I notice that on this farm of yours at Ballybrophy the cattle are kept till they are disposed of either for stall-feeding or for being finished on lands in Meath and Kildare?—Yes.

44169. Now, would not that avenue, the stall-feeding one, be greatly widened if some of the land in Meath and Kildare were put under tillage?—The most of the lands to which the cattle are sent in Kildare are tillage. That is, they produce the stall-feeding material—the fattening material.

44170. Are you of opinion that there are wide areas in Meath and Kildare that would be much more productively employed under that system than in grass?—Oh yes, that would be very much better in tillage than in grass.

44171. All the land in Meath and Kildare is not prime land?—No.

44172. Take this second-class land, and suppose it was broken up into moderately-sized farms? Would not the avenue of stall-feeding be greatly widened—if it was broken up into farms of thirty acres or thereabouts?—In what way?

44173. This way, that the thirty-acre farms would have as much tillage as would enable them to feed a good many cattle?—No; they would not be able to feed more than six or seven head of cattle in the year.

44174. But with the green crops grown in the tillage area could not they during the winter feed beasts beyond the number now stall-fed?—They would not do it to the same advantage as the man who would stall-feed forty or fifty head of cattle in the house.

44175. That might be; but do you not think that the result of the system would be that for such cattle as you send to your farm there would be a demand which does not now exist?—No; I don't think there would.

44176. In the district in which these cattle of yours are finished, if you broke up some of the second-class and third-class land and put it under tillage you will have the green crops that will produce food sufficient for stall-feeding?—It might increase the demand for cattle if it were used for stall-feeding.

44177. Would your objection to breaking up the grass land be removed if the best class of fattening land were spared?—No. I think it would disorganise the system if the second-class land was broken up.

44178. How is that?—Because it is direct to there that the cattle are taken from the congested districts. You see that there are two ways of fattening. There is land that will fatten cattle itself, and there are other lands which produce fattening stuff; and, of course, if you reduce the number producing fattening material it may somewhat increase the demand for cattle; but you must have the second-class land intact so as to keep the cattle that are fit for fattening.

44179. With a system of intermixed stock and tillage they could be fattened by the small men?—That would be hanging up their capital for a longer time, and under existing circumstances that has been rather a disadvantage. The sooner you get rid of the cattle the sooner you get the money.

44180. Mr. SUTHERLAND.—If they got the land on which that was done, could not they do the same thing as they do now?—When they would take it up.

44181. Most Rev. Dr. O'DONNELL.—The character of the stock would have a great deal to do with the matter?—It would.

44182. And the improved system in the tillage areas?—Yes.

44183. CHAIRMAN.—Why could not a man who was disposed to fatten cattle in Meath or Kildare take the cattle direct from the congested districts?—Because they would not be sufficiently advanced to fatten.

44184. Why? Do you hold that it is necessary for an animal to get to a certain age before it can be fattened?—Yes. I think the animal should be fully grown before it could be fattened.

44185. Is not it the fact that in other countries the fattening process is taken a great deal earlier than it is in Ireland?—I have no experience of it.

44186. Have you never heard it suggested by agricultural experts in Ireland that there is a great deal of loss owing to the fact that the growth of the beast is allowed to take place before the fattening is begun?—No, I never heard it.

44187. Mr. SUTHERLAND.—You are not aware that veal is greatly superseding beef?—No, sir, I am not.

44188. CHAIRMAN.—Do you believe it is impossible to fatten an animal at two years old, and have prime

July 9, 1907.
—
Mr. William J. Delap.

beef at two?—Well, I take it that you will not have the same beef from such an animal as you would have from an animal of two and a half or three years old.

44189. Mr. SUTHERLAND.—But then it might take more to produce that in the longer time?—Of course it takes a longer time.

44190. And then it would be tougher, would not it?—Well-fattened beef would not be tougher at three years old.

44191. But you are not aware of the tendency to shorten the fattening time?—No; but I know that as long as my experience goes back the same rule has held in this district, that you are bound to get rid of them after a year and a half or two years old.

44192. CHAIRMAN.—Are you aware of any case where men will buy young stock and by stall-feeding fatten them up to the point of prime condition at two years old?—No, sir, I have not that experience or any knowledge of that. In my opinion, it is pure nonsense to suggest that the middlemen—by which I mean the grazier of the medium lands—should be done away with, and that the small farmer should fatten his own cattle. In the first place, he could not keep more than about forty per cent. of the cattle he now keeps, and he probably has not the land suitable for growing the necessary crops for fattening, and to buy artificial feeding would be ruinous. The present system has grown out of the requirements of the trade, and it would be a very dangerous experiment to tamper with it to any great extent.

44193. May I just ask you, as a general question, have you any knowledge of systems other than the present system in Ireland?—No, I have not.

44194. So that you are speaking from a knowledge of the present system in Ireland, but without having the power of comparing that with the system in any other country?—No; that is quite true. The way in which small tenants would be likely to use new holdings would entirely depend, of course, upon their past training and the nature of the land to which they had migrated. It would be useless to migrate men who had been accustomed to cattle raising to land suited for tillage, and *vice versa*. If they were not provided with capital, as already suggested, they would proceed to run out the land at once by meadowing or conacre. I wish to say with reference to the price of lime, as several questions were asked about it, that the price of lime in Kenmare is 1*s*. 3*d*. per barrel of 33 gallons. In Killorglin it is only 30 gallons; and the last price I heard for lime was 1*s*. 2*d*.

44195. In Kenmare it is 1*s*. 3*d*.?—Sometimes 1*s*. 6*d*. and sometimes 1*s*. 3*d*., according to the trade.

44196. Trinity College has got many tenants round there?—Yes.

44197. Has it ever been discussed whether Trinity College might not import lime, as you have lime round there, from Kenmare in a ship and sell it at some central station like Cahirciveen at a lower price than it could be done now?—That was suggested on one occasion by myself, and the College authorities found a difficulty in undertaking any trading operations.

44198. Did Trinity College consider it a trade operation to bring lime from Kenmare for the use of their tenants?—Yes, at that time they did. Lacemaking is being taught with great success in several convents in my district, the young girls being taught in large numbers to do lace and crochet work with marked success and very considerable advantage to themselves. The spinning and weaving of homespuns is also carried on to a small extent, and would pay well for further development. The fishing industry round the coast has been very greatly aided and developed by the Congested Districts Board, both by the introduction of better boats and better landing facilities. I am not able to give figures as to the results of the lace works. There are unlimited quantities of the finest sorts of building stones in almost all the congested districts, and I believe, with capital available, a profitable industry might be made by working them.

44199. Have you any particular reason for saying that?—Yes, I know this county very well

44200. But has it any great quality which would enable it to compete with other places?—For a great many years the slate quarry in Valencia was worked with great success. What killed it was that the old machinery had become worn out and the company had not capital to buy new machinery.

44201. If the company had been paying would not they have been able to get the money from the bank?—They seem not to have been able to obtain it.

44202. Mr. SUTHERLAND.—Take the slating of this house, where would it come from—is it Irish?—I am not sure. You notice that they are always rather slighter, and the Valencia slate is not suitable for roofing except for a small district.

44203. Most Rev. Dr. O'DONNELL.—The Valencia slate requires strong timber?—Yes.

44204. Or requires a pointed roof?—Yes.

44205. Mr. SUTHERLAND.—It does not split thin?—No, it does not.

44206. Do you include building stone in that?—Oh, yes; there is an immense extent of old red sandstone at Dingle.

44207. But the Waterville Hotel has been built of concrete?—I believe so.

44208. If the stone was suitable why was it not used?—Because lime is not convenient here, and it is much easier to build with cement, and concrete is the readiest means of using cement. And that is why the use of the concrete building has taken such a hold here.

44209. Cement is expensive?—But it goes a long way.

44210. CHAIRMAN.—Is it not a fact that in these days, speaking generally, once it can be shown that there is a possibility of any industry succeeding capital can be found?—Not in this country, however.

44211. What are the reasons that induce Ireland to differ from any other part of the world?—The insecurity of property.

44212. Property was insecure before the Act of 1881, and it was done?—But look at the time before that.

44213. If you go further back till property was very insecure, very well?—That insecurity in the country led to the want of capital. In the early years of the Congested Districts Board's work, the Rev. Mr. Green brought boats, nets, and men from the Valencia district to the neighbourhood of Clifden and Cleggan in County Galway, to teach the people there the system of mackerel fishing by means of seine nets, with the very best results. I would suggest that the Galway and Sligo districts should be requisitioned to teach the making of kelp in the Kerry districts.

44214. Sir FRANCIS MOWATT.—Is there a supply of kelp on the coast of Kerry?—There is an abundant supply of kelp along the shore in all directions. I know County Donegal for a great many years, and there kelp was burned which fetched a very good price, and it seems to me that almost the same conditions hold here. Re-afforesting also ought to be undertaken seriously before all the available land for the purpose passes out of the market, and I think this ought to be taken up by the Government, as it will one day be a national matter, owing to the increasing shortage of timber from outside sources. I would call the Commissioners' attention when passing through Cahirciveen to a small planting which surrounds a residence on the opposite side of the river from the village, where the effects of the westerly and north-westerly storms coming in from the open sea are very clearly illustrated in the growth of the trees. They will notice on the western side of this demesne, where there are breaks and inequalities in the demesne wall, all these breaks are shown clearly in the growth of the trees, and I can show them also a similar instance in a small planting at Waterville. It is absolutely necessary in planting trees near the seaboard that they should be in a position which is completely sheltered from the direct force of the Atlantic gales. These storms come in laden with spray, and during the winter all the previous season's growth which is exposed to them is killed. On the other hand, glens which lie away from the sea, or are well sheltered from it, will grow larch and spruce very well indeed. I would instance a small plantation which I have been making by degrees for the past eleven years, opposite the village of Kilgarvan, on the railway between Headford and Kenmare, where I have been cutting out patches of stunted natural oak, and planting larch and spruce, with the very best results. I find it very difficult lately to get young trees in this country.

44215. CHAIRMAN.—I think that unless the Commissioners want to ask you any question on that you may pass to the next subject?—It is very hard to

arrive at what should be the fair price of the dual interest of land; that is to say, land in the owner's occupation which would be suitable for the purpose of the Congested Districts Board. I have read with great interest the evidence given by Mr. Boyd, Mr. Doran, Mr. Finucane, and others on this point, and while I think Mr. Boyd's estimate is too low, I think it might very well be taken as a minimum. Mr. Wrench, in reply to questions, Nos. 14535 and 14549,* gives the price roughly at one and one-third more for untenanted than for tenanted land. This is the figure that Mr. Boyd suggests. Mr. Finucane appears to put rather a higher value on the dual interest, but I have not been able to gather from his replies to the questions that he had any very clear idea of why land in owner's occupation ought to cost more than if it was occupied by a tenant. That the occupation interest is a very valuable commodity is made quite clear by the prices which a tenant will get for the right of occupying a certain farm at a certain rent. I have a schedule here showing the prices that we got in some cases that I had to do with, and the occupation interest is very valuable.† A landlord in selling his estate is paid for the right to receive the income of the estate, and of exercising all the other appurtenant rights. The occupation right which belongs to the tenant is the right of occupying a certain piece of land at a certain rent, of enjoying the improvements already made by him or his predecessor, and of selling the same in the open market. Each has a commodity to sell, and if the landlord is in the position of both landlord and tenant, he has both these rights at his disposal. I think that if Mr. Boyd's suggestion, that the valuation and one-third were taken as the minimum value of the dual interest, and that it were open to the landlord to prove that his income derived from lands in his own occupation were greater, and to have the price fixed accordingly, it would give a fair basis for ascertaining the value of the dual interest, and I am quite sure that all the land required by the Board could be purchased without any compulsion.

44216. What reason have you for saying that?—I am speaking from the estates that I manage.

44217. Under your own particular management that may be, but I suppose you have no possible means of judging whether it would be so in other parts of Ireland?—Oh, I have a great many agencies in other parts of Ireland, too.

44218. Have you never heard of a landlord who refused to sell on any terms at all?—No, never.

44219. If there were such people, would you be inclined to think that if their lands were very much required in the public interest, compulsion would be proper?—Compulsion should be resorted to as the last resource.

44220. How are you going to deal with men of that class. Do you think that a man of that character should escape altogether if he chooses to take up such an attitude and refuses to meet the Congested Districts Board at all—that he should escape scot free?—I would let him alone and buy all the other land I could.

44221. And allow this man who takes up this attitude, although his land is the most suitable, to escape what everybody else has to do?—I would allow him. Ultimately there may be compulsion.

44222. Then how are you to deal with him?—I would leave that to be decided afterwards, and I would buy all the land at disposal at present, and I think it will be found that the parties who stuck out would be very small in number.

44223. And supposing that in the County Kerry there was a certain amount of untenanted land, and that it was the fact, as it undoubtedly is the fact, that for purposes of migration the most suitable untenanted land is the untenanted land which lies nearest to the holdings from which you want to move people, and suppose some owners of those lands should refuse altogether to take a price, would you say that they should escape scot free or that they should be compelled to give at a reasonable price land for the purpose of migration from Kerry?—No; I think it will be a very hard thing to discover.

44224. Would not you say that if migration from Kerry is to be carried on, these people must be compelled to give up their objection?—No; I do not see why anybody has a right to compel another to give up his land.

44225. If even it were shown that there was clear need for it?—No.

44226. Perhaps you are aware that there are compulsory powers already in existence with regard to the taking of land for the purpose of light railways and land for labourers' cottages and small holdings?—Yes, I am quite aware of it; but in all those cases the price is considerable.

44227. It is not a question of price, but of the principle of compulsion. With the principle of compulsion already established, if it were shown clearly that the land was needed, would any individual have a right to object?—Well, yes; but I think that it should be shown that there was a clear case.

44228. That may be, but take any instance in Kerry?—Oh, I think if there could be a case for compulsion, that certainly would be one.

44229. Then, in other parts of Ireland, if you go to any other county, and show that untenanted land is very scarce, and that the landlords in the county who hold that untenanted land are not willing to sell it on reasonable terms, and thereby force a purchasing authority like the Board to go further afield, would not you say that that was a case in which compulsory powers were justifiable?—I think it is the very last resource.

44230. But, please, answer my question. You said it might be required in Kerry, but you say it is a very extreme case; but never mind that?—You put an extreme case in the County Kerry. I say if such an extreme case in another county were certain there should be the same remedy.

44231. If in Donegal, for instance, it can be shown that part of the untenanted land in the county is not available, owing to the unreasonable attitude of certain landlords, would you say that compulsory powers were justifiable?—If it was found absolutely impossible to deal with it otherwise, but I will only say generally, as a principle, in my own mind, that compulsion is the very last resource.

44232. Most Rev. Dr. O'Donnell.—But you admit it as a last resource?—I admit it as a last resource, but I think we have not got near that length, as a last resource, yet.

44233. Chairman.—But the people to judge of that are the people carrying out the negotiations for purchase?—I am not at all satisfied that they have exhausted the last means in their power with regard to purchase.

44234. That is a question for proof on both sides?—Yes.

44235. Most Rev. Dr. O'Donnell.—If a man had a large tract of land and did not reside on it, but lived far away from it, and did not require it for his income, and did not use it much or turn it to the best account, and was not willing to give it up at a reasonable price for the relief of congestion, that would be an extreme case?—That would be an extreme case, as the Chairman put it, as I should say.

44236. Then, as a question of principle, you say that all reasonable means have not yet been exhausted?—Yes.

44237. That is your position?—Yes.

44238. That it is quite possible that that case might arise, but that it has not yet?—Yes.

44239. On what do you found that?—On my own experience.

44240. When it is your experience, have you many cases to offer?—On thirty-five or forty estates that I have had to do with I have never found any man in any case of the sort who would refuse a reasonable price.

44241. That is when you were selling?—Yes.

44242. But suppose you were buying. Have you ever bought land?—I have.

44243. And have you found any difficulty with the seller?—I have always found that if you wanted it particularly you paid an extra price for it.

44244. And then here in this case suppose the Congested Districts Board approaches a landlord and he says, "That is my price," and he may be perfectly justified in saying that, and that the Congested Districts Board has to buy it, but keeping in view that they are to sell it afterwards, and that there is no way to repay them, are not they justified also if they say that that price is too high?—Oh, yes, if it is too high.

44245. And would you proceed with that or drop the negotiations?—Oh, no.

* See Appendix to the Third Report of the Commission [Cd 3414, 1907], p. 71.
† See p. 216.

July 9, 1907.

Mr. William J. Delap.

44246. What would you suggest?—I would suggest splitting the difference, as they do at the fairs.

44247. So that it is a question of the distance from each other at which they start?—Of course it would depend a great deal on that. What I say is that in no case that has come under my notice have the owners refused a fair price.

44248. Of course it is left to themselves to say what the fair price is?—Well, there have been tribunals created for a fair price now, for the price that is to be given by a tenant.

44249. Would you refer it to a tribunal?—I think if compulsion were adopted that would have to be done.

44250. Sir FRANCIS MOWATT.—May I sum it up. Assuming that land is absolutely essential for the enlargement of holdings, and assuming that that land cannot be obtained without it, then in the extreme case you recognise the necessity for compulsion?—Yes.

44251. Mr. KAVANAGH.—How would you arrive at the fair price of untenanted land?—The only way to arrive at the price would be for some independent person to make a valuation as to the letting value of that land and add to the occupation interest thus ascertained, that of the landlord. Mr. Boyd suggests, the valuation and one-third (Mr. Finucane suggested an even higher figure), leaving it open to the landlord to prove his income from the land from his books.

44252. I think Mr. Boyd's view was the valuation and a third?—I think Mr. Boyd's figures might be taken as a minimum.

44253. Can you tell me how second term rents compare with the valuation?—In this county they are at or a little bit beyond the valuation; but it varies greatly in other counties.

44254. And you see there is some difference between one and one-third valuation and second term rents and one-third valuation?—I do.

44255. It is worth solving, that?—It is worth solving. I think that the question of the dual interest as a security has been most lamentably lost sight of by the Estates Commissioners in fixing the amount of security which a holding represents, insomuch as they have, as far as I am aware, entirely ignored the existence of the tenant's interest in estimating the security offered, which, as will be seen from cases I have quoted hereafter, largely exceeds that of the landlord in many cases. The financial part of the land legislation of past years, to my mind, presents the most extraordinary anomalies. The legislation first proceeds by reduction of the rents and by giving the tenants practical fixity of tenure (practically whether they pay or not) to reduce the owner's interest to the lowest possible point. Then they come forward as moneylenders, with the depreciated value as security. At the same time they not only fix the limit above which the price may not go, but they also limit the possible purchaser to the then occupier of the land. All this is professedly to benefit the country financially, but the result—and the only natural result—is that exactly half the working capital of the country is taken out of it and invested elsewhere. One of the partners in the business realises his holding, and goes elsewhere with his money. On almost every estate with which I have been connected money has been borrowed by the landlords from the Board of Works, and expended in making roads, drains, reclamations, and other improvements. I hope to be able to furnish figures later on. In no case of which I am aware have the tenants been required to pay, either directly or indirectly, any part of these loans or the interest on them. I have got a statement, not quite as full as I hope to have it, of loans borrowed on estates such as I have had to do with.

44256. Most Rev. Dr. O'DONNELL.—With reference to loans for the improvement of the farms?—Yes; making roads, bridges, etc.

44257. When rents were being fixed in Court was there any evidence given on the landlord's side in reference to the expenditure?—In some of the cases there was.

44258. And such evidence would tend to help to recoup the estate in fixing the rents?—It would if the matter was taken into consideration.

44259. Sir FRANCIS MOWATT.—If that is so, then, indirectly, those tenants would be paying something of this expenditure?—Well, I think, unfortunately, as a matter of fact, there was not the smallest attention paid to that. I have a schedule showing the former conditions of eighteen or twenty estates which have been in my management, and their present condition, as to number of tenants, yearly rent, and present arrears. It shows the rents received, the average yearly rent, and the average yearly receipts. You will find these at the bottom of each table.*

44260. CHAIRMAN.—Will you hand that in?—Yes (*schedule handed in*). The Congested Districts Board adopted, in my opinion, the very best possible method which could be used for improving the breed of domestic animals, namely, the introduction of thoroughly good and suitable breeds of cattle, sheep, pigs and poultry, and I think that a great deal more might be done in this direction. Anyone who is acquainted with the districts about Cahirciveen and those about Kenmare cannot but be struck with the extraordinary difference in the class of cattle raised in the former as compared with the latter. In the former the Knights of Kerry and the Butlers of Waterville have for many years kept up a very pure strain of Kerry cattle, and the result is patent to anybody. In the Kenmare district, especially back towards Kilgarvan and Mangerton, there has been nobody to introduce well-bred stock; the result being that the cattle in these districts are miserable. Again, in the Dingle and Ventry districts Lord Ventry and Mr. George Hickson have for many years maintained a very good class of sheep, with the result that the sheep in the district have improved enormously.

44261. Have the College authorities done anything in that way?—No, they have not, except providing sheep in Valentia Island.

44262. What is the College estate?—About 3,000 acres altogether.

44263. In Kerry?—No; all the estate here.

44264. Most Rev. Dr. O'DONNELL.—That is the estate held immediately from the College by the occupiers?—Yes.

44265. There are other estates on which there are numerous middlemen?—There is only one middleman, as far as I know, in this district.

44266. CHAIRMAN.—Have the College authorities done anything, and can you tell us what, towards generally improving their property?—They give small grants from time to time to tenants for building houses, and for helping drains and making fences and improving roads.

44267. Most Rev. Dr. O'DONNELL.—Again, I suppose in fixing the fair rent mention was made of these things?—Yes. In my opinion the Congested Districts Board have done excellent work throughout the districts with which I am acquainted, and any curtailment of their power would be a grave misfortune to the congested districts. I would be strongly in favour of giving them a larger command of funds for the purpose of improving the breeds of domestic animals and developing the fishing and other industries?—I should like to say a few words about the fisheries. I was listening to the evidence given before you yesterday in Cahirciveen, and they have improved, I think, the existing class of boats, and they have improved the system of fishing generally. Nearly all the fishermen in the district are half farmers, and would not spend the night away from their homes, or go after the fish as the professional fishermen do. They will not sleep on board their boats. They go home and go to bed. After the famine, in 1881, there were boats given to the men free of all charge, and they asked to be paid for hanging the nets. They never fish the boats now.

44268. Mr. KAVANAGH.—You do not think they will ever be fishermen altogether?—I am afraid not.

44269. They will be always half fishermen, half farmers?—Yes.

44270. Can they make any use of the fishing?—I think so, part of the year when they have little else to do.

44271. CHAIRMAN.—You say the Board have improved the boats in Kerry?—Yes.

44272. In what direction has the money been spent?—They have given small sums for building boats and acquiring them, and Mr. Green has given practical hints as to building boats and the shape of them.

44273. Sir FRANCIS MOWATT.—And don't we understand that some of those Zulu boats were supplied by the Congested Districts Board?

44274. Most Rev. Dr. O'DONNELL.—But one witness

* See p. 216.

was exceedingly doubtful about the good result at the time of the introduction of the Zulu boats?—I do not see the objection to them. The only way in which these men could be induced to take up this as a living would be by inducing them to provide themselves with boats of another class—fourteen tons.

44275. Sir FRANCIS MOWATT.—Deck boats?—Well, half deck.

44276. Most Rev. Dr. O'DONNELL.—You say these men, half fishermen and half farmers, would not like to remain away from their homes?—Yes, and I think they could possibly be educated up to become in some few places professional fishermen.

44277. That the younger men of the family might, even if the training did not fit them for steam drifters?—They could. I do not believe in steam drifters. We want to remodel the harbours and landing-stage and everything. You could not bring the steamers alongside many of the small coast piers in this district.

44278. CHAIRMAN.—In a return here, printed by the Congested Districts Board, showing the sums up to the end of March, 1906, given to these fishermen under various heads, I see under the head of "Loans for purchase of boats," Kerry, £14,504; and then Cork, £10,000; Donegal, £9,000; Mayo, £6,000. Then, under the head of "Direct grants for boats," Kerry, £160. In no case has a large grant been made to any county. £440 to Galway, £410 to Donegal, £267 to Mayo. Under the head of "Fisheries," whatever that may mean, there is hardly any placed to Kerry; £17,000 to Donegal, £14,000 to Mayo. But under the head of "Loans for purchase of boats," you see the sums expended by the Board. There were many small loans given, and I think it was the best possible way to help them, much better than big grants. In your last paragraph you say:—"The Congested Districts Board have, in my opinion, done more for the country than any Government Department ever did before. They have made numerous mistakes, but they have profited by experience, and I think it would be a lamentable thing if their work were handed over to another Department, which so far seems to have been provided with cast-iron ideas, which no amount of local representation seems capable of bending to meet local requirements." That is the Estates Commissioners?—Yes.

Mr. R. O. SLOAN examined.

44280. CHAIRMAN.—Kindly state to the Commission the points which you wish to bring before us?—As the local Inspector of Fisheries for this district, I have been asked to give evidence on two subjects, viz., the want of pier or slip accommodation, and the neglect of our inland fisheries by the Congested Districts Board.

44281. Under which Department are you Inspector of Fisheries?—I am the local Inspector of Fisheries.

44282. Under the Fisheries Board?—Under the Waterville Fishery Board. It was only late last night I was asked to give evidence. So, therefore, the time at my disposal for the preparation of my case on the two subjects has been very limited, and any statement in consequence may be very disconnected. However, I think the facts of our case are so clear, so strong, and, I trust so convincing, that no matter how those facts may be marshalled, the injustice shown to, and, when compared with other congested districts, the neglect of, this congested district by the Congested Districts Board has now been so apparent that we may now hope for justice. The first subject I take up is the want of pier or slip accommodation. Now, the necessity for the accommodation has been already admitted by the Congested Districts Board. I cannot give accurate statistics, but I think I am correct in saying that some two or three years ago the Congested Districts Board, after a vast amount of correspondence, recognised the want of accommodation here and offered to contribute a grant towards the work, provided the County Council voted a certain amount, and that so much money was made up by the people of this district.

44283. Most Rev. Dr. O'DONNELL.—Where is that?—At Waterville. In consequence of the inability to collect any money locally the whole subject fell to the ground. Now I think, and think very strongly on the same point, that it appears most ridiculous for a board like the Congested Districts Board to offer a district like this—a poor impoverished district—a grant towards the proposed pier, and make it a condition that so much money should be subscribed locally. A grant offered under such conditions places the people of the district in the same position as the little boy in the city or town who stands outside a large confectioner's shop contemplating with a hungry look the good things in the window; but, alas, his pockets are empty, so he must continue to look on till some benevolent individual comes along and gives him a grant unconditionally. Now, I say the Congested Districts Board ought to give us a grant unconditionally. Other points, which were made against us were the engineering difficulties in the way, and the expense following such difficulties. As regards that, I say that it is not because nature has made difficulties here in the line of building a pier that we should be refused justice on those grounds. Nature never consulted us, therefore we cannot be held accountable for its freaks. I put it that when the Congested Districts Board has admitted the necessity it ought not allow a small difficulty to stand in the way of carrying out their object. Of course I quite understand the income of the Board is very limited, and that, therefore, the good intentions of the Board are hampered. Such a state of affairs should not be permitted to exist for a moment, and there should be some steps taken to provide the Board with a proper amount of money to enable it to carry out the duties imposed on it.

44284. Do you know that the Board has spent in the County Kerry as much on marine works as in any other county?—Yes; but it has not expended a penny at Waterville. Now for the necessity for the pier. At present it takes six or eight men, according to the size of the boat, to get it down to the water's edge. Then the crew must still shove it on through the water, and before they have it afloat they may be wet up to their waist. Men staying in their wet clothes all day are not to be envied. On the return journey it takes even more men to drag the boat to a place of safety. If you could spare five minutes when going to your hotel, I would give you practical proof of the difficulties we are labouring under here.

44285. Mr. SUTHERLAND.—Why was a pier never put there?—Because the Congested Districts Board——

44286. Surely this existed before the Congested Districts Board?—We had no money.

44287. Do you mean to say that these people would not give a day's work to polish off the thing themselves?—It was washed away in the morning by the tide if they made up anything like that.

44288. Most Rev. Dr. O'DONNELL.—Who are these people?—The fishermen going out occasionally to fish in the sea.

44289. Are these fishermen about?—Most unquestionably. Most of them want to go out provided that they get greater facilities, but they have not much in the way of facilities here. I will give you evidence that they are here and most anxious to fish, but how can they get out? They are idle on the road and cannot get out. Sea fisheries under such conditions are, therefore, not carried out. Our lovely bay is teeming with fish; our people are as sober, as honest, and as industrious as would be met in any part of Ireland, and are consequently as well entitled to this pier as the people of other districts for whom piers were built.

44290. Do you remember the sum that was promised by the Board?—I cannot remember it accurately.

44291. Sir FRANCIS MOWATT.—You are opposed generally to any local contribution?—Not to a certain extent, provided that the Board would see their way to make a sufficient grant. A contribution such as could be made by the district would be of no use.

44292. I thought, from the instance of the little boy and the cake, that you did not want to pay any part towards the work?—No, I did not want to go too far. When giving a grant for a pier or slip the Board ought take into account the ability of the particular district to subscribe, otherwise the Board

July 9, 1907.

Mr. R. O. Sloan.

might as well refuse the application. Perhaps when coming through the village you observed a number of men standing idle on the street. Those men are idle through no fault of their own. Visitors are coming very slowly, and, so far as the bay fishing is concerned, they must contemplate with longing eyes the rich harvest in consequence of not being facilitated in getting out to participate in that harvest. I pass now from the subject of the pier, leaving it confidently in your hands, knowing full well that long-delayed justice will at last be meted out to us. My second subject is the neglect of our inland fisheries by the Congested Districts Board. In the year 1902 the Congested Districts Board gave a grant of £10 towards a small hatchery, and that sum represents the total amount given by the Board for the improvement of the inland fisheries of this poor district.

44293. It has never considered it its duty to attend much to inland fisheries?—Perhaps before I am done I will show you that they ought to make it part of their duty. This is a very modest sum when compared with what the Board are doing to improve the maritime fisheries. The sole revenue upon which the Board of Conservators must rely to preserve the fish during the spawning and open seasons is that derived from the sale of licences. It follows, therefore, that if visitors do not come down to us in any given year or years the Board of Conservators will be considerably hampered in protecting the rivers in those particular years, with the result that the fisheries will suffer considerably. If you don't have protection you cannot have fish.

44294. Who hold the fisheries?—They are open to the public.

44295. May everyone fish them?—Yes, everyone with a licence.

44296. Mr. SUTHERLAND.—What licence do you speak of?—I speak of the licence issued before you can fish for salmon or trout.

44297. Therefore the answer to the Bishop's question is that it is the Board of Conservators' property?—Yes. They are conserving it for the public and charging what the Act of Parliament entitles them to do. They have no other revenue with which to protect the fishing. That is what the licence was established for.

44298. Most Rev. Dr. O'DONNELL.—What is the licence?—£1 for a rod, £3 for seine nets, and £10 for weirs.

44298A.—CHAIRMAN.—Anybody can fish who holds a licence?—Yes.

44299. That licence need not be taken out here?—It need not.

44300. Is there any system by which you are recouped for the money, for licences taken out in other places, because if all your visitors took out licences in Dublin, you would get no particular benefit?—We would be bankrupt, but they come here to fish sometimes when they don't fish in other places. We, however, get a good many who do come here with licences, and in that way we suffer considerably.

44301. So, as a matter of fact, it is only from the money paid for licences issued locally that you get any revenue?—Yes.

44302. Mr. SUTHERLAND.—Anyone taking a licence out here can use it elsewhere?—Yes.

44303. That equalises it all over Ireland?—Yes.

44304. Most Rev. Dr. O'DONNELL.—What interest have the small occupiers in inland fisheries?—The same interest financially as the small occupiers who are engaged in the maritime fisheries. Perhaps you may say that the Congested Districts Board has nothing to do with the inland fisheries of Ireland, and that the duty of looking after these fisheries is vested in the Fisheries Branch of the Department. True, the Department has a branch of its organisation set apart which deal with the inland fisheries, but surely the inland fisheries of a congested district are as much entitled to the paternal care of the Congested Districts Board as are the maritime fisheries of the same district.

44305. If the fisheries are held for the benefit of the congests, yes; not otherwise?—They are, because we have small farmers as well as professional fishermen engaged for three months of the year in it. They come down and reap a pretty considerable benefit from it, which adds materially to their income.

44306. How does the small farmer benefit?—When a pressure of visitors comes, the small farmers come down here from two, three, and four miles, and are employed as boatmen on the lake.

44307. That is to say, their interest is that of a labourer?—It is not. If you compare the boatmen to the labourer, it is.

44308. Apart from their farms, they have an advantage from the fisheries; as belonging to the population of the neighbourhood they get employment at the fisheries?—Yes.

44309. Mr. KAVANAGH.—Don't they sell their fowl and eggs in consequence of the visitors coming here?—A little of it.

44310. CHAIRMAN.—I suppose that the hotels which put up people who fish buy butter, milk, and fowl from the people about?—A great many of the hotels provide their own butter and fowl. The men engaged in the maritime fisheries are men who are not depending solely for their existence on the result of their fishery labours, whereas there are close on thirty men there who are engaged solely in the inland fisheries. Those men have not a sod of land, they have to buy even the very turf at a dear rate. Their existence and that of their families depend on the fishing.

44311. How many water bailiffs do you employ to look after the lake and the tributaries?—About forty in winter and fifteen or twenty in the summer time.

44312. What are they paid?—From £4 down. An odd one gets £5.

44313. Mr. SUTHERLAND.—What do they do?—Protect the river in winter time.

44314. CHAIRMAN.—They protect the fish during the spawning season, and when the fish are running?—I say, therefore, with perfect confidence, that those men are more entitled to sympathy and assistance than the men engaged in the maritime fisheries. Our inland fishermen are, I am proud to say, as honest, as sober, and as hard-working, as can be met. How then can you assist them? Simply by giving some help towards the preservation of the fisheries. With proper protection, we will have an ample supply of salmon and trout, and when our English visitors hear that our rivers are well stocked, we will have them here the whole year round, and as a result our honest fishermen will be fairly well off. I do not ask for any exorbitant grant towards the funds of the Board of Conservators, neither do I ask that the grant be given for any extended period, but I do ask, and confidently ask, that the Congested Districts Board will for, say, five or six years, give us a grant of £60 or £70 yearly to assist in placing the funds of the Board of Conservators in a sound financial state, and thereby enable us to protect properly our rivers during the spawning season. By doing so you considerably benefit this impoverished district and help in making the inland fisheries of this district what nature intended them to be, the best in the United Kingdom.

44315. Is there no way in which you can make the visitors pay for the fishing?—We have no rights. There are no private rights. We cannot entail on them any extra cost.

44316. Mr. SUTHERLAND.—Have you any power of assessment?—No.

44317. CHAIRMAN.—How did it occur that there were no private rights?—They are all publicly fished, and for everyone. The rivers are open to everyone.

44318. Mr. SUTHERLAND.—If they pay?—The two hotels have purchased the rights of two rivers, the Comeragh and Inny, which are good fishing grounds.

44319 From whom did they purchase them?—Sir Morgan O'Connell and Lord Lansdowne.

44320. Have you power as conservators to sell the fishing?—No.

44321. How did these fishings come to be sold?—The landlord had the rights of the Caneragh. He could prevent anyone from going on the land, as trespassers, and he sold his rights to the hotel.

44322. CHAIRMAN.—The hotels, of course, had to contribute largely to the cost of water bailiffs?—So they do; but they have only three months of a season here. The time is very short.

44323. They are in the position of landlords?—They are to a certain extent.

44324. They are in exactly the same position as were the landowner and these other owners before their rights were sold?—They have not got it bought out; they lease it yearly.

44325. Lord Lansdowne lets the fishing rights every year?—Yes.

44326. What contribution do the landlords make?—Lord Lansdowne gave £3 last year. It was the rent that he was getting for the fishing.

44327. And the other landlord?—Sir Morgan O'Connell gives us the use of a lodge for the police in winter time for the protection of the fishery. We think that that really compensates us.

44328 Is not £3 a year a very low rent for the fishing on the river?—Lord Lansdowne's rights are not very much.

44329. How did it come that the right of fishing in the lake was a public right. Did that never belong to anybody?—No; it is free from time immemorial.

44330. It is strange that the owners on the shore had not the right to fish on the lake?—It is, but it is a fact.

44331. Mr. SUTHERLAND.—I was going to ask you had the Conservators bought the rights?—Not at all; they were public rights from time immemorial for anyone who liked to fish the lake.

44332. Most Rev. Dr. O'DONNELL.—Suppose after the Burns-Hartopp tenants are fixed in their holdings they were educated into forming an association for fishing that lake, and wished to take out licences in the usual way, would they have the backing of the Board of Conservators to enable them to do that?—I don't think so. I am sure that the Board of Conservators and the public generally would resent it very much.

44333. You would find that these tenants on the shores of the lake would rather like it?—I daresay they would.

44334. The licences confer only the right of rod fishing?—Yes.

44335 But not the right of netting?—There are net licences also.

44336. They can take out licences for the lake?—We would not allow them to fish in it. It would be within the rights of the Fishery Inspectors to pass a by-law prohibiting netting in the district if the tenants took up that stand.

44337. The fishery inspectors are not free to do everything they please. There could be an appeal before the Privy Council?—Yes, but they would not succeed in the appeal.

44338. CHAIRMAN.—If there was indiscriminate fishing in a couple of years there would be no fish?—Yes.

44339. Most Rev. Dr. O'DONNELL.—Don't you think you got a very good grant from the Congested Districts Board?—£10.

44340. Do you think you ought to have got anything?—Unquestionably I do, or I would not be here to-day to put forward a claim.

44341. Mr. SUTHERLAND.—Are you here by the request of the Conservancy Board?—No. They are elected every three years by the licensed fishermen.

44342. By anyone who purchases licences?—Yes.

44343. Some of these will be in Dublin?—Yes, but they never come down to bother us. The local men elect them. You ought to give us something towards that. We are as well entitled to it as the sea fishermen. You are looking after them in a very paternal way, but you will do nothing for the poor inland fisherman, and the amount derived from the inland fisheries is a considerable one. The amount spent in the employment of men would amount to about £700 in this poor district.

44344. Most Rev. Dr. O'DONNELL.—The inland fisheries, I agree with you, are a great national asset?—Yes, and the Congested Districts Board should do something for them.

Mr. A. G. O'CONNELL examined.

44345. CHAIRMAN.—You are appointed by the County Council?—Yes. What I complain of is with regard to the expenditure of money, should be by the Congested Districts Board, and that the works of inferior or little merit have been done and that works of greater merit have been left undone.

44346. Are you speaking of marine works?—Yes, piers and slips. I hold, as a general rule, that no slip should be made in any place where the open sea has full force, because I believe that no slip can stand where the sea comes in with its full strength just as the Atlantic Ocean beats upon these shores.

44347. That is an engineering point to a great extent?—It is a mere fact.

44348. It is a question of engineers?—It may be, but experience will tell you as much as an engineer can.

44349. Then it is not much use going through the education of an engineer?—Experience will tell a man what actually does occur.

44350. Sir FRANCIS MOWATT.—What do you call experience?—Seeing the way a thing of that kind resists the sea, and how it stands when there is a storm from the ocean. To illustrate that there has been a slip built by the Congested Districts Board at Butt Cove, in St. Finan's Bay, and almost £1,400 has been expended upon it. The place where the slip has been built is open to the fury of the Atlantic Ocean, and any man watching the sea coming in would see that there is no shelter from the terrific force of the open ocean. In addition, that slip is built entirely too upright. There is terrible labour in pulling up a boat. It takes two or three crews to pull up a single boat. The lower part of the pier has been taken away.

44351. Most Rev. Dr. O'DONNELL.—Do you know that a great deal of force was brought to bear on the Congested Districts Board to erect it there?—I could not say. Last year there was a timber structure put up where the lower part of the pier was taken away. The very first storm that came it was all swept away again. That is a most nonsensical thing for men of understanding. They should know that no timber structure would resist that at any time.

44352. You think that no marine structure should be attempted in these places?—Yes.

44353. No matter how much the population require it?—Wherever you have a strand, then, if you go to low water and excavate about a foot deep and twenty feet wide and make a slip going up above high water, then the sea will take no effect upon such a slip. You should build across the top of the slip a concrete fence, with a base of about three feet, and in the centre a gap or gateway to pull the boats in and to build it six feet high, and when you slide your boats up from the sea you could place them up behind that wall for safety.

44354. Would you build it where it is erected now?—In the same place.

44355. Then it is only a question of the best engineering: you are to do the actual engineering?—Yes.

44356. Sir FRANCIS MOWATT.—Are you a marine engineer?—No. I am not an engineer. It is one illustration of works of small merit. You have north of Valencia a slip that is of no possible use; it is built so upright that in fact it is half standing. It is built on the wrong side. Every fisherman in Valencia could tell you that it is built in the wrong place. £1,200 was expended on that. In proof of what I say there is a small strand close by on which the fishermen place their boats, instead of pulling up the boats on that slip.

44357. Most Rev. Dr. O'DONNELL.—Do you know that that slip was built for the people around Tragenan?—Yes, but it was built on the wrong side, and against their wish.

44358. Are you aware that Mr. Green, the fishery inspector, and Mr. Parsons, the engineer for the Board, consulted the people in the locality?—I am not aware of that. It is within a quarter of a mile of the entrance to Valencia Harbour. What advantage is that?—When the weather is very bad you can come into Valencia Harbour, and inside Valencia Harbour you have a beautiful sandy beach. At Portmagee there is a pier inside a land-locked harbour. It was built about the year 1844, and is a fine substantial pier. When the Congested Districts Board started, a memorial was sent up to them asking for an extension of that pier, because the pier did not come sufficiently out into the deep water, and a steamer would not attempt to come alongside unless at the height of the rising tide. Portmagee is a place with a very large fishing population, and there is a lot of mackerel curing there. There are seven or eight companies curing there. I have often seen steamers come to take away barrels of mackerel, and they cannot come alongside the pier because of the rocks outside. What we want is to get an extension

July 9, 1907.

Mr. A. G. O'Connell.

so that steamers may come alongside at any time of the tide. In the channel outside there is always deep water. The Congested Districts Board approved of the work. It was surveyed by the Board of Works' engineer, Mr. Keating. He estimated the cost of the work at £1,250, but they said that there should be a local donation, and there was none forthcoming.

44359. Trinity College is the landlord?—Yes.

44360. Did they ask whether Trinity College would contribute?—They asked Trinity College, but they would not contribute. The pier does not belong to Trinity College, though it is on their property, but belongs to the County Council.

44361. The pier is for the use of the tenants of Trinity College?—Yes, but not exclusively.

44362. The Board asked whether Trinity College, as a landlord, would contribute to this useful local work?—Yes. When I got on the County Council I got the Council to grant £200, so as to induce the Congested Districts Board to carry on the work, and then the Congested Districts Board sent down their own engineer, and he destroyed the whole thing entirely by making an estimate that the work could not be done for less than £3,000. That was a great difference from the £1,250 which was the former estimate. This pier would be a great accommodation to the development of the fishing industry at Portmagee, because the fish have been constantly obliged to be carried away to Cahirciveen as the steamers could not come alongside the quay. That is a great loss.

44363. How much is the County Council going to give?—The proposition before the County Council, but it is not finally decided, is £600. I gave that motion before the County Council.

44364. That would be a very substantial contribution?—Yes.

44365. Is there a chance of getting anything from Trinity College?—I don't think so. It has been recognised as hopeless.

44366. However, the case is being still considered?—Yes. There is another subject that I want to draw attention to. Portmagee is entirely a fishing village. In fact it is one of the few places on the coast of Kerry where you have really *bona fide* fishermen—men depending solely on fishing as a means of support. That and the district around Dingle are the only two places of the kind in Kerry. Portmagee was short of a water supply, and we made application to the Congested Districts Board for a donation towards giving the water supply, because we had in fifteen years three epidemics of typhus fever, and it was largely put down to the water got in the village, which came from a well above the village and a well below the village. The doctors condemned the water as being unwholesome. Now, you have there sometimes 200 men going out fishing from Portmagee in yawls, who come in there and they had no good water to get, and there were also a lot of boats from Manx, Scotch, and local vessels coming ashore for water. We applied to the Congested Districts Board and they gave £250, and Trinity College gave us £100. That was £350. The total cost came to very nearly £700. The money was granted, the scheme was undertaken, and the water supplied. But the money necessary was raised on the security of the Portmagee Electoral Division. The guardians would not work it save on terms of charging it on the electoral division. Portmagee is a very small electoral division. The valuation is only £700, and the extra rate put on in consequence of the waterworks is ten pence in the pound.

44367. If it were all raised in one levy it would be ten shillings in the pound?—Yes. The people there are wretchedly poor, and what they thought was that where the supply was so much for fishermen from all directions the Congested Districts Board ought to give them an extra donation.

44368. Would you consider that the Congested Districts Board behaved rather well in giving you £250?—Yes, but still it was an extreme case, because of the people being so poor.

44369. Apart from exceptional circumstances you would not consider that providing a water supply would be one of the purposes for which the Board was instituted?—I thought that the Board was instituted for the good of the people in every sense of the word.

44370. You bring it in in your case in this way, that providing a water supply is a necessity of the fishing development there?—Yes.

44371. The men go out to fish from where the fresh water is, and men who don't belong to the locality come in there with their vessels for water. In that way you bring it directly within the purview of the Congested Districts Board?—Yes.

Most Rev. Dr. O'Donnell.—Otherwise as a mere water supply it would come in with difficulty.

44372. Mr. Sutherland.—Is there not a statutory water body? What is the body that is appointed to provide a water supply?—The guardians; the sanitary authority.

44373. Is it not their duty to provide a water supply?—They won't levy it on the rates.

Most Rev. Dr. O'Donnell.—It would be their duty, but in these cases it would not be possible to get the guardians to consent to tax the whole union for a water supply to Portmagee. In any case they would not do it, and therefore it is a question between the electoral division and some public body.

44374. Mr. Sutherland.—I don't know the custom in Ireland, but in other places if they neglect to do their duty in a case of that kind, they are compelled to do it. Don't you charge for the water you supply to those fishing boats?—No.

44375. Do you know that that is everywhere the case?—In a great many places it is; but you would have to appoint a man at a salary to do that. That would monopolise a great part of the revenues derived from the water supplied to these boats.

44376. Most Rev. Dr. O'Donnell.—Has that sum, the moiety of the expenditure, levied on the electoral division, been actually paid to the contractor?—Yes.

44377. Do you wish to put to the Commission that there should be some remission to the ratepayers?—Yes.

44378. If you began by asking Trinity College, would they come forward another bit?—We are negotiating at present with Trinity College for the sale of the place to the Congested Districts Board, which they have refused to do.

44379. They have refused to sell?—To the Congested Districts Board, under any consideration.

44380. The Congested Districts Board might not be in favour with them?—I suppose not. I can show you the correspondence with Mr. Delap, who was here to-day, and from the Bursar.

44381. Would they sell direct to the tenants?—Yes, they would sell, provided that Cahirciveen, which is part of their property, joined in the sale, but the property at Portmagee is a separate thing altogether. There is no middleman. We hold direct from Trinity College. Cahirciveen is the same way.

44382. Provided that the Cahirciveen tenants of the College are willing to buy, the College, is disposed to sell?—Yes, but not to the Congested Districts Board.

44383. Have you any idea of the terms which the College demands?—No, I have not. We did not mention any terms.

44384. It seems reasonable that you should stipulate that the transaction should be done through the Congested Districts Board or some Board that would have a friendly eye to these projects at Portmagee?—That is the object. Another matter that I want to draw your attention to with regard to expenditure is here at Ballinskelligs Bay, where you have sixty boats, and you will find that they have not a landing place or a slip or pier of any kind. You have a very nice spot called Ballinskelligs Castle. There is a little promontory running out to sea. Just inside that there is quite a little cove. The formation of the land makes it quite sheltered, and it was proposed that that would be the right place to build the pier.

44385. Mr. Sutherland.—Would not a timber landing place do there?—I suppose it would do there. There would be about fifteen feet of water at low tide, and vessels coming alongside there would be well accommodated.

44386. Chairman.—What vessel do you contemplate coming alongside?—All these fishing boats coming in there.

44387. A slip would answer there probably?—Not for a vessel coming alongside. You should have a pier.

44388. Most Rev. Dr. O'Donnell.—You contemplate decked vessels?—Yes. Sometimes decked and half-decked vessels come alongside, and, in addition, the yawls have no place to land their fish. Besides that, there is another thing that I think would be

necessary in this country—a motor service. There is a tremendous lot of fish killed in this bay.

44389. Mr. SUTHERLAND.—How much would you say?—It comes in in tremendous quantities.

44390. I would like to get it more definitely than a tremendous amount. Can you give me any idea of how much it is?—On some days three or four boats would take 20,000 fish.

44391. How often in the year would that be?—From time to time.

44392. All the year round?—At different seasons of the year. Autumn is the principal time. From this on to the 1st of November is the principal time. The fish are then carted to Cahirciveen. They get a tremendous shaking in these common carts, and in that way they are seriously injured.

44393. If it has to go to Cahirciveen how would you obviate the carting?—By a motor service.

44394. A motor service is worse for fish than carting?—I don't think so. The motor won't injure fish more than the cart, and it will go more quickly than a cart. With regard to both Portmagee and Ballinskelligs, the quantity of mackerel at Portmagee is very large—about 2,000 barrels of mackerel in the season. 1,575 barrels of cured fish were sent away from Ballinskelligs to the American markets.

Mr. JAMES O'SULLIVAN examined.

44395. CHAIRMAN.—Do you belong to this district?—I am a Maynooth student, but belong to this district, and am on holidays at present.

44396. Upon what point do you wish to give evidence?—The necessity of having a pier over at the fishing grounds beyond a place called Reneen Point in Ballinskelligs Bay.

44397. You appear in support of the pier that we have heard so much about?—A new pier. I have nothing to do with the Waterville fishery. I live near Reneen, 3¾ miles from Waterville. There are seventy fishermen. In the locality there are three seine boats. Each of these boats is manned by eighteen men. Besides those there are fifteen or sixteen small boats fishing lobsters, etc., with short nets. They have no way of landing at all. When they bring in the fish men and women go out to bring in the fish from the waves. Then, landing at night, they cannot go out again. It takes five or six men to pull up a boat.

44398. If there was a slip or pier built further down, near where the last witness referred to, it would serve Reneen as well?—It would, but it would be a bit far away for the fishermen.

44399. Is it not your opinion that you must have some kind of concentration, and that you cannot have a pier or slip in front of every little collection of houses?—You cannot, but it would be well if there was a good pier somewhere beside Reneen and Waterville. The seventy fishermen living at Reneen go out every night to the autumn season's fishing.

44400. It is sufficient for the Commissioners to understand from you that there is a demand for landing accommodation for Reneen as well as at Waterville?—Yes.

44401. Most Rev. Dr. O'DONNELL.—What is the distance between Reneen and Ballinskelligs?—At least nine miles, all round the bay.

44402. Reneen is on this side towards Derrynane?—Yes. The Rev. Mr. Green says that it would be the most suitable place around the coast for the pier. There is any amount of fish in the bay, but they cannot get it. I have often seen them go out myself, and they would be all wet getting into their boats. This pier has been talked of for a long time.

44403. Would there be any local contribution?—The people are very poor, but I am sure that there would be some little local contribution if they were asked. It would not be much.

44404. I suppose that the District Council would scarcely give a contribution?—I don't know; they may, but I am not quite sure. I know that the inspector of the Congested Districts Board has been spoken to about the matter before, but there have been no steps taken to get it up.

44405. If there were some money given for the pier, would the people contribute the labour?—Certainly; they would be only too glad to contribute the labour.

44406. Has there been any estimate made of what it would cost?—I don't think so. About eight miles from here there is a river without a bridge that crosses a road. There is a district on the far side of the river called Tooreens. There are six families living there. They have no means of crossing the river except a plank, and cannot cross except when the water is very shallow.

44407. CHAIRMAN.—To whom does that property belong?—To Captain Burns.

44408. Is it on the Burns-Hartopp estate?—I believe it is, but am not quite certain.

44409. Before the estate was sold were any representations made to Captain Burns-Hartopp about this bridge?—Yes. Representations were made often about the bridge and the pier, and they have not got either. The children cannot go to school except in very fine weather. In addition to the six families in Tooreens there are other families in the villages beyond it. The road should be extended to the village.

44410. Most Rev. Dr. O'DONNELL.—If it is in the Burns-Hartopp estate the application can be placed before the Board's inspector when he is here?—It is placed before the Board's inspector. They don't seem to move in the matter.

44411. It takes some time to improve a large estate like that?—Yes, but they have been some little time at it now.

44412. There is a road which cost the Board £411 called the Reneen-road?—That is going through another valley up towards the mountains.

44413. Is there a road to the site where you propose the Reneen pier?—Yes. If they had a pier there they could bring in their fish.

Mr. P. HAREN examined.

44414. CHAIRMAN.—What is it you wish to state?—We require a pier very much at Ballinskelligs. The agent wrote to me about closing the sound. Our late landlord, Mr. Mahony, made endeavours in the year 1883 to close that sound, to make a harbour of refuge of the place, but it failed. Major Hayes, the fishery inspector, did pay us a visit, and I was in the Admiralty service as officer there at the time, and I took the soundings with a view to making a harbour of refuge there. It appears that it would cost too much. There is a pier which I would advocate to be made. Near the telegraph station there is deep water, and in fact one side of the reef of rocks is a natural pier already. Engineers were sent down on different occasions to measure it, and I went out with them and took the soundings of the place. I was a seaman by profession in my young days. When the matter went up before the Board we heard no more about it. We wrote thirty or forty memorials both to the Lord Lieutenant and the House of Commons, and they were presented by members of Parliament. There are about fifty boats in Ballinskelligs and vicinity where we want to have the pier built. There is deep water at these large rocks at the other side. They come from all parts of the United Kingdom in the spring and the autumn for fishing, and in the mackerel season. They are all complaining that if there was a pier they would have facilities for fishing. There is fine shelter in the bay. I would sooner press to have this pier made than to close the sound. The latter course would take too much money. Another thing we want is a large curing house. If the townland of Ballinskelligs was bought up by the Congested Districts Board the place would be made the richest part of South Kerry, as there is a fishing gold mine in Ballinskelligs Bay and vicinity if developed.

The Commission adjourned.

EIGHTY-NINTH PUBLIC SITTING.

WEDNESDAY, JULY 10TH, 1907,

AT 11.0 O'CLOCK, A.M.,

At Kenmare Courthouse.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); The Right Hon. Sir FRANCIS MOWATT, G.C.B.; Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

July 10, 1907.

Mr. Denis J. Sullivan.

Mr. DENIS J. SULLIVAN examined

44415. CHAIRMAN.—Mr. Sullivan, you appear, I think, on behalf of the County Council?—Yes, my lord; I am a shopkeeper, and reside in the town of Kenmare, and am a member of the Kerry County Council, by which body I have been nominated to give evidence respecting the division which I represent, which comprises the parishes of Kenmare, Bonawn, and Tuosist, and the greater part of the parish of Kilgarvan. All of these are scheduled as congested with the exception of the electoral division of Cappagh, in the parish of Kenmare I am familiar with the condition of the farmers in the division. The greater portion of the land in the district is of a very poor quality, and must originally have been reclaimed from mountain sides and cut-away bog. It requires to be tilled and manured every six or eight years, otherwise it would revert to its original sterility, and grow nothing but furze, rushes, and heather. There are about 271 holdings in my district valued under £4, and about 1,109 holdings valued higher than that amount. The average valuation would be about £6 13s. The majority of the farmers in the district are heavily in debt to the shopkeepers, and only for the credit which they get and the remittances which they receive every year, especially at Christmas time, from their children and relatives in America, they would hardly be able to subsist on their farms at all and pay rent and rates. Very little has been done for the people in this district by the Congested Districts Board. Merely a few small grants to Parish Committees in Tuosist and Bonawn—nothing in the way of help towards road-making or the improvement of the breed of cattle or sheep. There is no Parish Committee in Kenmare, as a grant of £35 only would be made by the Board, and as this sum was wholly inadequate, the idea of forming the committee was abandoned. The principal landlord is the Marquis of Lansdowne, whose estate comprises all the parishes of Bonawn and Tuosist, and a portion of the parish of Kenmare. He was approached on two occasions since the passing of the Land Act of 1903 with a view to sale of the estate to the tenants. On the first occasion he replied that he did not then intend to sell his Glenerough estate, and in two years after (1905) he refused to meet a deputation of his tenants to discuss the terms of sale. In the beginning of this year, however, in reply to a letter from the Venerable Archdeacon O'Leary, P.P., of Kenmare, he at last submitted terms, viz., twenty years' purchase of first-term rents, and twenty-three years' purchase of second-term rents, sporting rights to be vested in the landlord absolutely, and excluding from the sale a large number of holdings, about fifty in the parish of Tuosist, and twenty in the parish of Kenmare. After consultation the tenants offered to purchase at seventeen years' purchase of first-term rents, and twenty years' purchase of second-term rents, the sporting rights to be vested in the tenants, and the excluded holdings to be now included in the sale; or, as an alternative offer, the tenants would agree to purchase through the Estates Commissioners. Lord Lansdowne refused to accept either the proposal for sale direct to the tenants, or to sell through the Estates Commissioners, and the negotiations were consequently broken off. There are a number of small estates in the parishes of Kenmare and Kilgarvan, some of which were held by middlemen under Trinity College, and which have been sold under the Act of 1903 at prices varying from six to ten years' purchase higher than the prices at which similar estates in those parishes were sold under previous Acts. I myself know of an estate in Kilgarvan, which the tenants agreed to purchase in 1890 at fourteen years' purchase, two years arrears being, in some cases, wiped off at the time. The Land Commission refused to sanction the sale then, as they did not consider the farms sufficient security for the advance, yet these very same farms, not considered sufficient security for an advance at fourteen years' purchase in 1890, have been recently sold at twenty years' purchase. I can give other instances of what I consider excessive and exorbitant prices paid in this neighbourhood under the Act of 1903, and I see no reason to warrant an increase of from six to ten years' purchase as compared with prices under previous acts, there being no advance in the prices of agricultural produce; nor has the cost of labour decreased. On the contrary, prices of all kinds of produce have decreased, and labour, owing to emigration, has become very scarce, and consequently dearer. I attribute the enhanced price to the operation of the zone system and the abolition of inspection for security, and also to the lever of arrears which the landlords are using to exact very high prices, knowing that a tenant owing arrears will grasp at any immediate benefit, without due consideration of the consequences in the future. I look upon this as a very serious matter, not only for the tenant purchasers, but also for the ratepayers of the district who will have to make good the losses to the Treasury. The remedy for this state of affairs is, in my opinion, compulsory purchase at a fair price, abolition of the zones, and inspection for security; all sales to be made through the Estates Commissioners or the Congested Districts Board, who should have power to expend money in improving such holdings as may be in need of improvement. There is not much untenanted land in the parish of Kenmare, only about 100 acres around the town, which is on Lord Lansdowne's hands, and let by him on the eleven months' grazing system. This land should be compulsorily acquired by the Estates Commissioners, and parcelled out as allotments to labourers, as the District Council have great difficulty in getting suitable plots for the labourers of the district owing to the comparatively small holdings of the farmers and the very few acres of good land in each holding. I would recommend that the entire district be scheduled as congested, and that larger grants be made to the Parish Committees to help in the improvement of the dwellings of the poorer class of the occupiers in the district. The supply of turbary is in some places exhausted, and the people have now to go far into the mountains for turf. Grants should be made to make roads into such places. The breed of cattle and sheep should also be improved, especially the cattle, which at present are of a very inferior quality, and must be kept until they are three or four years

old before they can be sold, and in times of depression in the cattle trade are almost entirely unsaleable.

44416. You say that the majority of the farmers in the district are heavily in debt to the shopkeepers. I should like to ask you whether, in your opinion, they are more in debt than they used to be?—Well, they are for the last nine or ten years more in debt than they used to be formerly.

44417. Do you attribute that increased indebtedness to any particular cause?—To the depression of the times.

44418. How do you mean the depression of the times?—The prices of all kinds of agricultural produce are less now than they were previously.

44419. No, that is not so, Mr. Sullivan?—Well, I think they are, my lord.

44420. Oh, no, I assure you you are wrong. Give us an instance of what you would like to take?—If we take the price of butter, the price of butter is less now than it used to be some fifteen or twenty years ago.

44421. I have got the list here. There are statistics made out every year by the Agricultural Department of the prices of those things, and if I take the return that is published by the Department I see that in 1905 the price per cwt. was 99*s.*; in 1900, 95*s.*; in 1895, 87*s.*; in 1890, 86*s.*; in 1885, 95*s.* Well, yes, you are quite right so far as in 1880 and 1875, but since 1880 they are higher now than they have ever been—butter, for instance?—I do not think so.

44422. But the 1885 price was 95*s.* It is now 99*s.*?—Oh, I know it is a fair price this year and last year, but years before that, four or five years ago, it was not so high.

44423. It was in 1900?—Well, for the very best quality butter.

44424. But that is the price on the return. Now, give us another instance?—Well, the price of cattle.

44425. Beef?—I do not mean beef at all, but store cattle.

44426. Well, the return does not give the price of store cattle, but it is pointed out that the price of store cattle depends on the price of beef, and the price of beef from this return is now 53*s.* per cwt. It has not varied much for the last fifteen or twenty years?—The price of cattle varies a good deal. For a couple of months there might be a fairly good demand for cattle, and then other times of the year the demand for cattle would be slack, but any depression at all in the cattle trade tells very heavily against us, because they are in general a poor description of cattle. The class of cattle raised in this country could hardly be sold at all.

44427. Would you say that the cattle trade for the last two years has been depressed?—For portions of the year.

44428. Then you say that nothing has been done by the Congested Districts Board in the way of improvement of the breed of cattle or sheep?—Nothing in Kenmare parish.

44429. Don't you know that that has nothing to do with the Congested Districts Board at present?—It has for the last ten or twelve years.

44430. Are you not aware, Mr. Sullivan, that for the last two or three years that work has been transferred from the Board to the Agriculture Department?—I know for the last three years, but previous to that time——

44431. Then your indictment against the Board is not supposed to hold for the last three years. You will admit that?—I will admit that.

44432. Any way you have got the remedy in your own hands now?—Yes.

44433. You are a member of the County Council?—Yes.

44434. And therefore a member of the Agricultural Committee?—Yes.

44435. And therefore you have the remedy, so far as this is concerned, in your own hands now?—Yes, my lord.

44436. Again, you say that there is no parish committee in Kenmare, as a grant of £35 only would be made by the Board, and as this sum was wholly inadequate the idea of forming the committee was abandoned?—Yes.

44437. Would it not have been better to have started with a small beginning?—Well, £35 would be of scarcely any benefit here, because if you start a parish committee you will require a Secretary, and he will have to be paid, and you would require a Clerk of Works, and he has to be paid, and then you would have a sum of £25 to spend.

44438. If you had been able to show to the Board that you had done as well as you could with the small amount of money at your disposal, would you not have a greater claim for an increased grant than you have now, having abandoned any attempt to try?—Of course you would have a better claim for an increased grant, but all the same £35 would do no good.

44439. Even £25 is better than nothing?—Well, for a large place like Kenmare that would be of very little use at all.

44440. But it would have been better than nothing, would not it?—Of course it would have been better than nothing.

44441. On the other hand, if you had gone as far as you could go with that £25, have you any reason to suppose that the Board would not have increased your grant in future years?—Well, I could not answer that question, because we did not trouble the Board.

44442. You did not take much trouble about the matter?—No. We found that as we could only get £35 it would be useless to start a committee.

44443. You say that after consultation the tenants on Lord Landsdowne's estate offered to purchase at 20 years' purchase of the second term rents, the sporting rights to be vested in the tenants. May I ask you what the tenants proposed to do with the sporting rights when they held them, if they had bought them?—To use them themselves.

44444. Each man to shoot on his own holding?—Well, I think so.

44445. Just as a matter of curiosity do you think that is a good way of preserving game? Do you imagine that there would be much game if anybody had been doing that for a year or two?—I think there would be just as much game as there is at present. I think one of the main reasons why the tenants wanted to get the game rights was not because they thought the game would be of any great benefit to them, but they objected that after purchasing their holdings there should be game lords over them and that men should come on their lands any time they liked.

44446. I could quite understand that, but I wanted to ask you what your opinion was as to what would be the effect if each person exercised his rights of ownership, so far as game was concerned, on his own holding. Do you think that the game would still continue to exist?—It would, because it would not be the interest of the people to keep the game down.

44447. But game is an asset of considerable value, is it not?—Well, it is.

44448. It would be, therefore, to the advantage of a tenant or almost of any man to maintain the game?—Of course.

44449. Is it not your opinion that if the sporting rights were acquired by the tenants that asset would be acquired and maintained far more readily if some committee of the tenants were to organise themselves for the purpose of protecting the game and leasing that to somebody, than it would if each man shot his holding himself?—Well, of course, that is a question for the tenants to consider after purchasing.

44450. Can you tell the Commission any instance in your knowledge where, when the game rights have been vested in a number of small holders, the game has continued to exist in any quantity. Do you know of any instance in the world where that is so?—Well, I think there is a gentleman here, Mr. Doran, who lives on a property where game has been left to the tenants, and there is game still continuing.

44451. Has he shot?—Yes.

44452. And there is as much game as there was?—I think so. What the people objected to entirely was that after buying their farms people would come in upon them with these game rights. They have been persecuted by bailiffs and emergencymen and that class of people in the past, and they will persecute us still coming in with their water bailiffs and dog boys. All the present landlords will want to keep the game and to let them to Englishmen, and several have let the game rights to strangers, and when those people come in they will persecute and torment the people almost as much as they were persecuted in the past.

July 10, 1907.

Mr. Denis J. Sullivan.

44453. Tell me what you mean by "persecute"?—Haul them before a magistrate in this court here for a very small reason.

44454. That is if they poach?—Yes; for a very small reason.

44455. But only if they poach?—Even if they were not poaching at all.

44456. Do you mean to say that anybody would be brought before a magistrate for nothing; for no cause whatever?—I mean that the majority of the gamekeepers are emergencymen, whose record in the past was not a very good one, and they would, for spite, bring people up here without any cause at all. I have seen instances of where people were brought up here by water bailiffs, against whom there has been no case proved.

44457. And is the case successful?—Sometimes.

44458. The action is successful?—According to the condition of the bench.

44459. And do you seriously wish to inform the Commission that there are constant miscarriages of justice in that way?—There have been in the past, unquestionably.

44460. What do you mean by the past—how long ago?—Well, not very long ago.

44461. How long ago, please—the Commission want the details?—Well, up to the time that the powers of the landlord party in the country were, to a certain extent, clipped.

44462. How long ago was that?—For the last ten or a dozen years.

44463. What clipped the landlords' power ten years ago?—The legislation I speak of.

44464. What legislation?—Of course we all know that the position of the people subsequent to the legislation on the land question has been far and away different from what it was twenty years ago.

44465. Has there been any legislation in the last twelve years?—I believe since the passing of the Land Act of 1881.

44466. And did the Land Act of 1881 have any effect upon the game laws or game rights?—Well, it gave the people more liberty, and there has been legislation in the past. Of course you have, to a certain extent, the people more represented on the magisterial bench now than they were formerly.

44467. So we understand you to say that since the Act of 1881, which appears to be the Act you have in your mind, there have been constant miscarriages of justice by convictions imposed upon innocent persons at the instances of keepers and bailiffs for poaching?—There have been, frequently, in many cases.

44468. Since then?—Since and before then.

44469. But, Mr. Sullivan, do, please, be accurate. I want to know when, in your opinion, this occurred, because it is of interest to the Commission?—It has frequently occurred.

44470. Since 1881?—No, but for a long time even before it.

44471. Has it occurred since 1881—can you give us any instances, or can you tell us that, in your opinion, there have been instances in this district since 1881 of miscarriages of justice in that respect?—Of course there can be instances given of where people were convicted for poaching offences against the weight of evidence. We have had the evidence of five or six, or seven or eight honest, respectable people in the district cast aside for that of gamekeepers or water-bailiffs, which was relied on by the magistrates.

44472. The whole of the system of justice in that respect lies, does it not, in these days, with the Petty Sessions?—Well, as far as justice is concerned, there was very little justice in this country at all.

44473. Then, you object to the Petty Sessions system?—As far as justice to the people was concerned, the people got very little justice here.

44474. Then, you say you attributed the enhanced prices of land to the operation of the zone system and the abolition of inspection for security, and the lever of arrears, which the landlords are using to exact very high prices. Explain that?—I mean that in the case of tenants owing two or three years' rent when they went into negotiation with the landlord for the purchase of their holdings the landlord asked an exorbitant price, and though they may get a slight benefit for the time being, a reduction of 4*s.* or 5*s.*, the mere fact of having owed these arrears, and getting rid of them was an inducement to them to purchase at the high price.

44475. They were in arrear when they offered to buy?—Yes.

44476. And if they bought the arrears were wiped off?—Yes; the arrears were wiped off.

44477. And therefore they have been induced to purchase at high prices in order to get the arrears wiped off?—To get the arrears wiped off, and in view of the little benefit they got in the way of reduction of rent.

44478. Then, you say the remedy for this state of affairs is, in your opinion, compulsory purchase at a fair price. May I ask you what do you mean by a fair price?—I mean the prices that were current under the Ashbourne Act, the prices at which land was sold in this district under the Ashbourne Act.

44479. That is what you call a fair price?—Yes; the price at which land was sold in this district under the Ashbourne Act was fourteen or fifteen, and seventeen years' purchase was the highest.

44480. Is it not a little difficult to measure the price by that rough and ready method—do you think it a very convincing argument that because a particular estate is sold at, say, seventeen or sixteen years' purchase, an estate in the same district should also be sold for sixteen or seventeen years' purchase. It is a rather rough and ready method, is it not, of arriving at a fair price?—Well, it is the method that has been adopted in the country since the Land Purchase Act was passed.

44481. If I have a cow in a field worth 30*s.*, and you have a cow in the next field worth £5, would you be convinced by that argument that you should sell your cow for 30*s.* because mine in the next field sold at that price?—Well, I do not think there would be that great difference between two neighbouring estates here. I know an estate here convenient to the town that was sold in the year 1890 at fifteen years' purchase. I held a farm on it myself.

44482. And you say there were other estates sold at seventeen?—Yes; seventeen years' purchase.

44483. May I ask you, on your basis of computation, why should not the estate sold at seventeen years' purchase have been sold at fifteen?—That was a matter for the tenants. That was a matter between the landlord and the tenants.

44484. Why should not it have been sold at fifteen years' purchase—how are you to judge of what is the reason for the difference of the two estates, one sold at seventeen years' purchase and the other at fifteen?—One was sold in 1889, and I believe the tenants organisation was stronger in those days.

44485. Do you mean that the reason for the difference of two years' purchase was not in any way due to the fact that the land was better in one estate than in the other? As a matter of fact the land purchased at fifteen years was much better than the land purchased at seventeen years.

44486. Then, when there is a difference in price it has nothing to do, you imagine, with the quality of the land?—It may and it may not. I think, of course, the difference in price, as far as I can see, is due to the fact that the tenants were organised, that they had a strong organisaion a their back, and were able to make better terms than when their organisation was not so strong, or when they were not organised.

44487. That is assuming, is it not, that the purchase and sale of estates is carried on under certain conditions, quite apart from the question of the quality of the land, but supposing these things were carried on under a normal condition of affairs where only pure business was meant, and by pure business I mean the value of the land, what it is worth to the seller, and what it is worth to the purchasers, which is the norman condition of sale and purchase. That is how ordinary things are sold and bought, is not it?—Ordinary things, but, of course, land is different.

44488. Well, now, under a strict system of business of that kind, the question whether there are tenants' organisations or not does not come in, does it—you are a shopkeeper?—Yes.

44488A. You sell certain goods in your shop?—Yes.

44489. You, I suppose, hope to conduct your business on business lines, without any question of whether your purchasers have got an organisation behind them or not?—I think that is entirely different to a question of land.

44490. You think that land is of a different character?—Yes. I know that landlords will try to

get as much as they can out of the land, and when they find the tenants helped by a weak organisation they crush them every way they can, and when they find the tenants' organization slack they increase the prices.

44491. We are to understand from you that in your opinion land should be bought and sold on a perfectly different system to any other commodity in the market?—Oh, certainly, because you cannot compare the land of Ireland with any other commodity. The people have some claim on the land.

44492. Whereas business should enter into the purchase and sale of any other commodity, with land business should not be considered?—No, because the occupiers of the land had an interest. Even the Act of 1880 gave them an interest equal to the landlord's in the holding.

44493. Then you say that land should be compulsorily acquired by the Estates Commissioners. Why do you say the Estates Commissioners?—The Estates Commissioners or the Congested Districts Board, either. I only just wish to point out to you the difference in price between the Act of 1903 and the previous Acts. Upon the estate that I mentioned that was sold for fifteen years' purchase I held a farm myself. It was purchased in 1890 at fifteen years. There is an adjoining estate, on the very next townland, sold under the Act of 1903 for twenty-four and a half years' purchase.

44494. Then you say that you think that certain untenanted land should be parcelled out as allotments to labourers?—Yes.

44495. You have power, have you not, to obtain land for labourers' cottages?—We have.

44496. Then, in your opinion, is further power necessary?—We have not power to go into the demesne lands.

44497. No, but you propose that you should?—Yes, because those lands are not used as demesne lands. They are of better quality.

44498. Do you think you should have the power to go inside a demesne wall and take land?—Although this land is called demesne, it is not actually demesne land, and it has not been used as such. It has been used for grazing, and let on the eleven months' system for the last thirty or forty years.

44499. Is it let in conjunction with the demesne?—No, but for grazing.

44500. How do you define demesne?—Demesne should be land round a gentleman's residence.

44501. Then you would take that?—If it was required.

44502. Do you think that that would have an effect upon the amenity of the residence?—I do not think it would.

44503. Sir Francis Mowatt.—Do you say only about 100 acres is what you are alluding to as the demesne land?—Yes.

44504. Chairman.—Then you say that the breed of cattle and sheep should also be improved by the Congested Districts Board, but you have already admitted, I think, that that is your affair, and not the affair of the Congested Districts Board?—Yes, my lord.

44505. And the cattle have to be kept now till they are three or four years old?—Yes.

44506. That is an unusual state of things, is it not?—Well, it is not unusual at all. They have to be kept here till that.

44507. Well, we have heard a good deal in other parts of Kerry about them having to sell them younger?—Well, of course, land in other parts of Kerry is entirely different from this land round here.

44508. You say they keep their cattle till they are three or four years old?—Yes, if they want to make anything of them, but some poor needy farmers will want to sell them at two years old.

44509. Sir Francis Mowatt.—You have stated in your evidence that in the beginning of 1905, in reply to a letter, the landlord at last submitted terms, viz., twenty years' purchase of first term rents, and twenty-three of second term rents, sporting rights to be vested in the landlord absolutely, and excluding from the sale a large number of holdings?—Yes; he had a large number of holdings on the estate which he refused to sell.

44510. Are the lands in his own hands?—They are not in his own hands. They are let to tenants.

44511. And he excluded them from the sale—did the tenants state that they would not purchase, but that others might?—Yes; that others might.

44512. One other question. You mentioned to his lordship just now that you were aware of an estate purchased in 1890 at fifteen years' purchase?—Yes.

44513. Was that second term rents or first term rents?—First term rents.

44514. First term rents?—Yes. I mean to say that they were mostly all lands that were held under leases.

44515. And therefore to that extent perhaps the comparison with the number of years' rent paid on second term rents is not quite sound, is it?—I take the fair rent to be the basis on which the number of years' purchase should be calculated.

44516. Let us understand. In 1890 the rents we may say were a little higher than when they were second term rents?—I suppose the difference would be 10 to 15 per cent.

44517. I only want to understand. I am not cross-examining. In 1890 the average was fifteen years of the then rents, but the then rents were, at all events, to some extent reduced when they were turned into second term rents?—Yes.

44518. Then fifteen years' purchase of the higher rents would represent something more, say, seventeen or eighteen, of the others?—Yes.

44519. I should like to ask one other question, about the cattle that you say they keep till three or four years old—I take four years as the maximum—before they can be sold to the middlemen who put them on the grazing farms?—Yes, before they can be sold to the dealers.

44520. Do you mean that small holders keep cattle four years before they sell them?—Some of them on the mountain have to keep them.

44521. Is that rather usual?—They have to keep them till they are three or four years old before they can make anything of them.

44522. When you say they have to do it, I am not disputing the fact, but I only want an explanation—do you mean that they follow such a course, and that there are many four-year-old beasts sent on?—Yes, I see a number of them here four years old.

44523. Chairman.—How long does it take to fatten a beast after he goes to the grazing land?—We do not fatten here.

44524. But how long does it take?—I suppose about twelve months.

44525. So that a beast would be rather ancient by the time he was fattened?—Oh, no; about five years old. Anybody who attends the fairs here will see numbers of them three or four years old.

44526. Is it a common thing to send stores to sell in England at five or six years old?—I cannot speak for England. I can only speak for here. I know they have been kept here in considerable numbers till three and four years old—great numbers of them.

44527. Most Rev. Dr. O'Donnell.—You say the greater portion of the land in the district is of a very poor quality and must originally have been reclaimed from mountain sides and cut-away bog. To what estate were you particularly referring—what estate had you before your mind?—Well, I may say all the estates, or rather the majority.

44528. Does it apply to the Lansdowne property?—Oh, certainly, my lord.

44529. When was this reclamation done—is it going on still?—It is going on still, my lord.

44530. Before the land was reclaimed was it of much value?—It could not be, my lord.

44531. The land was reclaimed. Was rent put upon the reclamation?—Yes, my lord.

44532. When?—When the leases fell in, my lord. When the old leases fell in, the rents were increased. I know instances where the rents were increased 40 per cent.

44533. Are you near the property here that Sir Charles Russell, afterwards Lord Russell, described?—Yes, my lord.

44534. Now those rents were charged, before 1881, on reclaimed land?—Yes; on reclaimed land.

44535. There was no redress after 1881 for the rent that had been charged on the reclamations of the tenants?—No, my lord.

44536. You have made a statement showing that the prices of land of the same class have gone up under the Act of 1903. You say you yourself know of an estate in Kilgarvan, which the tenants agreed to

July 10, 1907.

Mr. Denis J. Sullivan.

purchase, in 1890, at fourteen years' purchase, two years arrears being in some cases wiped off at the time, but that the Land Commission refused to sanction the sale then, as they did not consider the farms sufficient security for the advance; yet these very same farms, not considered sufficient security for an advance of fourteen years' purchase in 1890, have been recently sold at twenty years' purchase?—That is a fact, my lord.

44537. I want you to develop that a little, Mr. Sullivan. The Land Commission refused to advance fourteen years' purchase on those farms?—Fourteen years' purchase at the time.

44538. And they have been sold at twenty years' purchase?—They have been sold within the last few months at twenty years' purchase.

44539. Do you mean purchase of the same kind? Were they first-term rents in each case? They were all first-term rents in 1890?—I think some of them have got rents fixed since then; but the first-term rents that were agreed to be sold for fourteen years' purchase, and on which the Land Commission refused to advance that money, on the ground that the land was not sufficient security for the advance, have been sold now for twenty years' purchase.

44540. They are first-term rents, you think, on which the Land Commission would make no advance, even to the extent of fourteen years' purchase, that have now been sold to the tune of twenty years' purchase. Is that your statement?—Yes; that is my statement, my lord.

44541. That would be a conclusive proof that the same class of land is selling at a higher rate under the Act of 1903?—Yes, my lord; and some in this district at prices varying from six to ten years' purchase higher than under the old Acts.

44542. In reply to the Chairman you gave reasons why the tenants pay more now than they did formerly for the land?—Yes, my lord.

44543. You also stated, in reply to the Chairman, that agricultural prices have fallen. I want to know, when you stated that prices have fallen, what years you had before your mind? Would it be this, that a quarter of a century ago prices were higher than now?—Yes, my lord; that is it.

44544. Now I pass for a moment to some things which you say the Congested Districts Board have not done, and ought to have done. You think the Parish Committee could not well have begun with £35?—Yes, my lord.

44545. The sum offered was £35?—Yes.

44546. Do you know what proportion of the parish of Kenmare is scheduled as a congested district?—Well, only one electoral division.

44547. And do you know this—that none of this £35 could have been expended outside that electoral division?—Yes, my lord.

44548. And, then, do you not think it was a considerable sum for the area over which it was to have been spread?—Yes; but the area of Kenmare is a good deal larger than the other divisions of the parish.

44549. I suppose you hold that some of the area not scheduled is as poor as the scheduled area?—Yes; poorer, my lord.

44550. But, all the same, as the law stands, it could not have sanctioned expenditure outside the scheduled area?—Yes, my lord.

44551. I may call your attention to this: are you aware that there is a successful Parish Committee in Sneem, not far away?—Yes, I am.

44552. You represent Sneem?—Oh, no.

44553. On the County Council?—No, my lord.

44554. Now the Sneem Parish Committee in 1903-4 got £35. The following year they got £105, and the next year £105, and this year they have £105?—But there is the Parish Committee, in my neighbouring parish here, that I think got £50 two or three years ago; and that grant has not been at all increased since then.

44555. I daresay. It would depend upon circumstances. Your point is this, I suppose, that it is difficult to get a body of men to give their time for the expenditure of a small sum like £35?—Yes, my lord.

24556. Now, coming to the agricultural schemes and the live stock schemes, do you think are the people around satisfied with them?—They are not satisfied with them, my lord.

44557. The farmer is not getting the class of help he wants?—No.

44558. Is he getting any more of that help now than he did four or five years ago?—No, my lord; he is not.

44559. Do you think that there might be some system devised which should bring the advantages of those animals more conveniently to the door of the farmer?—Oh, certainly, my lord.

44560. Now in the time when these agricultural schemes were under the auspices of the Congested Districts Board there was a horse stationed there?—Yes.

44561. And what other class of animals?—I think there was a bull, my lord.

44562. Were not there poultry stations?—I do not think so.

44563. In the district you represent?—I do not think so; but I am not sure.

44564. Do you take any interest in bee-keeping?—No.

44565. Do you not think it would be a nice, elevating industry to spread throughout the country?—It would, my lord.

44566. It is a small thing, but in Ireland we have to attend to small things?—Yes.

44567. I should like you to explain a little further your replies to Lord Dudley (the Chairman) about the game. When an estate is being sold to the tenants, what do you think ought to be done with the game?—Well, I think, my lord, the best thing would be a committee of the tenants to look after the game, and to take charge of it; but the tenants do not look on the game as any great benefit to themselves personally. What they look to is that when they buy the farm they want to buy everything on the farm.

44568. They do not want to have bailiffs trespassing?—Yes, my lord.

44569. CHAIRMAN.—That is hardly Mr. Sullivan's answer to me, because Mr. Sullivan told me distinctly that in his opinion the game rights should be vested in the purchasers, and that they should have a right to shoot on their own holdings?—Certainly.

44570. Most Rev. Dr. O'DONNELL.—Do you consider that when the land passes to the tenant the ownership of everything on the land should pass?—Yes, my lord.

44571. That there should not be two owners remaining?—Certainly, my lord.

44572. And that the Land Purchase Acts were designed with the object of transferring the land and what goes with it from one class of owners to the other?—Yes, my lord; to carry out the Land Act.

44573. You consider it a hardship that gamekeepers should come there at their discretion and go over the land?—I consider it a great hardship.

44574. Perhaps you did not quite grasp Lord Dudley's point. Let us see how the thing could work out to the advantage of the tenants. One way would be that the tenants should form an association for the preservation of the game and lease it to a sporting man for advantage to themselves. One can fancy another system by which the right of shooting should remain subject to having to pay so much bird money to the tenants on whose lands the birds were shot. Would not that give the tenants practically the whole interest in the game?—It would, but all the same they would not like to give the landlord a right to send any person he liked on the land at any time he wished.

44575. The point is that the better the game is preserved the better for both parties?—Yes.

44576. And you will not be surprised to hear that that system has worked well in some parts of the country?—No.

44577. Would you favour a system by which the tenants would each try to shoot as much of the game as he could?—No. I prefer a system by which the game would be vested in a committee of the tenants, to be used for the benefit of the tenants, but what I object to entirely is that the landlord, when he sells the interest in his estate, should have the right to go there whenever he liked and keep a brigade of bailiffs and dog-boys and water bailiffs.

44578. Sir FRANCIS MOWATT.—Brigade is rather a strong term, is it not?—Well, we have been accustomed to it in the past.

44579. Most Rev. Dr. O'DONNELL.—Would you do anything that would be against the preservation of the game?—Oh, no.

44580. Would you vote for the preservation of the game?—I would.

44581. I think you also said in reply to Lord Dudley, our Chairman, that there had been convictions for poaching at times that were against the evidence?—Yes, my lord.

44582. The tenant after 1881 had not the game rights?—He has some game rights.

44583. There was the Ground Game Act and after that was passed he had some rights to ground game?—Yes.

44584. As regards convictions and I suppose as regards the control of local affairs, the occupiers' strength came quite as much from the Land Acts as from the Act of 1898—the Local Government Act?—That gave them fresh powers, but the Act of 1881 gave them certain powers, because previous to that Act the tenants had to vote any way the landlord wanted them to do at the Poor Law election.

44586. You think the object of Gladstone's Act of 1881, which no doubt had been largely brought about by that agency of popular strength to which you referred a while ago, was emancipation of the tenants?—Yes.

44587. Now, so long as the question of conviction for poaching is brought before the Petty Sessions you think it right that the bench should be manned by gentlemen in whom the people at large had merited confidence?—Yes, my lord.

44588. Is there a fair representation of that class on the bench in this district?—Well, there has been an improvement recently. There was not in the past, my lord.

44589. I should like to ask you a further question about those veteran stores that are sent on from the mountain sides to the better lands. Would it be true that in the poorer parts of the Kerry peninsulas the people have no regular system of sale of their cattle at a certain age?—They have not, my lord.

44590. They have not at any regular age?—They have no regular age here. Of course the system of sale depends upon the demand to a certain extent. There may be years of depression in the cattle trade when these stores we have here would not be bought at all.

44591. And that is the way. There is sometimes no demand for mountainous cattle?—Yes.

44592. And they have to be kept on the mountain sides?—Yes.

44593. So that they may be fattened by the time they have to pass from the district?—Yes, my lord.

44594. Mr. SUTHERLAND.—One question. It is in reference to the regrettable incident that terminated your negotiations with the landlord for the purchase of the holdings, with regard to the retention of the sporting rights by the seller. Do you know any case where the land is held by one proprietor and the shooting rights upon that land held by another proprietor?—No; I do not know.

44595. I never heard of it before. It is quite extraordinary to me. Do you know whether it is the custom in Ireland to separate the two things, that is to say that one man should be the proprietor of the land and another man should be the proprietor of the shooting rights upon that land. Is that the custom in Ireland?—No. They have tried to do it here in a good many cases, to keep the sporting rights; but when we want to get rid of the landlords we want to get rid of them entirely.

44596. CHAIRMAN.—But have you not read of sales which have taken place in Ireland in which that has been the case, in which the sporting rights have been retained?—Probably there may be.

44597. Probably! Have you not ever read of it? Do you mean to say that in accounts of sales that have taken place under the Act of 1903 in Ireland you have not noticed any cases in which sporting rights have been retained?—There may have been cases.

44598. Have you not read of it—can't you say yes or no?—There may be some.

44599. Have you ever, in the accounts of the sales that have taken place read of cases in which sporting rights have been retained?—Well, in the accounts of sales published in the papers there have been a good many cases that don't give the particulars as to whether the sporting rights are retained or not.

44600. Then am I to take it from you that you have never read of it?—It is on the Warren Estate in Kerry.

44601. It has occurred?—Yes.

44602. Mr. SUTHERLAND.—Did you ever hear of it before the Act of 1903?—I did not hear of it.

44603. CHAIRMAN.—Under the Ashbourne Acts did not that take place?—Well, I did not hear of it.

44604. Before 1903 were there no sales of that character?—I have not heard of any, my lord.

44605. Mr. KAVANAGH.—You say that in your opinion there should be compulsory purchase at a fair price, the abolition of the zones, and the Estates Commissioners to fix a fair price. I want to get your idea of what a fair price would be. You are a tenant yourself?—Yes.

44606. What is the rent?—I am not a tenant myself. I purchased at fifteen or seventeen years' purchase in the year 1890.

44607. You are not a tenant yourself?—No.

44608. What was the amount of the rent of your holding at the time?—£20.

44609. And what is the present instalment?—£12. It would be less if I took the decadal reductions, but I did not accept them.

44610. Is that, in your opinion, a fair price?—Well, I think it is a fair price.

44611. You consider nearly half of the present rents would be a fair price of the lands for purchase?—In this district, anyhow.

44612. Would you be satisfied with the price which the Estates Commissioners would fix?—That the Estates Commissioners or Congested Districts Board would fix.

44613. Whether it would be a rise or fall?—Yes.

44614. The effect of the abolition of the zones, as you are aware, would be that there would be no compulsion on the Estates Commissioners to give any reduction. They might increase them?—Of course they might, but I do not think they would.

44615. Just about game rights—now, I should like to ask you whether it would remove your objection if the vendor merely reserved the game rights for his own life time?—It would not. I object that the landlord should have any power over the people once he has sold his property. We should get rid of landlordism.

44616. And that would not remove your objection?—That would not remove my objection.

Mr. TIMOTHY J. O'SULLIVAN examined.

44617. CHAIRMAN.—You are a Kenmare Rural District Councillor?—I am, my lord. The parish, which is nearly twenty-four miles long, varying in breadth from one mile to three, is situated at the south side of the Kenmare River, at the base of the Caha Mountains. It is portion of the barony of Glenerought, and is all the property of the Marquis of Lansdowne. Although I have not gone into statistics, I should say the number of holdings are from three to four hundred and the average valuation about £6, owing to the unproductive quality of the soil, which must have been originally reclaimed from the mountain sides. In order to maintain any kind of fertility it has to be manured and tilled every six or eight years alternatively, otherwise it would revert to its original sterility, and grow nothing but grass of the coarsest description, furze, heather, etc. The potato is the principal crop raised on which the people have to subsist. Bread and tea are also used, but no meat, except on festival times, and even then it will be an old cow, which is purchased at from £1 10s. to £3. I have not seen twenty bags of corn sent to the market from this parish for the last forty years, though I have seen hundreds of bags purchased from the merchants yearly for seed and feeding purposes. Owing to the poor produce of the corn crop it would scarcely pay for the cultivation. Owing to the rocky, boggy, and gravelly light nature of the soil, manual labour has to be employed in the cultivation of all crops. The plough and harrow can only be used on a few isolated farms here and there, and in several instances the people have to draw manure on their backs where the horses or even the asses could not penetrate. About three-fourths of the holdings are uneconomic and unnecessary. To say people could not pay rent and taxes together with paying

July 10, 1907.

Mr. Timothy J. O'Sullivan.

the shopkeepers, to whom, I believe, most of them are indebted (as between ourselves and the shopkeepers it is all a system of credit, and scarcely any ready cash paid for either food stuffs or clothing, without getting remittances from their children in America or elsewhere). Most of the young men and women emigrate to America when they arrive at the age of about twenty years. The fishing used to assist many along the coast, but that, too, has declined in recent years, more especially this year, as there was scarcely any fish caught from Killmacilloge Harbour to Kenmare, a distance of fourteen miles. There are about a dozen handloom weavers in the parish who make some very serviceable flannels and pretty tweeds. I think the Congested Districts Board ought to encourage and assist them, as well as to obtain markets for their goods, as under existing circumstances they have to sell to the speculators, who export them, and make a considerable profit. There is no means of enlarging the holdings, as the landlord is planting most of the lands coming into his possession. He has some thousands of acres planted, and claiming the right of pre-emption in most cases where the tenant is selling his interest, he has at present four or five farms on his own hands for which I believe he paid the outgoing tenants in some cases. There are three evicted tenants, and in my opinion they ought to get an extent of land equivalent in value out of those farms in the landlords' hands. I may add that their own farms are in the possession of grabbers. The principal means of improving the condition of the people to my mind would be compulsory purchase, abolishing the zones, and giving the Estates Commissioners power to fix the number of years' purchase. This would give them a substantial abatement in their rents, and by becoming peasant proprietors it would encourage them to till their farms with greater energy, when they would not be afraid of periodical revision of rents. The landlord has refused to sell until very recently, when he offered us terms of an abatement of 5*s.* and 7*s.* to the pound respectively on first and second-term rents, but hedged round with a lot of difficulties, such as reserving game and fishing rights, charging a high rate of interest, and excluding a large number of the tenants from the purchase. We offered to purchase at 7*s.* and 9*s.*, or as an alternative to purchase through the Estates Commission or Congested Districts Board. The landlord has refused to alter his original terms, and so negotiations have been broken off. No arrears are allowed to accumulate, as the tenants are very often processed and served with writs for half year's rent. Before the Land Act of 1881, tenants were often served with notice to quit for cutting a branch off a tree or even a few sally twigs, even though the trees were planted by the tenant or his predecessor in title, and if not evicted the rent was invariably raised. Other means of improving the condition of the people would be the introduction of some good bulls and rams for the improvement of their little cattle and mountainy sheep, giving employment by means of reproductive works on their farms, such as draining, fencing, reclamation, etc., the making of several new roads through the parish in districts where they are badly needed, besides being of great utility, the making of them would give most needful employment to the small farmers and their sons during the ensuing year. In the absence of those roads which I could point out, the people have to draw loads on their backs in some instances over a mile from the main road. The cattle raised here are of such an inferior quality that it is only in good years they can be sold to any advantage. During the last twelve months I have purchased two and three-year olds in this parish at £3, and some even less. If Canadian and foreign stores were imported into the British Isles, our few cattle would became practically unsaleable. I remember some thirty years ago, when foreign cattle were imported and cattle disease was in the midland counties, three-year olds were sold here for less than a pound each.

44618. You have not had any blight this year?—No, because they have no opportunity of learning that yet.

44619. They are digging them up in some localities?—Early ones.

44620. And considering the wet that we have had during the last few months, I think the potato this year is a very good crop, looking fairly good at all events?—Yes, and I attribute that to the cold weather that we have had, and I think if we had foggy weather and warm weather the blight would have set in long ago.

44621. We have no sign of blight as yet?—In one field this season I could see it.

44622. A sign of blight?—Yes, my lord.

44623. The potatoes round Waterville are looking very well?—Well, they are thus in my district, too.

44624. You say, "I have not seen twenty bags of corn sent to the market from this parish for the last forty years, though I have seen hundreds of bags purchased from the merchants." Were those hundreds of bags foreign wheat?—Oh, certainly, American flour and Indian corn.

44625. Of course Ireland is not peculiar in that way. The tendency of recent years has been every year in England and Scotland, as in Ireland, gradually to decrease the acreage under wheat and to purchase more from other countries?—Well, I think, owing to the excessive humidity of our climate in the South of Ireland wheat could not be successfully grown at all.

44626. But is it not the fact that that tendency is to be seen in England and Scotland also?—Well, of course, I have no knowledge of England and Scotland.

44627. Is it not perhaps due to the fact of prices—Is not this tendency which you have noticed here to use more largely foreign wheat rather than home-grown wheat due to the fact that foreign wheat can be bought cheaper than home-grown wheat can be grown?—Undoubtedly.

44628. So that it is probably caused by things other than climate altogether?—Well, I suppose so.

44629. Then, you say, "The fishing used to assist many along the coast, but that too has declined." What is the reason for the decline of the fishing?—Well, I could hardly state the reasons except that I attribute it to the trawling. In most of the harbours, to my knowledge, in former years, there used to be hundreds of fish taken between Killmacilloge harbour and this place, and for the last fifteen years I do not think there were £20 worth of fish taken in the district except salmon.

44630. That is inside the Kenmare River?—Yes.

44631. And trawlers cannot go into Kenmare River?—But they go up to Mr. Warren's place.

44632. The foreign trawlers cannot?—I know that, but all the same I suppose they have injured the fishing at the mouth of the river.

44633. They cannot come within three miles of the shore. I mean the present law prevents foreign trawlers coming in?—I suppose so, but I think they infringe that rule very often.

44634. I think that at any rate they are breaking the law if they do?—You could stop them, and if there was any constant infringement I think there would be a gunboat sent.

44635. Mr. SUTHERLAND.—And do they come from France to do this?—Oh, they do, and from the Isle of Man.

44636. They are not foreigners, but do French trawlers come to the west coast of Ireland?—Well, of course, I am not up in the fishing business. I think there is another gentleman here that will give more evidence on the question than I can command.

44637. I think what you refer to as the trawling inside the three-mile limit is what the fishery authority in Ireland itself permits by by-law?—Yes. I admit that; and I think it has an injurious effect on the fish.

44638. May I ask you why?—I suppose they frighten the fish away.

44639. Are the local fishermen successful?—Not very.

44640. They might be if they began to trawl?—Well, I suppose they have not the means to get boats and cure the fish.

44641. CHAIRMAN.—Then you speak about the handloom weavers, and you think that the Congested Districts Board ought to encourage them and assist them as well as to obtain markets for their goods. Tell us, have you thought at all how that could be done, and would you like to see the Congested Districts Board encouraging weaving?—Well, I would like to obtain markets for them if they got the wool too, in the first instance. The shopkeepers have good wool, and there is considerable profit on the goods. I believe the Congested Districts Board's inspector might find

customers for these in England and Scotland, where these tweeds are sold, and could have them sent off, in the first instance. It would give them, I suppose, 20 or 30 per cent. more for their goods than they receive presently.

44642. You have not thought of any specific way in which that could be done?—I have not, my lord.

44643. Any way you would like to see, if possible, the energies of the Board directed towards encouraging the manufacture?—The Board's inspector could encourage this home manufacture.

44644. By obtaining a market?—Yes.

44645. Is there any other way?—Yes; I think there is another way; if they sent weavers from Scotland, say,—I suppose they are well up there in the weaving—to instruct the home-weavers, I think it would be an advantage, and I think it would bring about an improvement of the quality of the goods which they would afterwards turn out.

44646. There has been nothing of that sort done?—I do not think so. I really have not heard of it.

44647. And you think that the weavers about here could improve by their instruction?—I have no doubt about it that they would considerably improve.

44648. Could the looms be improved?—Oh, yes; they are very primitive looms. I think they are the same looms as were in use 100 or perhaps 200 years ago.

44649. Is that the hand shuttle?—Yes, the hand-shuttle. They have them inside in the dwelling-houses mostly.

44650. There is a considerable industry in weaving about here?—Yes; there are fourteen or fifteen hand-loom weavers about here.

44651. Are Mr. Mansfield's goods in the shop-windows all woven hereabouts?—I should say not. Mr. Mansfield buys tweed from Donegal and Galway, and, I suppose, Scotch tweeds.

44652. Is he the principal buyer about here?—Mr. Corkery, another merchant, also buys.

44653. Would you class Mr. Mansfield as a speculator?—Of course he makes a considerable profit. Of course I class the people that buy goods as speculators.

44654. You class the shopkeeper who buys goods as a speculator?—Yes.

44655. Then, you say that there is no means of enlarging the holdings?—Not as far as the parish of Clossit is concerned, except they migrate.

44656. You say the landlord is planting, and you say also that he is claiming the right of pre-emption in most cases when the tenant is selling his interest, and that he has at present four or five farms on his own hands for which you believe he paid the outgoing tenants, in some cases. But how did he get the farms if he did not pay the outgoing tenants?—By evicting the tenants for non-payment of rent.

44657. But where there was payment of rent and where the tenant resigned his holding or put it up for auction the landlord bought it in the ordinary way by claiming his right of pre-emption?—I think it is never put up for auction when the landlord claims the right of pre-emption. He offers a certain price.

44658. In cases where the right of pre-emption is claimed by the landlord it is not put up?—Oh, no.

44659. It is all settled privately?—Yes.

44660. You say, "The principal means of improving the condition of the people, to my mind, would be compulsory purchase, abolishing the zones, and giving the Estates Commissioners power to fix the number of years' purchase; this would give them a substantial abatement in their rents." Do you mean to say that the annuities which they pay would be considerably lower than the rent?—That is what I meant to convey, my lord, that it would give them more energy to till their farms with greater advantage.

44661. And the annuities which they pay now are considerably less than their rents, even under the voluntary system?—Well, of course, rents have been reduced for first and second terms, and the reductions are very little on the Lansdowne estate for the last twenty years.

44662. You say that, "The landlord has refused to sell until very recently, when he offered us terms of an abatement of 5*s.* and 7*s.* to the pound, respectively." Well, that is, of course, what you would call an abatement of the rent?—Yes; on the number of years' purchase the offer to sell would give us that abatement.

44663. That is 5*s.* and 7*s.* less than the first and second term rents?—Yes, but he hedged it round with so many difficulties that we could not accept it.

44664. Would you not call 5*s.* and 7*s.* substantial?—I would not.

44665. What would you call substantial terms?—I would be inclined to give the landlord his net income, and I have been credibly informed that Lord Lansdowne's income of this property never would come to sixty or seventy per cent. of the rental after deducting expenses of collection.

44666. But it is difficult for you and me to judge what his costs of collection are without seeing his books?—Well, it is.

44667. But you have heard of the Land Conference before the Land Act of 1903?—Yes.

44668. Do you remember the terms at which the Land Conference arrived—do you remember that they considered as a fair basis of purchase second term rents with ten per cent. knocked off for costs of collection?—Ten per cent. only?

44669. Ten per cent. was, I think, the Conference terms?—That may be the case with very small landlords, but not with Lord Lansdowne, who has very large estates. I should say thirty or forty per cent.

44670. Those are the terms arrived at by the Conference. You would not be prepared to accept that then—you do not consider that ten per cent. is a fair amount to allow?—I do not think it is.

44671. Have you had personally any experience of what it costs to collect the income?—Oh, never, but from what I have heard.

44672. Of course the books are the best guide, are not they?—But we could not get at the books. I suppose we would get no opportunity of getting at Lord Lansdowne's books.

44673. But supposing that Lord Lansdowne or any other landlord was to show his books and prove what his income taken over a number of years had been, would you be prepared to say that the fair price to buy him out at would be the sum of money which would give him that income?—I would.

44674. And if it was a question of price, you would ask to see his books as a proof of what his income was?—I would be satisfied with that, and I think that those I represent would be also satisfied, and we would be satisfied to leave it to the decision of the Estates Commissioners or the Congested Districts Board; and we offered that as an alternative to Lord Lansdowne when the tenants were negotiating for the purchase, and he refused.

44675. When you say "leave it to the decision," what do you mean by "decision"?—The fixing of the price of the number of years' purchase.

44676. But the fixing of the price as I understand, in your opinion, would be by the proof that would be shown by the production of the books?—Yes.

44677. You would not say, as a fair-minded man, that it would be fair to take anybody's property, whoever he may be, whether landlord or tenant—to take anybody's property and leave him in a position in which he would be worse off than he was before?—I would not. Under existing circumstances I would not, although I say we must all admit that some of the landlords obtained those lands by confiscation; but we cannot go into that.

44678. We cannot go into that. Then you say "Other means of improving the condition of the people would be the introduction of some good bulls and rams for the improvement of their little cattle and mountainy sheep." There, again, you know these things are not now in the hands of the Congested Districts Board?—Well, my lord, I believe the prices at which they get these bulls are prohibitive to the small farmers.

44679. But without going into that, that is a question, is it not, which now lies with the Agricultural Department and not the Congested Districts Board?—Very well.

44680. Is not that so? And you know, do you not, that the Agricultural Committee of the County Council, of which every member of the County Council is a member, has at present the responsibility of carrying out schemes for agricultural improvement—you know that?—I believe they have, but I am afraid they have hedged it with a lot of difficulties. I believe that the Congested Districts Board could lay out money more economically for the benefit of the people of the congested districts and by purchasing Polled Angus bulls for the mountainy small cattle of this country, and I consider that that would be a

July 10, 1907.

Mr. Timothy J O'Sullivan.

very desirable and simple course; and also by purchasing Scotch rams and giving them to the farmers at a reasonable price, which they would be able to afford to pay for them, and also by giving them by instalments for two or three years. Under the existing circumstances, I think the Agricultural Department have not got Polled Angus bulls for the mountainy district that I represent. I believe the people would have to pay £30 for them.

44681. I don't think it would be so much as that?—Of course that is a prohibitive price.

44682. But you would not propose that this work of the Agricultural Department should be re-transferred from the Agricultural Department to the Congested Districts Board?—Oh, I do not.

44683. You are satisfied that in principle at any rate it is best that that work should remain in the hands of the Agricultural Department?—In the hands of the local people, yes.

44684. And that it should be carried on through the medium of the Agricultural Department, and under a democratically elected body, such as the County Council?—Yes.

44685. And you would also, I suppose, agree that as the members of the Council have this power in their hands, if the people are not satisfied it is for them to call upon their representatives on the County Council?—Well, I do not know how a representative can improve matters, because by law he cannot under existing circumstances.

44686. Sir Francis Mowatt.—I have only two questions to ask you. You say the principal means of improving the condition of the people would be, in your opinion, compulsory purchase, abolishing the zones and giving the Estates Commissioners power to fix the number of years' purchase. This would give them a substantial abatement in their rents, and by their becoming peasant proprietors it would encourage them to till their farms with greater energy, when they would not be afraid of periodical revision of rents. Are they afraid of that now?—Of course if they improve their farms they are afraid that the Land Commission will not give them a proper reduction.

44687. The next thing is that the landlord refused to sell till very recently, when he offered terms of an abatement on first and second term rents, but hedged round with a lot of difficulties, such as charging a high rate of interest. What do you mean by that?—On the purchase money. $3\frac{3}{4}$ per cent.

44688. Then you say—"Other means of improving the condition of the people would be the introduction of some good bulls and rams for the improvement of their few cattle, and mountainy sheep, giving employment by means of reproductive works on the farms, such as draining, fencing, reclamation, etc., the making of several new roads through the parish in districts where they are badly needed. Besides being of great utility, the making of them would give most needful employment to the small farmers and their sons during the ensuing year." That is to say, that the energies of the small farmer and his son are not fully employed during the year in working their own farm?—Nor no other.

44689. And if they are not fully employed in working their own farms, if there is reclamation, draining, or fencing to be done on those farms, is not that a proper employment for the spare time of any farmer if the farmer is not fully occupied by other work on his farm, and if such draining and fencing ought to be done on his farm is not that a proper thing for him to devote his time to?—I suppose he would work with greater energy and determination if he was paid for doing it.

44690. Do you not think that making a farm pay all you can make out of it is a sufficient inducement, and should be a great inducement to him to reclaim barren land?—I think I also mentioned the making of new roads through the parish.

44691. Most Rev. Dr. O'Donnell.—You said a while ago that you thought the weaving industry ought to be encouraged?—Yes, my lord.

44692. It is the old loom which the people have?—The old loom.

44693. Did you see the improved loom introduced into some parts of the country?—Yes.

44694. You know the Ardea district?—Yes; it is immediately adjoining my district.

44695. Has the improved loom been introduced there?—I am not aware of it.

44696. Is there much wool available?—Yes.

44697. And in your parish you state there are 14 weavers?—I think so.

44698. Would it be, in your opinion, a good thing for that district if the improved looms were given to weavers anxious to use them, on a system of loan, such as prevails with reference to boats when fishermen use them?—Yes, if they would send an inspector.

44699. You think they would require instruction?—Oh yes, with that new system of loom.

44700. Do you think has Mr. MacNevin, our instructor of weaving, been in that district?—Not Ardea.

44701. You say that before the Land Act of 1881 tenants were often served with notice to quit for cutting a branch off a tree, or even a few sally twigs, even though the trees were planted by the tenant or his predecessor in title, and if not evicted the rent was invariably raised?—That was so, a little before 1881.

44702. And you put that before the Commission distinctly?—Certainly. I am aware of the case of an adjoining tenant to me a portion of whose farm he was deprived of for no reason in the world only that the late agent, John Townsend Trench, said that he had dirty turnips. He was deprived of portion of his farm, which was handed over to an adjoining tenant; and he is an evicted tenant.

44703. Was that before 1881?—Yes, a few years.

44704. The agent constituted himself the judge, whether they were in proper condition?—Yes.

44705. You think it would have been better to give a prize for well-kept turnips?—No doubt of it.

44706. You spoke of live-stock schemes. Have you any recollection of when the live-stock schemes were managed in your district by the Congested Districts Board?—I have not, my lord. I do not think there was ever any such, and I have a recollection of the last forty-five or fifty years.

44707. I want to ask you this question, Mr. Sullivan. Do you consider that the poorer districts would be in much greater need of assistance under those schemes than the better-off districts?—Most undoubtedly.

44708. Do you not think then that they would need more help than the County Committee could give them in proportion to their rate?—I have said so already.

44709. I want to put this to you. The rate which is raised for this purpose in the county is backed by a certain sum from the Department?—Yes.

44710. Is it your opinion that the poorer districts require considerably more public help than the richer ones?—Oh, yes, they require a great deal more assistance than the richer ones.

44711. If the better districts of a county got help represented as 1, do you not think that the poorer districts would need help represented as 3?—Yes; and it is the rich districts of the county that are availing themselves of the advantages of the Department, because they are able to get the bulls and pay for them.

44712. It is much easier for the richer districts to avail themselves of the scheme than the poorer districts?—Yes, and they do avail themselves of it.

44713. And you think that it is the poorer ones that most need help, and that the help should be given in such a way that they could avail themselves of it?—I do, my lord.

44714. Is there a Parish Committee in your parish?—There is, my lord.

44715. And how is it working?—They are doing very well for the short time they are in existence, two or three years. There is no doubt in life that the country has been much improved by it in the condition of the dwelling-houses and cleanliness and sanitary decency.

44716. Is there lime in your parish?—No.

44717. Where do you get the lime?—In this town.

44718. In Kenmare?—Yes, a distance of fourteen or fifteen miles by road.

44719. Has there been any scheme formulated for providing lime on a large scale?—No, none. Formerly we used coral sand as a substitute for lime. The sand used to be dredged by boats in the bay and river, and it is scarce now. We cannot find men to raise it; and there are districts in the

parish that have to cultivate their crops without either lime or sand.

44720. The coral sand was used for manure?—As a substitute for lime.

44721. Mr. SUTHERLAND.—How did it come that you cannot get sufficient sand now?—Our young people emigrate to America. You would require very able-bodied men to dredge the sand. We have only young fellows of twelve to sixteen, and when they arrive at sixteen they fly away to America on free passages from their brothers and sisters.

44722. Mr. KAVANAGH.—You say that about three-fourths of the holdings are uneconomic. Now, what would you suggest to improve the condition of those holdings?—By advancing them money at a low rate of interest to improve their farms.

44723. Do you think they could be improved to an economic standard?—I do not think they could be improved up to an economic standard, but they could be improved to a certain extent.

44724. There is no land in the vicinity that would be available for enlargement of the holdings?—No.

44725. Do you think those people would migrate at all?—I am sure they would be very happy and willing.

44726. How far?—They would go to any part of the country, say to Slane or Kildare, or Meath or Roscommon, or King's County.

44727. Have you ever asked them?—I have not, but I am sure they would be delighted to get out of this miserable county.

44728. Do you call the county miserable?—Perhaps you never travelled along the land down to Castletown Bere.

44729. I have?—Then I do assure you I do not think there is worse in all Ireland, except Sneem direction.

44730. Supposing you were to migrate one in three, and give the holding of the one to the other two, would that improve the condition of the two?—There is no doubt of it, because these uneconomic holdings are the grass of three or four small little Kerry cows, and if you migrated one out of three, a man would have the grass of nine or ten cows, and that would be the means of supporting him in some decency.

44731. But that would enlarge his tillage, as I understand this land will not stay under grass permanently?—No, you have to manure and till it every six or eight years, otherwise it will revert to its original condition. I think a man could manage forty or fifty acres of land, because if you have that much in the parish of Clonsist, you would only have nine or ten arable acres in all that.

44732. Is that all that he has?—That is all.

44733. Is there much labour in the county?—Well, there is not.

44734. No available labour?—No available labour.

44735. You are still of opinion that those people would migrate if they could get a holding elsewhere?—Yes, and they would be delighted.

44736. And they would go to any part of Ireland?—Well, any part of Leinster or Munster. I think they would have an objection to go to the North of Ireland.

Most Rev. Dr. O'DONNELL.—Why?

44737. Mr. KAVANAGH.—You say there is no means of enlarging the holdings as the landlord is planting most of the lands coming into his possession. You are not in favour of the re-afforestation of Ireland?—Yes, as far as the waste lands are concerned, but I am not in favour of the landlord planting the arable land of a tenant when it comes into his possession; and I think planting would be a great benefit for the mountain sides of the country. *July* 10, 1907. Mr. Timothy J. O'Sullivan.

44738. That is what your programme led me to suppose—that he intended to plant the land already in his hands on the mountain sides, and you are against that?—I am not against that. I am only against planting arable land where the people are going to live on.

44739. You said that the cost of collection on Lord Lansdowne's property was between 30 and 40 per cent. Suppose you had property, do you think it would take 30 or 40 per cent. to collect it?—Unfortunately I have not. I suppose I would be trying to collect it myself.

44740. You would take the chance?—I would.

44741. CHAIRMAN.—I just want to ask you one question about the tillage. Mr. Kavanagh asked you whether you thought that if you gave more land to those uneconomic people, and that that increased the tillage which it would be necessary for them to do, there would be any difficulty in doing it, and you told him you did not think there would, because on a fifty-acre holding you would have no more than eight or ten acres of arable land. It would be certainly possible, would it not, that there should be some sort of arrangement between neighbours to help each other with regard to the tillage. Suppose two or three men were living in contiguous holdings, and that the tillage on one farm was a little more than one farmer could do himself, could not you have some sort of co-operative arrangement by which his two neighbours could help him to till his land and he would help them to till in return?—That is a general practice now with regard to harvesting or labouring if people are in a hurry.

44742. And therefore could not you increase the actual amount of tillage on a holding by establishing the co-operation of your neighbours?—Well, I think where a man's son remained at home here on the farm the man would be able to manage it himself.

44743. But supposing there was no son, could not you do that by arrangement with your neighbours in that way, the neighbours coming to assist you and you engaging to assist them in return?—I would not have time to go on their land. I would have to mind my own farm.

44744. But having got through your own work with the assistance of your neighbours, would not you have time to help them then?—I would have more than enough to do always on my own farm.

44745. Is not there any arrangement by which you lend each other horses?—Oh, certainly, horses and ploughs, if the land is available for ploughing. There are only five or six farms in the parish in which a plough could be used at all. It is all manual labour.

44746. You think that as a matter of practice the tillage on a man's farm would have to be done by the man himself and his son?—Oh, yes.

Mr. ROBERT M'CLURE examined.

Mr. Robert M'Clure.

44747. CHAIRMAN.—You appear on behalf of the Landlords' Convention?—Yes. My experience and knowledge of congested areas are limited chiefly to Kerry and portions of the County Cork. There is but very little land in Kerry available for redistribution or migration. The latter, I believe, is somewhat theoretical, for it cannot be extensively carried out with the consent of the people. The financial aspect appears prohibitive, for the holdings of migrants would have to be equipped by providing houses and offices and fences on what might be called a grazing ranch. This would entail an expenditure of at least £200 for each such migrant, who might feel, after his transfer to such a holding, that the Congested Districts Board had either induced him to adopt it or forced him in to it, justifying him, from his own point of view, in asserting that a mistake, for which they should be responsible, had been made. It would also seem that if a large scheme of migration is adopted, plans for carrying it out should be in the first instance well considered, instead of, as would otherwise be the case, moving at random. Mr. Commissioner Finucane's scheme for migration of tenants of very large holdings in congested districts to untenanted or available land outside their areas, and distributing their land amongst the congests, appears to me to be the better plan and accompanied by less expense and risk. This work of planting grazing ranches with small migrants, even if adequately provided for, could not be accomplished within the next quarter of a century. The various congested districts of Kerry, at all events, produce a large number of store cattle, the market for which is now found only in the large grazing districts. The practice of selling stores from the congested districts to the occupiers of grazing districts, through the agency of cattle dealers who purchase at local fairs, has been going on in Kerry from time immemorial. I find in the *Quarterly Journal of Agriculture*, published in 1837, a reference to this fact, in the

July 10, 1907.

Mr. Robert M'Clure.

following words, viz.:—"Cows may be purchased at the fair which is held in Killorglin in August, from £1 to £10 or upwards. The stunted breeds which are sold at the former price are sent in droves every year from the Kerry mountains even to Dublin, resting at night on the roadside wherever a little herbage presents itself. As they proceed on their route their ranks become gradually thinned by repeated sales, and, of course, on their arrival in Dublin they are far from being the *elite* of the body. We have seen some of them offered for sale in Sackville-street, as they mournfully stood at the base of Nelson's Pillar, as if they were about to be offered in sacrifice to the name of the departed hero, at £1 5*s.* a head, and sometimes at a lower price. Yet these half-starved diminutive animals, when turned upon good pasture, increase in size and weight surprisingly. After being well wintered they thrive in the next season after their removal from their native mountains to a weight of 3 to 3½ cwt. Instances are known of bullocks kept over a second year in rich pasture, having arrived at 5 cwt. of excellent beef." It appears to me that if a system, which has been, with great benefit to the small farmers in the congested districts, carried on from time immemorial, is terminated now, that, instead of improving their condition it will have the contrary effect. The supposed cure will intensify the disease. It may be prudent where grass lands within the congested areas are held as grazing ranches, to purchase and distribute among the surrounding population, or plant them with migrants from within the district. I have observed from the evidence of some of the witnesses examined, amongst others, Mr. Doran, that the objection to the planting of migrants on store grazing lands is sought to be met by the supposition that these migrants would become purchasers of store cattle, and take the place of the cattle dealers at the local fairs. I do not agree with this, for I believe the migrants would have to make their income chiefly from sale of their own store cattle. Congestion in some districts has been caused chiefly by sub-division of the land, which is a most difficult thing to prevent, as my experience has proved to me. Unless it is stopped the measure proposed at present to relieve congestion cannot be permanent, for in the course of a few years the contemplated remedies will not be effectual. As an instance of the way in which sub-division was practiced, and still is practiced in some parts of Kerry, I give you the following quotation from the *Journal of Agriculture*, 1837:—"Lord Ventry's system is this—He sets to a resident tenantry in considerable farms from 100 to 300 acres, at a fair rent, upon leases of three lives, or 31 years concurrent. . . . One peculiarity pervades his lordship's leases. In general the value of land is considered to increase with the population, and one might suppose a dense population to be an object with an extensive landed proprietor, but the population of this district is, of late years, increased so much as to induce his lordship to insert a clause limiting each farm, in proportion to its extent, to a certain number of houses. . . . Some village lawyers, however, have evaded the clause, and contrived legally to accommodate their increasing numbers, not by additional houses, but by an addition to each house, which sometimes exhibits a front of 100 feet, sheltering three or four generations." I think a great deal can be done within the congested districts to improve their condition materially without a very large State expenditure. Almost all the low lands can be vastly increased in value by drainage and adopting a better system of agriculture. The development of the land itself in these districts would be equivalent in effect to a large increase in the area of each small holding as it stands. Occupiers of small holdings should be able to obtain loans such as they may require, but not less than £10, from the Board of Works, for permanent improvements, such as drainage, sub-soiling, building substantial offices, and such like, at a rate of interest slightly in advance of the existing purchase instalments, and for a shorter period. The present arrangements on which the farmer can obtain money from the Board of Works are prohibitive. Moreover, the advance of a small sum, such as £10 or £15, is not allowed. This would develop the land and afford employment to the people. It should be followed up by a better system of agriculture and house-feeding of cattle on green crops. The attention of the Agricultural Department should be directed to impart necessary instruction and advice. I believe one of the best modes of doing this would be to select in districts here and there holdings occupied by intelligent men who possess agricultural knowledge in advance of their neighbours, instruct them in the best system to adopt, and reward them for success. Such holdings would be examples to others. I think this would have a much better effect than casual lectures, the memory of which, I believe vanishes with the lecturer's presence. The system of National Education in congested districts is imperfect, for the minds of the children are not directed into a channel which should lead them to think of the life business which the great majority are supposed to follow. There should be attached to each school a small farm of a few acres, where the knowledge and practice of agriculture would be taught by an instructor (not the school teacher) for half a day twice a week. The youth of the country would in this way be interested and instructed. The growth of population in the congested districts is most rapid, for the number of children in a family vary from four, which is about the minimum number, to twelve in some cases. It is impossible to provide for all out of the land. Migration, if adopted, will have filled up the available ranches. The country cannot be enlarged, and if sub-division is stopped the young people of these districts must emigrate to a land where there is plenty of elbow-room. It will be impossible to stop emigration, which must go on, for after all that is said and done, it is the safety valve for this country. Prior to the famine of 1846 to 1850 the Irishman's ambition in the congested districts was to build a cabin on the wild slopes and on the mountain sides where a potato crop could be raised, and take to himself a wife and raise a family. That dreadful scourge swept over the country, decimating a population which grew up with the luxuriance of that fated crop. Fishing on the coast is a great help to the congests, but they are not availing of the produce of the sea to the extent they might do, for they lack the knowledge, though possessed of more pluck and hardiness than those of other countries, who fish the neighbouring waters and carry off much of the great wealth of the sea. I should have said that the Congested Districts Board ought to encourage planting trees. Many of the stony mountain slopes produce excellent timber. Plantations and forests beautify and civilise a country, affording shelter, and, in due course, large profits on the outlay. Wood industries, as in other countries, could be introduced eventually. There are evidently now great difficulties in the way of re-arranging mixed holdings. I have had a good deal of experience of this work, even at a time when the landlord had power of enforcing his plans, and found great difficulty in carrying out re-arrangements. I agree with Mr. Doran's recommendation that it is indispensable to provide absolute power to plan and carry out a scheme of re-arrangement of such holdings. But, assuming that all those necessary re-arrangements and improvements have been carried out, supervision and compulsory powers to maintain such improvements must be continuous. The chief part of the Mahony Estate, consisting of two electoral divisions and part of a third, is the only estate in the Kenmare Union which is not now classed as congested. The owner for half a century fought against sub-division of the lands, a most difficult business, and during the period from 1851 to 1881, thirty years, spent over £20,000 on improvements, such as making roads, subscriptions towards roads (generally one-half or one-third), which are now county roads, draining, building bridges, planting, etc. The following summary of work on the estate proves that the owner was alive to his responsibilities:—

Roads,	40 miles.
Farmhouses and offices and labourers' cottages,	95
Thorough draining, sub-soiling, etc.,	550 acres.
Plantation,	160 ,,
Farm fences,	25 miles.
Bridges,	7 ,,

I hand in the judgment of the legal Commissioner,* delivered when first-term rents were being fixed on the estate in 1883, showing what had been his action towards his tenants. There is not an evicted farm on the estate. The work of the Congested Districts Board is now so greatly enlarged it would appear that, although the existing Board of hon. members

* See p. 217.

have been acting so far successfully, it seems absolutely necessary that some better arrangements should be made to carry out such comparatively heavy operations as are contemplated. My experience has been that rents have been fairly well paid by the smaller tenants, who are, as a rule, honest and industrious. Indeed I must say that I have found the Kerry tenants well disposed when treated fairly and justly, and quite willing to meet their obligations. The people are generous and kind-hearted; they sometimes lack perseverance, which is a valuable quality possessed by those of some countries. As to compulsion, regarding acquisition of land for migration purposes, I think notwithstanding all that has been said on the subject, it will be unnecessary, and if adopted would prove most mischievous. I believe that, if the fair full value is offered for land, there will not be any difficulty in getting it. Before the present Act came into force, I sold a large extent of land (which was farmed by the owner) in the following way. I divided the entire lot, some £600 a year, into several lots suitable for small farmers, fixed a rent on each small lot, invited tenders to purchase these lots, the purchaser to pay cash down in a lump sum. I got many applications, chiefly from the adjoining tenants, who agreed to purchase under the old Act, and who paid in cash on signing purchase agreements, from seven to ten years of the rent previously fixed by me, and which at that time was a fair rent. Thus I judge that, in the event of compulsion having to be adopted, from seven to ten years should be added to the price of a second term rent (average of which is now twenty-two and a-half years' purchase) for land in owner's hands. The poor law valuation in Kerry is not a fair guide. I have a farm under my management, the poor law valuation of which is £29 15s., on which the owner has expended over £1,000. The poor law valuation basis could not apply to such a case. The basis to adopt is the present value of the land, with some seven to ten years added. I believe, perhaps, arbitration might be satisfactory if the buyer and seller each selected a valuer, and a Judge of the High Court acted as umpire. I hand in a table showing prices given for tenants' interests on holdings on Lord Ventry's estate.* I could give many instances of high prices paid for tenants' interests on several estates if I were not so pressed for time, as I have been recently. Mr. Stuart, in reply to a question put to him, stated that the Estates Commissioners sell land to the congests at a reduction as low as 15 per cent., or, in other words, three shillings in the pound, and he considered this a safe margin of security for the purchase money.† We must contrast this estimate with the rate at which owners are selling to the congests in the congested districts. The usual margin at the present prices is 35 per cent. on first term, and 25 per cent. on second term rents, so that when, in their own cases, the Estates Commissioners are satisfied with a margin of at least 15 per cent., they should not complain of prices which give a margin of 25 to 35 per cent., in cases of direct sales by owners to occupiers. Moreover, it should be remembered that, in the case of migrated congests, according to Mr. Stuart's evidence, they build their own fences, and largely contribute to building their dwellings and offices. Surely if one of the joint owners of land, such as the occupier, is entitled to compensation for disturbance, it cannot be justly denied to the other, who is chief partner.

44748. You say that migration is somewhat theoretical and cannot be extensively carried out with the consent of the people. May I ask you what experience have you which enables you to say that?—Well, I have not consulted people about it.

44749. Is that your view of it, that it is theoretical?—Yes, it is.

44750. Then you go on to say that the financial aspect appears prohibitive as the holdings of the migrants would have to be equipped by providing houses and offices and fences on what might be called a grazing ranch, and that this would entail an expenditure of at least £200 for each such migrant who might feel after his transfer that the Congested Districts Board had either induced him to adopt it or forced him into it, justifying him from his own point of view in asserting that a mistake for which they should be responsible had been made. Are you aware that already about 300 migrants have been moved by the Congested Districts Board?—I am not aware that so many have been moved, my lord.

44751. But I think if you read Mr. Doran's evidence you will see that about 300, as far as I can remember the figure, have already been moved, and Mr. Doran told me that although some of those migrants were not the men that would be chosen had he had an opportunity of making as wide a selection as could be desired, and that although in his opinion they were not the most suitable that could be found, still, in the great majority of cases, those men had succeeded on the new holdings. Do you not think that, with the experience before us, we are entitled to assume that the financial aspect was not prohibitive?—Except the cost.

44752. But that has been done in 300 cases. Is there any reason why it should not be done in others?—At a very large expenditure.

44753. No, no; at an expenditure of about £70 a migrant?—For building houses and fences?

44754. For building houses and fences and putting the men in. That has cost, roughly speaking, £70 a man?—Well, I think if they have effected it at that low expenditure it is very laudable.

44755. That is what it has been done at already, and if it can be done at that figure, would you still maintain your opinion that the financial aspect was prohibitive?—No.

44756. You say it would also seem that if a large scheme of migration is adopted, plans for carrying it out should be, in the first instance, well considered instead of, as would otherwise be the case, moving at random. Of course, naturally, we all agree that if a scheme of migration is adopted it must be done with care, and you must select the people carefully, with a view to their future success. That is what you mean?—Yes.

44757. You also say:—"Mr. Commissioner Finucane's scheme for migration of tenants of very large holdings in congested districts to untenanted or available land outside their areas, and distributing their land amongst the congests, appears to me to be the better plan, and accompanied by less expense and risk. This work of planting grazing ranches with small migrants, even if adequately provided for, could not be accomplished within the next quarter of a century." Well that is exactly what is being done. The whole idea of migration is to move a man of considerable holding from a congested area to land which has been purchased outside the congested area, and then to distribute the land that he vacates amongst those that remain. That is the policy that has already been adopted?—Well, I think that is very sound.

44758. The migration is carried out on those lines?—We have had no experience of that in Kerry.

44759. Yes, you state that your knowledge and experience are limited to the County Kerry and portions of the County Cork, and yet I fancy that you are prejudiced against a scheme which you say yourself has not been adopted in the County Kerry?—Yes.

44760. May I suggest that that is perhaps a little hard on the promoters of this scheme which your experience in Cork and Kerry could not enable you to fully understand?—If I had the same knowledge of what has been done in the other congested districts of the West of Ireland as you have informed us now, my lord, that certainly would alter my opinion.

44761. You also say:—"It may be prudent where grass lands within the congested areas are held as grazing ranches to purchase and distribute among the surrounding population, or plant them with migrants from within the district." That is obviously again the policy that the Board have already adopted. I take it from that, Mr. M'Clure, that where grass lands in the congested areas are held as grazing ranches on the eleven months' system the Board should purchase those grazing ranches and distribute them amongst the small holders around?—Yes.

44762. And perhaps, again, in order to clear up the points between us, I may say it is obvious that the Board have, I think, already realised that before you can attempt to bring a migrant on to any land which the Board has purchased, it is necessary first of all to satisfy the local claim?—Yes.

44763. That is, I think, your point?—Yes.

44764. If the local claim is satisfied, and the small holders living round the grass land which has been acquired have had their holdings enlarged, and there

* See p. 218.

† See Appendix to the Third Report of the Commission [Cd. 3414, 1907], p. 225, q. 17565.

July 10, 1907.

Mr. Robert M'Clure.

yet remains a surplus, would you not say then that that surplus should be given to men who are brought from a distance?—Well, I should say that, but I do not think there will be a surplus.

44765. Then you would agree with the Board that when that grass land has been acquired, the men who have the first claim upon it are the small uneconomic holders round that grass land?—Yes.

44766. And that if it is possible to satisfy their claim and give you a surplus over, then is the time to bring in a migrant?—Yes, I quite agree with that.

44767. Then you say:—"Occupiers of small holdings should be able to obtain loans such as they may require, but not less than £10, from the Board of Works, for permanent improvements such as drainage, sub-soiling, building substantial offices, and such like, at a rate of interest slightly in advance of the existing purchase instalments, and for a shorter period. The present arrangements on which the farmer can obtain money from the Board of Works are prohibitive. Moreover, the advance of a small sum, such as £10 or £15, is not allowed. This would develop the land, and afford employment to the people. It should be followed up by a better system of agriculture, and house-feeding of cattle on green crops?—Yes.

44768. In other words, as I understand, you agree with several witnesses who have already appeared before us, that a great deal could be done in Ireland to encourage what is called stall-feeding, or in-feeding of cattle?—No, my lord. I am afraid very little could be done in that way.

44769. Then what do you mean by the house-feeding of cattle?—The house-feeding of dairy cattle; instead of leaving the dairy cattle to depend entirely on the pasture, that they might be fed partly in the house.

44770. That assumes that at any rate in a dairy country there would be a great deal more tillage?—Yes, certainly.

44771. Green crops and other things would be grown to feed those animals in the byre?—Yes.

44772. Do you not consider that taking a dairy county like Kerry, for instance, if land which at present is in grass can be broken up in that way, and the area of tillage increased for the purpose you mention, it might have two effects, in the first place the effect of giving an opening for more labour on the tilled land, which would help to keep most of the family at home?—Certainly, it would.

44773. And secondly, would it not have the effect of making a good many of those people less dependent than they are now upon the middleman purchaser. Would they not be able to keep their animals and feed them a little longer than they do now upon grass?—Well, that is a point that would have to be cleared up by actual practice. The Kerry small tenants in the congested districts dispose of their cattle to the cattle-dealers at the different fairs. Those cattle are conveyed to the dealers' lands in the midland counties, where they are fed for a certain time. They are then either exported to England or perhaps transferred to some better land in Ireland to be fattened for killing; and I am afraid that if we interfere with that in any way we will damage the interests of our country very much. It may be a parish opinion, but I am expressing it from my knowledge of Kerry.

44774. I can perfectly understand that if you were to suddenly wipe away the men who now purchase young cattle without providing any alternative, you would at present dislocate arrangements. But what I am suggesting is that the very remedy which you yourself suggest is the true remedy?—Yes.

44775. I am suggesting that when you have grown these green crops and encouraged tillage for in-feeding in Kerry, you would by that means enable the people to feed their young stock besides feeding their milch cows; that you would enable them to feed their young stock, their calves, for a longer period, and thereby obviate the middleman altogether. You would enable them to feed their calves till they were ready to be sent perhaps to the finishing lands of Meath or Kildare?—That would be the effect of it, my lord; but we must wait for that effect. It will take time.

44776. But it is a thing to aim at, and it is quite possible?—Quite possible, and it will take a period of years before you arrive at that possibility.

44777. Oh, yes; but after all to change the system of agriculture among the people must take time. It must take enlightenment and time, but it is a perfectly possible scheme?—Yes.

44778. And by that means it would give the State the power to acquire what I call the second-class lands to which those young stock now go to fatten, for the creation of holdings, without dislocating the cattle trade in those congested areas. You say that agricultural instruction should be given in the primary schools?—Yes.

44779. And the only remark I have to make upon that is that I believe that was done in old days?—Well, I do not think it was properly done.

44780. Was not the reason of the failure that the schoolmaster was expected to give the agricultural instruction?—Yes, and the school farm was so limited. It was simply a garden that contained perhaps two acres or an acre of ground. And I do not think that a National School teacher is exactly the man to instruct people in agriculture.

44781. I understand that you are in favour of the National School being used more than it is now to equip boys and girls with a practical knowledge of the business they will have to do in after life?—Yes, I think there is a necessity for it, my lord. It would lay the foundation with young people for subsequent instruction in the way of agriculture and technical knowledge.

44782. You say:—"There are evidently now great difficulties in the way of rearranging mixed holdings. I have had a good deal of experience of this work, even at a time when the landlord had power of enforcing his plans, and found great difficulty in carrying out rearrangements. I agree with Mr. Doran's recommendation that it is indispensable to provide absolute power to plan and carry out a scheme of rearrangement of such holdings." I understand that what you mean is that the rundale system is a hopeless system?—Quite a hopeless system.

44783. And that it is absolutely necessary on any estate of that character that there should be a re-striping and re-settlement of such holdings before you can hope for any prosperity at all?—Certainly, my lord.

44784. Assuming that these arrangements have been going on for a number of years, there must be a considerable difficulty in having a satisfactory rearrangement. Would you not agree that the obvious time to make such a redistribution and rearrangement is when the estate is passing from the landlord to the tenant?—Certainly.

44785. You will agree that after an estate has been sold to the tenants, and they have actually become the annuitant purchasers of the various holdings, it is infinitely more difficult then to re-stripe than it would be before they had actually got in as purchasers?—I might use a stronger expression than that. I think it would be absolutely impossible to do it.

44786. Then would you not suggest that the Congested Districts Board is the agency for doing this?—I admire the work of the Congested Districts Board very much from all I have read of it. I was rather prejudiced against the Board at one time. I offered them two estates in Kerry and they did not buy either or take any trouble to inquire about those interested, and I thought they were neglecting us very much in not paying attention to our wants in Kerry.

44787. You have read about, and perhaps you have seen yourself, the Dillon Estate, the largest estate which they bought, where they have done a great deal of this re-striping. You will admit probably from what you have heard, if not from your own personal experience, that the Board have been successful on estates which they acquired in effecting arrangements of this kind?—Yes; I have read the cases, and that is the only information I have.

44788. Clare Island is an instance in point?—Yes, I think that that is very satisfactory.

44789. Would you say that where an estate needed a great deal of improvement in the direction which you have pointed out, where there are a great many holdings in rundale which have to be re-striped, such an estate ought always to be sold through the medium of an improving authority?—Yes.

44790. And does it not follow from that there may

be great evils in allowing an estate which needs improvement before you can hope to have any prosperity upon it, to pass direct from landlord to tenants and thereby make it almost impossible for the estate to be improved afterwards?—It depends on the class of improvement to which you refer—intermixed holdings, the rundale system, and things of that kind, where they exist.

44791. Then you say:—"Assuming that all those necessary rearrangements and improvements have been carried out, supervision and compulsory powers to maintain such improvements must be continuous." How do you suggest that there should be compulsory powers to maintain such improvements?—I think that in the county where improvements are executed, improving houses, draining lands, and things of that sort, someone ought to look after them and to keep those things in proper order. It is possible to forget to keep the mouths of the drains open, and they get choked. Perhaps omitting to keep a watercourse clean would choke the whole extent of the drainage.

44792. And how do you propose that you should compel them to keep it up?—You must have officials appointed to look after it.

44793. Do you notice this tendency to allow improvements to lapse on holdings that have already been bought or upon holdings merely which are still in the hands of the people as tenants?—Well, I cannot give you any evidence upon holdings which have been bought.

44794. Do you not think that there would be a considerable stimulus to the people to keep those things in order when they have become owners of the land?—Yes, there ought to be.

44795. That would be a stimulus which does not exist when they are only tenants?—Yes.

44796. It is a common feeling which affects all people?—Yes, but they frequently forget to keep the mouths of the drains open, and that sort of thing. I looked after the mouths of the drains myself personally, and my farmers would probably not think about them.

44797. Might the County Council or the District Council, do you think, be given any power to keep a man up to the scratch in these cases?—I do not know. It is a question that I could not answer, my lord.

44798. So far as drains are concerned, one of the reasons, I think, for some drains becoming choked at present in many cases is because there is not a very good system of arterial drainage?—In some cases, yes, that is the case.

44799. That means, in practice, that a tenant finds that if he drains his own land he drains it on to his neighbour?—Yes, that sometimes happens.

44800. And therefore if there was greater attention paid to arterial drainage and thereby a means found of getting the water away, would not it be likely that the tenant would pay greater attention to the drains than ever?—Oh, yes, but you can keep the arterial drainage in order, too.

44801. Yes, but that must be by some public authority?—Yes.

44802. And if there was a public authority in Ireland whose responsibility it was to look after all the great arterial drainage, then do you not think that you could fairly safely leave the small drains to be looked after by the tenants themselves?—Well, I should hope that might be so.

44803. You seem to contemplate some kind of re-organisation of the Board, do you not?—I think it will be necessary, my lord, to carry out such additional works.

44804. Now, have you formed any idea in your own mind as to the lines on which such a re-organisation should be carried out?—I would be sorry to see the *personnel* of the Board in any way interfered with, but I think there ought to be some additional authority to grasp the whole scheme, and control it with their assistance and advice.

44805. Would you like to see a county representative on the Board? I think the Board, constituted as it is now, of men of different politics and religions, makes the ship sail on an even keel. That is my impression, and I should not like to see any addition or alteration. But so long as that kind of non-political aspect, non-party constitution was maintained you would like to see the Board strengthened?—Yes.

44806. You say:—"As to compulsion regarding acquisition of land for migration purposes, I think, notwithstanding all that has been said on the subject, it will be unnecessary, and, if adopted, will prove most mischievous. I believe that, if the fair full value is offered for land, there will not be any difficulty in getting it. Now, would it prove mischievous?—It would create a great deal of distrust, and would damage capitalists' ideas as to the safety of investments in this country.

44807. But no capitalists invest money in the land?—I know, but the object lesson I mean would tell.

44808. But you don't imagine, for instance, that the compulsory acquisition of land in Ireland would so frighten the capitalists that they would be less likely to invest their money in industrial operations?—I think it would have that tendency, my lord.

44809. But it has not had that tendency in England, and we have got compulsory powers in England for certain purposes?—I know, but this is a very different country. I don't think there would be any necessity at all for compulsion, and that you would get as much land as you would like for a fair price.

44810. But suppose you find that a man whose land you want very much for this migration scheme is a cranky sort of man who won't come to terms at all, how would you deal with him?—Well, I would be inclined to compel a crank if he was wrong in his views.

44811. Does it not come down to this, that although compulsion need not be used in many cases yet if a man takes up a perfectly unreasonable attitude and refuses to listen to a sensible proposal that in a case of that kind compulsion is the only weapon you can possibly have to bring him to sense?—I would call that man a maniac..

44812. And he ought not to be allowed to block a great scheme of public utility?—Provided he gets the full value of his property.

44813. So that in a case of that kind, where a man is unreasonable, you would not object to compulsion, so long as compulsion gives that man the fair full value of his property?—And interest on it, whatever it may be.

44814. Then there is only one other question. "Surely if one of the joint owners of land, such as the occupier, is entitled to compensation for disturbance, it cannot be justly denied to the other, who is chief partner." Would you be inclined to think that if a landlord in Ireland is given a sum of money for his land, which, when invested in a good 3½ per cent. security, brings him in the net income which he has enjoyed for a certain number of years, that the transfer to such a good security from the very questionable security of landed property is in itself a compensation for disturbance?—That, I think, would include the compensation for disturbance.

44815. Most Rev. Dr. O'Donnell.—I notice that you consider that it would be an advantage to the tenantry if the Board of Works advanced smaller sums and at a more reasonable rate of interest?—Yes.

44816. You have no doubt that the loans would be repaid?—Without the slightest doubt.

44817. I notice in your precis of evidence you pay a high tribute to the industry and honesty of the smaller occupier in Kerry:—"Indeed I must say that I have found the Kerry tenants well-disposed when treated fairly and justly, and quite willing to meet their obligations." You consider that it would help matters very much through the country if the occupiers had facilities for industrial loans at reasonable rates?—Yes.

44818. The limit of £100 is entirely prohibitive?—Yes. If a man wishes to reclaim an acre or two of his land it would be two or three years before he would derive any benefit from it, but if he gets a loan from the Board of Works at a reasonable rate it enables him to conduct the improvement and wait for the result.

44819. That is quite so. Then does it come to this, that if it be good public policy for the State to advance money cheaply to the tenants for the purchase of their holdings, it is equally good policy to advance money for the improvement of their holdings?—Certainly. I do not think you will be ever able to develop the agriculture of the country unless you adopt some scheme of that kind by which people can drain their lands properly, because it is a waste of labour to crop wet land.

44820. In connection with that, do you think would

July 10, 1907

Mr. Robert M'Clure

the output of those farms be considerably improved throughout the country by a good system of practical instruction in agriculture?—Oh, yes.

44821. Beginning with the National Schools and going on to example farms?—Yes.

44822. Managed by the best of the local farmers?—That is the only true way to improve Irish agricultural conditions.

44823. I was interested in what you said about two estates you offered to the Congested Districts Board. The Congested Districts Board have been very much on the look-out for estates in Kerry to buy. Would you kindly state the conditions of the offer to the Congested Districts Board?—I think about 1904, I proposed to sell an estate to the Congested Districts Board, and their usual form was sent down to me, and I went to a great deal of trouble to fill it in. I gave them all the information they required, maps and the rest of it. I got a courteous acknowledgment to the document, and for some weeks afterwards I heard nothing, and I wrote asking what they were doing. They said that the matter was under consideration. Then some weeks passed, and I wrote again. I forget what the answer was then. Finally, after some months had passed, I wrote asking were they going to deal with the estate or not, and the answer I got was that it would not suit them.

444824. Meanwhile the Congested Districts Board had informed themselves chiefly through the items which you filled in of the character of the estate?—I do not know anything about that. I got no information of any inspection or anything else.

44825. But you yourself, in your return, gave them a description. Would you be able to inform the Commissioners of the quality of the estate and the character of its holdings?—Some of the holdings are mixed holdings and some good mountain holdings. There was no unoccupied land in the lot. I concluded that the Congested Districts Board did not want cases where they could not obtain untenanted land. Then in another case in connection with a property at Cahirciveen, the tenants directly applied to the Board to buy the estate. The Board sent me down the chief tenant's letter, asking me whether the owner would consent to the sale of the estate. I said yes. Then they said, send us on the papers and forms. I did so, and got the estate surveyed, and it cost the owner £30. I sent on all the maps and documents necessary, and after a considerable time the Board replied that they would buy no more estates pending the decision of the Commission.

44826. CHAIRMAN.—That was more recently?—Yes, in 1906.

44827. Most Rev. Dr. O'DONNELL.—Since this Commission the hands of the Board have been considerably tied?—I understand that, but, at the same time, I think they bought other estates in Kerry.

44828. I don't know, except grass land. Since 1904 they have bought £140,000 worth of land in Kerry, but it would be interesting to know what the Board considered in that first letter of yours to be fatal to purchase by them. There were no grass lands?—No.

44829. What price did you fix?—Well, I cannot exactly tell you the price now.

44830. The price would be important of course?—Of course, but there was no inspection of the estate at the time, and a blank refusal was given.

44830A. But your price might be prohibitive?—Well, I don't think the Board could know it was prohibitive without making an inspection.

44831. Except from your description of the estate?—I don't know.

44832. If the Board were offered an estate on which there were no grass lands, it would not be likely, unless your terms were fetching terms, that the Board would accept the offer?—Well, my lord, you cannot expect fetching terms from anybody.

44833. When I say fetching terms I mean terms such as the Board has been accustomed to give in their purchases?—You must remember that a great deal of property was sold in Ireland, because it had to be sold. The owners were smashed through creditors pressing them, and the bankrupt estates are gone.

44834. No doubt such estates were sold. The Duke of Abercorn sold a great deal of his property in the North of Ireland under the Ashbourne Act. I should like to know the price you asked for that first estate, as the Board were anxious to buy in Kerry?—I could not tell you now. I merely mentioned it because my experience in these two cases rather put me off having anything at all to do with the Board. If you have an estate on which there is a good opportunity to exercise its operations either by the enlargement of farms, or as to rundale conditions.

44835. Most Rev. Dr. O'DONNELL.—If you make your price reasonable, I don't think you need despair of negotiating with the Congested Districts Board?—Oh, I believe the Board is quite prepared to do what is fair.

44836. You detailed in your evidence an interesting experiment of selling 600 acres to the adjoining tenants?—Yes.

44837. You fixed the fair rent of this 600 acres before splitting them up?—No, I first split them, and then fixed the fair rent.

44838. You fixed the rent and the tenants gave for this addition to their holdings an increase of from 5 to 10 per cent. on the rents which they were paying?—There was only one case in which 10 per cent. increase was given, as far as I remember. They were not all tenants. In some cases the tenants took the lots. I remember in one case a man came from the County Limerick, and they came from other places. Where a piece of land was touching on a farm the tenant was glad to get it.

44839. Were these lands put up to public competition?—No, I fixed the prices and invited tenders and sold at the prices fixed by me.

44840. Then these were competitive prices?—Yes.

44841. Don't you think the small Irish farmer would give a tremendous price for an enlargement of his border?—He very often does. I will give a case in point. A tenant on an estate I have to do with bought a small farm, the judicial rent, first term, of which was £5, for £180, plus auctioneer's fees and the cost of conveyance. That was 40 years' purchase. I was so anxious to know why anybody would do such a mad thing, that I went to the place to examine the plot and ascertain whether there was anything in the shape of improvements which would account for it. I found a very bad house, which certainly was not worth £10. I could trace no improvements. There may have been a few stones dug out a great many years before, and a trench or two made. £20 would cover the whole thing, and yet this adjoining tenant bought the interest in this holding for that large sum of money, nearly forty years' purchase.

44842. Such instances have been frequently brought before the Commission since the sittings began. You would not consider these transactions very wise?—No; and I think it was a wise thing of the Government in the Act of 1881 to put in a provision that the landlord should have the right of pre-emption, so that he might transfer a holding at a limited cost from one occupier to another.

44843. Land being practically the only source of employment in the country, the hunger for small farms is a very serious factor?—Yes, they pay too much for them.

44844. In these questions which I put to you about the 600 acres, I did not wish to convey for a moment that I question that for untenanted land the owner should receive a bigger price than for tenanted land of the same class, but the development of that transaction does good. It was a competitive price that was obtained for this land through the competition of men who are likely to give more than its value?—There was no auction, but simply the advertisement stating that I, the agent, would attend on a particular day at a particular place, and that anyone wishing to buy these lots might meet me.

44845. That was the way it was done?—Yes.

44846. Sir FRANCIS MOWATT.—When they attended they bid each other up?—They did not, because I fixed the price, and if a man wanted a piece of land I said:—"If you are willing to pay this price for it, you will get it." If he said, "No," I would offer it to somebody else.

44847. Most Rev. Dr. O'DONNELL.—You said something to Lord Dudley about the maintenance of drains in the farms. What would be your idea of the authority to insist on those drains being kept in order?—If you have an agricultural instructor in connection with the schools I presume that the instructor would also act in connection with these farms, and I suggest that he also would look after these drains.

44848. If we had any general Irish authority, say an Irish Parliament or anything of that sort, don't you think it would fine the farmer who would not keep his drains in order?—I don't know, my lord. What is everybody's business is nobody's business.

44849. Mr. KAVANAGH.—Do you think, as a general rule, compulsion is necessary?—No.

44850. But you have admitted to the Chairman that in certain circumstances it might be necessary. You have a paragraph in your precis that arbitration might be satisfactory in settling the value of land. Is such a suggestion a substitute for compulsion?—Yes.

44851. Instead of compulsion?—Yes.

44852. You think this means might be adopted?—I don't think anybody could complain of injustice, when buyer and seller fail to agree, at a decision of a judge of the High Courts.

44853. Then you would not call that compulsion?—No.

44854. Supposing the Congested Districts Board wanted a certain property, and the landlord would not agree to terms, you would not consider it any hardship if a judge of the High Court acted as arbitrator between them and settled the price?—No.

44855. You say that emigration is a safety valve for this country?—I say it is, and that if you transfer the surplus population in the congested districts to the ranches in other parts of Ireland, that the population of the congested districts would still grow, and you would have the division and sub-division of lands again unless there is emigration, and you will go back to the state that you are trying to get the country out of now. There is no remedy for it but emigration.

44856. If you adopt some means of preventing sub-division, why should congestion arise again?—If you adopt some means of preventing sub-division of course congestion won't arise again. Then the young people will have to emigrate. They cannot remain in the country. They cannot marry and settle down.

44857. You would not say that Ireland is not able to support its present population?—I am not saying that.

44858. Well, you would rather say that emigration is the safety valve for the distribution of the population?—Well, if you can distribute the population it would be a good idea.

44859. Mr. SUTHERLAND.—You prefer resort to the High Court of Justice in Ireland to compulsion introduced by statute?—Yes.

44860. Is resort to the High Court of Justice in Ireland now the chief process?—No.

44861. What would be the cost of an appeal to arbitration such as you have in your mind? Have you any idea?—I have no idea.

44862. Thousands of pounds?—I don't think so. The judge of the High Court might deal with several cases of arbitration at the same time.

44863. But would they be as cheap as a body like the Estates Commissioners, who charge no fees?—I think the point to be considered is the justice you will have, and not the cost.

44864. But supposing there was such an arbitration, the tenants could not undertake the expenditure of hiring learned counsel and all that for cases in the High Court?—I would keep the lawyers out of it altogether.

44865. What is the practice?—Now lawyers are employed, because you have different reports from land valuers.

44866-7. But you would require to amend the present procedure in that way?—Yes. I am referring to the purchase of untenanted land.

Rev. T. HARRINGTON examined.

44868. CHAIRMAN.—You appear here because it is not convenient for you to attend at Glengariff, but your evidence relates to Glengariff?—Yes. With the exception of one or two farms, the best land in the parish of Glengariff is the portion which is irrigated by the rivers flowing through the glen. But as the greater part of this portion is demesne land, in the possession of the landlord (Mr. Leigh White), the great bulk of the people have to eke out an existence on the barren mountain slopes, or on patches of soil between the rocks along the seaboard. The population of the entire electoral division is about 1,600, and its valuation (excluding the demesne land and the property of the Eccles Hotel Company) is only £954 2*s.* i.e., a rateable value of about 12*s.* 8*d.* per head of the population, from which it is evidence that the land, even if they had it free of rent, would not be able to support its inhabitants. If they manage to pay rent, or even to live at all, it is only by means of the moneys received from children in America, or earned by themselves as labourers in Wales. It is quite a common practice for numbers of the Glengariff people to spend months of every year in Wales. Another disadvantage under which they labour is their great distance from fairs. From the remotest villages of this parish, Bantry (which is the nearest fair) is sixteen miles distant. Castletown is twenty-five miles, and Kenmare, which is the only other fair within reach, is (by the coach-road, which is the only road passable for cars) distant twenty-five miles also. Attending fairs means often, therefore, being absent from home the whole of the fair day, and the greater part of the night before and of the night after. The result is that the people often prefer to sell their cattle at a heavy loss, rather than incur the trouble and risk of bringing them home and waiting for another fair. As the cattle are of the poorest kind, the improvement of the breed is a matter which well deserves the attention of the Congested Districts Board. But, owing to the exceptional poverty of the people, that project would not succeed unless the bulls are delivered on easier terms than are required in wealthier localities. There are two townlands which could be immensely benefited by a comparatively small outlay. By means of £50 spent in deepening the bed of the river, which flows from Barley Lake to the plain beneath, 30 acres of good land could be added to the holdings of the people of Crostera. How much they need it is evidenced by the fact that though their population is 100, their aggregate valuation is only £40. In the same way, at the cost of about £60, 40 acres could be also reserved from the floods for the benefit of the people of Coomerkane, whose holdings are almost as uneconomic as those of Crostera. Another disadvantage from which the Coomerkane people suffer, is the want of a bridge, or rather of a completed bridge. The bridge itself has been built, but the approach roads to it have not yet been made. The result of this is that they are always exposed to the danger of being prevented by the flood from driving their sheep and cattle to the fairs. They are debarred from the chance of getting this bridge finished by the County Council, owing to the fact that the road leading to their village is only a continuation of the demesne road, and is therefore private. As they pay county cess, they complain that the continuance of this state of things is most unfair. They consider that Mr. Leigh White ought at least to make the road public, so as to enable the County Council to finish it. I wrote to Mr. Leigh White about the matter, and the substance of his reply was this—that when he undertook to make the bridge the tenants consented to make the approach roads to it; that as they had failed to perform their portion of the contract, he regretted having incurred so much expense in vain; but that, even now, if they decided to finish the work, he would give some assistance. He did not, however, specify the nature or amount of this assistance. The tenants deny having consented to any such arrangement, and their recollection is in agreement with that of my predecessor, Rev. J. Browne, who was their representative to the landlord on the occasion. After some persuasion on my part, the tenants agreed to make the approach to one end of the bridge if the landlord undertook to make the approach to the other end. I wrote informing Mr. Leigh White of this offer, but to this, my second letter, he did not reply. In the northern part of the Glen there are 54 families who up to ten years ago were precluded, like the Coomerkane people, from receiving any assistance from the county. Their only exit was through the demesne; for the new public road which runs at present from the bottom of the valley up to the coach road at a point near the

July 10, 1907.

Rev. T. Harrington.

tunnel, was not then made. The result was that, though they had been paying county cess for generations, they continued to stand in need of necessary roads and bridges in their own immediate neighbourhood. In Derreenagorrig there are four families whose access to public road is completely blocked by the wall of the demesne. It is only by climbing up what I might call a precipice they can manage to leave this human pound. And as the demesne wall in the vicinity of their place is only a few perches from the demesne road, they think it hard that their petition for the privilege of a gate should continue to be refused. On the seaboard there are four townlands, inhabited by fifty-five families, who supplement by fishing the little incomes derived from tilling their patches of soil, and from labouring in Wales. A few years ago the people of two of these townlands (Mackera and Bocarna) got seine boats from the Congested Districts Board, which, however, have proved almost useless for want of a suitable landing-place. They say that if they consented to accept these boats, it was only on the strength of a hope held out to them by the Board, that a slip would soon after be constructed at Bocarna. That hope has not yet been realised. The money originally intended for the Bocarna slip is being applied at present to the construction of a pier for the accommodation of the Glengariff steamer. This pier will, of course, be an advantage to the hotel and tourists, and to the village traders. It won't, however, help the fishing industry—at least to any appreciable extent. A curing station is also required at Bocarna. As regards Derryconnery, whose population is sixty-five, and valuation £18—the fishing industry there has proved a failure owing to the want of a suitable road from this village to its slip, which is half a mile away. Though hundreds of pounds of the money of the Congested Districts Board has been expended in the construction of this slip, it is practically useless to the people of the place, as their only access to it is by means of a boreen so rugged as not to be safely passable even for a saddle horse. Four years ago a Parish Committee was established at Glengariff, whose operations have been attended with very satisfactory results. To enable them, however, to help the poorest section of the people, they should be empowered to make larger grants for dwellinghouse. As regards the parish of Bonane—most of the farms here are exposed and bleak, and owing to the excessive humidity of the climate, pulmonary diseases are rather prevalent. As a means of providing shelter and of rendering the climate less damp, I would suggest the planting of clumps of trees here and there. There are hundreds of acres of used-up bog, precipitous slopes, and poor and rocky land in low-lying districts, which are incapable of being converted to agricultural purposes, but which are very well suited for afforestation. But, the uppermost feeling in the minds of the Bonane people, is the desire for compulsory purchase. To the demand made by Lord Lansdowne last winter for twenty-three and twenty years' purchase on first and second term rents respectively, they replied by making an offer of twenty-one and eighteen years' purchase. They consider this a generous offer, especially in view of the fact that in their neighbourhood the Hickson-Mahony estate was sold for fifteen and the Hartopp for fourteen years' purchase. Owing to the danger with which their principal industry is threatened by the contemplated importation of Canadian cattle, they are determined not to make any further advance on their present offer, and as landlord appears to be equally inexorable, the tenants are most desirous, that with a view to terminating this deadlock, powers of compulsory purchase should be given to the Estates Commissioners.

44869. You say that "with the exception of one or two farms, the best land in the parish of Glengariff is the portion which is irrigated by the rivers flowing through the glen. But as the greater part of this portion is demesne land in the possession of the landlord (Mr. Leigh White) the great bulk of the people have to eke out an existence on the barren mountain slopes, or on patches of soil between the rocks along the seaboard." What is the extent of this demesne?—I should say it is about two miles long. In its widest part it would be a mile. It varies from a mile to a few hundred yards.

44870. Is it what is commonly understood by the word demesne? Is it land surrounded by a wall and with a residence on it?—It is surrounded by a wall.

44871. Now, do you suggest that that land should be acquired and broken up amongst holders?—Well, I had no idea in that connection, my lord. That did not suggest itself to me at all. I speak of the small area in which the great bulk of the people have got to live.

44872. I rather gathered from the paragraph that you were suggesting that the land should be acquired and parcelled out into holdings?—No, I am making no suggestion of that kind in my evidence.

44873. You also say:—"But, the uppermost feeling in the minds of the Bonane people is the desire for compulsory purchase. To the demand made by Lord Lansdowne last winter for twenty-three and twenty years' purchase on first and second term rents respectively, they replied by making an offer of twenty-one and eighteen years' purchase. They consider this a generous offer, especially in view of the fact that in their neighbourhood the Hickson-Mahony estate was sold for fifteen, and the Hartopp for fourteen years' purchase." Now, when you say that the prevailing feeling in the minds of these people is a desire for compulsory purchase, I want to ask whether you really consider that under compulsion land would be acquired more cheaply than under a voluntary system?—I don't think it could be acquired at all under a voluntary system, because the will is absent in both cases.

44874. Am I to understand that the only reason you have in your mind for saying that compulsion is so needed is not because the land is too expensive, but because you cannot get it?—The reason you cannot get it is because it is too expensive.

44875. Does not that assume, in your opinion, that if you exercise compulsion you would in some way or other beat down the price?—You should beat it down to a fair figure, to a lower figure than it is at present.

44876. Very well, if that is your view, may I ask you on what principles you would apply compulsion? What would be a fair figure under which land should pass under a compulsory system?—Well, such a figure as would give the tenants a fair chance of living in decency and comfort in their homes, and such a figure as would allow the landlord his net income.

44877. Are we to understand that in your view fair terms would be terms under which the landlord would enjoy in future, at a reasonable rate of interest, the average net income which he could show from his books he had derived from his property for, say, eight or ten years?—Yes.

44878. Then I would like to ask you a further question. I don't know, of course, anything about this particular estate. I have no reason for making any suggestion, and I do not know whether eighteen or twenty-one years' purchase is fair value; but you say that you consider that eighteen years' purchase of second term rents in this case was a generous offer?—Yes, my lord.

44879. Very well. Supposing that a farm was let at £100 a year, eighteen years' purchase of that would give you £1,800. Is not that so?—Yes.

44880. Then there is the bonus to be added, 2½ per cent., which would give you £2,050, say £2,000 in rough, and that invested at 3½ per cent. brings £70. Now, on the Land Conference terms the cost of collection was 10 per cent. Therefore if we knock £10 off the £100, you will see that the net income enjoyed by the landlord was £90. Under what you call a generous offer he would get £70 in future. That is not in accordance with your previous statement?—I would give him what he pays income tax on.

44881. Further you say that he should get his net income—otherwise he is not so well off as before?—I would take his net income to be what he pays income tax on.

44882. Supposing he produces his books, is not that a far better testimony?—If he produces his books and shows that his farm brought him in £90 a year—£100 less 10 per cent. the cost of collection—how is it a generous or fair offer to give him a sum of money which would bring him in only £70 a year?—I do not see that the tenants who have bought at a cheaper rate have become millionaires.

44883. You say that compulsory purchase should be carried out on fair terms. When I ask you what

are fair terms you say a man should be allowed to have his net income?—By net income I mean what he pays income tax on.

44884. Nothing could more clearly show his net income than his books?—I would not go so far as to say that his income should be reduced only by 10 per cent.

44885. You would not suggest that it should be reduced by more than the cost of collection, and when he can show you by his books what it costs him?—I adhere to my own definition of net income. What I mean by net income is what he pays income tax on.

44885A. What everybody means by net income is what a man puts into his pocket, the amount of money that he has after the costs of the collection of his rent?—The meaning I attach to net income is the income on which he pays income tax.

44886. He pays income tax on his net income, does he not?—That is the statement to which I adhere, and anything more than that would not be sufficient to give the tenant a chance of living and thriving on his land.

44887. If the amount of money which you call a generous offer does not bring him in what he can show he has enjoyed for previous years, you would be disposed to amend your phrase about generosity?—No, my lord, I would let it stand. I think it is generous still. The landlords have many advantages which those of former times did not obtain, as, for instance, in the case of those who sold under the Ashbourne Act.

44888. Are you prepared to tell us that you know for certain that a sale on eighteen years' purchase on second term rents of this particular property would bring in an income, when invested at 3½ per cent., equal to the net income which has been enjoyed by the landlord?—Well, of course, I could not say that from the very nature of the case unless I had seen his books.

44889. May I ask how you know that your terms are generous?—I would give him a more liberal allowance than satisfied landlords in the immediate neighbourhood. It is altogether a relative thing, you know. We have only to judge of what has been done in other parts of the country.

44890. Then when you speak of generosity so far as this estate is concerned, you did not mean that it was generous under the circumstances, but only in view of the fact that it was a higher offer than had been made successfully in neighbouring properties?—Yes, and all over Ireland in times past.

44891. Most Rev. Dr. O'Donnell.—I notice that in your parish there is a large proportion of the occupiers rated at a very low rate?—At 12*s.* 8*d.* per head, my lord.

44892. That indicates that it is a very impoverished district so far as land is concerned. What is your proposal for the betterment of these small holdings?—I suggest that there are two townlands that might be substantially benefited by means of a small outlay. By means of £50 spent in deepening the bed of the river which flows from Barley Lake to the plain beneath, thirty acres of good land could be added to the holdings of the people of Crostera. How much they need it is evidenced by the fact that though their population is 100, their aggregate valuation is only £40. In the same way, at the cost of about £60, forty acres could be also reserved from the floods for the benefit of the people of Coomerkane, whose holdings are almost as uneconomic as those of Crostera.

44893. What is being done with the thirty acres now?—Well, it is grazing land. It is ruined by the periodic floods.

44894. If the Congested Districts Board gave you that amount of money, could it be done by the occupiers themselves?—It could, because the bed of the river is bog.

44895. Are there no fishing rights on the river?—The river is almost perpendicular; it falls down at an angle of 45 degrees to the plain. I am sure that Mr. Whyte has fishing rights.

44896. Supposing anyone from the Congested Districts Board intervened to do this work, would there be any objection by the owner of the fishing rights?—I don't think he would object to it.

44897. In the past it has been found difficult to do such work except by purchasing a wide area, owing to the objection of the owners. Your suggestion, as the figures show, is a very valuable one for the district?—Yes. In one place there are four families whose access to the highway is blocked by the demesne wall, and it is only by climbing a sort of precipice that they can get out on the road. What aggravates the case is that for forty years they had a right of way. There was an old road from Glengariff to Kenmare. The old road is there still, but grass-grown, and the wall of the demesne is only 100 yards from the main road in the vicinity of their houses; and what they want is the privilege to get through the wall, and they will not get it. They cannot use cars or horses in a place of that kind, because it is inaccessible. There is one woman who at times is completely imprisoned by the flood. Eighteen months ago her daughter was dying, and for thirty-six hours the doctor was prevented from reaching her place owing to the floods. If she got timber from the demesne she would build a bridge at her own expense, and that little concession would not be granted her although she pays £12 or £15 a year rent. And then there were fifty-four families who up to ten years ago were precluded from getting any assistance from the county. They had not got then what they have now, a public road, and their only egress was through the demesne, with the result that though they had been paying county cess for generations they stood in need of roads and bridges in their own locality. They got the road ten years ago, and since the County Council has got access to their place they have built two bridges and roads and done wonderful work.

44898. I gather from your evidence that the slip or pier that was built by the Congested Districts Board does not serve its purpose, owing to the place being so bad?—That is Derryconnery. Its population is sixty-five and valuation £18. The fishing industry there has proved a failure, owing to the want of a suitable road from this village to its slip, which is half a mile away. Though hundreds of pounds of the money of the Congested Districts Board has been expended in the construction of this slip, it is practically useless to the people of the place, as their only access to it is by means of a boreen so rugged as not to be safely passable even for a saddle horse.

44899. Was there any bargain about a road being made on condition of the bridge being built?—I am not aware of that, my lord, but there was a bargain made by the Board, which they have not fulfilled, with respect to giving us seine boats. On the seaboard there are four townlands, inhabited by fifty-five families, who supplement by fishing the little incomes derived from tilling their patches of soil and from labouring in Wales. A few years ago the people of two of these townlands (Mackera and Bocarna) got seine boats from the Congested Districts Board, which however, have proved almost useless for want of a suitable landing-place. They say that if they consented to accept these boats it was only on the strength of a hope held out to them by the Board that a slip would soon after be constructed at Bocarna. That hope has not yet been realised. The money originally intended for the Bocarna slip is being applied at present to the construction of a pier for the accommodation of the Glengariff steamer. This pier will of course be an advantage to the hotels and tourists, and to the village traders. It won't, however, help the fishing industry—at least to any appreciable extent. A curing station is also required at Bocarna.

44900. Do you consider the original destination a better one from the fishing point of view?—I do, my lord.

44901. With reference to the case of purchase which you were discussing with Lord Dudley, I invite your attention to the paragraph in your evidence in which you state that to the demand made by Lord Lansdowne for twenty-three years' purchase on second term rents, and twenty years' purchase on first term rents, they replied making an offer of eighteen years' purchase on first term rents and twenty-one years' purchase on second term rents. Take a rent of £100 at twenty-one years' purchase. This amounts to £2,100, and with the bonus added it amounts to £2,352, and 3½ per cent. interest on that is about £82 7*s.* In your opinion 10 per cent. would not suffice for a reduction?—It would not.

44902. It is not merely the expense of collection—there would be bad debts on the estate?—Of course there would.

44903. Well, for bad debts and cost of collection we have got simply £17 13*s.* That is not a very big

July 10, 1907.

Rev. T. Harrington,

reduction on £100, so that your suggestion as to twenty-one years' purchase on second term rents gave the landlord his net income, allowing for a deduction of £17 13*s.* in £100 for cost of collection and bad debts?—Even in Lord Dudley's sense of the word his net income.

44904. CHAIRMAN.—But you would not say that bad debts would be included in net income. Obviously bad debts might amount to anything. You would not pay income tax on bad debts, for instance, would you?—No, my lord.

44905. Therefore I am assuming as net income what a man has received, exclusive of bad debts—what his books can show he has received?—But, if you allow for bad debts you must take more than 10 per cent. from his income.

44906. I think I would not. What I would suggest to you is that bad debts are a thing apart altogether, and that net income is what a man puts into his pocket outside of bad debts. Is not that so?—But so many years' purchase includes bad debts and all.

44907. Does net income include or exclude bad debts?—Well, I suppose, in a strict sense of the word that net income should exclude bad debts.

44908. Most Rev. Dr. O'DONNELL.—That is to say, before you get the net income you deduct the cost of collection and bad debts?—Yes.

44909. CHAIRMAN.—That is to say, if you are going to buy, the amount which his books show to be his net income—that is irrespective of bad debts?—If he is actually worth what he is worth on paper that is what it would mean.

44910. Mr. KAVANAGH.—You call 10 per cent. an inadequate reduction for cost of collection and bad debts. Did not Mr. Redmond, Mr. O'Brien, and Mr. Harrington agree with that definition?—Well, it is a definition with which I would not agree.

Mr. KAVANAGH.—I was not asking you that. I was asking you if it was not a definition with which Mr. O'Brien. Mr. Redmond, and Mr. Harrington agreed in the Land Conference.

Mr. DAVID DORAN examined.

Mr. David Doran.

44912. Sir FRANCIS MOWATT.—Are you here on your own account?—No, sir; I was deputed by the Kenmare Rural District Council to represent four divisions, which are not scheduled as congested.

44913. Will you tell us what you are going to say, please?—These four divisions are not scheduled as congested.

44914. Which are they?—The divisions of Dromore, Greenan, Loughbreen, and Reen.

44915. What electoral divisions are they in?—They are four electoral divisions comprised in the parish of Templenoe. The main reason why these divisions are not scheduled as congested is that there are three landlords resident in the divisions, and these represent a valuation of over £500, while the valuation of the whole four divisions is only £3,625. The area of the division is 33,708 acres, and the area of the land that these three landlords have in their occupation is 3,917 acres. On the Dromore estate.

44916. What union is that in?—Kenmare Union. The valuation is £1,103 4*s.*, Greenane has a valuation of £887, Loughbreen £906 5*s.*, and Reen £728 15*s.*, making a total of £3,625, and, as I have said, it is owing to the valuation of the lands occupied by these three landlords that our valuation appears so high. In reality, when you take these 3,917 acres out of it, our valuation is low. There are in the division 289 holdings, 59 of which are under £5, and 131 under £10 valuation. A very singular state of things occurred in 1883 and 1884. These divisions, paying a penny in the pound for agricultural and technical instruction purposes, and the other electoral divisions, which are equally as well off, paying nothing.

44917. Because they are congested districts?—Yes. We might as well be part and parcel of China.

44918. Sir FRANCIS MOWATT.—Well, that is not in the electoral division. Will you continue with your statement, please?—We applied for a boat-slip, and two officials were sent down, one was an engineer, and one was something else, and between them we got nothing. Now, what we want is this, we should be included in and scheduled in the congested districts. As you came by yesterday, I wish you had come slower, so that you could better see the character of the country you were travelling through. The people are living on mountains, rocks, and bogs, and are mainly dependent on cattle, and if foreign cattle are admitted, to which there is a tendency, we will be ruined. We are unable to turn upon tillage, because you can't make bogs tillage. There are no lands suitable for tillage in Kenmare except in a very limited area.

44919. Sir FRANCIS MOWATT.—What you say is, that the condition in these four divisions is such that the districts ought to be scheduled as congested. The figures you have given is good enough for us.

Witness.—Very well. I will pass on and make some suggestions which I hope the Commission will embody as representing our views. When everything is settled down you will have as a necessary consequence a material improvement in the condition of the people. In a poor country like ours, which is mainly dependent on cattle-rearing, and where we cannot turn on tillage, as Mr. Bailey has suggested, because the land is not fit for tillage, we in our poor divisions cannot meet the pressure of the times, because the cost of living will increase very much. Therefore, what I would suggest is, that in the event of purchase, the Estates Commissioners should purchase with a view to making the future conditions of occupiers comfortable, to meet the changes of the times. We are dependent on cattle-raising, and if Canadian or foreign cattle were admitted we would be ruined. Then there is need for lime. The land is moist and peaty. There is abundance of lime in the parish of Killanin which could be taken by the Congested Districts Board and distributed as far as Cahirciveen. It would be a great advantage to have it. If the estates were bought by the Congested Districts Board, then they would be able to improve the estates by drainage. As regards game, the question which your lordship put on the matter in the earlier part of the day, I am a tenant on an estate which was owned by an English gentleman named Colonel Gough. We bought our farms, and we got the game on the estate. What the tenants did there with the game was this. They gave so much for what was shot over the several farms.

44920. CHAIRMAN.—Where is Colonel Gough's estate?—In the division I live, in the parish of Templeno. It was bought for about fifteen years' purchase. That was the average at the time, and the game is of this value to the tenants; the present owners would be considerate to the tenants, but when they part with the game the man who rents it will have no such consideration, because he will say, "I will have my pound of flesh," and you will have summonses against the tenants seen in pursuit of ground game, as happened to my own knowledge when, as Chairman of the Rural Council, I adjudicated as a magistrate. You will have continual friction and summonses for pursuit of game, and therefore it would be far better that the tenants should get the game rights.

44921. Will you give me any instance of the sort of damage that could be done?—I will. On the western side of Dromore is an estate rented by an English gentleman, who has a lot of pheasants, and they spread out along the seashore, and they do immense injury to corn crops. Sir John Colomb lives on the other side, and his pheasants do damage also, and between the two you cannot know who is responsible for the damage, and you do not know whom to proceed against under the game laws. We had a case against one of these, but the game laws are so framed that the judge said he was very sorry he could not give us damages. I have a four-acre field, and it is nothing but a rabbit warren, and I can get no redress. You can kill ground game, but the farmer would want to be always out with his gun, and if he had not a licence he might get into trouble.

44922. A licence for what, to kill rabbits? You can snare rabbits on your own holding, can't you?—Well now, there is a case I mentioned to you.

44923. Is there anything to prevent an Irish tenant

catching rabbits on his own holding?—I don't know that they can snare them.

44924 You are a magistrate?—I was by virtue of my office.

44925. And you don't know that he can snare them? He can kill them. However, as I say, it would lead to endless litigation, and the tenant ought to get all belonging to the land when he is purchasing. As regards the price, I was very much interested.

44926. CHAIRMAN.—Before you pass from that, I think Mr. Timothy O'Sullivan told us in his evidence that he had not seen twenty bags of corn sent to the market from this parish for the last forty years, and I think you said that there was a great deal of damage done by pheasants to corn?—Yes, my lord, but you must remember——

44927. That is the reason why corn is not sent to the market?—No, my lord, in this part of the country meadowing land is very scarce, and the tenants have to sow oats as a substitute for hay at a late period. What the people do is, every little plot that is at all available they take up for meadowing, and the oats are sold as a substitute for hay, and the rabbits and pheasants destroy that. As regards the question of price, there is in the Land Act of 1881 a clause which compels the tenant to give the landlord the right of preemption. If the tenant will get £1,000 in the open market for a holding, and if the landlord likes to exercise the right of pre-emption, and if the Land Court, the tribunal before which he goes, gives him only £200 he must take it. I can give two instances, one in the case of Miss Stokes, and another a man living in the West of Glengariff, and, therefore, where a landlord can use compulsion in acquiring his partner's interest at a less price than can be obtained in the open market, I cannot see why compulsion cannot be applied to the landlords.

44928. By the way, why do you say at a lesser price than can be obtained in the open market?—The law is this—you are a landlord and I am a tenant. I serve notice of my intention to sell, and you serve notice of the right of pre-emption, and you call upon the tribunal—the Land Commission or the County Court judge—to decide the amount the tenant is bound to accept. The landlord can then acquire it at whatever price the County Court Judge or the Land Court fixes.

44929. Then I think it is open to the tenant to put evidence as to the value of that land before the tribunal. Whether it is worth £1,000 is supposed to be proved before the County Court Judge or Land Commission?—The County Court Judge sends out his valuer, and he is guided by whatever he says, and it is the same with the Land Commissioners.

44930. In those cases you have not much confidence in the Land Commission?—They are liable to mistakes, the same as everybody else. They will not take into account what a man can get for it in the open market.

44931. Do you consider the suggestion to leave it to the arbitration of the Land Commission would be satisfactory or not?—It would, provided they sent down impartial valuers.

44932. Do you suggest that impartial valuers are not sent down for pre-emption?—Well, I may say that when you have a Conservative Government in power we had little reductions in rents, because the valuers were appointed by landlord influence, and were afraid, and now we have a Liberal Government, and they have been dismissed, and they are giving much better reductions.

44933. CHAIRMAN.—That is your opinion?—Oh, my lord, that is a matter of public notoriety. As regards the 10 per cent. for collection and bad debts, that not to come in at all, for the only question is the value of the land and what it is capable of producing. I fail to see why the sleeping partner should go and leave the working partner to bear all the liabilities of foreign competition. I would not take into question the bad debts at all, because land should have its value like gold or silver or diamonds, or anything else.

Mr. WILLIAM ROCHFORT examined.

44934. CHAIRMAN.—What particular point do you want to draw the attention of the Commission to?—I want to draw your attention to the return of untenanted lands of Ireland with respect to Lord Lansdowne's estate in Kerry, and I want to show the classification of these lands.*

44935. What is the total area given in the return?—The total area of the estate is 68,264 acres in the barony of Glenarought, of which the Government valuation is £6,482 per annum, and according to this Parliamentary return which was moved for by Mr. Ginnell, M.P., in 1906, it is shown that on Lord Lansdowne's estate there are 5,226 acres of untenanted land valued at £697 a year. The classification is as follows:—Under *one* class, rough mountain, there are 2,673 acres.

44936. Do you say that in Mr. Ginnell's return there is a heading "rough mountain"?—No, but in my classification of the return taken from my knowledge of the land and the Government valuation lists.

44937. In Mr. Ginnell's return there is no classification at all?—No, but mansion houses are mentioned. To show that it is not a capricious opinion of my own these 2,673 acres are only valued at £45 a year.

44938. That is what you call rough mountain?—Yes.

44939. Do you say that it is unoccupied?—There is some grazing for sheep and cattle on it.

44940. Is the grazing of that in the landlord's possession?—Yes.

44940A. Do you agree that the acreage of the untenanted land is 5,226 acres?—Yes.

44941. Is the whole of that 5,226 acres in his occupation?—It is in his rated occupation. He is in the rate books for it, although in some cases the grazing of it is let to other people.

44942. On the eleven months' system?—Yes. Under the second heading "Woods and Plantations" there are 1,689 acres, valued at £257 a year, and the *third* heading is "Demesne Lands" exclusive of plantations which have already been taken into account. There are three residences, and the total acreage of these three demesnes is 212 acres, valued at £199 a year.

44943. We have been told this morning of 100 acres of land close by the town, which, I think, was described as demesne lands, is that included there?—Yes; parts of these 100 acres are probably demesne lands. Under my last heading, town parks and other grazing lands, only some of which are suitable for agricultural purposes, there are 652 acres, valuation £196 a year. These grazing lands are not classified in the previous three headings. Out of this large total of 5,226 acres substantially less than 600 acres would be of any use for agricultural purposes if it was required for tenants.

44944. I suppose that the whole of the 600 acres which you say could be used would be found under the heads 3 and 4?—Under 4 mainly, and less than half of it is suitable for tillage.

44945. Do these demesne lands lie within demesne walls?—There are no demesne walls in that part of the County Kerry, but they are well fenced With reference to the land you have mentioned around the town, some of it is in the demesne of Lansdowne Lodge, and more of it is let at short tenure to residents in the neighbourhood.

44946. Does anyone live in Lansdowne Lodge?—Yes, the assistant agent, Mr. Maxwell. With reference to some of the evidence that was given at Cahirciveen on the 8th instant by the Rev. Canon O'Riordan, to the effect that the tenants on Lord Lansdowne's estates were afraid to approach him on the question of sales, I think the Rev. gentleman made a mistake, because, on two occasions, there have been negotiations about sales of the estates, and he was the spokesman for the tenants, although negotiations have not come to any results Still the negotiations were conducted, and Canon O'Riordan was the spokesman.

44947. Most Rev. Dr. O'DONNELL.—I should like to ask whether the whole of the 2,673 acres might not be used for the enlargement of holdings. You state that 600 acres would be useful for agricultural purposes, but the balance might be a valuable addition

* See page 219.

July 10, 1907.

Mr. William Rochfort.

for grazing purposes?—You are now speaking entirely, my lord, of the 600 acres?

44948. Yes, sometimes a tenant is greatly benefited by having his rough grazing enlarged, and, therefore, with reference to the rough mountain tract, might not that portion of it be made available for the tenants; I mean if it was purchased?—Well, it represents an extremely small value. It is almost barren land, so it would not be of much material assistance to the tenants.

44949. At what stage are the negotiations on this part of the Lansdowne property? Are they live negotiations still?—No, my lord, they are broken off.

44950. Was it merely over the game that the negotiations were broken off?—No, both price and game, as I understand.

44951. CHAIRMAN.—Was there ever any refusal on the part of Lord Lansdowne to take into consideration sales through the Congested Districts Board?—I don't think such a procedure was suggested, but it was suggested that the sales should be referred to the Estates Commissioners, but Lord Lansdowne did not acquiesce in the suggestion.

44952. Has it ever been suggested that the Lansdowne estate should be sold through the medium of the Congested Districts Board?—No.

44953. Does that apply to the whole of his estate, or only to this portion of it?—To Glenarought, the main portion.

44954. Do you imagine that if the estate was to be acquired by the Congested Districts Board that improvements could be usefully effected by that body?—If they are prepared to spend money I have no doubt they could.

44955. In your opinion is the estate in such a condition that it could pass direct from the landlord to the tenant with any prospect that the tenant could enjoy prosperity upon the holding he acquired when improved?—Of course prosperity is a relative term. Judging from the way rents are paid, without any great effort, I imagine that with the reduction that would be obtained under the purchase terms as offered by Lord Lansdowne, namely, 35 per cent. to one class of tenants, and 25 per cent. to another, the prospects of the tenants meeting their engagements with the Government as they have in the past with Lord Lansdowne ought to be very favourable.

44956. As the agent of the estate, and therefore acquainted with it, would you tell the Commission that, in your opinion, this estate ought to be allowed to pass to the tenants without improvement?—I think it could be done without any risk to the State.

44957. That is not the point. Could you tell us if, in your opinion, the estate is in such a condition that it ought to be allowed to pass direct to the tenants under purchase without improving?—Yes.

44958. Most Rev. Dr. O'DONNELL.—Is there any drainage you consider necessary to the estate?—Many holdings could be drained; and I think there are many tenants who could do a great deal more than they do now if they chose.

44959. Besides the drainage by the tenants, is there no large arterial drainage that could be done?—I don't think it is required—it is so much on the hillsides.

44960. Is there any rundale on the estate?—No.

44961. If a public body, like the Congested Districts Board, were engaged in the transfer of the estates it might have some of these unoccupied lands?—Possibly it might.

44962. Mr. KAVANAGH.—Would you say that 10 per cent. is a fair deduction for the cost of collection on the Lansdowne Estate?—I think 10 per cent. is very fair.

44963. CHAIRMAN.—Is there any objection to telling us, roughly, what the cost of collection is?—I cannot tell offhand; but, of course, it is a very scattered estate, and there are sub-agents in the outlying districts.

44964. Supposing you have a block of property on this peninsula declared an estate, what would the cost of collection on it be?—I should say probably 12 per cent.

44965. That is the absolute cost of collection, including bad debts, or does it exclude bad debts?—It includes bad debts.

44966. Does it include anything else except that?—I would say that would cover the administration of the estate—the management of the estate and the collection of rents.

44967. Do I understand from you that for every £100 of rental on that estate £88 represents the net income of the landlord?—Yes; that would be approximately correct.

44968. Do you think that that percentage applies to other estates or is it likely to be more or less on other estates?—I should think about much the same, that is, in Kerry.

44969. If you charge the cost of agency—of the principal agency—upon this block, you would only have to charge the other estates with the cost of the sub-agency, and might not the cost of collection on these estates be less than on the principal estate?—The expense of management on the outlying part of the estate, if it required additional assistants, would be rather higher than on the main portion.

44970. That is, if you are spreading the cost of agency over the whole property?—The more detached a property is the more difficult it is to manage. If the Iveragh block was managed from here the expense of our representative down there could be avoided.

44971. For the purpose of arriving at what the collection expenses are, supposing you have three estates, you charge the expense of the estate office to the principal estate on the main block?—I should charge that over the whole estate. The cost of the central portion of the management would be spread over the whole estate, and any additional expense for the outlying districts to these districts.

44972. Most Rev. Dr. O'DONNELL.—When you stated to Lord Dudley that the collection expenses, broadly, would average a deduction of 12 per cent., had you before your mind the legal expenses involved in having fair rents fixed from time to time, or would that be an additional expense?—That would include the solicitor's expenses.

44973. You would not give an exact percentage, but you give the Commission what you consider would be about the percentage?—That is right.

44974. In the event of a proposition from the tenants to buy, so as to leave Lord Lansdowne his net income, would there be any objection to producing the books, so as to ascertain the net income over a number of years?—My experience as agent is that in sales on the basis that the landlord is to get his net income there is great difficulty, and one reason is that nobody can agree as to what rate of interest can be obtained for the purchase money. A great deal depends on whether or not the property is in trust, and whether you can invest the money at a high or a low rate of interest.

44975. I assume that the proposition to give the landlord his net income would be based on the investment of the proceeds at a certain rate. The rate of investment would be fixed at the start—3½, 3¾, or 4 per cent., whatever it was. Assuming that the owner was to get his net income at a fixed percentage, to be determined beforehand, would there be much objection to our getting the books, with a view to determining over the preceding twenty-five years the net income?—I cannot pledge Lord Lansdowne on those lines in the least.

44976. CHAIRMAN.—I suppose that a method could be arrived at of finding out what the net income was by reference to the books without necessarily involving publicity of the details?—Certainly.

44977. So that if the objection of any particular landlord—I don't wish to take Lord Lansdowne's instance as a particular instance—to showing his books was, that if negotiations broke down, the details of his business might not be public property, that is an objection which might be easily overcome?—If one could agree as to the person by whom the inspection of the books was to be undertaken.

44978. There is no reason to suppose that that would be a difficult matter?—No.

Ven. Archdeacon DAVID O'LEARY examined.

44979. CHAIRMAN.—You are Parish Priest of Kenmare, and Vicar-General of the Diocese of Kerry?—Yes. I have been appointed by the Most Rev. Dr. Mangan, Bishop of Kerry, to give evidence before the Commission on Congestion regarding the condition of the County of Kerry; and the Rural District Council of Kenmare have asked me to describe the condition of the Parish of Kenmare. The principal industries of the county are agriculture and fishing; other industries exist only to a limited extent. If a line were drawn east and west from the town of Tralee, it would divide the county into two portions, which present a marked contrast to each other. While the northern portion is generally level, and the land in many districts good, suited for tillage as well as pasture, South Kerry is, for the most part, mountainous, leaving but little scope or opportunity for tillage. The land in the baronies of Glenarought, Dunkerron, Iveragh, and Corkaguiny consists to a large extent, of reclaimed mountain, morass, and bog. In his History of Kerry, Smith, referring to the district in the neighbourhood of Kenmare, says:—"This part of the country is mostly encumbered with mountains and coarse pasture grounds, the greater part of which tract is almost one continued rock terminated with bog affording very indifferent food for cattle; and it is justly esteemed the least profitable and most irreclaimable land in the whole county." But the inhabitants of those baronies, mainly by their persevering industry and toil, have in the course of generations turned a considerable portion of the bogs and mountain slopes into pasture land. This process of reclamation still goes on, and with persistent, untiring effort the tenant fences and drains the forbidding bog or the wild mountain side, until he reaps his reward in the green field. The greater part of the parish of Kenmare seems to have been thus reclaimed from mountain and bog, and yet it is, with the exception of one electoral division excluded from the operation of the Congested Districts Board. The rule for determining a congested division works out very strangely and unfairly in some instances. Townlands are occasionally, by reason of some accidental circumstance, declared non-congested, while neighbouring townlands of much the same nature are classified as congested; but Lacca Ruadh, Gortlahard, and Cappagh lying on the opposite side of the narrow river, the Sheen, are not congested. Yet the quality of the land along the Sheen Valley on both sides of the river is quite uniform. In Corkaguiny Minard is supposed not to be congested, though the people living in it are not better off than their more favoured neighbours in the congested districts. I would suggest that the whole of the County Kerry should be declared congested; and that all tenants of holdings of £10 valuation and under should be entitled to the special advantages which the Board now offers to those whose land is valued at £7. If the average valuation per head of the entire county were taken into account, we should seem justified in regarding Kerry as entitled to this advantage at the hands of the Board. Estates have been sold in Kerry in almost every parish; but some large estates still remain unsold. The prices demanded by the landlord vary from twenty to twenty-four and a quarter years' purchase of the second term rent. This shows a considerable advance on the average price at which estates were sold previous to the Land Purchase Act of 1903. Land was sold before the Wyndham Act at an average price of about eighteen years' purchase; the average at the present time in Kerry, is in or about twenty-two years' purchase. One landlord offered, in the eighties, to sell to his tenantry, asking twenty years' purchase for the lands. A large number of the tenants thought the price too high and refused to purchase. These same tenants consented a sort time ago to pay twenty-three years' purchase for their farms. It is very questionable whether a reduction of 5*s.* in the pound for second term rent is sufficient to enable the farmer in South Kerry to face the future with an easy mind, and without fear. Most of the farmers depend, to a considerable extent, on the value of the cattle on the mountain pastures to enable them to pay their rents and to meet their other obligations. Let the price of cattle fall for any cause, and the benefit derived from the reduction ceases. The number of foreign cattle introduced into England affects the price of cattle; and if Canadian stores are admitted at any time—by no means an unlikely event—the tenants will not be able to meet the annuities, with the result either of ruin to themselves or an increase on the rates. A landlord, whose rents are considered to be high, recently offered to sell a portion of his estate, giving to the tenants a reduction of 4*s.* to 6*s.* in the pound. This is mere trifling with the tenants. The same landlord refuses to sell a considerable portion of his estate. A reduction in the rent or annuity will no doubt give immediate relief. But it will not go far in enabling the poor farmer to pay his debts to the shopkeeper, or to maintain his family in greater comfort. The extent to which the farming class is indebted to the shopkeepers gives ground for alarm regarding the future. Making every allowance for prosperous years, improved cultivation, and the greater profit which the farmer makes on his holding, many years must elapse before the farmer can show a clean sheet with the shopkeeper, who has been generally ready to assist and to stand by the farmer in his hour of need. The mortality of calves in Kerry is considerable; and if a farmer suffers special loss in this way, he is on the verge of ruin. He must have recourse to the shopkeeper and the Bank to stave off the evil day. Keeping these facts and the wretched condition of the peasantry in view, the offer of a reduction of 3*s.* in the pound to poor farmers, whose holdings are situated in perhaps the wildest district in the country, must seem callous on the part of the landlord. Some landlords refuse to sell except on conditions which the tenants are not disposed to accept; to meet such cases the Congested Districts Board or the Estates Commissioners might get power to intervene and arrange the difficulty by compulsion or arbitration. It will not conduce to the peace or prosperity of the country, if any body of tenants shall be deprived of the right or privilege of purchasing their holdings. The statistics of emigration show that Kerry is losing considerably from the drain on its population. The population of the county in 1841 was 293,880; in 1901 the population was estimated at 165,726—a decrease of 128,164. This means a considerable drain on the resources of the county. The money which has been expended on the maintenance and education of the emigrants is lost to the country for ever, and as each inhabitant is supposed to contribute to the general wealth and prosperity, the evil resulting from emigration is incalculable. This evil is accentuated by the fact that it is not the weak and infirm that leave the country, but in the main the young and vigorous and strong on whom every nation depends not only for its growth and progress but for its very existence. In 1881 the population of Kenmare Parish was 6,450; in 1901 this number declined to 5,000, and the decrease is still in progress. Last year, 1,971 people emigrated from the county; of these there were 176 males between the ages of 15 and 20, 580 between 20 and 25, and 162 between 25 and 30. The females formed the great bulk of the remainder. This is a deplorable condition of affairs, and every effort should be strained to keep the youth in the country and provide employment for them. Where industries exist, there is a noticeable effect on the population. The fisheries have been developed to some extent along the south and south-western coasts, with the result that the parish of Ferriter is the only parish in the county where the population has increased. There the young men stay at home, because of the inducement of profitable employment. While, on the other hand, agricultural labourers are fleeing from the country, allured by the brighter prospects held out to them by their friends in America. The lace schools that exist in the county also help to keep the girls engaged in that industry at home. They can earn, according to their skill and industry, sums varying from 4*s.* to 12*s.* a week; in some instances they can earn up to 15*s.*, and even £1. Even the smaller sums are a great help to the family; they help to pay the rent of the house; while the girls, who are expert at their work, can support the whole family. If other industries were started, which would be likely to exist permanently in a neighbourhood, some alleviation of the present evil would be experienced. The home industries, which still exist should receive every countenance and support until they have been put on a safe and permanent basis. Weaving and

Ven. Archdeacon David O'Leary.

spinning for instance, which were so generally engaged in forty or fifty years ago should receive some kind of encouragement where they still exist. They are a source of profit yet in some places. There are various ways in which the energies of the Board might be expended; along the sea coast, we might have more piers, slips, and boats; dredging is badly needed for some harbours, and net-making and not repairing might be taught. In the country districts the people should receive proper practical instruction in the cultivation and improvement of the land; they should receive aid for the making of drains, smaller sums of money than they may receive at present being granted at low interest. Roads should be made in some instances to their dwellings, particularly when the people live in villages. Where the embankment of rivers is imperfect leading to the flooding of considerable tracts of country, the Congested Districts Board or the Agricultural Department should be empowered to execute the work necessary to confine the river within its proper bed. No Government should allow such ruin and havoc to the land and such danger to the health of the inhabitants as result from the overflow of the river in flood. The plantation of forest trees in many mountainous districts, besides being a source of profit, would conduce to the health of the general community. This will scarcely be done by individuals. The farmer would have to wait for a considerable time to derive any substantial profit from such a source. The instances of successful planting of mountain sides and marshy land in Kerry give a guarantee that any moneys expended in that direction will produce valuable plantations and forests. I must now refer to a subject to which considerable importance is attached in this county. The opinion is strongly held that Kerry does not receive the support from the Board which its condition demands. Along the Western coast, principally in Donegal, Galway, and Mayo, large fishing fleets have been created at the public expense, while we cannot gather that anything of a similar kind has been done for Kerry. Loans may, indeed, have been given to enable fishermen to buy trawlers, boats, and canoes; it is to be assumed that these loans have been repaid. But no fleet of fishing boats established by the Congested Districts Board has appeared in Kerry waters. The same discrimination as against Kerry has been exercised in other directions—in technical instruction, in the purchase of estates, in agricultural schemes, in industrial schemes, in agricultural loans, etc. It is to be desired that in any reconstruction or modification of the Congested Districts Board a special representative should be appointed for Kerry and South-West Cork. We shall then have a distinct assurance that this large district shall receive a proportionate share of the public grants. It would be even advisable that a certain sum of money should be ear-marked for Kerry, to be expended in meeting the needs and improving the condition of the county. Complaint has been made that the Board is unnecessarily slow in putting into effect its power of purchase under the Act of 1903. The landlords show a reluctance to sell to the Board, for this and other reasons. And the farmers are thus deprived of advantages which the Land Purchase Act evidently intended they should enjoy. The section of the Act dealing with the subject is practically a dead letter. The housewifery school in Killarney is doing good and useful work, and it is hoped that it will continue. Parish Committees also are carrying out the object for which they were instituted. They have proved of great service in some districts, while in others, for various reasons, they are inoperative. There is not much room in the county for migration, but some landlords hold large farms in their own hands, and they would be likely to part with them if they were approached by the Congested Districts Board or the Estates Commissioners.

44980. You say that the whole County Kerry should be declared congested, and that all tenants of holdings of £10 valuation and under should be entitled to the special advantages which the Board now offers to those whose land is valued at £7?—Yes. I say that solely because there are some advantages which I am aware that those under £7 valuation enjoy as against those who have a higher valuation.

44981. Under the present arrangement a holder of over £7 valuation is not entitled?—My remark is intended to convey that persons who have a valuation of £10 should not be excluded from the advantages of those Parish Committees, or any other institutions that may be established by the Congested Districts Board in the future.

44982. Then you go on to speak about the enhancemen of price brought about by the Act of 1903, and you say that a certain number of landlords offered in the eighties to sell at lower prices, and that the prices of this sort of land went up after the Act of 1903, and then you say it is very questionable whether a reduction of 5*s.* in the £ for second-term rent is sufficient to enable the farmer in South Kerry to face the future with an easy mind and without fear. May I ask you on that whether it is your opinion that a landlord ought to sell his property at such a price as would enable the tenant to buy on such easy terms that he is absolutely safeguarded from all possible loss in the future?—No. I should consider the interests of the landlord as well as the tenant, decidedly. A tenant in South Kerry who buys at a reduction of 5*s.* in the £ is very much worse off than one who buys in North Kerry, or more favoured districts, under the Congested Districts Board, because the dangers attaching to a purchase are much greater. The future holds out for him much more uncertainty than for the farmers who live on the better pasture lands; and I have noticed here a few instances in which great danger seems to me to threaten farmers in South Kerry. As you have heard frequently from the witnesses, these depend very much for the payment of their rent, the maintenance of their families, and the payment of the shopkeeper on the stores that are fed on the mountains.

44983. But that is common to all congested districts, is not it?—Yes. As distinguished from the rest of Ireland, I say that a reduction of 5*s.* in the £ is attended with very much greater danger and risk to the tenant farmer in this particular district of the county than I should say it is in the north of the county or other better parts of Ireland. To me the thing seems evident.

44984. My only point is this—that, of course, the purchaser of any ordinary business has, naturally, to take into account what his prospects in the future are. In fact, the very old maxim holds good as regards purchasers *caveat emptor*. You would not go so far as to say that that maxim should not operate also with regard to the purchasing tenants in Ireland?—Of course, it applies to every tenant who purchases in Ireland. It is on that account particularly that the tenants in South Kerry will have to be very careful about the price that they pay, solely on account of the great risk that they run.

44985. A tenant buying land in Ireland must use the same judgment as any other person uses, and must make up his mind as to whether it is really worth his while to buy at all, or whether it is not better for him to remain as tenant; but it is surely straining things altogether to say that he is to be relieved from the necessity of taking that precaution by having his land given to him at such a low price that his future success is assured?—You misinterpret my meaning very considerably.

44986. That is not your view?—No. If you take, for instance, a special figure instead of 5*s.*, if you take 6*s.*, or 5*s.* 6*d.*, we can argue the case then in the concrete. We can compare the figures, and see to what extent the landlord would suffer, and to what extent the tenant will be benefited; but you may take it as certain from me that the very smallest addition to the tenant will be a considerable advantage to him. They are small reductions in the landlord's income, and will be of very trifling moment to him or his family.

44987. It is a matter of opinion and calculation?—Yes.

44988. A good many small concessions would make up a large sum?—Yes. Take a small case—that will be sufficient to illustrate what I mean. There is a farm in Dingle, which was held by the Presentation Nuns. The rent was fixed by the arbitration of valuers sent down by the Commission at £17 16*s.* On my advice the bishop sold that, which was a second-term rent, at 21½ years' purchase—that is, 6*s.* reduction. The sum of money coming in, therefore, will be £382 14*s.* The bonus will be £35 18*s.* 5*d.*, and the total that will be received by the bishop for the Presentation Nuns will be £428 12*s.* 5*d.*; and that at 4 per cent. will give £17 2*s.* 8¼*d.* That is just a few shillings less than the actual amount previously received.

44989. When you take 4 per cent. as the figure, I conclude it was within the bishop's power to invest that £428 in whatever security he chose?—I don't know exactly.

44990. He was not bound to invest it in a trustee security?—Not if you distinguish between a trust security and the ordinary security. I suppose there would be some distinction as to the exact amount of interest that would be required; but I am looking to a statement which was very distinctly made by the Duke of Devonshire, when the question of this Bill was before the House of Lords. It is to be presumed that he had had a great deal of experience in the financial world, but he seemed to ridicule the idea that in a great many instances very safe securities could not be obtained at 4 per cent. under the provisions of that law, which, as you are aware, extended the scope of trust securities.

44991. It entirely depends on whether the money is free or is not. If a man has the fee-simple of his estate, and can invest the money that he receives as he likes, I have no doubt that he can get 4 per cent., but if he is only a tenant for life, and obliged to reinvest that money in trustee securities, it is very seldom that he will get 4 per cent. 3½ per cent. is what we have been told is considered the fair figure?—I was under the impression that he could get 4 per cent. If you state he must take 3½ per cent. I will take it from you.

44992. If you read the evidence given before us, especially evidence like that of the stockbroker to the Bank of England,* who has, of course, enormous experience in these things, you will find that, so far as we can judge, 3½ per cent. represents about the interest which can be obtained from trustee securities?—I have no doubt that that would be about the general condition.

44993. Then, taking your instance, if that £428 had to be invested at 3½ per cent., there would be a loss of income?—Yes.

44994. When we get illustrations of this kind it is almost impossible, is not it, to judge how far they are of general application, unless we know the absolute circumstances of the property?—Quite so. I merely want to point out that 3½ per cent. is not to be absolutely relied on at all as a rule in determining the net income. In a great many cases, I suppose, it might be difficult to get even 3½ per cent.

44995. I suppose you will allow that the great bulk of Irish landed property is in trust, and is not held in fee?—I was always under that impression.

44996. Therefore, the great majority of landlords selling are not able to get the rate of interest which was obtainable in this particular case by the bishop?—I think it will depend very much on the financial condition of the friends of those landlords. If the landlords selling have got friends who are thoroughly up in the condition of the financial market, I can quite conceive that they would make a very much better bargain than those who are not so situated.

44997. Possibly; but, as you know, what trustees can invest in is not altogether a question of knowledge. It is a question of law, which the Trustee Act has laid down?—I thought that was over-ruled by the Act of 1903 extending the scope of the investments.

44998. Yes; the 1903 Act does, to a certain extent, extend that?—Therefore, I don't think it should be worked altogether on the side of the landlord. If the Act gives him the privilege of doing so, it should work also on the side of the tenant. We have seen what a recognised authority has said in the House of Lords. I don't want to have any cast-iron rule. The tenants, you may take it from me, will be absolutely satisfied with 3¾, but they will not be satisfied with the figure of 3½ per cent. They have got a privilege from the Legislature. It is a privilege which has been granted mainly in their interests, though it seems to be in favour of the landlords, namely—that the landlords can purchase on securities that were not recognised as sufficient for trust purposes before the Act.

44999. He has not yet been given the privilege of altering the securities in which trust funds may be invested?—We were under the impression that he had got those privileges.

45000. You also say a landlord whose rents are considered to be high recently offered to sell a portion of his estate, giving to the tenants a reduction of four shillings to six shillings to the pound, and that this is mere trifling with the tenants?—My remark on that applies to that particular case.

45001. What do you mean by saying that his rents are considered to be high—I suppose they have been fixed by the Land Court?—They have not, except in a few cases.

45002. They might be fixed by the Land Court?—They might be if the tenants were disposed to enter the courts.

45003. If the tenants have any reason to suppose that the rents are too high, they have their remedy of going into the Land Court?—Certainly, but in this particular case there were certain reasons—you may call them prejudices on the part of the tenants if you will—that prevented them from going into the Land Courts. When the Land Act of 1881 came into operation we had the misfortune to have in Kerry a Commission which completely demoralised the people, and instead of lowering the rents, which as everybody knew were too high absolutely, in some cases it increased them. It was known in Kerry as the John George M'Carthy Commission.

45004. What is the more Parliamentary term for that Commission?—The Assistant Land Commission. John George M'Carthy was at the head of it. He had been a member of Parliament, and was appointed Legal Assistant Commissioner.

45005. These were gentlemen sent down by the Land Commission to revise rents?—Yes.

45006. They actually put the rent up in some cases?—Yes; in a lot of cases, and in most of the cases they gave ridiculous reductions, so that the people were actually repelled from going into that court. That is a historical fact. You may call that mere prejudice, but it is a fact.

45007. But the reason was, I suppose, that in the opinion of these gentlemen the rents were, if anything, too low?—I hope for their own sake that that was their opinion.

45008. Was there any other reason?—I am afraid it was attributed to something else. I don't like to say hard things about other people, but people commonly attribute it either to ignorance, or to landlord prejudice on the part of the Commissioners. We cannot enter into the minds of individuals. I give you the fact and state how the fact was interpreted. It was one of the greatest misfortunes that happened to the County Kerry that that particular Commission was sent here. I state that merely to explain the conditions of the property that I refer to where the landlord offered four to six shillings in the pound. In a few instances the rents were second term rents.

45009. Sir Francis Mowatt.—He offered four shillings on the second, and six shillings on the first term rents?—Yes, but the fact was that the landlord was not disposed to sell at all. I daresay that is why he put down that price. The parish priest of Anascaul wrote to him shortly after the Act of 1903 began to operate, and he never answered the priest's letter.

45010. Chairman.—How did he arrive at what the second term rents were if the tenants have not gone into court, and if there is no such thing as a voluntary reduction outside?—There is no such thing in existence at all. A person must either go into court, or he can adopt another course. The landlord and tenant may approach the Commissioners and ask them to send down valuers to fix a second term rent without going into court. That will be recognised by the Land Commission as second term rent.

45011. But you say that that has not been done here?—In this particular case I have not said that.

45012. I thought you said that the people, because of the example that occurred soon after the Land Act passed had been deterred?—Not all, but a good portion of them.

45013. With regard to this particular instance, you said that rents were considered to be high; I asked had they had them fixed and you said no?—Not in the court.

45014. And you told me the reason was that there had been an instance of a Commission which actually increased some rents, and the tenants had therefore been deterred from going into court?—Yes. The landlord then, to make up for that, gave them an allowance.

45015. He makes them an allowance?—Of three shillings in the pound.

45016. That is a reduction of rent?—Yes, a reduction made by him, but not recognised by the courts. He can withdraw it at any time.

* See Appendix to the Fifth Report of the Commission [Cd. 3630, 1907], pp. 17 *et seq.*

July 10, 1907.

Ven. Archdeacon David O'Leary.

45017. It is a reduction made by him and accepted by the tenants in lieu of a legal fixation?—Not in lieu of it.

45018. I think it must be?—It is not. I know the facts of the case perfectly. It is simply because it was notorious that the tenants were rented too highly. Then the landlord, in consideration of that notorious fact, gave them a reduction of three shillings in the pound, provided that they paid within a certain time. If they did not pay within the certain time, then the reduction was not given.

45019. Is not this the fact—the Act of 1881 gives the tenant the right to go into court to get a rent fixed if he chooses?—Yes.

45020. In many cases in Ireland instead of going to the legal expenses of going into court, the landlord makes a voluntary reduction, which the tenant accepts, and which saves both sides the trouble and expense of having the rent legally fixed?—Yes.

45021. That is what has occurred in this case?—Yes.

45022. Then an arrangement of that sort is, I submit, an alternative; it is in lieu of a legal fixation?—You call it a substitute.

45023. Mr. KAVANAGH.—It is not a judicial rent?—Not in any sense. The landlord can withdraw it at any moment.

45024. CHAIRMAN.—If he does the tenant can go into court?—Certainly, but this barrier of prejudice on their part—I don't want to say whether it is reasonable or unreasonable—is there. They won't go into court.

45025. It is a voluntary arrangement in lieu of, and in substitution for, the legal arrangement?—I object to the word substitution altogether, because the landlord has the right of receding from it, which he will not be able to do in the case of a first term rent fixed by the Land Commission.

45026. That may be so?—It would be a substitute in this way, if that reduction was laid before the Land Commission, and they recognised it as a judicial rent.

45027. The difference is that in the one case the Land Commission fixes the rent, which remains a constant quantity for a period of fifteen years; in the other case it is a voluntary arrangement which can be withdrawn by the landlord?—Yes. That is the objectionable feature of it.

45028. That is the difference between the two; but so long as the landlord continues to give that reduction, and so long as the tenant can pay his rent to the day, and so long as the tenant accepts that arrangement, it is, as a matter of fact, a voluntary arrangement agreed to by both parties in substitution of the legal arrangement enacted by Parliament and contained in the Act of 1881, and in subsequent Land Acts?—We are disputing about words. It is a battle of words. I don't acknowledge that it is a substitute. The difference is so great.

45029. Mr. O'KELLY.—I daresay you will admit that a man who is supposed to appraise the value of land should know something about it?—Certainly. I modify my answer to his lordship. I know it from the general opinion of the farmers or from experts. They are quite as competent to form an opinion as the judge sitting on the bench in any case that is brought before him under those circumstances.

45030. CHAIRMAN.—You have also said that the extent to which the farmers are in debt to the shopkeepers gives ground for alarm regarding the future; and before that you said that a reduction in the rent or annuity will, no doubt, give immediate relief, but it will not go far in enabling the poor farmer to pay his debts to the shopkeeper or to maintain his family in greater comfort?—Yes. You will notice that remark refers to a reduction of five and seven shillings in the pound.

45031. Is the indebtedness of the farmers to the shopkeepers greater than it used to be?—I am afraid it is deplorable.

45032. Is it greater than it used to be?—I should think so. It has been for the last twenty years quite alarming in its proportions. I have had some cases brought under my notice that would make the farmer practically bankrupt if the shopkeeper insisted on his rights; and I am afraid that the arrears are to some extent due to the improvidence of the farmers themselves, combined, of course, with their own extreme poverty.

45033. You would not suggest that it has any reference to the question of rent?—I do suggest that it has some reference to it. I take it in this way. Suppose that the produce of a farm is £15, on which the farmer has to support himself and his family. I speak now of the actual money value of things that can be got only in the shops, such as clothes, flour, and things of that kind. From the resources of his income, from which the entire of what he has to get from the shopkeeper must come, he must first pay the landlord: and the balance is very variable.

45034. The first witness we had to-day, Mr. Sullivan, was a shopkeeper, and I think he told us that the indebtedness of the farmers had increased in recent years?—That I don't know anything about, but I speak of cases that were brought under my notice recently, and in the past.

45035. I think that he told us that. As a shopkeeper he ought to be aware of his facts?—That may be his personal experience of it. My evidence does not in any way contradict him.

45036. But as a shopkeeper he ought to know something about it?—Yes.

45037. If the indebtedness of the farming classes has increased, and if it has reference to rent you think there would have been lately an increase of rent?—Not necessarily.

45038. If the indebtedness has increased, and it is due to rent?—You speak of the increase of the indebtedness. I have not spoken of that.

45039. We were told by the shopkeeper himself that the debt is increasing; is it not because the standard of living and the conception of the standard of living has risen in recent years?—To some extent, yes; but not altogether.

45040. What should you imagine was a common figure for the small farmer to owe a shopkeeper?—A common figure would be from £20 to £25, £30, £35, £40, or £45. It varies very much. I know the case of one person who has a liability of about £80, and he has got a farm of about £10 valuation.

45041. That is probably an extreme case. You began at £20 or £25. Shall we take £30 as a rather common sum?—I think you might take it at £25. £20 is a very common case. It depends very much on the credit of the farmer. If you struck an average you might perhaps take £20.

45042. What sort of a farmer would owe £20?—A farmer, say, with four cows.

45043. What rent would he pay?—It would depend very much.

45044. What is the common figure?—I speak for the County Kerry and not for Kenmare.

45045. Take a man in the County Kerry with four cows?—I cannot give you an answer to that.

45046. Can you give me a sort of a rough guess?—They pay £12 in some places, and they pay £4 in others. If you ask me my individual opinion as to what they should pay I would say that it all depends on the nature of the land.

45047. Do you think £5 a year rent is a fair figure to take for the class of farmer who owes £20 to the shopkeeper?—£4 or £5, but that is purely hypothetical.

45048. I may take £5 as illustrating the rent of the man who probably owes £20 to the shopkeeper?—Yes.

45049. You say a reduction of from four to six shillings in the £ is trifling and does not enable the poor farmer to pay his debts. May I ask what reduction would not be trifling?—Do I make that statement? My words have been rather carefully considered.

45050. You give us an instance of the landlord who offered to sell his estate at reductions of four shillings and six shillings in the £, and say this is mere trifling with the tenants, and you say "A reduction in the rent or annuity will no doubt give immediate relief, but it will not go far in enabling the poor farmer to pay his debts to the shopkeeper, or to maintain his family in greater comfort. The extent to which the farming class is indebted to the shopkeeper gives grounds for alarm regarding the future." I am perfectly entitled to assume, I think, that the meaning of that is that the pressure of rent is so great that the tenants have got into debt with the shopkeeper?—No; I don't think you are entitled to assume that. You are entitled to assume that the reduction of five shillings in the £ will not go far

n enabling the poor farmer to pay his debts to the hopkeeper.

45051. You say that a reduction of from four to six hillings in the £ is mere trifling with the tenants?—n the case of that landlord. I have not made the ssertion generally though it may be applicable gener-lly.

45052. What reduction do you consider would not e trifling, and would go some way?—Any substantial eduction over five shillings, say 5*s.* 6*d.*, 5*s.* 9*d.*, or ix shillings. I think that these would be very reason-ble.

45053. Take reductions of six shillings and eight hillings?—They would be quite satisfactory. I ould take 5*s.* 9*d.* and 7*s.* 9*d.*

45054. A reduction of six shillings in the £ on a ent of £5 would be £1 10*s.*?—It would take fourteen ears to pay his debts with that reduction. There-ore my statement is absolutely proved. It won't go ar.

45055. Even with what you call a substantial re-luction, which is not trifling with the tenants, it ill take fourteen years to pay his debt?—Not quite; en or eleven, or twelve.

45056. Six shillings in the £?—But if he gets eight hillings in the £ it will be £2 off.

45057. In the one case he gets a reduction of £1 10*s.*, nd in the other case he gets a reduction of £2. The atter reduction would not pay off the debt for ten ears, and the former would take fourteen?—It is a ery substantial difference.

45058. These are the two reductions which you say re not trifling?—Yes; but the advantage of being ble to pay off in ten years as compared with fourteen s very substantial.

45059. But what you call trifling reductions are generally six or four shillings in the £; and with hese reductions it would take fourteen or twenty years o pay off the debt, as against ten or fourteen years with the other reductions; that is if the people saved the whole of the difference. As a matter of fact the differences are very small?—They are small in your eyes and in mine, but to a poor wretched farmer every shilling and sixpence is very material.

45060. But that is the difference between what you call trifling and what you call satisfactory, twenty years as against fourteen years, and fourteen years as against ten years?—You carry my remark "trifling" beyond what I intended it should go. I refer to the particular case of that estate, where, according to the general judgment, the rents are very high. They have to pay on that estate with which I am very well acquainted, £3 to the cow. You are aware that we calculate by the cow down in Kerry. On the neighbouring estate they pay about £1 10*s.* to the cow. Nothing can be clearer and plainer than the discrepancy between the two, and the injustice of the conditions of the one as contrasted with those of the other. I have been living in that parish for seven years, and I have heard the people speak about it. I am giving you, therefore, not my judgment, but the judgment of the people in the matter.

45061. You say: "Keeping these facts and the wretched condition of the peasantry in view the offer of a reduction of three shillings in the £ to poor farmers whose holdings are situated in perhaps the wildest district in the country must seem callous on the part of the landlord." That is the first we have heard of a three shillings reduction. I thought you said it was four shillings?—I hope you will hear no more cases of the kind.

45062. The instance you gave us was a reduction of four shillings?—This is not the same case as the previous one. This is the case of a landlord, who, immediately after the passing of the Act of 1903, had the magnificent public spirit to offer the wretched people living around Slea Head, the most westerly and the wildest point in Europe, a reduction of three shillings in the £.

45063. Mr. O'Kelly.—Who was he?—Mr. Drummond. The strange thing about it is that in other respects he seemed to be rather interested in the tenants. He built houses and a school for them, but as for a reduction of rent, it was not to be expected from him.

45064. Chairman.—This is for sale?—Yes, for sale of the lands. He offered to sell on terms that would give a reduction of three shillings in the £. His sub-agent, Mr. Huggard, as the tenants informed me, said that he would sell at a reduction of three shillings in the £.

45065. That is callous on the part of the landlord?—Most decidedly.

45066. I don't wish to argue whether it is or not. The only point I ask is where do you draw the line between what is callous and what is not callous?—When a person is aware that the condition of those dependent upon him is already rather bad, and he gives the minimum amount of reduction, I call that man callous, and driving a hard bargain.

45067. As a matter of fact, when you talk about driving a hard bargain, would you say that apart altogether from sentiment, and regarding purchase and sale on business lines, a proper price can only be estimated on the basis of net income; would you say that the landlord was callous for asking his tenants to pay a price which would give him his net income?—No; I should not.

45068. Then suppose that in this instance a reduction of three shillings in the £ was the full reduction that could be given if his income was to be insured, would you be inclined to call that callous?—I should, because the case would be too exceptional. You make a condition which is not of general application, and I don't think that is fair or reasonable. You make a condition which is of a very exceptional nature. You take Mr. Drummond as an ordinary landlord, although nineteen-twentieths of the landlords have offered four, five, six, or seven shillings reduction to tenants on good lands where the tenants themselves are fairly well off and in prosperity. When you remember this fact you will see that it is decidedly hard-hearted and callous on the part of a landlord to ask these wretched creatures, living at the very extremity of Europe, with their lands torn by the force of the Atlantic winds blowing in to them from Labrador, to purchase at a reduction of three shillings in the £.

45069. I could understand all that. It may be too much. I don't say that it is not an exorbitant demand. My point is—can you say any demand is callous or hard-hearted, or anything else, unless you are cognisant of the actual sum of money which is going to return the net income to the owner?—I can. All the circumstances of the landlord show that he is not in any want. He was a very kind owner to the tenants. He built houses for them.

45070. Whether he is in want or not does not affect the question. You have told us that, in your opinion, when a man sells an estate he is entitled to ask for a sum of money which will give him his net income?—Yes, generally.

45071. Where do you make exceptions?—When the cases come before me I may make exceptions.

45072. You say that in general a man is entitled to ask for his net income?—Yes.

45073. Tell us what exceptions you have in your mind in which that rule would be departed from?—When the conditions of his tenantry are such as would make the application of the land law to their case too severe a strain on them—where the voice of humanity would say that it was too great a strain on them—then I say that the landlord should sacrifice some of his net income. I don't at all maintain, and have never held to the rule, that the landlord should in every instance get his net income.

45074. Would you say that a man is only entitled to his net income when it can be said that his tenants can afford to pay a sum of money which will give him his net income?—No. I say that, as a general rule, a landlord may look naturally for his net income.

45075. There are to be certain exceptions—in cases where the holdings are swept by winds from Labrador?—You refer to the amount of the reduction so as to make it appear that the landlord grants it only in order to get his net income. I deny that altogether.

45076. I want to know when you would make an exception?—I don't think I am bound exactly to answer questions like that. I don't feel myself even competent to answer it; but when the case comes before me I shall deal with it.

Chairman.—If you don't care to answer it, please don't do it.

45077. Mr. Kavanagh.—Your point is that 3*s.* reduction would bring in more than his net income?—That is my point. I am afraid that we have been at cross-purposes.

July 10, 1907.

Ven. Archdeacon David O'Leary.

45078. CHAIRMAN.—Have you any reason to know that in that particular case the reduction of 3s. in the £ would bring in more than his net income?—I have the general information that 3s. in the £ properly invested will give every person more than his net income: I mean by that the income derived from his property.

45079. In every case?—I think so. I am safe in saying that.

45080. And more than that?—Yes, if invested at 4 per cent.; most decidedly.

45081. The reason then you say that this offer is callous is not because your good heart makes you think that there ought to be any sentimental reason for the landlord giving the tenants exceptional terms, but because you think that it would have given him more than his net income?—For the two reasons. I don't hesitate at all to put it before you: because it gives him more than his net income, and because it is an act of cruelty, if they were not his tenants at all, to practically induce them to purchase their farms at such a reduction. It is repulsive to humanity.

45082. Where does the inducement come in?—The reduction in the rent or annuity will no doubt give immediate relief. Many persons have bought on bargains that they did not approve of, merely because they felt that they would get immediate relief, and they said to themselves let the coming generation provide for itself.

45083. That is not rating the intelligence of these particular tenants at a very high level?—Don't ask me to pass a decision on them. I would rather not.

45084. In other words, you imagine that there was danger of these people being practically bribed by the consideration of an immediate reduction of a few shillings in the £ to undertake an obligation which would be disastrous in the future?—Which may be disastrous or may be difficult to meet.

45085. You really think that a body of independent people would be likely to undertake a thing of the kind?—I am aware that they have; but I don't pass an opinion. I merely give you the fact for what it is worth.

45086. These people have advisers?—Sometimes. Sometimes they have not.

45087. Are not their advisers strong enough to put before them the dangers of the thing which you see so clearly?—Perhaps so. I don't know any case where the advice was given in a matter of that kind. Sometimes they act on their own advice.

45088. You also say that some landlords refuse to sell, except on conditions that the tenants are not disposed to accept. To meet such cases you suggest that the Congested Districts Board or the Estates Commissioners might get power to intervene, and arrange the difficulty by compulsion or arbitration. On what terms would you suggest that the compulsion should be applied?—When either the landlord refuses to sell to the tenants or there is absolutely a breakdown of the negotiations between them.

45089. But on what terms as regards price would you exercise compulsion?—I really could not tell you. I would have to take the individual case. It is utterly impossible to answer a question of that kind with regard to all estates. If you tell me any particular estate that I am acquainted with I shall be able to tell you.

45090. Would you say that in any case compulsion should be exercised to force a man to give up his property, and be at a loss by it?—Not if he lost substantially.

45091. If there was any loss by it?—I think, as I have already said, the landlord may in some instances lose a little.

45092. That was voluntary sale. You have now got to compulsory sale. Do you think it is fair for the State to compel a man to give up property, no matter what it is, and be a loser by it?—Not if he is a loser to a great extent.

45093. To any extent?—Certainly I do.

45094. You think it is fair that the State should compel a man to lose any money at all by compulsion?—Certainly.

45095. On what grounds?—Because of the public utility and advantage. Public advantage has demanded for the last twenty-one years that the landlords have had to give up portion of their rents by the judgment of the courts. It is a principle that has been recognised in English law, and may be carried out to its proper legitimate logical conclusion.

45096. Are you prepared to adhere to the principle which has governed compulsory purchase under English law?—Do you refer to English law as applied in Ireland?

45097. No?—I don't know anything about the English law.

45098. There is compensation for the acquisition of allotments and the acquisition of land for railways in England: would you be prepared to say that you would accept the principle which governs the compulsory acquisition of a property in those cases?—Not until I knew the principle. I would be acting blindfolded if I did. When the principle of English compulsion comes into this country we shall be able to talk about it then.

45099. At any rate, I am to understand from you that, in your opinion, in Ireland it would be fair for the State to take a man's property by compulsion, even if that compulsion led to a loss?—Occasionally, yes; cases may arise in which that would occur. I may instance the case of Lord Clanricarde. I think it is perfectly competent for the State, in the case of a landlord of his class, to take up his estate, even though he would suffer some loss. It would not be substantial, because injustice rules his estate, and has ruled it for the past thirty years, unfortunately.

45100. Therefore, you would apply more injustice to remedy it?—I would not, indeed. If the law allowed the thing, the word injustice is not at all applicable to it. We used to hear before the passing of the Act of 1881 the word confiscation applied to the idea of any public authority interfering between landlord and tenant. It ceased to be confiscation when the Act passed.

45101. Does not it appear to you that it is confiscation for the State to take the property of an individual?—It is not. It is its supreme right. It gave in the first instance. What it gave it can take away.

45102. How do you know that it gave in the first instance?—History tells us.

45103. Are you prepared to say, with regard to all landed property, that the State has given that property?—I am speaking of Ireland.

45104. All Ireland?—No, but to a great extent; and to a great extent in Kerry.

45105. CHAIRMAN.—There are many instances, no doubt, of estates which were granted for services of various kinds, some of which we need not enter into.

45106. Mr. O'KELLY.—You remember Cromwell?—And I remember Elizabeth also. A great portion of Kerry was settled in the time of Elizabeth.

45107. CHAIRMAN.—But there have also been many properties acquired by actual payment of cash?—Certainly.

45108. Cash earned by business or other undertakings. Does not it seem to you that where a man has, by the savings of his family, put his money into landed property, it is confiscation for the State to compulsorily acquire that property at a lower value?—I used the word confiscation when quoting from landlords before the Act of 1881, in order to show that what was confiscation in one instance, when the law intervened, was not confiscation; so what is injustice in one instance when the law intervenes is not in justice. It cannot be an injustice if it is a just law.

45109. Then it is not an injustice, in your opinion, if a man buys an estate for a certain sum of money, which is his own money, which he is free to put into any property that he likes, for the State to compulsorily acquire that property, and to throw a loss upon the owner?—It is not confiscation or injustice for the law to put that landlord on a level with other landlords, no matter what his title to his land may be.

45110. I don't understand what you mean by the level of other landlords?—You spoke of landlords having a certain title by purchasing their lands, while others receive it by inheritance. The law should not be called upon to distinguish between the two classes of landlords. Therefore, the point of your argument, if you meant it for an argument, seems to fall.

45111. Inheritance has absolutely nothing to do with it?—I thought it was the point that you were insisting on.

45112. Give me an answer to this plain question. In your view, where a property has been acquired, whether by the owner or by his predecessors, it has been bought and represents the savings of a family, and an investment of money which they are perfectly entitled by law to make—do you consider it is just

or fair for the State to compulsorily acquire that property when it entails a loss to the owner?—If it be for the public advantage I think so.

45113. If the public advantage requires it?—Most decidedly. Personally, I should not like to see the loss a substantial one.

45114. Whether it is a substantial one or not does not affect the principle?—No; I admit that.

45115. The principle is affected by the question whether there is loss at all. Are you of opinion that it is sound policy to lay down that where public policy demands it it is not unjust to compel an owner to sustain loss by the compulsory sale of his property?—You may take that. I know a case where a person spent a lot of money on an estate before 1881 and the reductions of rent simply blotted out his income practically.

45116. You go on to show, what is undoubtedly the case, that within the last few years there has been a considerable decrease in population. How do you propose that that decrease should be checked?—That is a matter that I will leave to the Government to consider. I can point out ways in which the thing may be mitigated or modified, but as regards an effectual check, I don't see that any remedy can be applied except by the growth of Irish industries, and, of course, it will take a generation or two generations to get them into such a condition, if they ever reach it, as will enable the people to remain at home instead of going to America. But I have pointed out some of the ways in which the thing may be mitigated. The fishing, for one thing. It has been developed to some extent along a certain portion of the west coast, with the result that the parish of Ferriter, where the fishing has provided occupation, is the only parish in the county where the population has increased. There the young men stay at home because of the inducements of a profitable, though very dangerous employment.

45117. You would look to the development of fisheries and the increase of industries?—And the encouragement of industries where they already exist, and they should go far to support these industries, in Cahirciveen, for instance, where under a reconstituted Board they might receive some paternal attention. And there are industries as you have already heard to-day along the parish of Tourosist that might be attended to. They might get new looms instead of the old looms.

45118. Is there any other method by which industries could be encouraged?—By the establishment of lace schools. The Board has already done something to encourage the lace industry, but I doubt if it cannot be carried much further.

45119. Exactly; that is a point I was coming to. You have no reason to suppose that the output of lace in Ireland could be much increased?—I should think so. We get imported lace into the country, and the Irish lace will bear comparison with it. Irish lace may be a little more expensive.

45120. Have you any reason to suppose that the output of lace in Ireland can be increased very materially without endangering a glut in the market?—I have. We have got a most successful lace school here in Kenmare, and no girl is kept idle and the nuns always find a market for the lace. I have no reason to think that they supply the whole market for lace in this country, but I know that they have no difficulty in getting rid of any lace they do.

45121. That particular school goes in for a very fine class of lace?—Yes. That is a thing that perhaps could not be practised elsewhere.

45122. That is a kind of work which can be carried on successfully in a school like this where they have the constant tuition and encouragement of people who know all about it, but it is hardly the class of work that is very suitable for a cottage industry where the girls take the work away?—It is eminently suited for a cottage industry.

45123. As fine work as that?—Yes. The girls take the lace out with them from the school and make it, and it is a lace of the very highest kind. There is nothing superior to it in the world.

45124. Then there is no difficulty in the highest class of lace being made in the houses of the people themselves?—The girls take it home from the school and work at home for as many hours as they please. Besides that there are married women also who work the lace as a cottage industry. They don't come to the school. And there are some externs, and the lace is sold for them at the convent. It may not appear to be a great thing, but it is, at any rate, a move in the right direction if we can get twenty or thirty to stay in a parish instead of going to America. Here we have got about thirty-five or forty, who in all probability but for the lace industry, which is carried on with such great success, would be in New York or Boston, or some of the other cities of the United States.

45125. You say as regards the fishing industry, that slips and piers are badly needed. Which is the better way in your view: to have a great number of small slips to accommodate a few boats each, or to have a concentration at some big pier?—I think I would have piers at certain points and slips between them. I refer now to a pier which has been called for for a long time, at Coomcroun, for instance, or Renard, or the pier at Dingle, which has long needed enlargement. The central points being fixed up with piers, then slips may properly be set up at suitable distance from them.

45125a. But you would agree, would you not, that in order to encourage these people to be the most efficient fishermen possible it is necessary to spend money as far as possible on large works in suitable places, where they can get big boats and where they can really become professional fishermen; would not you agree with that?—Yes, and I would say provide the slips for the small boats. That, of course, would require increased income on the part of the Board; it could be done in this particular instance in our County Kerry, if the Board would give us a larger proportionate share of the sum which it actually receives.

45126. You advocate the planting of forest trees?—Yes. They have been planted with considerable success in many places; on the sides of Mangerton and Torc they have been planted with great success. Landowners have planted along here on some pieces of land that would not be fit for agricultural purposes. There is no reason why the pasture lands or lands fit for tillage should be taken up with planting, where we have got so many hundreds of square miles of mountain on which noble forests grew at one time, and probably the same thing could be brought about yet, but you would require a large expenditure of money for that. The large expenditure of money would, however, be very well repaid.

45127. Take a local instance. Take the peninsula which runs out here between the Kenmare River and Bantry Bay down towards Dereen. I understand there is a certain amount of grazing going on on those mountains?—Yes.

45128. Almost right up to the top?—Yes.

45129. If that whole tract of country were acquired, say, by the Congested Districts Board, would you advocate the planting of that range?—Not the whole range.

45130. How far would you go?—For one thing this district is very badly off in the way of fuel. The bogs are rapidly wearing out. In some districts the people at present scarcely use any turf. They have to use timber. In the course of generations it is practically certain that the people will have to depend altogether for their fuel on the timber. If that timber is not provided now within the present generation it will go very hard upon them. They will have to pay a very high price for coal. The price of coal is not diminishing.

45131. Of course the advantages of having trees are very obvious, but the point to which I want an answer, and which I have never got satisfactorily cleared up so far is: suppose you were to acquire a tract of country like this by the Congested Districts Board, there would be a demand made that the whole mountain should be either divided up amongst the tenants or else given to the tenants as common grazing ground?—Yes.

45132. Would you say that the demand should be resisted by the Board, and that a certain amount should be retained by them and planted?—I don't think, expressing my own opinion, that the tenants would object if a reasonable supply of timber were planted without substantially interfering with the pasture.

45133. Would not they say in almost every case that it did interfere with the pasture?—Certainly it would interfere with the pasture, but if they were impressed with the notion that it was for their own advantage, this thing could be done.

45134. Suppose they can show that there is grazing almost up to the top, a certain rough grazing, which

July 10, 1907.

Ven. Archdeacon David O'Leary.

I understand is the case here, as a matter of fact, when that has been acquired, won't the demand be made that the whole land should be available for grazing?—Certainly.

45135. Are you of opinion that the Board should resist that demand and plant trees?—To a limited extent. You must consider that there are miles and miles of mountain all round here, and if you put a fair expanse of plantation on those it will only cover comparatively speaking, a very small surface indeed. I can only express my opinion that I don't think the tenants would, in view of the fact that this thing was done for their own advantage, have any serious objection to give up a reasonable share of that land. Perhaps they may look for compensation. I daresay they would, but it is not very much.

45136. Most Rev. Dr. O'Donnell.—At the beginning of your evidence you drew a distinction between the reduction on purchase that tenants should look for on poor land such as there is in South Kerry, and the reductions that would be tolerable on better land such as in North Kerry and other parts of Ireland?—Yes.

45137. I am anxious that you would elucidate the basis of that distinction. No doubt when the reductions are given even if considerable they seem small on the poor lands?—Yes.

45138. All the same you consider that the rate of reduction should be greater on the poor lands than on the better lands?—Yes.

45139. Under the preceding purchase Acts did not inferior lands in congested areas go for a very much smaller number of years' purchase of the rent than the better lands in the good areas?—I think so. We have some instances here where land was sold for a smaller number of years' purchase.

45140. Is not it quite ascertainable from existing statistics that the number of years' purchase was smaller in the congested area, and especially in the poorer districts in the congested area?—Yes. With regard to this particular district it has also to be borne in mind that we are situated in perhaps the wettest district in the whole country. The rainfall on Mangerton is eighty-six inches in the year. The rainfall at Dromore is sixty inches in the year, and at Dublin it is about thirty inches. We lie here between Mangerton and Dromore. The two most useful articles in our district for ordinary persons are the umbrella and the waterproof. The consequence is that the land is simply drenched.

45141. That is an explanation of the difficulty of growing crops in South Kerry in some districts?—Yes.

45142. When the occupiers in poorer districts bought their lands for a smaller number of years' purchase was not the reduction proportionately greater?—Yes.

45143. Is not the difference a very marked one?—Yes.

45144. Was the reason for that, as a matter of fact, when everything is considered, that rents are higher on the poorer lands than on the richer lands?—Yes; coupled also with the greater risk that is run by the tenant who has to depend very much on the mountain pasture for the maintenance of himself and his family, the payment of rent and everything else.

45145. Is not the poorer land to a large extent reclaimed?—In nearly every instance.

45146. With all we hear about sub-commissions is not it very difficult to get rent down on reclaimed land to anything like what it would be before reclamation?—Yes.

45147. That may be one reason why the number of years' purchase on poorer lands before the Act of 1903 was very much less than the number of years' purchase of the better lands?—It may.

45148. You have also alluded to the fact that the crop on the poor land is more precarious?—Decidedly. The blight strikes the stalks up on the mountains very much sooner than it strikes the crops in the valley.

45149. The oats may not ripen and the potatoes may be struck with the blight?—Yes. The harvest, as a rule, is about three weeks late in the upland, with the result that when settled bad weather comes the farmers find it very hard to take in their little crop of oats at all.

45150. Is it not a fact that the income from a farm is much more precarious in a poor district than in the better districts?—Certainly. There can be no question of it.

45151. Is it not also a fact that when there is a good market for stock, cattle from the poor districts, say, rough stock, find a market?—Yes.

45152. But it is much easier in the bad years to sell the produce of the better lands?—Yes.

45153. From all these causes the position of the men on the poor soil is precarious?—Yes.

45154. The reduction that would enable a man to get on on the better lands is not quite the reduction that would give a proportionate benefit to the man in the poor districts.

45155. That, I understand, to be the chief reason why you consider that 5 shillings reduction in the poor districts, such as you find in South Kerry, might not be adequate at all, might be inadequate, whereas the reduction would be sufficient for the better lands?—Yes. Some of the landlords are increasing their offer from 5*s.* to 5*s.* 3*d.* There is actually one case here in which we hope that the increase may be still greater than that.

45156. As a matter of fact, during the past two years, the prices have been going down again?—They vary very considerably. The price of cattle at one time will be very low. Then it will improve for a while.

45157. Did it come under your notice that the price of poor land went up very much under the Act of 1903?—Yes.

45158. You alluded to a certain sale in Dingle, in which you were concerned in selling some property held by the nuns. You sold at twenty-one and a half years' purchase?—Yes.

45159. With your investment at 4 per cent. you lost nothing?—A few shillings a year. Of course the sale is not carried out yet, but it is in progress.

45160. Suppose you could not invest it at 4 per cent., but at 3½ per cent., that would give you £15?—Yes.

45161. Would it not be better to have £15 fixed for all time, we may say, rather than to have £17 odd, with the liability to have a third-term rent fixed on that property?—I think so.

45162. You spoke of the Slea Head property. The proposition to sell at a reduction of 3*s.* in the £ would mean 26½ years' purchase?—Yes.

45163. With the bonus added, the return would be above not merely the net income but the gross income?—Yes.

45164. There is no particular reason why land should be sold so as to enable the owner of a remote property, like that on which the people are very struggling, to get an annual income far in excess of his gross income?—None whatsoever. I may suggest a reason. I have alluded already to his kindness in dealing with the tenants. Everyone was under the impression that the money given for the building of houses was a gift, and he relied upon this kindness he had shown to the tenants for the extraordinary demand made, to recoup him for what had been regarded as a gift.

45165. You think that was the justification in his mind?—I merely mention it. I don't desire in the least to do an injustice to Mr. Drummond. I may say 3*s.* was the first offer he made. Whether he still adheres to that offer I don't know; but I know his agent was approached by my brother, who is the parish priest of Dingle, the other day, and he refused to specify any terms, but said he would wait until the tenants would mention what terms they would purchase on.

45166. It is not very usual for an owner to make those improvements to which you have referred?—It is not. On the neighbouring property the people are in a very bad way for houses.

45167. When he made that outlay, did he charge any interest on it?—I don't think he did.

45168. So the people took it to be a matter of goodwill?—Yes; and the evidence went to show that that was the disposition. I don't know whether it is the present landlord or his father, but some one Mr. Drummond was extremely kind to his tenants.

45169. You are perfectly right to state that to his credit. I wish to illustrate an answer you gave Lord Dudley. In general, you agree that the right thing is to give the owner something like his net income?—Yes.

45170. You also say that in certain exceptional circumstances you would not agree to give him his net income?—Yes.

45171. Let me ask you if this be your position: is it not the fact that until the other day the Land

Commissioners were mainly appointed by a Government not supposed to be so favourable to the tenants as the landlords?—Yes.

45172. Would not it be perfectly possible that the Sub-Commission fixing first-term rents and then the Commission fixing second-term rents would be, by the tenants at all events, supposed to be favourable to the landlord?—Yes.

45173. Suppose the tenants were under that impression, and you, as priest in the district, on an impartial consideration, came to the same conclusion, would not you tell those men that they ought not to give the man his net income, as fixed in these circumstances or as indicated by the second-term rents?—I daresay I would.

45174. You would tell them to wait until they went into court again, and had the chance of a different class of tribunal?—Yes.

45175. That directly affects the class of case you had in your mind when you said to Lord Dudley that you would not think that in every case the owner should get his full income?—I should have the class of case before me. It is not for me to specify all the exceptions, and I declare myself not competent to do it, even if I were willing to do it.

45176. You went into a matter in which you stood on principle. You said that in very rare instances you could contemplate a public authority for the public good taking a man's land and leaving him with a small loss through the transaction?—Yes.

45177. I suppose when the lands of the "mere Irish" were taken there was no idea of giving anyone any compensation?—None whatsoever.

45178. Let us look at the matter with that only very slightly in the background: are you aware that at the present moment the Congested Districts Board has authority to take land from a tenant on one of its estates if the Board think that the land is required for the enlargement of surrounding holdings, and to send the tenant about his business?—I take it from you that it is so. I have not heard about it.

45179. Might not it be that the owner of that land had a tremendous fancy for working a farm in that locality, and would look upon it as a very considerable loss to be put out of that for a considerable price, and would be the class of man who would not be much disposed to look at farms any other place?—Yes.

45180. Is not it the fact that the Congested Districts Board might promise, in taking up the farm, to give him a good price, and yet might not give him what people would think would be altogether compensation for everything that he was parting with?—Yes.

45181. He was parting with opportunities of a personal kind, which he esteemed?—Yes.

45182. And which nobody else would prize so much?—Yes.

45183. You may take that as an instance, where a public authority takes away an advantage which nobody else prizes so much without full compensation: that is a very good case?—Yes.

45184. But, generally, you would say that when a man is deprived of his land under a system of compulsion, the fair thing is to pay reasonably for what he parts with?—Yes. I have stated that.

45185. It is only for the vindication of theory you laid down the principle that for the public good a man might have his property taken from him without perfectly complete compensation?—Yes, by the State, in certain exceptional cases.

45186. I was greatly interested in what you said about the local lace industry here. Is there any other local industry in the town except that?—No. At a little distance from the town there is some weaving carried on. The mill, which is on the River Sheen, is utilised now for the purpose of making a rough kind of cloth.

45187. Has the Congested Districts Board done anything for industries here?—I don't think so; but I hope in the future they will give us greater encouragement and support.

45188. You give pretty strong reasons why Kerry should receive careful attention in future?—Yes. Of course, I don't speak at all in any captious spirit of the Board, and nobody values the work which the Board has done more than I do; but in the future, I think that a great deal more attention ought to be paid to us.

45189. You think it would be a good thing if there were a member of the Board representing Kerry, or knowing Kerry and its requirements, and seeing that these were well attended to?—Yes. The Board has not often come down to us. We want to go up to the Board in the person of a representative.

45190. Have you any suggestion to make as to the way in which a representative should be selected?—To my mind, a suitable way would be by means of an election through some Council, or a number of Councils together. All the Rural District Councils of Kerry, for instance, could appoint one person; but I don't see any reason why it should not be left to the County Council to appoint a representative man for Kerry on the Congested Districts Board.

45191. Mr. O'Kelly.—Suppose that the people of Kerry want to have a representative, and that the County Council was the body selecting the representative, don't you fancy that other County Councils with congested areas to look after would insist on the same claim?—They would like, of course, to receive the same privilege, but it depends on whether they have insisted on it up to this. We have been insisting on this point here for some years.

45192. Suppose that the County Council was allowed to nominate a representative on the Congested Districts Board, don't you think the other County Councils administering counties that are partly congested would insist on having a representative?—They may or may not. They may consider that they have a grievance, but up to the present they have not actually put forward that claim except in Leitrim.

45193. What is your view as to the workable character of a Congested Districts Board which would have representatives from all the counties in which there is congestion?—I don't see why it should not work fairly well. It would be, I suppose, more expensive, but it ought to exist and to work out fairly well. You would have public-spirited men members of the Congested Districts Board, and each representative, I suppose, would like to have special attention paid to his own county. That could be very easily done by following the suggestion that I have made, that a definite yearly sum should be ear-marked for each county according to the needs of each county.

45194. Do you think is that possible year after year?—Yes; absolutely feasible.

45195. You were speaking to his lordship a while ago about net income. Tell me how you ascertain the net income of the landlord?—The net income of the owner would be ascertained by deductions from the gross income, which deductions, of course, would depend on the expenses of administration and working the estate generally. In some cases it may be only 10 per cent.; in some cases it may be 15, and in some cases it may be 20 per cent.

45196. How is it ascertained?—There is no method except through the estate office.

45197. Is there a single landlord in the County Kerry who has allowed his books to be inspected by a representative of the tenants?—I am not aware, but I judge of the net income of the landlords by the bargains that they have made up to the present.

45198. It has been said over and over again that the landlords are anxious merely to get their net income as a result of sale and purchase. Is there a single landlord in the County Kerry who has allowed his books to be inspected by any representative of the tenants in the course of negotiations for sale and purchase?—I am not aware. I have no means of determining that. I should think not. The only reason we have for determining the net income is the bargain that he is prepared to make.

45199. Under the Ashbourne Act 18 years' purchase was the average price. The average price has gone up during the last few years to 22 years' purchase. Can you give any reason to account for the remarkable increase in price?—The reason is evident on the face of it; the lowness of the annuity that the tenants will have to pay.

45200. That might be the occasion, but not the reason?—I am afraid it is both reason and occasion. I don't think there is any other reason why the price of land has gone up from 18 to 22 years' purchase.

45201. What is the justification?—That is what I have been trying to find out. I don't want to be at all unreasonable with the landlords but we think that such reductions as three shillings in the pound are not such as landlords should offer or tenants consider, but anything from 5*s.* 6*d.* up to 6 shillings would be very well considered by the tenants, and in some instances even large estates have been offered at that price.

July 10, 1907

Ven Archdeacon David O'Leary.

45202. CHAIRMAN.—You have said you were not aware that any landlord in the County Kerry had consented to show his books in proof of his net income?—I am not aware.

45203. Do you know of any instance in which a landlord was asked to do so?—No.

45204. Mr. O'KELLY.—Do you think if any landlord was asked he would consent?—We have seen today the answer that has been given: I do not think they would.

45205. CHAIRMAN.—We have been told by Mr. Rochford that he could not pledge Lord Lansdowne. Put yourself in Mr. Rochford's position. Do you seriously think that an agent acting for a landlord could say that such a thing would be done without previously consulting his principal?—I think that Mr. Rochford made a most proper answer.

45206. Could any man acting as agent make any other answer without consulting his chief?—No.

45207. Only one other point. You say you judge of net income by the prices that have ruled in previous years?—I take it for granted that the landlords secure for themselves substantially their net incomes under the Land Act.

45208. Do you really think that; do you think that the prices that prevailed under the Ashbourne Acts afford any criterion of income?—I don't speak of them, but of the present Act.

45209. In your opinion the prices which have prevailed in this district since the passing of the 1903 Act are sufficient indication of what the net income is?—Fairly so, but I am prepared to believe that in some instances the landlords did not get their net income.

45210. Suppose you were an owner of Irish property and your principal fortune was in England, and your Irish property was a considerable source of trouble to you, would not you be disposed, if you were a rich man, to let that property go at a reasonable offer of purchase without insisting too closely on getting your net income?—I should.

45211. Is not it possible that sales which have occurred since the Act of 1903 are sales of that character?—Some of them.

45212. Therefore it is not a fact that you can judge altogether from the price as to what the net income was of the man who sells?—It is a fair criterion generally.

45213. But it may break down, as I have pointed out?—Certainly.

Mr. J. L. SHEEHAN examined.

Mr. J. L. Sheehan.

45214. CHAIRMAN.—Kindly state what views you wish to bring before the Commission?—I would say first that compulsion with inspection is the only remedy for the sale of estates in congested districts in South Kerry, because the landlords ask exorbitant prices as particulars of portion of the Warden estate will show, which was purchased as a congested estate on December the 13th, 1906, for £38,240 (including the bonus). Twenty and twenty-three years' purchase, plus two years' arrears, being extracted from the tenants who refused to buy from the Landed Estates Court Judge fourteen years ago for fifteen years' purchase. Under sale terms 4*s.* 6*d.* in the pound was given to second term tenants, and 7*s.* in the pound to first term tenants, but when two years' arrears had been added to their purchase the tenants found their annuities had been little reduced from the old rents, one tenant only receiving 1*s.* 5*d.* reduction in the £ instead of 7*s.*, her old rent being £21 3*s.* 6*d.*, and her annuity being £19 10*s.* Instead of buying at twenty years she bought at twenty-eight years of her rack rent. Only the slum portion of the Warden estate was sold to the tenants, the landlord reserving to himself the better portion, including three townlands and the village of Sneem. The majority of the tenants bought on rack rents only, ninety-nine out of about 300 tenants on the whole estate being judicial tenants. In the cases of evicted tenants they purchased at rack rents, and in addition there were added sums for landlord's improvements, which were valued by the landlord's valuer, and which consisted of rotten stakes and wire fences put up by the landlord some twelve years previously, the farms having grown wild in the meantime. Some of the evicted tenants signed under compulsion, the landlord notifying them that if they did not sign for the terms he fixed he would hand over their farms to other tenants. One evicted tenant, who was in America, had some 200 acres reserved by the landlord. He now has about twenty-five acres to live on. In another case an evicted tenant who was absent had his annuity fixed at £1 11*s.*, his old rent being £1., the landlord basing the annuity on the grazing rent. The Warden estate was bought by the owners at £30,000, and they realised £38,000 for the worst portion, and they have yet three townlands and the village of Sneem reserved, which amounts almost in rental to the portion of the estate sold. The Warden estate should never have been sold direct to the tenants, and it is one which should have been purchased by the Congested Districts Board, and resold to the tenants, each holding to be valued separately as various tenancies existed on the estate, including dairymen, mortgage tenants, weekly tenants, future tenants, and judicial tenants. If the potato crop failed for one year, the tenants would be unable to pay their annuities, and would be reduced to a state of famine, the holdings being uneconomic, the rent being sent by the tenants' children from America, England, and Wales. Under the Ashbourne Act the tenants bought more cheaply in South Kerry, the Mahony Hickson estate being bought at fourteen and a half and fifteen years' purchase, and the Gough estate at fourteen years' purchase. Gout is so prevalent in this district that few buyers attend the fairs, the farmers are not able to improve the breed of cattle, being too poor to keep the young cattle, which are sold at two and three years old. Fishermen too poor to borrow loans from the Congested Districts Board for nets and boats. Curing stations should be got up for buying fish as there are no curing stations in the district, especially for herrings and sprats. The loss of the Clyde Shipping Company's service to Sneem, which was subsidised by the Congested Districts Board, was felt very much by fishermen and others. It was a loss of £400 a year to the district.

45215. One statement which you make surprises me. You say that gout is so prevalent in this district that few buyers attend the fairs. Do you suggest that they are so gouty that they cannot attend the fairs?—It is the cattle have the gout. They get it from the wet land.

45216. You say that the fishermen are too poor to borrow loans from the Congested Districts Board for nets and boats. They can get them and repay the loans by their catches?—Yes, when they have good years; but they must get the nets and boats before they fish, and they might not be able to pay up the instalments.

45217. Is there any reason why they should not have the share system here; there are two methods by which fishermen get boats from the Board—the loan system and the share system. In the first case the money is borrowed from the Board to buy the boat. In the second case a boat is handed over to a crew of men and a certain amount is deducted from the money that they get for their catch of fish until they have bought the boat. Do both those systems apply in the County Kerry?—No; only in the district I represent.

45218. Is there any reason to suppose that, if you represent this to the Board, you would not be able to get the share system adopted here?—Yes, but the security required by the Board is very large and the holdings of the farmers are so small that it would require a large number of them to make up the security.

45219. There is no security required in the case of the share system?—I was not aware of that.

45220. I understand that in Donegal, where they work the share system, people have taken up boats from the Board, and have paid for them entirely by their catches; in that way it would not matter whether a man was poor or not?—It would not; but we have none of that in the districts that I represent.

45221. Most Rev. Dr. O'DONNELL.—What has been done on the Warden Estate?—The poor part of the estate has been sold, without any improvement whatsoever. The rest has been reserved by the landlord.

45222. The sale has been to the occupiers?—Yes.

45223. And neither through the Estates Commissioners nor the Congested Districts Board?—The

Estates Commissioners have taken it up now from the occupiers.

45224. Are they going to improve the holdings now before selling to the tenants?—Yes. There has been 10 per cent. granted on those holdings. The Treasury has opposed the giving of the 10 per cent., but the question has not been ultimately settled as to whether the 10 per cent. will be given or not.

45225. What portion have the Estates Commissioners taken up?—The sold portion.

45226. Are the facts which you have stated in reference to the reductions given the tenants those which arrested the attention of the Estates Commissioners?—Yes.

45227. Is it owing to these facts that they have delayed the vesting orders?—Yes.

45228. The property has not been vested yet?—Not yet.

45229. From what you state the Estate Commissioners are looking into the transaction?—Yes.

45230. It will depend upon their decision whether the terms are sanctioned or not?—The terms are sanctioned, but the question of the 10 per cent. has not been settled.

July 10, 1907.

Mr. J. L. Sheehan.

45231. You allude to the subsidy that was once given to the Clyde Shipping Company's service in this bay. Is the stopping of that service a great loss to the district?—Yes. We live seventeen miles from the railway, and cartage is very expensive. We generally get our goods from Cork. From Kenmare to Sneem is as dear as from Cork to Kenmare.

45232. Where do you live?—At Sneem.

45233. There have been a great many works undertaken by the Congested Districts Board about Sneem?—About fourteen miles from Sneem the Hartopp Estate has been bought.

45234. Was there a pier built at Sneem?—About twelve years ago. Nothing has been done since except by the Parish Committee.

45235. How is that working?—It is working very well.

45236. Is Father Horgan the parish priest?—Yes. He was to have given evidence, but was unable to come.

Most Rev. Dr. O'Donnell.—I see from the evidence he sent in that he appreciates the efforts that have been made to help the locality.

Mr. John Riney examined.

45237. Chairman.—Where do you reside?—At Glen-inchiquin, Tuosist, Kenmare. I am a farmer, holding sixty acres, on the Lansdowne Estate. I am familiar with the condition of the small farmers in the district. I am also familiar with the following estates:—The Maybury, the Goff, the Hewson, the Mahony, and the Wardewall, in the union of Kenmare. The greater part of the Lansdowne Estate, on which I live, is poor and barren, the soil is generally peaty, and owing to the rough and rocky nature of these places is impossible to drain thoroughly, while other parts are poor, light, and gravelly, and, therefore, require good manure to yield a crop. There is very little clay land on this estate. I would unhesitatingly say there is not one in every forty acres, hence all the labour has to be done by the spade, the land being entirely unfit for the plough. To improve this class of land nowadays is very expensive, owing to the scarcity of labour and the difficulty in getting lime or sea sand. The former is only to be had at Kenmare, at a dear rate, if at all procurable, and at a long distance from most of the people in this locality, whilst the latter cannot be had owing to the scarcity here of able-bodied men to raise or dredge it from the deep. Oftentimes, too, the improvements effected would not repay for the outlay, the nature of the land being such that often, after a very few years, it falls back or reverts to its primitive state if not very frequently tilled. I myself for several years was in a position, with the members of my family, to reclaim, at great expense, several acres, and find, like many others, that the improvements were not permanent. The principal crop grown here is the potato, which, if the summer or rainy or wet, is sure in this mountainous district to be a complete failure. For instance, the crop last year in most places was not worth digging, and large portions were to be seen undug. As we have very little clay lands we never grow wheat, and the little patches of oats we sow hardly ever yield to us the quantity of grain we put into the ground, the land being, of course, deficient in the substances necessary for the growth of cereals. The ravages of the wire-worm, too, is another cause. Therefore, as an inference from the quality of the soil and the slow and expensive method of sowing crops here—all hand labour—I can avow, fearing no contradiction—even from the landlord party here—that not one cwt. either of potatoes or grain finds its way into the market of Kenmare, while all we want for man and beast is brought from the merchant stores. Our cattle, as a consequence of the inferior quality of our land, are very inferior also, notwithstanding that several attempts were made in this locality by the better class of farmers to improve their cattle by the introduction of bulls of at least average qualities. I myself have made repeated efforts to improve my stock, but, like the others, I was disappointed, as the offsprings did not at all thrive as we thought they would, and, at most, were not much of an improvement on the old class, being more subject to disease. I may also state that mortality in calves is very great here, the white scour and blackleg being the prevailing diseases. It is not a singular thing also to see cattle contracted with gout here, owing, of course, to their grazing continually on poor wet mountain land. To give an idea of their value, the average price of our 1½ year old is £2 5*s.*; 2½, £3; 3½, £4; and in calf heifers of best quality here, not more than £5. We may claim too that in this locality the very appropriate name "Kerry Goats" was applied to our cows on account of their diminutive size. The average quantity of butter made from our best cattle is not more than 60 or 70 lbs. per cow, even though hand fed, and where this is not carried on I can hardly make an estimate of the amount, but I know it is insignificant. The town of Kenmare is our market to sell our goods. Buyers come sometimes from Cork, Limerick and Tralee to buy the cattle, pigs, and butter. They are under great expense, and we are compelled to sell cheap to them and are very much at a loss compared with farmers who live near Cork and elsewhere convenient to good markets. As we are living in this remote congested district we must pay an advanced price for everything we require. As a consequence of there being no livelihood at home, the greatest ambition of our young people is to emigrate to America, and consequently every grown-up member in every family, with the exception of the old and one or two useless members, are sure to leave home, so it is not surprising that though small, yet, through the sums remitted from so many, a considerable amount is received, which goes to keep the old roof-tree over the remaining few at home, by the payment of rents to the landlords, as well as the payment of debts incurred to the shopkeepers or merchants. In addition to this outside aid, it is painful to see the children on cold winter days trying to do their part to keep body and soul together by picking periwinkles on the sea strand, making at an average per child, 4*d.* per day. We have no industries except the spinning and weaving carried on at two mills near Kenmare, and which employ only a few hands—the members of their own families. There is no fishing industry here, and never was, it being too near the head of the river, and never frequented by any class of fish, and it was therefore found to be a waste of time to engage in it. There are four or five hand weavers in the parish. In my opinion there will not be peace or prosperity in congested districts until they are purchased. I am aware that farmers on all estates are not evenly rented, and for that reason my advice is not to leave the bargain between landlord and tenant. That the land on this estate is not evenly rented can be clearly seen when I state that we had until eight years ago an agent here, Mr. Trench, who mercilessly raised the rents on every pretext possible, such as the transfer of the farm from father to son; sale from the occupier to another, by way of fines; and, again, if the tenant received any help from his landlord towards the improvement of his dwelling-houses or out-offices, etc., he was debarred from the Land Court, so it is no wonder that rents require to be revised before purchase. I had a fair trial of a purchase transaction some twelve years ago

Mr. John Riney.

July 10, 1907.

Mr. John Riney.

on the estate of Colonel Goff, in the parish of Templenoe, near Kenmare, where I was then tenant, the holding now being occupied by my son. This purchase was, of course, under the Ashbourne Act. The Government sent a valuer of their own to value every farm by itself, so he valued some at 12, 13, 14, 15 and 16½ years. I am one whose farm he valued at the latter figure, because he considered it of superior quality to some more. I consented and considered he acted fairly. I say also that there is a vast difference between the land on that estate and the land on the Lansdowne estate, and in the event of the latter being purchased I would say that we should get 9*s.* and 7*s.* respectively off first and second term rents on account of the fall in the price of cattle and foreign competition. The tenants in this congested district make every effort (even denying themselves the necessaries of life—flesh meat being to them the greatest luxury and seldom used by any) owing to the fear of law costs, as the tenants have often been writted and processed for one gale, plus the hanging gale. The tenants never let the rents accumulate. The landlord should also reasonably expect that his revenue would be greatly diminished by reason that some farms are 40 and 50 per cent. still over a stiff valuation and therefore no basis for a purchase. There are a number of future tenants also on this estate who were constituted such by some device of the agent. I could ascertain the facts. He has also several untenanted farms in his possession, which some think he will plant, as he has planted several hundred acres before. He also wishes to keep his agent and officials in office at the cost of the rack-rented tenantry. These are some of the causes, I daresay, which make the landlord cling on to his estate, and to his rent-making machinery. The tenants on two occasions wished to purchase, but at the same time demanded if the landlord was not willing to sell, he should give an abatement in the November gale of 1906, in consequence of the bad crops, low prices and bad harvest, but his lordship's reply was in the negative, saying that the Commissioners made provision in fixing rents for recurring bad seasons. I would say then that that Congested Districts Board or Estates Commissioners should in the interest of the Government, as well as the tenants, take up this estate and not leave the bargain between the landlord and tenant, as I am sure that most of the tenants would rashly agree to anything that would give them immediate relief. There are some evicted farms, some in charge of caretakers, others let as grazing ranches, a few more occupied by grabbers, and in one confined area there are three large untenanted farms of, I would say, over two hundred acres looked after by an emergency man, and used for grazing purposes by the neighbouring small tenants and cattle jobbers. There are now only a few evicted tenants or their representatives in the district, and if some of the aforementioned land was given them, it would much alter their condition and keep them from being a burden on the rates, when sickness or privation assails them. There are also in the same congested area very small landholders having only a few cows each, who would be much benefited by the adding of additional land to that already held by them. In one congested area, consisting of twenty small uneconomic holdings, there are about three and a half miles of a most dangerous road, running for a mile or so by a river and lake. It is very narrow and rugged, and no guard between it and the lake, being most dangerous, in fact, to life and property, and it is a miracle that fatalities do not occur. The inhabitants of this congested townland have therefore in this respect a great grievance, as they cannot bring lime or sand if they could get it to improve their land. This road could be greatly improved by diverting about a mile of it, which was attempted in the Famine years and was not since taken up. If this road was improved it would, along with giving some means of earning to the poor men in the locality, be an inducement to tourists to visit that very romantic and picturesque spot, where there are to be seen two beautiful lakes, a grand waterfall and the Eagle's Nest, also wood and mountain. There are also other roads of a similar character very necessary; also drainage to a great extent is required, as the district is very wet and boggy. I know one small landholder in the townland near where I reside, and on his little holding there are about four acres of cut-away bog, which it is impossible for him to drain owing to a rock being in the way. If this rock, which is twenty feet long, were cut three and a half feet deep and two feet wide, it would, in my opinion, take away the water, and then this land would be much improved in value. This same landholder, with another whose farms run to the sea, are much aggrieved by reason of the inroads the sea is making into said lands tearing down the ditches as often as they are rebuilt. I might inform you that this particular place is quite bleak and open to the sea. It is also a sandy soil, and if the sea is not prevented from making these inroads, by the making of a strong boulder fence of about forty perches in length—and which the tenants are not in a position to do—before a few years, perhaps the greater and best parts of those little holdings will be eaten away by the sea. I may also add that the cause of this encroachment of the sea is the taking of thousands of tons of sea gravel every year for every purpose—roads, concrete buildings, mortar for buildings, &c., and which the tenants were powerless to prevent. This entire parish of Tuosist belongs to Lord Lansdowne, and in it there are about 450 landholders, and I would say three-fourths of them are under £5 valuation. In my opinion, if the powers of the Congested Districts Board were extended so that it could give grants to the small uneconomic landholders in each parish to drain, make roads fence, and generally improve those holdings through parish committees it would be of the greatest help and encouragement to those poor people in those distressed times.

45237A. One of your points is that you think more ought to be done with regard to draining the land?—Yes.

45238. Do you think if the main drainage was done by the Government would the small farmers do the draining of their own fields?—I believe that they would. They would give every help that they could.

45239. Do you think that they would keep the drains in good repair?—I am very strongly of opinion that they would.

45240. It would not be necessary to compel them to keep the drains open?—It would not.

45241. Their own interests would induce them to do it?—They would take very good care.

45242. Do you find great difficulty in draining your fields at present?—Yes.

45243. What is the great difficulty which, as a practical farmer, you have experienced in draining your fields?—There is a great deal of land on many farms in Kerry that could be reclaimed, but would first require to be drained.

45244. Do you speak of grass land or of heathery bogland?—Of heathery bogland. There is a good deal of cutaway bog—cut away in small patches. It is very hard to drain them, but numbers of people do make a great attempt to drain them; but the peat was cut too low, and the water collects on the rock.

45245. How are you going to get over that difficulty?—They can often make cuts where they cannot make proper drains.

45246. It is very hard to make a cut in a stone?—Yes. They cannot do it without losing a lot of money.

45247. How long do you keep your young stock?—Generally to the age of three. They are not of much value until they are three years old. The wet land makes them gouty, unless they can get a remedy to free them from it.

45248. Do they get the gout because they are confined in too small a place?—No; but because the place is wet.

45249. It has nothing to do with the size of the holding?—No.

45250. Merely the wetness of the soil?—No; but the wet, sloughy land.

45251. You keep your cattle until they are three years old?—Yes.

45252. What price do you get for them?—For yearlings and two-year-olds, as they are very weak things, we get but a trifling price. For two-year-olds we get £2 10*s.*, and for three-year-olds £4, and for a five-year-old heifer, with calf, we get £5.

45253. Do you find that it pays you better to sell them as two or three-year-olds than to sell them as yearlings or at one-and-a-half years old?—It cannot be helped. Very often they might be sent to many fairs, and they could not be sold. Very often there is no demand at all for these kind of cattle.

45254. Why is that?—They are the wrong cattle. They are not fit for the graziers to finish.

45255. Do you mean to say that you could not sell a good-sized yearling beast?—I could, but at a very small price—£2.

45256. It pays you better to keep them until they are three or four years old?—Yes. They have to pay grazing for them.

45257. Has it always been the case that they have to keep the cattle as long as that?—Sometimes, when they get a chance of selling them, or when they have no grass for them, they sell them. At other times they have to put them out on grass. They put them out. In my neighbourhood Lord Lansdowne has two or three large grazing farms. They put them grazing here.

45258. Most Rev. Dr. O'Donnell.—In what parish do you live?—In the parish of Tuosist.

45259. How is the Parish Committee doing?—I did not know that there was a Parish Committee.

45260. You alluded to the evicted tenants: are there many evicted tenants in your neighbourhood?—Not a great many.

45261. Their case is one for the Estates Commissioners?—I suppose so.

45262. Has much land been sold in your neighbourhood by the landlords to the tenants?—Not on Lord Lansdowne's Estate, which extends from here to the boundaries of Berehaven, all along the Kenmare River.

45263. Do you think that an agricultural instructor in the district would be much good?—He might. The people are good labourers. They must labour with the spade. They cannot use the plough—the land is so full of boulders. It is made up of patches of poor, thin soil, on the sides of mountains, and there is a terrible rainfall, that washes the droppings of the cattle off the land, and is very poor in every respect. There are narrow glens in between steep mountains. There is one item I heard you inquiring about. For instance, a landlord wants to sell his estate to his tenants. I know a great deal of that work. Say a man has twenty acres of a farm and another man has twenty acres of a farm. One man's twenty acres might be worth two-twenties of the other man. Say that the landlord and tenant agree to sell at twenty years' purchase. The man who has the twenty bad acres might be ruined, and he might be a burden on the Government by and by. I have told you about the Goff Estate. The Government valuer estimated the price at ten, eleven, twelve and thirteen years, and on me and my neighbour he put sixteen and a half years.

45264. Chairman.—But you are forgetting one little fact when you say that both men buy at 20 years' purchase. That may be so, but that does not mean that the sum that they have to pay is the same?—Perhaps the man with the 20 bad acres may have more rent on them than the 20 good acres. You see a great deal of that too on Lord Lansdowne's Estate.

45265. That is a matter for the people who fix the rent?—Certainly. You would see rents rising on the Lansdowne Estate from £2 2*s.* valuation to £12; they changed hands often, and at every change the rent was increased by the agent. I saw a great deal of that.

45266. Most Rev. Dr. O'Donnell.—In your own day?—In my lifetime. That is the reason I ask the Government not to be in a pucker about his getting too big a price for his land. I have not any ill feeling against any man, but what I work on is truth and justice.

Mr. John Downing examined.

45267. Chairman.—Where do you reside?—At Ferryrush, Tuosist, Kenmare. I am a farmer and fisherman in the above district and live on the Lansdowne Estate and I am well acquainted with the condition of the small farmers in this parish. I know the seacoast from Clashenane to Ardea, a distance of about ten miles. About eighty per cent. of the holdings here are uneconomic, and the people could never maintain themselves were it not for the money they make in the fishing industry and principally that sent to them from their friends and relatives in America. The fishing industry has been steadily on the decline for the past six or seven years. Previous to 1899 the money made by each fisherman ranged from £10 to £25 a year. There is no means of enlarging the holdings in the district, as the landlord has planted all the lands—hundreds of acres—that fell into his hands through the right of pre-emption. The lot of the poor could be greatly improved, however, by making roads in some of the backward districts and by the drainage of the bogs, which is greatly needed. The people are so poor that several of them could not supplement the grant of £3 made by the Congested Districts Board for the improvement of outoffices, and are forced to bring their cattle into the dwelling-houses during the winter. I know of two or three instances of this also in a neighbouring townland. I would advocate as a step towards the material welfare of the people the growth of early vegetables through the encouragement of the Department of Agriculture. I am convinced that as the landlord is not willing of his own accord to enter into purchase agreements with his tenants, the only solution of the question would be to grant to the Estates Commissioners compulsory powers, by which means they could secure this estate for re-sale to the tenants at a reasonable price.

45268. You say that the fishing industry in this part of the world has been declining?—Yes.

45269. Have you got any reasons to account for that?—No. I know that fish migrate from one place to another. We had a species of fish called pilchard about twenty-five years ago. There is no trace of these fish now. There was a great catch of hake some years ago. That fishing is declining every way; so is the mackerel fishing.

45270. At Dingle the fishing has been kept up pretty well?—Yes. The herring fishing came into our bay two years ago, and Rev. Mr. Green was aware of it, and he accordingly sent down nets and barrels to be ready if the glut came. The following year there was no fish. Last year the fish appeared again, and the Fishery Board sent a merchant down, and the result was that there was £300 made on the Kilmaccologue pier in three weeks, and that was distributed in the locality.

45271. Is there any way in which you think the fishing can be improved? Nobody can make the pilchards come back unless they come back themselves?—We cannot divert the fish.

45272. What other way is there?—Unless we are going to improve the fishing, I don't know any way. We must look to Providence.

45273. Then you also think that drainage is needed?—Yes, and also the making of roads in the remote parts of the country.

45274. You say that several of the people are so poor that they could not supplement a grant of £3 by the Congested Districts Board for improvements?—Yes, I know that, because I am a member of the Parish Committee. Some of my neighbours were not able to supplement the balance, and therefore the grant had to go back again.

45275. Is not the labour taken as an equivalent of the money grant?—This was for the making of outhouses. They should have to employ mechanics, and would have to pay them in cash, and they could not get any of the money until the work was finished.

45276. If they had got paid the £3 beforehand would it have helped?—It would help to some extent, but I don't think that they would be able to do it at all.

45277. So it would not have made the difference?—It would not.

The Commission adjourned.

NINETIETH PUBLIC SITTING.

FRIDAY, JULY 12TH, 1907.

AT 11.0 O'CLOCK A.M.

In the Workhouse, Castletownberehaven, County Cork.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; CONOR O'KELLY, Esq., M.P.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

July 12, 1907.

Very Rev. Canon M'Donnell.

Very Rev. Canon M'Donnell examined.

45278. CHAIRMAN.—Would you kindly state what points you wish to bring before the Commission?—The first matter to which I would wish to refer is purchase. The purchase of two estates is under consideration by the Estates Commissioners. Neither is completed, though in one case, the Clinton estate, the amount of the annuities has been agreed upon.

45279. When you say the Estates Commissioners do you mean direct sale or sale to the Estates Commissioners?—In this case it is a sale to the Estates Commissioners and a re-sale from them to the tenants.

45280. There are very few sales that have been effected in that way?—Yes. On the Puxley estate landlord and tenants have agreed as to price, and the matter is now in the hands of the Estates Commissioners. Inspection is expected to take place soon. This estate was offered in the first instance to the Congested Districts Board, and Mr. Doran actually came down and inspected it; but the Board ultimately refused to carry out the purchase. Other landlords were invited by the tenants to sell; and in one case—the Leahy estate—a sale was practically agreed upon but afterwards fell through; in another case—the Leigh-White estate—the price asked was so extravagant that the tenants refused to consider it. The price was twenty-four or twenty-four and a half years.

45281. In the case of the Puxley estate, which was first offered to the Congested Districts Board, and ultimately sold to the Estates Commissioners, was the price the same?—The price was agreed upon between landlord and tenant. Meanwhile it has not been inspected, so that what the ultimate price may be is still undetermined.

45282. The price agreed on between landlord and tenant was the price at which it was offered to the Congested Districts Board?—Yes.

45283. Is that the price at which it was offered to the Estates Commissioners, or is that a direct sale now?—It is a direct sale between landlord and tenant. Both parties agreed that the sale should take place through the Estates Commissioners. The estate has not been inspected yet.

45284. The price has not been altered?—It is very likely that the price will alter. Another estate quite close to it, which is much better land, has been sold at two and a quarter years' less purchase.

45285. You mean that the Estates Commissioners may declare that it is not worth the price offered?—Yes. In reference to improvements, I may say that drainage could very profitably be carried out in connection with purchase—or without it; this could be done—and should be done—over considerably large areas through the whole parish. Houses should also be built for many of the poorer tenants, either by a free grant in the more extreme cases, or by a loan payable without interest over a period of, say, twenty-five years. In some cases existing houses have no passages connecting them with the public road. This could be remedied—at least in some instances—by constructing a common roadway to serve groups of houses where they lie close together, as they usually do. My point is that poor people have to come two or three miles to market, or to Mass on Sundays, or have to send their children to school without any road at all, with sometimes nothing but a passage through the mountains. There is a considerable number of such places in the parish. Hence if on sales taking place, or, independently of sales, the Congested Districts Board could come to our rescue in that way, a great deal of good could be done through the parish.

45286. You have got a Parish Committee here?—We have.

45287. Is it possible, under the existing rules, to encourage the formation of a passage of this kind through the mountains through the means of the Parish Committee?—It is possible. The Committee's work for the last two years has been fairly satisfactory; but the grants are mostly made for improvements to houses; and the amount that would be required to make a road over a mountain or through a bog is so great that it would take nearly all our money, and we should be left nothing to assist our people in the improvement of their houses.

45288. Mr. SUTHERLAND.—Are you a member of the Committee yourself?—Yes.

45289. How much did you get last year?—Last year we got £80. This year we got £80. Last year we had great difficulty in spending the money. We spent £72 10s. this year. The reason is that we have very few masons in the district, and one man has to wait until another is done, and we have to wait with our work. The Board has been very kind to us where we have made excuses, but still there have been difficulties.

45290. Most Rev. Dr. O'DONNELL.—You have always vigorously co-operated in anything that the Board has undertaken?—I think, my lord, that we have always done our best.

45291. CHAIRMAN.—The Board, like the Treasury, require any surplus to be paid back?—We have been contributing in that way too. The most important question for landholders in this parish is the matter of manure. Leaving out of question farmyard manures, three chief alternatives offer, the use—namely, of lime, sand, and artificial manures. Artificial manures are rarely used, so far as I know. Lime is practically unprocurable, and therefore out of the question. Lime must be brought thirty-five miles by road from Bantry, or thirty-three from Kenmare. Practically that means that no lime can be brought in.

45292. Can you bring it across from Bantry by sea?—The steamer would not bring it.

45293. Can you bring it in a lighter?—If the people co-operated it could be done. It is very unusual to bring burned lime in a boat. If they brought the stone they could burn it here.

45294. Is there any export of turf from here to Bantry?—No. The people have barely enough for themselves, and they generally have to go to the top of the mountains for it. Coral sand is available in almost unlimited quantities and could easily be procured with the assistance of the Congested Districts Board—which has, so far, been withheld. At my request, Mr. Doran, when inspecting the Puxley estate, was good enough to investigate the needs of the people in this respect. He admitted that the need was urgent and he kindly promised to devise a scheme for supplying sand cheaply and bring the matter before his Board. I have been given to understand that he did so, and that his scheme was rejected, or at least

ot adopted. I believe, however, the matter is to be econsidered by the Board, at least so I ave been given to understand by Mr. Mitchell. sufficient supply of coral sand is a most nportant, and indeed vitally urgent matter for he people of this district. The land has lready deteriorated for want of it, and is rowing less productive every day. And yet the eople cannot supply it themselves, owing to the cost. Vith present methods a load of sand would cost from s. to 3*s.*, and this would not pay. Sand should be rocurable at a shilling a load to pay.

45295. Mr. SUTHERLAND.—Do they have to purchase he sand?—They have to pay the boatmen who drag up with very primitive appliances. They have to ay fourteen shillings a boatload.

45296. They pay nothing for the raw material?—Jothing. It is simply the extraction, the time spent y a crew of four or six men. There are only two oats in the parish at present for sand.

45297. You call it coral sand. Is it the ordinary asis of coral or is it different from ordinary sand?—t consists of broken shells. The people here much refer it to lime.

45298. It is shell sand?—Yes.

45299. Is it the best quality of lime. They never urn that lime?—They never burn it. They consider t small enough as they find it, and put it on the elds.

45300. Mr. KAVANAGH.—It is only for top-dressing f grass land?—Yes. They use it a little for planting lso, and for crop land. The Congested Districts Board could help in this way. They could extract he sand by machinery and store it in a large boat vhich could be anchored over the sand bed. If it vere delivered free the people could fetch it in their wn boats, and in this way they could have it for 1*s.* or 1*s.* 6*d.* per load. Possibly if there were an xtensive output a supply of boats could be given to he people, because very many of the poor people have o boats of their own. Very few have boats. Very ew could afford to pay even that much, and it would e a great boon if it was delivered free from the large oats, or landed free. In a great many places boat-lips are needed, and they could be, for very little xpenditure, supplied by the Board. Until this is one the people will be very much handicapped. Facilities should be given for landing the sand, and n all states of the tide. A considerable number of ears ago a little pier was made, but it was made in uch a place that it is only at very high tides the lace can be used. It is perfectly useless. It is made o the end of a roadway at Bank, and is lying useless.

45301. CHAIRMAN.—Who made this fine work?—The vork was done fifty or sixty years ago.

45302. By the old Board of Works?—I think it must have been. This is a very nice little pier, but it is perfectly useless. If put where there would be always high water it would be always available. A very small sum of money would make matters all right. The result of the present condition is that the use of sand is being given up altogether. To carry out my suggestions piers should be built in three or four places on the Clinton estate; in two places on the Leahy estate, in one place on Leigh-White estate, and n one place on the Puxley estate—all in this parish. All this could be done for a moderate expenditure of money. Then, is a few cases roads should be made o enable the people to get the sand on to their farms. For these purposes grants from the Local Council are practically out of the question, as the union is a very poor one. There are places where you have twenty or thirty tenants using old roads that are practically impassable, and it is quite out of the question to expect the District Council here to look after them. The union is very poor, too poor to expect it to make such roads. These places are generally up against hillsides. The valuation of this union is £12,254. Failing a supply of sand as pointed out above, the Congested Districts Board should procure lime for the people. This could be done by bringing the stone by sea from Bantry or Kenmare, or such other place as may be considered best, and building kilns in Castletown. From these kilns the lime could be delivered at cost price, or under, to the poorer tenants. If these estates here for sale were purchased by the Congested Districts Board, they could very easily do all this. On the Puxley estate, I know myself, a very large area which Mr. Doran proposed to have drained in case the scheme went through the Board. That will now fail because the Congested Districts Board did not buy it. We are hoping that possibly the Estates Commissioners will help in this way, but the Commissioners tell me that they are not sure that they will be allowed the 10 per cent. expenditure which is supposed to be in the Act for improvements.

45303. I see that the population of the union is 11,178?—The valuation is £12,405, which is £1 2*s.* 2*d.* per head. That is very low. A Parish Committee has been working satisfactorily in the parish for the last two years, and a renewal of the grant is expected this year. An enlarged grant is needed.

45304. Why is a large grant needed if you cannot spend all your money?—Because we cannot supply all the applicants.

45305. You told us you could only spend about £70 out of £80?—If we got a larger grant we would get outsiders to come in and assist in the work, and make roads and drain rivers. Applications were, as a matter of fact made to us for the drainage of rivers. The amount asked was so large, and the amount at our disposal was so small, that we really could not consider the matter.

45306. Mr. SUTHERLAND.—Do you consider that the drainage of rivers would be a proper work for the Parish Committee to undertake?—Under the rules I think we are allowed to do it.

45307. CHAIRMAN.—I suppose you mean small drains, and not big arterial drains?—Yes, very small drains; where the river is blocked up by stones, or by a rock and overflows and goes in on the crops. In that case we could remove the piece of rock. It is not so much drainage as that you have obstructions to the ordinary natural course of the river.

45308. I suppose, as a matter of fact, the possession of a small sum in the hands of a body of men who are very well acquainted with the local needs will go a great deal further than if the money is administered by even a central body like the Congested Districts Board?—Of course we know the circumstances at all events, and we could discriminate between the applicants.

45309. You would be able to do a great deal of useful local work in that way?—I think so. At all events, the Board Inspector has been pleased with the work done. I know that. A lace and crochet class was established in 1906, but so far it has not been worked successfully. A change of teachers is to take place shortly and better things are hoped for in the future. My last point is in reference to industries. Some people seem to think that a woollen industry might be tried. I don't know whether it would succeed, but tree planting might succeed. We have thousands of acres on the mountain sides where trees would grow very well.

45310. Is there grazing on these mountain sides?—Yes; there is some grazing. If the Board acquired the grazing rights from the people and planted trees it would give employment and would pay very well.

45311. Would not there be a demand made by the people that the mountains should be kept for grazing?—If it were brought home to the people that as a matter of fact they would derive more benefit the other way, they would give up their grazing rights.

45312. They would agree to do that?—In their own interests.

45313. Would they require compensation for the grazing rights?—I suppose that they would require some little compensation; that would be only natural.

45314. Mr. SUTHERLAND.—How do you think that the ultimate benefit of planting would be better than that of grazing?—In the first place, by the amount of employment given. Then the grazing is inconsiderable. The people are too poor to buy cattle to put on the mountain.

45315. If the planting done is ultimately for the benefit of the locality then to give them compensation would be to give it to them both ways; they would get compensation for the grazing and they would also get a benefit from the trees?—That is so, but the Congested Districts Board has been acting on that principle already.

45316. Do they never complain?—I think not I think they ask the State for something for the owner of the property. Still the locality is expected to derive the full benefit from the scheme afterwards. This would give a great deal of employment. There are thousands of acres of mountain and bog suitable for planting.

July 12, 1907.

Very Rev. Canon M'Donnell.

The Congested Districts Board could pay good wages, and ultimately the work would make a profit.

45317. Have you got any idea as to what sort of trees would be planted?—I have planted spruce, silver fir, *pinus insignis*, and Scotch fir in my own grounds, and I find they have all done well. I tried limes in my avenue, but they did not do well, and I had to pull them up. That is the only failure I had.

45318. CHAIRMAN.—What sort of wood do you imagine would be most useful?—I think larch would be most useful. I applied some years ago for shelter belts to the Congested Districts Board, but the Board never gave them. I believe that the matter was handed over to the Department. We sometimes get trees here at a reduced rate through the County Council.

45319. Do you find living out at an extreme point of Ireland that you have any difficulty in getting into touch with the Board?—No; I don't find that. Nearly all our work is done by correspondence. When the inspector goes round he takes us in with the others.

45320. Do you imagine that any useful purpose would be served by the Board having sessions occasionally in places of this sort?—I really do. I think we can make our wants known in that way, in a way in which we can never do by correspondence, and we could press them in a way which would be more effective than by merely writing formal notes.

45321. And you would have an opportunity of pointing out to members of the Board the things that are required?—Yes. I think that would be an excellent thing if it was done, and that things would come all right. The Board has been treating us fairly well, but I think we could get a great deal more from the Board if the Board were satisfied from occasional visits that good results followed the expenditure of money already granted.

45322. Most Rev. Dr. O'DONNELL.—When did the negotiations about the sale of the Puxley Estate drop?—About one and a half years ago.

45323. Do you know what was the cause of Mr. Doran not going on with the purchase?—It was never discussed, but I gathered from Mr. Doran that he was to recommend the purchase to the Board.

45324. Was there any land available for the enlargement of holdings?—Little or none.

45325. Was there any land that should be restriped?—I think a certain amount of striping would need to be done.

45326. Drainage would be very important?—Very important, and the building of houses also would be important.

45327. Was there any question of keeping out the sea from encroaching on the land?—No. There are lakes on the estate. There are three or four small lakes, which Mr. Doran was prepared to drain one into the other, and all into the sea. There was no question of the sea coming up.

45328. There was a drainage scheme?—Yes.

45329. It was in connection with the Puxley estate?—Yes. In reference to the scheme of the coral sand, it was only for the benefit of the Clinton estate in the first instance that we invited Mr. Doran's assistance, but it was on the occasion of his being down on the Puxley estate that we got him to come and visit the other estate.

45330. Has the Clinton estate been sold?—The amount of the annuity has been agreed on, but the estate has not yet been handed over to the Estates Commissioners.

45331. Does that apply to the Leahy estate?—Nothing has been done yet, although landowner and tenants agreed to the price two years ago. A section of the tenants who live on this estate broke out of the agreement.

45332. You believe that properties like those in this district should not pass direct to the tenants, but should be under the direction of an improving authority like the Congested Districts Board?—Yes. I am very anxious for that.

45333. Ever since this Commission has been issued the Congested Districts Board felt itself greatly impeded in concluding bargains for land of that class?—Yes.

45334. As regards the coral sand, it is evident from what you say that it would be very important that some scheme should be devised for poorer tenants generally to provide themselves with that class of manure, and also that you suffer now from the fact that labour is not so plentiful for dredging the sand as it formerly was?—We suffer immensely in that way owing to emigration. The people emigrate from this district generally to the mining districts in America, in Montana, where the wages are very high. A steady fellow can earn about £200 a year in Montana. The result is that all the boys and girls, when they are about 16 or 17 years of age, emigrate, and in that way the supply of sand ceased a considerable number of years ago, and has never been revived.

45335. Do you propose a new plan for raising it?—Mr. Doran recommended the plan I spoke of, and I think that it would fully meet the needs. At all events, it would be about as good a plan as could be suggested, because in that case all they would have to do would be to take it on to their lands; whereas now it requires a small boat a considerable time to raise this sand with their primitive methods. The result is that the amount paid per load of sand is very high. Artificial manures would be cheaper than sand and would stimulate the land more quickly, but the sand is more lasting in its effects.

45336. One would imagine that from its not having been burned. If the Board bought any property around here you would consider it would be a useful demonstration as well as a useful operation for the Board to dredge the sand and bring it ashore and make it available for the tenants?—I think so. It would be a useful demonstration for the Board to show them what could be done, and it would immensely benefit the poor tenants.

45337. And then we should be able to form an opinion as to whether it could be done economically?—Quite so. It is not likely that the Board would lose very much even if it were a failure.

45338. How far along the coast does your parish extend?—My parish extends on the Glengariff side about seven miles from here, and four miles on the other side.

45339. You don't go near Dursey Island?—No. There is a parish further on.

45340. When was the pier improved round here?—The Congested Districts Board have contributed. It was improved about twelve months ago for about £1,000 or £950. Mr. Harrington will tell you about that.

45341. I just want to ask you whether the expenditure on the pier and dredging had turned out a success?—The expenditure on the pier was a success, but there was no expenditure on dredging. The harbour was not dredged. Mr. Wyndham made a promise to consider the matter, but nothing has been done since. I think the Congested Districts Board were approached by the District Council here recently, but they only offered £250 out of an estimated expenditure of £1,000. I think that is what happened.

45342. Would there be any chance of getting the balance from the marine grant; it was not mentioned as one of the works in the grant?—It was not mentioned as one of the works that were to be done, but some hopes were held out by Mr. Wyndham that he would consider the matter.

45343. From what you state of the outlet for men in Montana we need not consider for the moment industries for men, but you were putting before our Chairman a scheme for employing the girls more profitably?—Yes. We have a little lace class, but it has been very unsuccessful. What the causes are I don't know. Mr. Walker has given notice to the present teacher. The month's notice has nearly expired. He has kindly promised to send a new teacher down and we are hoping that better results may follow.

45344. The girls have not attended?—There were about twenty-five or thirty girls in the beginning, but they dropped off because they could make no money.

45345. It requires a great deal of perseverance, but I daresay that the girls here would have perseverance corresponding with the perseverance of the men in Montana?—I think they would.

45346. The lace, you think, would be as suitable industry as any other for the girls?—Yes. If the knowledge of the class got abroad we could have advertisement in that way, and, of course, there are various ways in which I could help to get sales myself if the class were a success.

45347. Have you had occasional visits from Mr. Walker?—We have had three visits altogether; one when the class was established; one six months ago and a visit quite recently.

45348. With your own initiative the suggestions of Mr. Walker would be exceedingly useful in the development of the scheme?—I think he is doing all he can, but it would be well if we could have an opportunity of meeting him more often. His visits are very hurried naturally. He has a large area to cover. If he were to sit with us for part of the day and see how the girls are being taught and the working of the class we would look for very happy results.

45349. How does he come?—He came by motor the last time. I am afraid that the motor won't serve us; it is so easy to go away again. Otherwise one might have to wait until the following morning. It would not be so easy to go away.

45350. CHAIRMAN.—Tell us a little about the emigration; the population has very much decreased here?—Yes. There is only a population of about 2,000 people altogether in my parish.

45351. What used it be?—It used to be over 4,000. I think from a census of the parish, made about twenty-five years ago, the population was about 4,000.

45352. It has decreased by about half?—Yes. It has decreased even during the seven years that I have been here.

45353. Do the men come back?—Very often they come back when they make a little money. When they are worn out working in the mines they come back and raise the price of land by paying an extravagant price for it.

45354. We have heard about that elsewhere. What happens when all the boys of the family go off to America attracted by that high wage which you tell us they can get?—They help to support their parents. They send to people in the parish about £3,000 at Christmas, and about £1,000 during the year in addition.

45355. When the parents die what happens to the holdings?—Generally either some boy stays at home or comes home and takes possession of it.

45356. Do you mean to say if a man is getting £200 a year in the mines in America he will give that up to come back and take over the family holding?—No man can keep in the mines more than six to ten years. They get broken down and rheumatic from the damp in the mines. They merely exist for the rest of their lives.

45357. Then they never, as a matter of fact, either abandon the holdings or sell them to the next man?—Very rarely. As rarely as such a thing takes place anywhere else

45358. Do the girls go as much as the boys?—Yes.

45359. Do they come back, too?—Sometimes they come back and marry and settle down at home. Sometimes they come back to visit their friends. Of course a great many never come back, except on a visit.

45360. Mr. SUTHERLAND.—Most of them marry there?—Yes.

45361. Have the military works on Bere Island given any employment here?—Very little.

45362. Is that because the authorities have used their own sappers?—Partly that, and partly because a great deal of the work is skilled work; and Bere Island supplies the need for unskilled workers.

45363. Any extra men who are required are found on Bere Island itself?—Mostly. Of course a few were employed from this parish, but it did not make very much difference to us.

45364. CHAIRMAN.—You get the fleet in here occasionally?—Yes; we have had the Atlantic fleet here for a month quite recently.

45365. With the fleet coming in here, do you find that any of the boys go into the navy?—There are a fair number from Bere Island and this parish in the navy, but recently only a few have joined. I did know a few, but not many.

45366. Are there many people living about here who have been in the navy?—There is a considerable number of pensioners from the navy.

45367. Do they speak well of their life in the navy?—They seem to be very respectable men themselves.

45368. Is their influence directed towards inducing boys to follow their example?—I have not heard exactly that they try to induce people, but I never heard them in conversation speak ill of the treatment they received; and I know them all.

45369. Mr. KAVANAGH.—Do you recommend the woollen industry here?—I would be very slow to recommend any industry. I think it would be rather a matter for expert opinion. We have not much wool here.

45370. Passing through the mountains it struck me that they did not carry as much sheep as they might do; I did not see many sheep?—I don't think so. The people have no money to buy either sheep or cattle. The farmers, as a rule, have very poor holdings. They are very small, of two, three, or four cows. There are 280 landholders in my parish of £5 valuation and under.

45371. Sheep are paying so well during the last few years that it is a wonder that people don't speculate in them?—There are very few here. You might pass through miles of the parish without seeing one. Whether it is that the land does not agree with them or not I don't know. At all events they are not here.

45372. Surely the mountains ought to agree with them; there is a fine mountain run?—There is a big run.

45373. About emigration; suppose that land were available for the young people, new farms and so forth, do you think that would keep them at home instead of going to America?—Very probably it would; but they have a great many friends in America, and the pay is very high; and there is no land, as a matter of fact, available in the locality.

45374. Some succeed, but some do not, I presume?—I think most of them succeed; I mean succeed tolerably. I think that there are very few failures among them.

45375. Do you think is emigration a question of high wages, or is it a question of seeing life and seeing a new country?—I think it is a question of wages altogether. The holdings here would not support the family. I am convinced of that.

45376. If the high wages were in Ireland it would keep them at home?—If you had industries here which would give wages, not equal, but very nearly equal to the wages in America, I think they would stay. This should be a good place for industries if you could succeed in hitting on the proper one, because we have the outlet by sea.

45377. We have had many witnesses who say it is not altogether a question of wages, but also a question of seeing new life and new countries?—I don't think so with regard to this district. I believe if the people had not the inducement of sufficient wages given to them they would rather not face the hard climate and the hard work.

45378. CHAIRMAN.—It would be difficult to contemplate wages like those in America being given in an agricultural parish?—It would be impossible to give wages on the same scale, but I think that many of them could be induced to stay if a reasonable working alternative were put before them.

45379. Mr. SUTHERLAND.—Do they really prefer wages to profit such as they would derive in the case of a farm?—I think they would prefer the wages. The farms here as a rule would not support a family and pay the rent. £4,000 a year at least comes into this parish from America. So far as they pay rent it is in that way they do so and support themselves.

45380. Most Rev. Dr. O'DONNELL.—That would be £10 a family?—Yes.

45381. Mr. SUTHERLAND.—You are assuming that workmen engaged in America are able to save all their wages?—No. The workingmen who come from America tell me that they save half their wages. In Butte City, in Montana, those young men were boarded at £2 a week. They get fourteen shillings a day wages.

45382. If he pays ten shillings a day for his keep?—He would not pay that. He woud pay six or seven shillings a day.

45383. Most Rev. Dr. O'DONNELL.—Is there a steamer service still from this place to Bantry?—Yes. The boat goes every day in the summer and every second day in the winter.

45384. It is a subsidised service, I think?—Yes. There is one matter that I wish to refer to although I don't know whether it comes within your terms of reference, and that is in connection with the defective postal facilities here.

45385. CHAIRMAN.—I don't think that we have got much to do with postal facilities?—The post arrives at 12.15 p.m. and goes at 1.20 p.m., so that unless one goes to the post office and receives his letters there he cannot reply the same day. This is positively dreadful for business people, and it would be very desirable to do something for them in this way. I should like also to call attention to the need of a fog horn at the

July 12, 1907.

Very Rev. Canon M'Donnell.

lighthouse mouth of the harbour. My attention has been called to this need by the Managing Director of the Cork and Bandon Railway Company, who own the steamboat plying between Bantry and here. Sometimes we have a heavy fog for a whole day together here in the harbour and the bay, with the result that the boat is in very great danger. If we had the fog horn the shipping in and out would be very much improved.

45386. Mr. KAVANAGH.—Who is the lighthouse under?—The Board of Irish Lights, but I don't know that they are supposed to supply more than the lights.

45387. I should have thought they were to equip the whole lighthouse?—The question is whether a fog horn would be supposed to come under the term equipment, whether the Board of Irish Lights is supposed to supply these things or not; but the harbour authority should be the people to do something, and the Admiralty is really the harbour authority here.

Mr. SUTHERLAND.—There could not be a better harbour authority than the Admiralty if you approach them. You are fortunate in having them.

45389. CHAIRMAN.—I find, in a memorandum by the Board, a paragraph, stating that all the difficulties complained of would be obviated if the Castletownbere people chose to form a Harbour Board, as has been done in Baltimore and other places; so that would look as if you had the power?—I cannot say positively, but I understood once the place was made a naval base that the Admiralty rather resented local interference.

Most Rev. Dr. O'DONNELL.—I think that Mr. Harrington told us that it was a rather troublesome operation to get an Order in Council.

45390. Mr. SUTHERLAND.—It costs about £80 to get a provisional order. What you lose here is the income from the harbour, which would be quite sufficient to maintain itself, or more?—The only boats we have are our fishing boats. If you charge those fishing boats you kill the fishing.

45391. The fishing boats in Scotland pay hundreds and thousands of pounds a year in dues?—There are so many alternative harbours here where they could go that I doubt whether it would not kill Castletown.

45392. You have too many harbours?—Castletown is very central for the fishing.

45393. There is a steamer lying down at the pier to-day. Is that boat not paying dues for lying there?—That is the boat that serves the lighthouse.

Mr. SUTHERLAND.—If boats come in there and use the harbour and pay nothing for it it indicates a great source of revenue that might be used?

Mr. Harrington.—They pay dues on the pier to the County Council. The dues are very small.

Mr. SUTHERLAND.—You have a harbour authority ready made?

Mr. Harrington.—No. Their authority only extends about 200 feet from the pier. The dues on the pier go to repair the pier with the contribution of the Congested Districts Board.

Very Rev. Canon MACDONNELL.—As an addition to the evidence which I have given I would ask to be allowed to read the following memorandum, which I have received from Rev. Father James M'Donnell, Parish Priest of Adrigole. They indicate the points on which he desires to lay emphasis:—(1.) Purchase of holdings from the landlord and re-arranging same so that every man's holding should be a consecutive whole, and not, as at present, mixed up with those of several of his neighbours. The present arrangement originated in co-operative reclamation followed by individual tilling and manuring. (2.) Migration is desirable; but no land is available locally. (3.) Some means should be found of providing coral sand at a cheap rate. It contains a high proportion of lime, in which the district is remarkably deficient. (4.) Encouragement to practice *general* fishing—*i.e.* to use hake trammels, herring nets, flat-fish nets, lobster pots, and mullet and cod-fish gear—and not depend on one particular kind. The people are disposed to decry fishing as a means of existence, because hitherto their chief dependence has been on the hake in connection with which there is great risk—cases of drownings having occurred and loss of nets by storms having crippled the people financially. (5.) A vetrinary surgeon for Berehaven, one who could act as itinerant lecturer also on animal diseases, cures, causes, preventives. Very necessary that he should be able to speak Irish, as the energy expended by previous lecturers has been largely wasted owing to the absence of the possession of a common language by lecturer and audience. (6.) Extension of the knitting industry. One machine at work at present. Evident that work could be carried on more economically if several were in use. (7.) To establish in this parish a weaving industry such as the Congested Districts Board has done in Glengarriff.

Mr. DANIEL D. HARRINGTON examined.

Mr. Daniel D. Harrington.

45394. Most Rev. Dr. O'DONNELL.—I want to ask you what your opinion was as to the project put before the Commission to have local representation on the Congested Districts Board. In your opinion would it be desirable to have a representative, both for Cork and Kerry?—I think it would be highly desirable.

45395. The distance is so great that regular attendance for the whole locality would be best secured by having two representatives?—Yes. I think it would be highly desirable, and I think that the people would wish it very much.

45396. CHAIRMAN.—There is a steamer running between Bantry and this place?—A steamer runs every morning from the 1st of May to the 1st of October from Castletown to Bantry, and returns the same day to Castletown, and brings everything she is asked to bring. In the winter half of the year the steamer stays in Bantry for the night, returns to Castletown next day, and then stays a night in Castletown before going back to Bantry again.

45397. Most Rev. Dr. O'DONNELL.—I think she has a considerable subsidy from the Congested Districts Board?—At one time she had, but I did not know that she had it still.

45398. I believe she has a subsidy of something like £300?—Yes. If the subsidy was increased to the boat she could bring the mails. It leaves Bantry at half-past 2 or 3.

45399. Mr. SUTHERLAND.—Why should the Congested Districts Board subsidise the post office?—The benefit is to the people locally. The principle is admitted already, because she is actually subsidised.

45400. There is a profit in carrying letters, and it is only right that the profit should be devoted to the service that earns it. I presume they carry passengers also?—Yes.

45401. CHAIRMAN.—Does the steamer call at Bere Island?—At least one day each week on both journeys.

45402. Is much produce landed at Bere Island by the steamer?—Not very much, compared with Castletown. Still there is a considerable amount. It would depend. A considerable number of soldiers may be on the island being trained in the summer, and that means a considerable amount of extra provisions.

45403. Mr. SUTHERLAND.—But she does not go outside Bantry Bay?—No; she is not licensed to go outside the bay. The Board of Trade won't allow that.

45404. CHAIRMAN.—You represent, I think, the County Council?—I am ex-chairman of the Rural District Council. I have been nominated by the County Council, but I represent the district also. I wish to refer to the development of the fishing, pier accommodation, and by dredging the harbour here at Castletown. I think that the Congested Districts Board has been furnished with our views already from the District Council, and I have very little to add except with regard to the fishing. The fishing industry here is a very important one if properly developed. If interest was taken by the Congested Districts Board in the development of mackerel and herring, I think it would be very successful.

45405. How do you think they can best be developed?—I will take first the mackerel fishing. There is a great want with regard to the curing of

nackerel here. There is one chief point. In connection with each of the fishings there should be helter sheds built for the proper curing of mackerel. Sun and rain injure the mackerel considerably. If helter sheds were built by the Congested Districts Board they would enhance the value of the mackerel onsiderably, and turn out a proper article.

45406. You mean sheds under which the curing ould take place?—Yes.

45407. Who are the curers?—Some are local men, ome are Liverpool men, and some Scotch.

45408. Is not it a curious thing that those curers lo not put up sheds themselves?—They have sheds, ut only for storing.

45409. Do they cure in the stores at present?—No. They may cure there if a rainy day comes on. They cannot bring in the fish except in basketfuls. f they had a lot of fish they would leave it outside.

45410. Mr. Sutherland.—These men have to put ip sheds in their own country?—If there were a arge station in which each would get in under cover am sure they would pay rent to the Board.

45411. Most Rev. Dr. O'Donnell.—Is there room ipon the pier for that kind of store?—I don't mean he pier here, but I mean the general curing all round the seaboard.

45412. Chairman.—You are not speaking of Castletown?—No. I am taking all the ones around he seaboard where the curing of mackerel is going on. There is the curing of mackerel going on in Castletown.

45413. Most Rev. Dr. O'Donnell.—You think that the sheds might be put up and let to the curers?—Yes. The Board might take a little more interest than they have done, because several times the District Council approached the Board with resolutions, but without avail. When I met Mr. Green a few times I discussed the matter with him.

45414. What did Mr. Green say to your proposition about curing sheds?—When he was down here at the inquiry I spoke to him about that. He made no promise about it, but it was advocated a great deal by witnesses at the inquiry that it was necessary to have these covered in open sheds.

45415. Chairman.—In what other way could the fishing be developed?—There are great opportunities for developing the herring fishing in Berehaven. Our bay is teeming with fish. The Board should apply themselves to it as well as they do it off the Donegal coast, and start herring fishing here, instructing the people how to cure herrings.

45416. Don't the people who come to cure mackerel know how to cure herrings?—No. They are cured in a different way altogether.

45417. Do not the Scotch curers know how to cure herrings?—Yes, but the local people should be instructed how to do it in an adequate manner also.

45418. Don't they learn from seeing the Scotch curers do it?—No Scotch curers come here—I mean workers.

45419. The herring fishing is going on at the same time as the mackerel fishing?—There is no herring fishing here except that last year I cured a little herring for a Scotch firm.

45420. The herring come off the coast at the same time as the mackerel?—About the same time. It starts here about the 1st of August up to the middle of October.

45421. The autumn mackerel fishing goes on through the autumn up to December?—It does. Last year it started about November and finished about the 1st of February.

45422. That was an exceptional year, probably?—Yes.

45423. But as a rule it goes on from August to December?—Yes.

45424. Then you get herrings in about August?—Yes.

45425. So that actually the herrings do come off this coast at the time you are fishing for mackerel?—Yes.

45426. If the curers are here for the mackerel, you would think that the Scotch curers would also know how to cure any herrings that were brought in?—They would, but it would be very difficult to get a lot of Scotch curers down here.

45427. But the Scotch curers come to cure the mackerel?—Yes, but they get local labour here. They are expert curers of mackerel here.

45428. Mr. Sutherland.—That is the chairman's point, that while they have to hire the labour here and show them how to do it, that is instruction?—Yes, but I was referring to the necessity of instruction by officials of the Congested Districts Board, so that they would carry on a course of instruction if the herring fishery were established here.

45429. Mr. Sutherland.—Do you have herring here?—In a fortnight last year I cured fifty barrels. Two Scotch coopers came down to me from the merchant I cure for.

45430. Were the fish brought ashore by boats belonging to this locality?—Yes.

45431. Have they got drifts of herring nets?—No; it is seine nets they have here.

45432. Therefore, they don't go very far to sea?—No, a few miles out, but they would in case the herring curing started.

45433. Which is more profitable here, herring or mackerel curing?—The mackerel. We never had herring curing until last year.

45434. What do you get per barrel for cured mackerel?—They got £3 a barrel last year.

45435. Where do they send them to?—They go direct to America. The mackerel I cure are sent off to Liverpool. My firm then ships them to America.

45436. Are you of opinion that there could be a herring fishing developed there?—I believe that it is about one of the best fishing grounds in Ireland.

45437. What sort of herrings do you get?—Large fulls, and fulls in good quantities.

45438. Are they as good as the Downing's Bay?—It appears they are. Mr. Brenner of Wick would be pleased to have them from this locality.

45439. Are boats the principal need?—Boats and nets.

45440. Large boats and drift nets?—Yes. I think to start the herring fishing here the Congested Districts Board should take the matter up a good deal, and I think that they should do the same as they did in Donegal and subsidise some boats here. They have done that. I have seen reports of the Board.

45441. They have not given any loans here?—No.

45442. Chairman.—What do I understand you to mean by subsidising boats—what is the method you have in your mind?—Give a boat so much at the opening of the season and have a chance afterwards of any fish they take besides.

45443. Mr. Sutherland.—What would you say to a bounty?—Yes; that would be a bounty.

Most Rev. Dr. O'Donnell.—Generally the boats are given out on a share system, and the money is repaid for these particular boats, but you are right in saying that there was a subsidy in one particular case. In order to develop a May herring fishery as distinct from an autumn herring fishery an inducement was given to two or three boats—they were Scotch boats, I believe—to test the fishing.

45445. Chairman.—It was not given to a local boat?

Most Rev. Dr. O'Donnell.—No. The Board never subsidised herring boats in the sense which witness means?—I mean to say that if the herring fishing were started you should get a few large boats to fish with drift nets outside.

45446. Was there any application made to the Congested Districts Board to get down an instructor in curing here?—No.

45447. Or to get down curers?—No. I was speaking to Mr. Green some time ago, and he said that Mr. Duthie should come down here and call on me. He has not called yet.

45448. I think you may take it that if you show the Board that shoals of fish are coming here, or that probably they will, there will be no lack of instruction?—I showed the Board that here last year. I cured about fifty barrels in a fortnight, in October.

45449. It would be a great matter down here to turn from the mackerel in case they failed to the herrings, so that they should have an alternative in fishing?—Yes. It would be well if the Board would give a bounty or give a steamer drifter here to try the herrings with herring nets. Long line fishing is also an important matter here. The long line fishing lasts from August to Christmas.

45450. In that matter the Board would await the report of its inspector, but if the Board were of

July 12, 1907.

Mr Daniel D. Harrington.

opinion that there was an opening for a steam drifter they would not hesitate, I think, to make the experiment?—I think that it would be a success from what I have seen of the very large herrings that I have seen coming in at the end of the season.

45451. Mr. SUTHERLAND.—If the mackerel came in would it stop the herring fishing?—I think not. I fancy from the look of things for the last few years that the mackerel are becoming later every year. Some ten years ago they came in August Now they won't start until October.

45452. The herring fishing will be over then?—You will have a continuous fishing for six months if you establish the herring fishing.

45453. Do boats come from Scotland here?—No, except in the spring.

45454. It was a big centre for the herring fishing at one time?—Yes. There are no herrings in the spring, but there are the mackerel. But we want transit facilities. The want of these block us very much. We have none here at all.

45455. CHAIRMAN.—What is your next point?—I think a lot of harm is also done here by the large steam trawlers that come around the coast. This should be lessened if possible by patrolling the coast frequently. The establishment of this herring fishing which would come before the mackerel fishing is also a matter of great importance. For the last few years there were herrings in this harbour, but there was no possibility of catching them. If the Board took up the question of curing herrings I think you would have a lasting industry here. My firm belief from my knowledge of things and from what I have heard from time to time that the trawling of small boats in the harbour here being stopped has ruined the harbour with regard to line fishing in the harbour, and I think it is the opinion of everybody connected with it that the small boats should be allowed to trawl in the harbour for a short time in the year to clear the ground. The fish cannot lie on the ground. It is all weeds and no fish could go there. I know several families that were making a living here all round the harbour.

45456. CHAIRMAN.—It is a question of a bye-law?—Yes.

45457. Who makes those bye-laws?—I suppose Mr. Green.

45458. After a local inquiry?—Yes. They had in the harbour here a lot of pollock and all kinds of fish to be caught. Now they cannot catch fish there.

45459. Mr. KAVANAGH.—What is the reason?—Because the ground in the inner harbour is all fouled and the fish won't lie there, but if trawling was continued by small boats of fifteen tons and so on, the fish would lie there and come in and spawn there. Expert fishermen who have made a living there have said so.

45460. CHAIRMAN.—The point is really one for representations to the fishery authorities?—Yes. There is a question of pier accommodation here along the coast for fishing. A great deal of money is lost here. There is a long strip of pier which is very dangerous at present. It is 200 feet long and 25 feet broad, so that it is very narrow. It should be double the width that it is at present. Then we all feel the want of a representative on the Board, and I would suggest that there should be a representative from the South of Ireland on the Congested Districts Board.

45461. Most Rev. Dr. O'DONNELL.—How would you select them? Would it be by the County Council?—Surely. You see that they are the representative body of the county.

45462. Such a member should be able to know the local wants of Cork and Kerry?—I think so. I believe his Lordship, the Bishop of Ross, would be a good representative of the south coast.

45463. CHAIRMAN.—Would not that be a rather big area to ask one man to be responsible for; from Limerick round to Skibbereen?—I would appoint one from Cork and another from Kerry. This would make the work easy and give direct representation.

45464. Of course there is not very much of Cork congested?—All along the seaboard is congested. We have a most congested district here. Our population in 1850 was about 25,000; now it is only 12,000. If the Congested Districts Board would make experiments along the coast here I think that they would be very well repaid, because along this is one of the best coasts for fishing in Ireland. A lot of dried fish are imported into Castletown and the district, and there are any amount of fish in the bay. Our pier should be extended and other piers should be made around the coast here. There was one pier applied for at the west end of Bere Island to facilitate the people there. Another pier should be made down at a place called Rossmakeowen, that would remove congestion to a considerable extent.

45465. Most Rev. Dr. O'DONNELL.—On the opposite side of Bere Island?—Yes; on the mainland side.

45466. CHAIRMAN.—Up to March, 1906, £10,532 has been paid out by the Board for the purchase of boats and gear in the County Cork?—Very little of it was paid in Berehaven. A few small boats were given out a few years ago, and nothing was given since, I think.

45467. Is there any other point?—The dredging of the harbour. The harbour at Castletown is filling up altogether.

45468. Most Rev. Dr. O'DONNELL.—Has any dredging work been done?—Yes, round the pier some years ago, but there was hardly any benefit at all by it.

45469. Mr. SUTHERLAND.—Is there a harbour authority?—No. There was £100 expended some years ago in dredging with a hand dredger and a sand boat. The Congested Districts Board sent down some men to do it, but very little was done.

45470. Most Rev. Dr. O'DONNELL.—Would it be necessary to have it done on a large scale?—Yes; here at the entrance to the harbour at Perch Rock at low water the entrance is only 9 feet. About 300 feet from the pier head it is 8 feet. Outside that, between there and the small island called Dinish it is about 13 feet. If it was dredged to that depth all over it would be most valuable. It should be dredged 200 feet each side of the pier to allow a steamboat to work it. I saw a steamboat leave the pier one day at Castletown and it stuck in the mud 300 feet from the pier and remained there until the next tide.

45471. Do you think if the dredging were once well done would the harbour be liable to silt up again quickly?—I think not if it was done on a good scale. Say, start 20 feet outside the Perch Rock. You have deep water there. Inside about 200 feet there is a bar. A vessel must come round the channel. Strangers often stick there in fairly low water. From 200 feet each side of the pier out to this point of about 300 feet, where there is 13 feet of depth, if that were done once it would take 100 years or more to fill in. Round the pier there is a depth of 10 or 12 feet of mud. The banks of mud have filled in considerably during my lifetime.

45472. CHAIRMAN.—I see that in the spring of 1896 the capture of mackerel at Berehaven exceeded that at any other port by 40 per cent.?—Yes, I remember that year. There was a very large spring mackerel fishing then. I often saw seven steamers loaded here during a week.

45473. Most Rev. Dr. O'DONNELL.—Were the mackerel iced?—Yes. The spring fishing has gone down. If there were transit facilities it would still continue, because I think small buyers would continue to carry on if facilities were given for a steamboat that would leave Castletown for Bantry in the evening. I think it would be very necessary for the Board to take that into consideration. The boat could run from Castletown to Bantry in the evenings to catch the train. Referring to that, I have myself seen, when the boat left its moorings, fish left on the pier, which they could not get up after, and sold for curing, reduced in value by 50 per cent. I think that the Congested Districts Board promised £250 for dredging this harbour, but that is considered a very small thing.

45474. CHAIRMAN.—Could not you have a harbour board here?—The population is very small. It was thought to have a harbour board here, but the provisional orders and those things were rather expensive at the time. They cost from £70 to £100.

45475. Mr. SUTHERLAND.—You must be losing a lot of money by not getting any dues from all the ships that come there. You could well afford to do it. They do it in every other place?—It was not thought practicable at the time. In building piers around here the Congested Districts Board should adopt a certain time of the year, about the 1st of March, when the people are not engaged in fishing. If they come during the fishing season they cannot get the people to work. Consequently it is more expensive if they start then. From about the 1st of March up to the 1st of August you will get plenty of men to work at it.

45476. Most Rev. Dr. O'DONNELL.—That seems but reasonable; still, of course, it is difficult if little works are being pushed on at various parts of the coast to begin everywhere on the 1st of March?—Yes, but I know it would be useful. At Berehaven I would suggest another thing: that the Congested Districts Board in doing these things should invite tenders from contractors. I think that that is a most practicable way of doing it, in some cases.

45477. You think that that would be better than doing the work themselves?—Yes. You would have a competition then to do it.

45478. Would there be many contractors in the locality capable of tendering?—There would, I am sure.

45479. Mr. KAVANAGH.—You are a member of the County Council?—Not now. I represent this district, and have been Chairman of the District Council. My seat on the County Council was *ex officio*.

45480. Have you any knowledge of the agricultural schemes in this county?—I have not taken that matter up. I have been representing this district for twelve years. I still represent a fish-curing firm. I am fairly well acquainted with it for the past ten years. My firm think that they could get 1,000 barrels of beautiful herrings here.

Mr. MAURICE POWER examined.

45481. CHAIRMAN.—You are Chairman of the Rural District Council?—Yes.

45482. What would you like to say to us?—I wish to refer to the land. I represent the districts, say, from the boundary of Berehaven to Bantry; that is the Bantry district, which is a very congested district and very impoverished.

45483. What point do you wish to bring before us?—The necessity for draining the land and making roads, and planting trees on the mountains.

45484. Most Rev. Dr. O'DONNELL.—The mountains are bare at present?—Yes.

45485. Would the farmer lose much if portion of the mountain were taken from grazing purposes and reserved for planting trees?—I don't think so, in many cases, because there is nothing left but the rock.

45486. You might easily find a tract of mountain that is not much good for grazing?—Certainly. And you have lots of the cut away and places where the rock is nearly exposed and all over, where the turf is cut and nothing left behind. You might get some of these places for planting trees. It is very necessary there inland, where there are very miserable places.

45487. Mr. SUTHERLAND.—The drains you refer to are farm drains?—I mean farm drains.

45488. Mr. KAVANAGH.—You don't think that the people use the mountain for grazing?—Not very much.

45489. Why is that?—It is too poor.

45490. The people are too poor?—Yes, and the mountain is too poor. The people are poor and the mountain is worse.

45491. Do you think it carries anything like the number of sheep it might?—The sheep there are quite worthless. It would not carry a good sheep.

45492. What kind of sheep have you in this district?—I don't know what they call them, but I know they are the last class in the world.

45493. Are they black-faced sheep?—No, they are not. They are very common small things, that bring from seven to ten shillings.

45494. Mr. KAVANAGH.—Did you ever try a better class of sheep on the mountain?—I don't know that the place would keep a better class of sheep.

45495. How do you know that?—I hear the people say that it would not. Some say they did try them there and that they did not thrive, but, however, I am quite certain that they could be improved in some places.

45496. Most Rev. Dr. O'DONNELL.—Did any farmer try the black-faced sheep from Scotland on these mountains?—I think not.

45497. Mr. KAVANAGH.—There seems to be a great demand for lime in this part of the world?—Yes. If we had lime we would want it very much.

45498. At what price per barrel could you afford to buy lime?—Even at a high price it cannot be got.

45499. What have you to pay for it now?—You must pay at Kenmare 1*s.* 6*d.* per barrel for it, and then you have to carry it all around the road until you come here.

45500. It is not much used here?—It is not used. It could not be used for land purposes here.

45501. You have the sand here, too?—We have not the sand now. There is no boat in the harbour.

45502. There was one?—Yes.

45503. Was that subsidised by the Congested Districts Board?—It was not.

45504. It was a private boat?—Yes.

45505. Why did they give it up?—It was owing to the want of men to work it in the first instance. There was plenty of demand for the sand, but we could not get the men to work the boat. In that part labour has become scarce. The men went away. People could not afford to pay them reasonable wages such as they would want for lifting sand.

45506. So it did not pay in the end, and that is why it broke down?—Yes.

45507. Which would you rather have—the sand or lime?—Lime; but I am not a good judge. It is a great thing in our part. If we had each of them we would want them, because the general class of land we have there is cut-away bog, and the lime is a very good thing for them, because it grows so much weed, and lime should be a very good thing for destroying weeds.

45508. Have you any agricultural schemes in this part of the world?—I know nothing of them

45509. Most Rev. Dr. O'DONNELL.—Have any of the landholders sold to the tenants in the district you represent?—No. The landlord of the Leigh White estate does not seem inclined to sell. He made an offer this year when we asked him to sell, but the price was very large.

45510. Mr. SUTHERLAND.—So you dropped it?—We dropped it when there was no chance. There are several places there where they would want slips for landing seamen along the coast.

45511. Most Rev. Dr. O'DONNELL.—What places have you before your mind?—One or two places. Adrigole is one of them.

45512. What class of work is being carried out at Adrigole?—There is a pier built there, and a very poor one at that.

45513. It did not cost much?—Some £2,400 or £2,500, I believe. It is simply like a good double fence twenty feet wide.

45514. Was it for the fishing it was built?—No. It was not built for the fishing, but for steamers.

45515. When was it built?—It is not finished yet.

45516. Mr. SUTHERLAND.—Is it near the road?—About a quarter of a mile from the main road. Passing by you could easily see the thing There would be a slip wanted, for that is no use for small boats.

45517. Is Muccuragh in your district?—No. That is in the Bantry district. There should be a slip built for small boats beside the pier at Adrigole, because there is no way of landing anything from small boats.

45518. The existing work, you consider, is good only for steamers?—That is all. Small boats cannot moor there or discharge.

45519. Do you know anything of the Bantry Bay steamer service?—It is quite unknown to us altogether. I thought we would have had it some time ago, and there is no trace of it yet.

45520. CHAIRMAN.—Was not the steamer very small?—The steamer we have at present is not small. The only way to get sand would be for the Congested Districts Board to send down boats with a great quantity of sand, and land it at those piers. If we don't get sand the land is no use, and I don't see any easy way of getting it unless the Board send down a boat.

Mr. T. O'Sullivan examined.

July 12, 1907.

Mr. T. O'Sullivan.

45521. CHAIRMAN.—What district do you represent?—Allihies, Castletownbere. I wish first to refer to the Berehaven fisheries. From Dursey Island to Cod Head in this parish is the principal fishing ground in Berehaven, and statistics will show that the Berehaven mackerel fishery is one of the most important in Ireland. The Rev. Father Barton, P.P., seeing the urgent necessity there existed for piers, slips, and roads leading to the different curing stations, made application to the Congested Districts Board and other Boards to come to the aid of the fishermen and afford proper facilities to develop this flourishing industry in our midst. After repeated invitations and requests some gentlemen from the Congested Districts Board, with Sir Horace Plunkett, called on our parish priest, Rev. Father Barton, and on seeing for themselves, expressed their great surprise that nothing had been done to help the industry in this important fishing district. They at once recommended a grant of £650 to build a pier at Ballydonegan, but through some misunderstanding between engineers, foreman, and labourers, this pier is left half finished and practically useless. There are other parts along the seaboard from Dursey to Cod Head where piers and slips are needed. Within the last few years the Rev. Father Barton forwarded to the Congested Districts Board a petition signed by the representative fishermen of the surrounding district, the principal fish buyers and merchants of Castletownbere and Allihies, asking the Board to construct a pier and improve the landing at Clainough, Cod Head. The usual reply was that the Board would attend to it, but nothing had been done. This appears to be a very urgent necessity, as fishermen from the outlying districts frequent this important fishing centre at certain periods of the year. With a little outlay in improving the entrance to this harbour a safe refuge would be afforded to all comers, where they could sell their fish at the curing stations, and go home by land when overtaken by storms. Instead they have to round Cod Head, often throwing both fish and fishing gear overboard to save themselves. In this fishing district are employed some forty boats at seining; each seine is worked by sixteen men. They commence about the 1st August and continue to November. There are some fifty local net boats worked by a crew of seven men each, and they continue fishing from August to February. The hauls of mackerel taken by seines sometimes go as high as 50,000 in one catch, by nets as high as 10,000. In the district there are about thirty curing stations where the fish is bought, cured, and packed for the American markets, giving employment to hundreds, old and young. The fish merchants are English, Scotch, and Americans, with a few local enterprising capitalists. With all this flourishing industry and apparent prosperity is it not pitiable to see the best of our young men emigrating, and leaving the remnant. Any observer can explain why when he occasionally sees the crowds of fishermen perched on the rocks eagerly watching the shoals of mackerel within a few hundred yards, and unable to launch their boats for want of a pier or slip of any kind. Along the seaboard from Garinish to Cod Head there is only one *half* finished pier, and this embraces the principal fishing ground of Berehaven. Our parish priest has been taunted, even in the public Press, for not getting more assistance from the Congested Districts Board than others less worthy. It is not through want of interest in his people and in the fishing industry he has not been as successful as others, and the pigeon-holes of the Congested Districts Board's Office, Dublin, can confirm this, for over and over again he has written them to do something for his people and the fishing industry in his parish. We most respectfully request of this Commission to do something practical by recommending the Board to send down an engineer to consult with Rev. Father Barton. He will give him all the reliable information and assistance necessary to make the Berehaven fisheries a remunerative and prosperous industry.

45522. Most Rev. Dr. O'DONNELL.—Where are you living?—At Allihies Mines, three-quarters of a mile from Ballydonegan. I have a map showing site of the Clainough Pier—applied for some time ago by the Congested Districts Board and also copies of the letters sent to the Board asking them to do something for the people.

45522A. Is Garinish in the parish?—Yes; to the west; near Dursey Island.

45523. Was there a pier or slip constructed there?—There was a pier constructed there a great many years ago.

45524. By the Congested Districts Board?—I don't know that, but I think that the Board partly contributed to it.

45525. Who was the parish priest at the time?—Rev. Father M'Carthy. He was removed to Causeway. He is now dead.

45526. It was in his time it was constructed by the Congested Districts Board?—Yes. It was he made the application. I don't know whether it was finished before he left.

45527. Do you remember what it cost?—I don't know really. I am sure that Mr. Dudley can tell you.

45528. How far is Ballydonegan from Garinish?—About three miles by sea. There is a road leading to it perhaps five or six miles.

45529. The work was begun at Ballydonegan?—Yes, five or six years ago.

45530. Why was it stopped?—I believe there was some difference between the labourers and the engineer. It appears that he did not want to accommodate them. When he was down they were employed at the fishing. When they could earn, perhaps, ten or fifteen shillings a day at fishing, it would not do for them to go work at two shillings a day for the Congested Districts Board.

45531. That was the trouble?—Yes. There was another reason. The Berehaven Mining Company resumed operations at the time. They gave £1 a week to their labourers.

45532. It was due to this fact that the work was stopped, that the engineer could not get labourers at two shillings a day?—He could at certain times of the year, but just then, at the time of the fishing, he could not.

45533. That is why it was stopped?—Yes, it must be.

45534. Is it going on again?—No, it is not.

45535. Would they work now for two shillings a day?—Yes, and would be glad to work for the last two months. Then you would have these two works—Ballydonegan and Clainough—completed.

45536. You say that communications have been made about that place, Clainough?—Yes.

45537. Was there any favourable reply?—There was nothing done.

45538. Was it there that Sir Horace Plunkett came?—No. He was at Allihies Mines. That was the time that the Berehaven Mines were in operation. He came down to Ballydonegan, and, seeing the great necessity that existed for it, said that he would recommend something to be done. They have great trouble launching the boats, and then after a whole night fishing out on the sea, they have to drag their boats 200 or 300 yards along a sandy beach.

45539. You would be able to state for the information of the engineer that now it would be possible to have labour at the rate of two shillings a day?—Certainly.

45540 It may not be a big wage, but you would not expect a public board doing work of that sort for the benefit of the locality to pay very big wages?—They would work for half the usual wages for their own benefit at a time when they had no fishing, but it is very hard to expect them to work for low wages during the fishing season when they could make a great deal more fishing. Then, when in the Berehaven mines they were getting £1 a week, you could not expect them to leave that behind and go work for twelve shillings a week. Some of these have no such interest in it, as they expect to go off to America at the end of a year, but those who were interested ini the fishing would work for two shillings a day or less when the fishing season was not on.

45541. One of the witnesses said that it would be better to get such works done by contract—would that be so?—I would not like to give an opinion.

45542. A board doing work at a place so distant from Dublin as Berehaven has the great disadvantage of not knowing exactly when the harvest of the deep may be reaped by the workers from the shore?—We

could always let them know when we could attend to the work there?—I know a pier was built at Gurtahig some time ago by contract, and the work was done satisfactorily for £200. A great deal of work was done.

45543. Was it built by the Congested Districts Board?—They gave £100, I believe, and the County Council gave £100.

45544. Have you a Parish Committee in your parish?—No; it lapsed. They did nothing.

45545. Did Father Barton apply for it?—I think so.

July 12, 1907.

Mr. T. O'Sullivan.

Mr. James Dudley examined.

45546. Chairman.—You are a Rural District Councillor of Garinish?—Yes. I am a provision merchant, fish curer, and Rural District Councillor. I am well acquainted with the conditions prevailing in Berehaven, and especially those of the district I represent. The whole district is congested. The holdings are mainly uneconomic; out of 100 well known to me only five are economic. Owing to the exposed situation of the district, and the entire absence of trees, the potato crop has from time to time been lost, having been blasted by hard southerly winds, laden with sea-spray. The people are badly housed, nearly 90 per cent. of the houses being old, low, badly lighted, and badly ventilated. The congestion is likely to be somewhat relieved in a short time, as the Estates Commissioners are negotiating the purchase of grazing land in the vicinity. The only industry —and it is the mainstay of the people—is fishing. At Garinish, ten seines, worked by 160 men, engage at mackerel fishing from August to November. In years gone by large takes were obtained, and the prices being fairly high, each fisherman made £40 on an average. This, I believe, could have been doubled if there were quay accommodation. At present there is only a small, narrow slip capable of accommodating two boats at a time. It can be reached at half-tide only. When mackerel are abundant, and the fishermen have their takes early in the night, they have to wait sometimes for hours for the rise of the tide. Had there been a quay sufficiently large, and built, say, in two feet of water at low tide, the boats could come alongside and discharge their takes, after which they could again proceed to sea to fish. The curing of the fish is very much hampered through the lack of quay accommodation. Under existing conditions the fish is carried in baskets from the boats to the foreshore, where it is cured. This involves much extra labour and expense. Many of the fishermen come five or six miles to fish at Garinish. After a take of fish they have to sit for hours in their wet clothes, often under a heavy downpour of rain. If there were quay accommodation they could secure their boats, and go to their homes to change their wet clothes, after which they could return at an early hour to sell the fish. It would be well if some shelter were provided for those fishermen who come long distances. In a fairly good season the total sum turned over at Garinish for fish and labour would be about £8,000. This sum could be easily doubled in similar circumstances if there were quay accommodation. In my opinion Garinish is one of the largest and most important fish-curing stations on the south-west coast, and it is strange that the Congested Districts Board has neglected its development so long. Less important places have been provided with boat-slips and quays. If Garinish were so equipped, the labours of 160 fishermen would have been made less hard, and the general condition of the people improved. In April and May the fish is sold at a much smaller price than at other places. This is due to the fact that the fish must be carted fifteen miles to Castletownbere to be sold; the freight is then considerable. Owing to unavoidable delays the quality of the fish is much deteriorated before it reaches the English market, to which the great bulk of it goes. Last autumn the fishing was a complete failure. The effect on the people was felt at once. As a merchant, I had to give considerable credit, and must wait for payment until there is a successful fishing season. A more kindly interest taken by the Congested Districts Board would improve the lot of the people. The great crying need is quay accommodation, and until that is obtained, no improvement may be looked or hoped for. With suitable and sufficient facilities to help the fishing industry in this district, the fishermen would reap a full instead of a half harvest, and would be thus enabled to tide over any bad season which, in the natural order of things, may arise from time to time. Lobster fishing has been carried on in the summer months. After the gear has been paid for by the fishermen, the fishing yields a profit. The number of crabs taken in the lobster-pots is greater than the number of lobsters. These are thrown away as useless, as there is no market for them. Crayfish is also obtained, but there is market

Mr. James Dudley.

45547. Most Rev. Dr. O'Donnell.—You live in the district of Garinish, where a pier was constructed?—Yes.

45548. It was not an extensive work?—It is hardly a pier.

45549. And it cost £1,500 or £1,600?—I could not say.

45550. What improvement would you suggest?—It should be made a pier.

45551. I think you spoke of a quay?—I suppose a quay and a pier would be the same.

45552. Would a pier suffice without any special shelter except what a pier gives?—Yes.

45553. You say it is a good fishing centre?—Yes, the best.

45554. Has that been so at all times or since the slip was constructed?—All the time, but they have better appliances now than they had in the past.

45555. Is the slip good as far as it has gone?—Very good, but in discharging barrels and then loading it is too narrow for working. Sometimes three steamers are in attendance during the fishing time.

45556. So that it is a prosperous centre for the fishing?—Yes. The steamers come in; we ship the fish to Liverpool, and from there they send it to America.

45557. Do you know anything of the Ballydonegan slip project?—Yes.

45558. Will that be also useful if completed?—Yes.

45559. You don't know what is being done out as far as Dursey Island?—They are doing a little work there at present.

45560. What is being done there?—They made a little bit of a pier about eighteen years ago, and the Congested Districts Board are improving it this year. They are working on it at present. Dursey Island is being sold to the tenants.

45561. Is that within the last couple of years?—It is not settled yet. They are only paying interest on it; but they evicted them, and frightened the poor people, and they had to pay extra for it. They were innocent, and had no place to go.

45562. Is your chief recommendation the improvement of the fishing by landing accommodation?—Yes. It is behind altogether—a thousand years behind the times.

45563. Mr Sutherland.—You remember the time before the Garinish slip was erected; did the erection of the slip increase the amount of the fishing?—Yes. Since then all the people have got more money.

45564. How much has it increased the fishing?—About double.

45565. Do you know the amount of mackerel they used to land before the slip was made and the amount they landed since?—I remember one day there was about 130,000.

45566. Was it the erection of the slip that made that?—It brings the boats to the place.

45567. You don't know to what extent the expenditure of this £1,500 increased the fishing?—They were going to make a pier also, and they did not do it. They were going to build on the opposite side.

45568. The expenditure of the money increased the fishing?—Yes. It was a great help to the fishermen.

Rev. JAMES O'CALLAGHAN examined.

July 12, 1907.

Rev. James O'Callaghan.

45569. CHAIRMAN.—You are parish priest of Eyries?—Yes. The Congested Districts Board has done most useful work in the Eyries parish within the last two years. The pier of Cahirkeem, which is in the way of completion, cost £900—contribution by the Board in Dublin, £600. The Congested Districts Board has removed a rock, 86 feet long, at Kilcatherine, and has made the inlet there a most safe and convenient place for landing. The place is not yet finished, no gravel rests there, and boats would be torn to bits if drawn over the jagged bottom. Skids are necessary in order to make the place fit for landing. Landing at the point was impossible at high water. Fish had to be put into bags and hauled over the cliffs. The fishermen had to remain in their boats until the tide answered. With a little outlay this can be made a very safe place. The Board has built a slip at Darrigroe, which is a convenience and a safety for a good many fishermen. It has removed a rock which blocked the passage between the sea and Loughane Before its removal no boat could enter except at high tide, even then the oars could not be used, the boat was simply washed in. The Board has made a landing at Innisfanard—a most necessary work. The Board has undertaken to make a landing place at Trasalig. In Trasalig nets had to be dragged over the cliffs and were torn and fishing was stopped until repairs were made. Nets, oars, fish, and boats had to be left in a precarious position until the tide answered. Travera and Traanimod need as much to be looked after as any place around the coast of Coulagh Bay. Lives were lost because these works were not executed, and fishermen were cowarded by their fear of not being able to find a refuge should the sea stir. Kindly bear in mind that rough weather is the best for fishing, and that a boat can hardly keep her gunwale over water in the finest weather when she is loaded with a heavy crew, heavy oars, wet seines, and as much fish as they have taken. From this it can be seen that a fisherman carries his life in his hands, and that there cannot be too many harbours of refuge around the fishing coast. The Board has promised to build a bridge over the ford between Glenbeg Lake and Argroom River. A life was lost there, and the people have to wait, without even the shelter of a ditch, until the water falls. A road is promised to Cleandra. There is one other remark that I may make. In my opinion no Board could be more prompt in answering correspondence and carrying out any work useful and necessary recommended by a man who has the interest of the public at heart than is the Congested Districts Board. With regard to industries, in my opinion Glenbeg Lake is the finest water power in the whole of the Diocese of Kerry. On the subject of re-afforestation I may say that the people are under the impression that it means the enclosure and plantation of large tracts. I suppose it does. The re-afforestation I would recommend is: let every man plant as much timber as would supply him with fuel. The branches of 300 trees would supply plenty of fuel for any ordinary farmer, and provided that trees are not too closely planted, but planted in such a way as to branch freely, grazing, so far from being injured, would be improved, not only by the falling of the leaves, but by shelter for the cattle and protection from the gad-fly. Our bogs are worn out. Were they planted there could be an abundant supply of fuel in the country. The seeds of ash and sycamore are easily got. Let them be shaken over an enclosed space, whether lea or tillage, and they will grow. Thus planting costs nothing. In reference to the use of heath and furze I may say that the value of both is known. Heath produces the best butter and the sweetest mutton. It is too hard for a cow or a sheep to crop except the tenderest shoots of it. If furze and heath were cut and crushed in a mill driven by wind or water power, and afterwards subjected to a partial process of fermentation, either would make a good food for the production of butter or the support of cattle. I have seen cows desert clover aftergrass for fermenting rushes and fermenting furze. There is so much furze, rushes, and heath in the country that an effort should be made to utilise them. Mountain torrents should be diverted from their courses and made to scatter clay and gravel over slopes which are barren, because they are producing the same thing since creation. Grass by the sides of mountain roads shows how any clay will improve a bog. The curing of fish should commence the moment the fish is landed, and each crew should have their own hands in readiness. There is often a delay of from thirty or forty hours before curing commences. Whenever there is a heavy take of fish the local agents show telegrams—real or bogus—stating that the market is glutted, and stop buying. No bargain is made until late in the evening, and fish which on Tuesday brought 10*s.* has to be sold on Wednesday for 3*s.* 6*d.* or less, whilst Tuesday's fish was cured at once, and Wednesday's fish had to remain forty hours before a fish was opened. I have an object in view in making this statement:—(1) to protect the fishermen from bogus telegrams, for it is plain that fish caught on Tuesday and Wednesday of the same week will fetch the same price in the foreign market, no matter whether 10*s.* or 3*s.* 6*d.* were paid for it; (2) to show the folly of delaying the curing of fish, which hour by hour deteriorates, and gives the buyer an advantage over the fisherman, for the fisherman must sell at the price offered, or else let his fish rot if he delays curing his fish. In my opinion every seine should cure their own fish and have a brand, for when people think that bad fish or bad butter will fetch the same price as good, they will contend to produce, not the best, but the worst article. Hence, the necessity of inspection for the purpose of keeping goods up to the highest standard. Ice houses are necessary in all curing stations, also sheds and troughs supplied by pipes. I have seen girls standing knee-deep in water all day long, often with rain pelting on them, the poor girls being in a stooping position often for twenty hours. I would be very sorry to see a Board which has done so much for this parish and for other places similarly circumstanced, embarrassed in its useful work. Roads should be made through the bogs and turf should be cut down to the gravel. Watercourses should be opened to drain the bogholes. Cows like fuschia. It grows well. I believe that an experiment should be made to test the value of fuschia as a winter food for cattle. We have furze meadows. Why not have fuschia meadows? Furze costs trouble to prepare it for cattle. Cows eat fuschia as they would grass.

45570. Most Rev. Dr. O'DONNELL.—That suggestion about the fuschia is quite a new one to the Commission?—They eat it ravenously. Sheep will eat ascalom with avidity. With regard to the evidence given as to the value of the mountains as grazing places, there are large tracts covered with furze that are simply valueless. These places can be planted in the morning; they would not diminish the grazing value of the district by the stint of a cow to any person. Any man who wishes can turn sheep on the mountain. No person will charge for them. There is only one farm in the parish where five shillings a cow is charged in the summer. If those people were encouraged to enclose two or three acres of land and plant it, and protect it for a short time from sheep and goats, there would soon be plenty of fuel for the houses. The supplying of fuel would be the best use that could be made of planting in this country. The supplying of fuel is a great necessity at the present time.

45571. There is another point in your statement which is new, and may be of considerable value. You speak of mountain torrents being used, not so much to irrigate the land underneath as to carry gravel and clay over the surface?—Yes. Any person going over a road made on a bog will see a vast improvement in the grass on the side of the road. Any person going over a mountain torrent where it is dry will see a very fine class of grass. These old mountains are worn out, because they are producing the very same thing since the creation of the world. If only clay were overlaid on these places they would produce things that would make a good pasture.

45572. Mr. KAVANAGH.—You speak of sowing the seeds of sycamore and ash broadcast; did you ever know of that?—They are growing over the whole country. Any man who has grass growing near these trees will find it very difficult to keep out their seeds. They plant themselves. In places where you see sycamore and ash they plant themselves. The seed is very easily obtained. A person can make the experiment without the cost of a single penny. If nothing is gained nothing is lost. If they succeed it would mean planting the whole country without any loss. Ash is the very best kind of timber for planting. Poplar is

very easily planted. Over in Belgium they plant poplar along the canals. These are stripped every second year, and the grazing around the place is much improved because one year's grass is equal to two, after being fallow for twelve months; so that they actually gain by the planting instead of losing. Besides, as far as mountain is concerned, any man can take in four or five acres of these mountains and plant them. If they did that in a short time they would have plenty of fuel. They should also be made cut the bog down to the gravel instead of cutting bog holes here and there, which has the effect of making the lower bog rot altogether. They should also open up a large trench, or as many as may be required, the whole length of the bog. This trench will, in two years, be wide enough for a cart to pass through; thus a gravel road will be made free of cost. It will shift from year to year, always keeping close to the turf, and will serve as a canal for draining the bog; the side trenches will be kept dry, which, in a few years, will be wide enough for a cart to pass through, and thus the labour of drawing turf in baskets will be saved; a better sward than the wet bog will be secured for drying turf; and in a few years there will be valuable coarse meadows, provided the upper sod is set aside for sodding the areas cleared of peat. There will be no waste of valuable fuel, now getting scarce, with nothing to replace it. Half our bogs have rotted because they were not cut to the bottom, and our cut-away bogs are hideous tracts of barrenness, because they were not cut deep enough or in the orderly manner I have indicated.

45573. Most Rev. Dr. O'Donnell.—These are plain remedies, but they carry you a good way in improving the condition of the people?—Yes. A man cuts a bog any way he likes, and his own bog rots away. It was simply the neglect of the landlord which caused the whole thing. I know, myself, the poor people in our parish won't be able to hold their ground without help from the Congested Districts Board. The Government is inclined to help those poor men to make a living in the country, but others won't let them. I applied to your Board myself for help to build a house for a man. The answer was that nothing could be done because it was not on an estate belonging to the Board. Help should be given to these people to earn their rent on their own land. The population could be kept on the land apart from the fishing. When a man has to meet every demand from the milk of four cows he cannot do it.

The Commission adjourned

NINETY-FIRST PUBLIC SITTING.

SATURDAY, JULY 13TH, 1907,

AT 11.0 O'CLOCK, A.M.,

In the Courthouse, Bantry, County Cork.

Present:—The Right Hon. the Earl of DUDLEY, G.C.V.O. (in the Chair); Most Rev. Dr. O'DONNELL; WALTER KAVANAGH, Esq., D.L.; CONOR O'KELLY, Esq., M.P.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

Rev. TIMOTHY O'LEARY examined.

July 13, 1907.

Rev. Timothy O'Leary.

45574. CHAIRMAN.—You have been nominated by the Bishop, and the Cork and Bantry Rural District Council?—Yes. In my parish, Muintinarara, there are five electoral divisions scheduled as congested. These are Sheepshead, Seefin, Glanlough, Durrus West, and Durrus East. The population of these congested electoral divisions in 1901 was 3,215. These five scheduled electoral divisions were owned by eighteen landlords, two of them sold under the Balfour Act, seven under the Wyndham Act to the Congested Districts Board, two under the Wyndham Act to the tenants directly, one has been offered to the Congested Districts Board, and sale negotiations are going on. For the six remaining landlords compulsory powers are necessary, and compulsory powers will be necessary to vest portion of Coomkeen townland in the tenants. Coomkeen is part of the Bandon estate, and agreements to purchase it were lodged with the Estates Commissioners nearly two and a half years since. Mr. Parr, one of the Estates Commissioners' surveyors, recently mapped this townland. The production of his map before the Commission would be very useful to give them an idea of the difficulty in vesting this townland, which is in Durrus West electoral division. Compulsory powers are necessary for striping. The works of improvements on the Board's estates here are very useful, and well done. These works are road-making, main drains, the erection of new dwellings and out-offices, together with the improvement of existing ones. Parish Committees are doing very useful work. They have assisted in erecting twelve new dwellings and improved six old ones. They have built six new out-offices and repaired three existing ones. They have given grants for roads, drains, and fences. The total grants made amount to £162 10*s.*, and the total estimated cost is £814 13*s.* 6*d.* Kilcrohane crochet class is doing splendidly. The total earnings of the fifty-nine pupils, for the last financial year, was £353 7*s.* 4*d.* The maximum earned by one of these pupils for the year was £23 11*s.* 11*d.*, and the minimum 2*s.* 6*d.* The Board's rent collecting system as practised by its officials is too exacting. The average price paid for mackerel each year during the past four years in the four fish-curing stations in the parish was £2,253. About £750 was paid annually for herrings. A large quantity of fish caught here was sold in the local markets. The Congested Districts Board built five landing places or boat-slips, and thus aided very considerably the efforts of the local fishermen. The fish taken in Bantry and Dunmanway Bays are mackerel, herring, hake, turbot, plaice, sole, brill, haddock, whiting, pollock, mullet, bream, sprat, lobsters, scollops, cockles, crabs, mussels, and periwinkles. Six hundred and twenty-nine emigrated from the congested portion of this parish since my appointment to it in March, 1898. In reference to remedies for the relief of congestion migration is not feasible, and very little untenanted land is available. The most then must be made of the patches of land we have. Our main source of living is from the sea. Give us facilities by building landing places at Loughawn, Cross-a-gour, Gloun, Maughadaw, Tooreen, Trarodim, Lahernatha, Church Strand, Reenrour, Ahakista, Kealties, Sealodge, and Coolculloghta. Give us facilities to take our fish to market by establishing a motor service to Kilcrohane, or at least to Ahakista. A monthly fair at Durrus would be very useful. Unless we get facilities for landing our boats and fish, and facilities to markets, by giving us a motor service, one year's visit of the blight on our potato crop would bring hunger to some homes in our midst. The great point which I wish to emphasise is that in twenty-six years the population has decreased by 1,666 in the congested portion, that is, by 62 per cent. of the present population, which, in May, 1907, was 2,681. There are in the congested portion of the parish 487 families, and 383 of these are under £10 valuation, that is 78·6 per cent. of the families at present in the parish have a valuation of less than £10. Since my appointment to the parish, nine and a half years ago, 629 people have emigrated, that is, nearly 24 per cent. These emigrants are the flower of the parish. There were in the congested portion of the parish eighteen landlords. Two of these have sold under the Balfour Act.

45575. Do you mean the Act of 1896?—Yes. Two have sold directly under the Wyndham Act; seven have sold to the Congested Districts Board; in one negotiations for sale are pending. Six are hopeless without compulsion. Of the eighteen landlords in the parish there is no trouble with eleven; eleven have sold, and in one case negotiations for sale are pending with the Congested Districts Board; the cases of the remainder are hopeless without compulsion. In the case in which the landlord offered to sell to the Congested Districts Board, she offered to sell at eighteen and twenty-one years' purchase. The estate came before the last meeting of the Board, and I understand, owing to some financial difficulties, they did not make an offer. The landlord is fairly reasonable in the demand made—twenty-one and eighteen years' purchase. The Board made no offer of sale yet. In the case of the remaining six landlords in the parish compulsion would be necessary.

45576. Most Rev. Dr. O'DONNELL.—How many landlords have sold to the Board?—Seven.

45577. They would not be large owners?—No, the principal landlord, Lord Bandon, owns nearly all Durrus West Electoral Division; the others hold about half the land in the parish between them. Lord Bandon sold directly to the tenants, but he sold one townland to the Congested Districts Board. He would have sold the whole probably to the Congested Districts Board, but that the tenants could not agree amongst themselves. Unfortunately they are not all of the same way of thinking religiously. Some of these in my parish would not touch the Congested Districts Board. My parishioners and those not of my persuasion were evenly divided. Nothing could have been done.

45578. Were the terms on this property about which negotiations have come to a standstill pretty much the same terms as those on which the tenants bought on the other properties from the Congested Districts Board?—Yes; I think so.

45579. Is it due to the fact that during the sessions of the Commission, the Congested Districts Board, for the time being, is not buying land, unless it is exceptionally fitted for its purposes?—So I think. Perhaps it would be better to give reasons to show why these landlords won't sell. Perhaps the better way

ould be to produce the original letters. The first tter is dated the 28th October, 1904. I was asked by y parishioners to write to Doctor Barrett, and ask m if he would sell. His reply was—"In reply to ur letter to hand I beg to say I do not contemplate lling Runnacahana at present." I let two years pass. was asked by my parishioners to write again to him id ask if he would sell, and on what terms. I d so. He replied on the 17th October, 1906—"I ve received yours of the 14th inst. I much fear at a sale at usual prices would reduce my income. ne Land Act was intended to benefit the landlord as ell as the tenant; therefore the landlord must ex- ct an increase in his income, and not a loss by the le. In my case there is a head rent to be bought, id also tithes. The question is, would I get for the sidue a better, or even as great an income as the resent one. I cannot therefore see my way to sell present." Another landlord, Mr. John Barrett, ought the reversionary interest of an estate from an d lady for £350, a few years previous to her death. entered into negotiations with this lady, and the ndlord who bought the reversion of it tried his tmost to prevent her selling. Just before her death— erhaps a week or so—she had given instructions to er solicitor to sell this estate to the Congested Dis- icts Board at twenty years' purchase; that was the fer which she was prepared to make.

45580. CHAIRMAN.—You say Mr. Barrett bought the version of this lady's property?—Yes, Miss 'Donovan's.

45581. Although he bought the reversion she was nxious to sell it to the Congested Districts Board?— he had a perfect right to it. She got the rents uring her life.

45582. Do you mean to say that if somebody buys a version, the property can be sold to a third party? o I understand; she was absolute owner of this pro- erty.

45583. But she had sold the reversion?—She had iven it for £350; she used to get the rents and profits f her property during her life; at her death it as to revert to him.

45584. She only proposed to sell the life interest?— Ie gave £350 for the reversion. I understand there as portion of it in the nature of a loan although he enied it. Mr. Barrett became owner on her death, nd a few days previously she had given instruc- ions to her solicitor to offer the estate for sale to he Board. He, on the 17th October, 1906, says in is reply—"I have this day received your letter of he 14th inst., in which you inform me that you have een asked by my tenants on a certain portion of my roperty if I would, through the Congested Districts Board, sell these lands to them. In reply I beg to say hat if I should be offered a price that will not cause sale to them to entail loss to me I would be willing to onsider the matter in a friendly spirit." In reply o him I reminded him of the fact that he had bought he reversion of the property for £350. I offered him wenty-four years' redemption of the head rent; wenty-two and a half years' redemption of the tithes; 60 law costs, and 23 per cent. interest on his money, ogether with the profit rents he had received from the state; and I told him that fifteen and three-fourth ears' purchase on the net rents would meet his case, nd would give him 23 per cent. interest on the £350. Twenty-four years' purchase for redemption of the ead rents, twenty-two and a half years' purchase for edemption of the tithe rents, and also pay his prin- ipal; and his reply was—he denies he is landlord of ne townland—I mention this because here is the eceipt signed by his agent (*produces receipt*), which s dated six or eight months before he wrote that etter, and he got from other tenants in the townland ents in the meantime—"20th October, 1906, I am n receipt of yours of yesterday relative to some pro- erty of mine which is situated in your parish, rela- ive to which, in a letter dated 14th inst., you say 'I am asked by your tenants to ask you if you will sell your property through the Congested Districts Board to them. It is strictly understood from this letter that it will be through the Congested Districts Board that any negotiations that might arise should be carried on,' and in reply I state that if I be offered a price that would not cause a sale to them to entail a loss to me I would be willing to consider the matter in a friendly spirit, but I certainly did not mean to convey that I would necessarily accept the offer. I do not, at present, possess any portions of the land at Glenlough, hence the calculations with which you have favoured me are based on amounts of rent which I do not receive, and head rents which I do not pay. . . . . I do not intend to offer the property for sale to the Congested Districts Board, or to any others, and for fear that I may fail to express my meaning clearly, I do not intend to carry on any further correspondence myself in the matter, but if the Congested Districts Board should think fit to proceed in it, any communication they may address to my solicitors, Messrs. O'Keeffe and Lynch, South Mall, Cork, will, I am sure, meet with prompt and courteous attention."

45585. Most Rev. Dr. O'DONNELL.—When you say the offer you made included 23 per cent. interest, is it 23 per cent. on the sum of £350, between the date on which it was advanced by Mr. Barrett to Miss O'Donovan and the date of her death?—I will read what I said; it is not an exact copy, but it is substantially a copy of my letter.

45586. CHAIRMAN.—Are there any agents on these properties?—The agent is in Court at present, Mr. Turner, of Messrs. Turner and Ellis. The letter is dated 18th October, 1906. "I am in receipt of yours of the 17th inst., with reference to the sale of Derrycloonane, Gortnakilla, and Joint's Glenlough, in which you write that if 'I should be offered a price that would not cause the sale to them to entail loss to me I would be willing to consider the matter in a friendly spirit,' there ought not to be the least difficulty in not only not causing you a loss, but giving you actually a profit by the sale. Fifteen and three-quarter years' purchase suffices for this. Let us see how the matter stands:—You gave a loan or purchased the late Miss O'Donovan's reversionary interest in this property for £350. Since her death, about twenty-one months ago, you are in receipt of the rents." The gross rents of Derrycloonane are £35 17*s.*; Gortnakilla, £54 1*s.* and £68 15*s.* 6*d.*; Joint's Glenlough, £110. Total, £158 13*s.* 6*d.* The outgoings are, head rents, £27 18*s.* 8*d.* and £22 10*s.*, and ecclesiastical tithes, £3 19*s.* 10*d.* and £5 4*s.* 2*d.*, and the lay tithes, £5 12*s.* 11*d.* and £7 2*s.* 2*d.*; the income tax is £4 5*s.* 7*d.*; rate allowances, about £4 5*s.* 5*d.*; agents' fees, £4 9*s.* 10*d.*; bailiffs, £2; allowance to one tenant, 10*s.*

45587. Most Rev. Dr. O'DONNELL.—How much do these come to?—The total outgoings are £87 18*s.* 6*d.*, leaving a net profit rent of £70 17*s.* At the very time that this landlord stated that he did not own Glenlough at all, he had actually sent an ejectment process to the tenant, who is at present evicted, and whose rent was £2 16*s.*, though the land valuation was only 15*s.* and house valuation 10*s.* My letter to him continues:—"And head rent, £50 9*s.* 6*d.*, redeemable at twenty-four years' purchase, is £1,211 8*s.*; the tithes, lay and ecclesiastical, say, £22, redeemable at twenty-two and a half years, would be £495; lay aside £60, which is a big estimate, considering that it is a sale through the Congested Districts Board, for law costs, and say £150 interest, in addition to profit rents, you have received since Miss O'Donovan's death on this loan of £350, we can see at a glance what number of years' purchase of the gross rental will realise that sum." I gave him 23 per cent. interest on £350 from the date of the death of Miss O'Donovan, taken with the rents received meanwhile, 15¾ years' purchase, plus the bonus, which would realise the price this landlord had originally demanded.

45588. Mr. KAVANAGH.—In all these replies the landlord merely states he will not sell unless he is insured against loss of his income, is not that so?—So it appears.

45589. Would you call that an unreasonable reply?—Most unreasonable.

45590. You think in every case the landlord ought to be compelled to lose on a sale?—I would not like to say in every case, but I say in this case where the tenants are entitled to go into the land courts immediately, and get, perhaps, 20 or 30 per cent. reduction.

45591. I asked you whether you think it is an unreasonable thing to ask the landlord to sell at a loss, and you say it is not?—To ask this individual landlord.

45592. CHAIRMAN.—You say the tenants are entitled to go into the Land Court?—Some of them were never in the Land Court; some of them got temporary

July 13, 1907.

Rev. Timothy O'Leary.

reductions—perhaps three-quarters of them are entitled to go into the Land Court and get a fair rent fixed.

45593. Is there any reason to suppose that the rent they would get fixed by the Land Court would be lower than the rent so reduced by the voluntary rebate?—As a matter of fact they very nearly all applied to enter the Land Court since.

45594. Most Rev. Dr. O'Donnell.—In pursuance of your reply to Mr. Kavanagh, is the reason of your reply this: that the income at present is derived from rent which has not been sufficiently graded down?—Certainly.

45595. If the net income were derived from rents duly graded down to second term rents would you have the same objection?—Not at all.

45596. Mr. Kavanagh.—Was there anything to prevent them going into Court?—There were arrears in many cases, and then there was the question of costs, which is a very serious thing, when these poor people have to go and give a solicitor a couple of pounds and other expenses, the case means three or four pounds at least; and it would take years and years of reduction to recoup them for that expense. Their rents are merely a few pounds.

45597. Are they all first term tenants?—At the time that these letters were written I don't believe there was a single second term rent on the estate.

45598. Would you suggest that these landlords should take second term rents, or their equivalent, and then sell at such a price as would bring them in their net income?—I would agree with that proposition, if fair rents could never more be justly reduced; then I think that would be a fair principle to act on. There is another landlord on a property in the non-congested portion of the parish who wants thirty and ten-thirteenth years' purchase on the gross rent.

45599. Mr. O'Kelly.—What is his name?—Mr. O'Sullivan; he bought the property recently over the heads of the tenants. It is not congested. He wants a sum which, at 3¼ per cent., will give him his present income; and that comes to about thirty and ten-thirteenth years' purchase.

45600. Exclusive of the bonus?—I suppose it includes the bonus.

45601. Chairman.—What sort of land?—Ordinary tenanted land; such as we have in the parish.

45602. Is it very good land?—The greater part of it is mountain; perhaps four-fifths of the property in area is mountain. Roosca East is the name of the townland.

45603. When he talks about his net income does it mean his income with the cost of collection deducted. Suppose his income is £100 and the cost of collection is £10, would he mean £90?—I don't know what he means. I suppose he means the actual cash received.

45604. Here is a table which is included in the Third Report of our Commission and is put in by the Estates Commissioners; it is the table which we use. Apparently from that I see that in order to produce £90 14*s.* 1*d.*, by investment at 3¼ per cent., it takes 24·9 years' purchase, plus the bonus, making it 27·9 with the bonus?—That table does not apply in this case, because this landlord has no agent and no expenses of any kind. His rents are collected in a shop in town, and in one case, at least, by the bank.

45605. Then you mean he wants the full hundred pounds?—His full pound of flesh.

45606. He has got no costs of collection?—Not a penny. Very often he gets one tenant, at all events, when the poor fellow owes a half-year's rent he threatens him he must pay. He supplies a promissory note to the tenant, but at the tenant's expense. This tenant deals with him. He tells him to go to the bank, and he raises the rent in the bank, and acts as the tenant's security. He gets the money on this promissory note with interest from the bank. The bank collects it from the tenant.

Chairman.—Then in order to give £99 13*s.* 6*d.* out of £100 it would take 27·4 years without the bonus, or 30·7 with the bonus.

45607. Most Rev. Dr. O'Donnell.—If the tenant paid 30¼ years' purchase the amount paid to the owner would be the gross income, and the bonus would be additional?—Certainly.

45608. But on the total I put it to you that if 30¼ were paid partly through the tenants' moneys, and partly through the bonus, then the number of years' purchase paid by the tenant would be something over 27 years' purchase?—Yes, that is exactly it.

45609. Chairman.—You say in this case the 30 years' purchase includes the bonus?—Yes; I should think so.

45610. Of course it is very exceptional that you should have an estate in which the gross income is the same as the net income?—It is very exceptional.

45611. Most Rev. Dr. O'Donnell.—It is not difficult to get an investment bearing a higher interest than 3¼ per cent.?—I know nothing about investing money. It is not necessary to give figures as to the prices of the estates bought under the Balfour Act and under the present Land Act. The Commission have these already.

45612. Chairman.—I think not; we have heard so much about it?—With regard to the two recent estates bought by the Congested Districts Board, one is the Furlong Estate, on which one-third of the tenants are second term tenants—about thirty-eight or thirty-nine is the total number. About nine of these had fair rents fixed by the Land Court, and five got the second term rents fixed by consent. That property was bought by the Congested Districts Board recently, so the agent informed me, at 18 years' purchase of first and second term rents.

45613. Were the first term rents graded down to second term?—They were not. 18 years included all first and second term rents. Another property in the same place, on which there are five tenants, was bought at 17 years' purchase—the Brown Estate—by the Board. That shows the downward tendency. There was another estate offered to the Board for sale, about which negotiations were going on for perhaps two years. The landlord would not sell to the Congested Districts Board. The landlord, Mr. Wright, who was Clerk of the Crown and Peace at the time in the county, thought that the Congested Districts Board woud not give him the bonus, so he implied in a letter to me. I had to get a letter from them declaring that they would give the bonus and declare the place an estate. He refused to sell to the Congested Districts Board and to the Estates Commissioners. He would not sell anyway except to the tenants directly, and here on this estate there are two evicted farms, and four future tenants, and three miserable pauper tenants, whose lands are not half stocked. This estate was offered for sale to the Board recently at its last meeting. They made a certain offer; what it is I don't know. This Mr. Wright at the very time served a process on one poor tenant for half a year's rent due the 25th March last, at the April Sessions, and, of course, got a decree. He employed a broker to negotiate the sale of the estate. I understand the broker and Mr. Doran met and discussed the matter and failed to come to terms. The result is Mr. Wright declined to sell his estate to the Board.

45614. Most Rev. Dr. O'Donnell.—Would these estates generally be in the Durrus peninsula?—Yes. The Wright is not exactly in, but at the base of, the peninsula, and is the poorest estate in the parish.

45615. Mr. O'Kelly.—Did he give any reasons for his refusal to sell?—The ordinary reasons that the landlord gives.

45616. What are they?—They try to have recourse to every expedient to have the last penny they can.

45617. The landlord would sell directly to the tenants?—Yes, at 20½ and 23½ years' purchase.

45618. Is the idea that he would get a better bargain from the tenants?—That is clearly his motive. The landlord's broker sent them a letter to the effect saying what fools they were not to accept Mr. Wright's offer, and that since 1904 they have lost three years' difference between 3½ per cent. interest on the purchase money and the actual rent, and he calculates that the tenants will lose about £500 in six years. As a matter of fact, he has not got the full rents in these places—they cannot pay them. I take exception to the rent collecting system as practised by the Board, and I instance what occurred in connection with the Bird Estate, which was the first bought in the county. The first thing the tenants heard after the Board had bought the estate was to get receivable orders, ordering them to pay to the bank, within a certain time, a year's rent, and at the foot of the receivable order they set forth the balance due. Here is the case of a tenant who owed at his death about 13 years' rent. His rent was £4 5*s.*, and the arrears were £53. He was called upon by the Board, or rather by the official who has charge of the rent-collecting department, to lodge in the bank the amount due. It is dated the 15th

December, 1904. "Any bank is to receive on or before the 30th December, 1904, from Charles Daly, Eskeragha, Bantry, and place to the credit of the account of the Congested Districts Board for Ireland the sum of £4 5s., being one year's rent on account to May 1st, 1904, leaving a balance of £48 15s. still due to that date." That poor man died since. The bank clerk would say to that man: You cannot be security for any man: you owe 13 years' rent. If a stranger goes to Bantry to the bank and is not known, the manager or some representative of the bank will try to find out from some persons, probably in the town here, the status of the person making the application for the money.

45619. CHAIRMAN.—Is this your point: that the number of years' rent due is set forth so publicly in a document of this kind that it interferes with the power of the tenant to borrow from the bank?—Certainly.

45620. Mr. KAVANAGH.—Might I ask this question: suppose a tenant had been a tenant, not to the Congested Districts Board, but to the ordinary landlord, suppose he went into the bank and wanted to raise a loan, the bank would ask for the last rent receipt?—I never heard of it.

Mr. KAVANAGH.—Well, you may hear of it now. The rent receipt will show exactly what is due just as does the receivable order coming from the Congested Districts Board.

45621. Mr. O'KELLY.—Who is the official?—I have no idea who he is. I wrote to Mr. Mitchell, the Secretary, calling his attention to this and telling him I believed it would have a bad effect on the solvency of the unfortunate tenants, and he at once cancelled the receivable orders and sent down Mr. Vereker, his assistant, to collect the rents. So from that I infer that it must have been some clerk who sent out the order, and that it escaped Mr. Mitchell's attention.

45622. Most Rev. Dr. O'DONNELL.—Would you say it is the Board and not the official who is to blame for a system of that kind?—It is very hard to blame a Department; when Mr. Mitchell affixed his signature to these letters, he might have had 1,000 letters to sign his name to, at the time, for posting, so that he could not read them all, and simply took for granted what his clerk said, and trusted him.

45623. The official, I assume, is carrying out the wishes of the Board?—Technically I agree with you; they are responsible for the action of their officials.

45624. CHAIRMAN.—Do you suggest, as a matter of principle, that if a man is in debt for fifteen years' rent, or whatever it may be, he should be admitted to negotiate a loan from the bank. Would you say it was either wise or desirable in the interests of the tenant?—I deny the application of that question, for this reason, that these arrears were not worth more than a year's purchase—they were not worth a year's purchase at all. If that money were due honestly, and if the Congested Districts Board had bought that £53, and meant to recover it, perhaps it might be justifiable then, and then alone, in writing such a receivable order as that; but they bought that £53 for £3 or £4, and parading the wants of these unfortunate people before the world is, I think, a very strange thing to do.

45625. Most Rev. Dr. O'DONNELL.—You would probably look at that in a way that would be very fair, from a local point of view, but take a Board dealing at a distance, with an estate, don't you think it is rather a good thing, before a Board deals with arrears at all, to put before the individual tenants that while a year's rent is taken from them, all is not over with the question of arrears?—I agree with you thoroughly, but they go a great deal further when they say—"Go into the bank and show this receivable order."

45626. Was it necessary to go to the bank?—It was.

45627. Could he not return this receivable order to Dublin?—They said it could be received at any bank for advice with the Bank of Ireland.

45628. Mr. SUTHERLAND.—Is it a rather common thing to collect rents by promissory notes in Ireland?—I don't know a single case except the case I referred to a moment ago; but tenants very frequently have to borrow rents from banks.

45629. Do you think this man ever did this before?—He has done it frequently.

45630. Most Rev. Dr. O'DONNELL.—You see a Board like the Congested Districts Board should have a regular system of doing that; and they would fancy that a particular tenant who thought it somewhat inconvenient to him to expose to the local banks the circumstances of his arrears would get a post office order and send it up to the Congested Districts Board, and that someone would tell him to do that?—The instruction was given in red ink, calling special attention to it, and would seem to convey that he must pay through a bank, and nowhere else.

45631. What can a Board do that has a system of that kind of paying by receivable order, except, when representations are made to it by one like you, to listen to these representations. They did not proceed with the order complained of in these particular cases?—In the first instance, let them, by all means, in documents to the tenants, set forth the rents due, specifying the rents to be paid within a month, and the arrears due of each; but what they did was this, in asking for a year's rent, the first thing they do is simply send this receivable order, and explain their poverty to the bank.

45632. That was in 1904?—Yes; Christmas, 1904.

45633. Have they changed the system since?—I have no experience of what they did recently, because it is only within the last month that three properties have been bought, and very probably they may do the same thing again.

45634. How much of these arrears were actually demanded from the tenants?—The tenants paid three years' rent to the Board. The Board paid only two and a half years' interest; and they have given them receipts up to November, 1905. The Board bought the Bird estate on the 31st October, 1904, and bound themselves to pay interest to Dr. Bird from the 1st of November, 1904. From that to May, 1907, would be two and a half years. Six weeks after they bought this estate they collected, or tried to collect, from the tenants a year's rent through these unfortunate receivable orders. They got these rents in February. Mr. Vereker came down and the matter was settled. Mr. Mitchell cancelled the orders.

45635. What could you expect to work more expeditiously than that system?—It is all right, except this alone, that they should never have issued these receivable orders.

45636. Are the improvements going on or completed on the Bird estate?—They go on, and are extremely good. I will go a little further in my objection to the system of the Board in collecting rents. In March, 1906, they threatened to process twenty-five tenants for a year's rent. The tenants on the estate had paid a year's rent the previous year, and the following February a year's rent was demanded of them. Fifteen of the forty had paid the two years' rent in less than fifteen months. They threatened to process the twenty-five who did not pay. I wrote for three months' time, and asked them if they gave me a list of those from whom rents were being demanded I would try and help them in some way to make peace. The letter I got from the office was this. It was written on the 31st March, and received on the 1st April, and stated that the list asked for would be sent to me as soon as the sessions were over. They were to process the tenants at the Bantry Sessions for the rents, and I got a letter from them saying that as soon as the sessions were over they would send me the list.

45637. Mr. O'KELLY.—You would not need it then?—I would not. I wrote Mr. Mitchell again, and called his attention to the action of what I believed was this clerk, and immediately the whole matter was settled by return of post. No processes were issued, and the tenants got time.

45638. Most Rev. Dr. O'DONNELL.—Writing a letter to Mr. Mitchell is no great trouble?—I wrote in the ordinary way. The first thing I did was to ask time for some of the tenants for three months, and they would not give it.

45639. Don't you think the Board is right in trying to get a year's rent seeing that it is expending the rents on the estate?—But then you have the case of tenants of comparatively large holdings, who derive no benefit from the Board's works, and have great difficulty in getting labour, because of the men employed on the Board's works; and it is rather hard to get them to pay a year's rent in full, and practically in advance.

45640. Would not the Board usually expect that a year's rent should be paid from year to year when they held the estates?—Certainly.

45641. It would be only in exceptional cases that the Board as a good landlord should change

July 13, 1907
Rev. Timothy O'Leary.

from that and allow a tenant to go without paying his rent in full?—Certainly.

45642. Did not you succeed yourself in getting Mr. Mitchell to do what was asked in the cases where the people were very poor?—Yes, but at the time the Board had only paid a year's interest on the purchase money. They had collected, in fifteen cases, in February two year's rent, and they had until the following November to collect the balance if they wished. I thought it a very small thing to ask, to give three months' time to these poor people to pay their rents. They would not give it according to this official.

45643. You were able to set the thing right by writing to the secretary. Surely in a matter of that kind all is well that ends well?—Certainly. On the 10th October, 1905, the Board's work of improvement commenced on these estates—the Bird, the Beamish, the O'Donovan, and Lord Bandon's estate. The Board sent down three gangers; each of these employed on an average fifteen men daily, making roads, drains, fences, &c. These people earned in the winter, from the 1st November to the 1st March, 10*s.* a week, and from the 1st March to the 1st November, 11*s.* a week. They stopped work in the evening about six, and the poor people went home as quickly as they could to work on their own farms. They have made about eight miles of roads where many persons in the parish believed there never would be a road made. They have made main drains, and have built, or caused to be built, sixteen houses.

45644. Do you think all these works are good works?—Splendid. I might mention that before they commenced any work there was a meeting of the tenants called. The tenants discussed the matter, and tried to see what would be the best and most suitable works for the improvement of the land of the district. We came to the conclusion to represent these works to Mr. M'Clean, the local assistant land inspector, and everything, with one exception, that we recommended, he did, and he did more even than we recommended. The Board exceeded our anticipations as far as the work was concerned.

45645. CHAIRMAN.—You are telling us this in support of the work the Board has done on the estate?—Yes. They are also to improve and help to build fifty new additional dwellings besides I don't know how many out-offices; and the building of houses out there is a most important thing, to my mind, because the houses I may say are frightful in many cases—one miserable window stuck in the wall—a fixture, with one pane of glass. I would also point out that as regards some tenants compulsory powers are necessary for striping holdings. I may give a case that actually happened. The Land Inspector, Mr. M'Clean, divided a farm between two farmers. They held it in rundale. One field, the best field they had, was divided into eleven little plots, intercepted by stakes. Having settled it, he asked one man whether he would have the northern or the southern side; "I do not care," he said. He asked the other. "I will take the southern side," he said. He appeared to be very pleased. He found that it would be necessary to remove the dwellings of the tenants easily satisfied. The neighbours were not very friendly—they were living quite convenient to each other. Sometimes the women of the household used to have disputes about hens and that kind of thing, and the Inspector thought it necessary, for wise reasons, I believe, to remove the dwellings altogether, and put them in such a position that the men could work the farms with more ease and facility. When the party who had got his choice side of the farm found his neighbour getting £20 to build a house he asked me, "Could he do this in spite of me." I said I thought he could. He went to a solicitor in Skibbereen a couple of days afterwards and threatened legal proceedings. How that will end I don't know. There should be some legal powers given to make things right with such an unreasonable individual as that.

45646. In a case of that kind you would bring compulsion to bear on the tenant as well as on the landlord?—Certainly. There is one case I would specially call attention to, and it is the case of Comkeen townland, on the Bandon estate. The people on this townland signed an agreement in February, 1905—between the landlord and the tenants. Lord Bandon was most anxious to sell this townland to the Congested Districts Board, and would have sold the whole of this property direct to the Board if he could. There are twenty tenants—nineteen tenants and one sub-tenant—on this townland. There are two tenants whom I wish to exclude. One has a valuation of £20 15*s.* and the other £10 5*s.* The other eighteen tenancies of this townland have a valuation of £65 1*s.* on land, and £8 15*s.* on houses, or a total valuation of £73 16*s.* The population of the townland is 75. These are first term tenants; the rents were fixed by consent, but not filed or registered by the Land Court. For all practical purposes they would be regarded as second term rents. About 2½ years ago they bought at 19·6 years' purchase. The lands on that townland are terribly intermixed. There is a field, 2½ acres in area, about two acres of which are good land. Two tenants graze this field in common, and a third tenant has the exclusive right to the furze growing on that field. The result is that that field can never be tilled, and has become a mere waste. There is another field in the same townland held in this way: one tenant has the grazing of half of it all the year round, and alternately each year he must save half of it for hay on the 1st of May; the hay has to be taken off on the 15th of August. There are three tenants on the townland dividing the hay between them; they cut in common off one side in one year, and the other side the other. There are besides on the same townland cases where the tenants drive their cattle through two or three bounds ditches, and pull down the gaps and raise them again. The result is there is a great deal of trouble and complication. I think it would be necessary then if it could be done at all that that land should not be vested in the tenants without having some improvements done. There is fairly good land in the townland. If the river was sunk and some of the rocks cut away it would improve the place immensely.

45647. Has that land been sold to the tenants?—Agreements have been signed since February two years, but the estate is not yet vested.

45648. It should not be allowed to pass without an improvement for those securing the holdings?—Certainly; valuable land at present is useless for want of draining.

45649. Mr. KAVANAGH.—In these cases of rundale is one man responsible for the rent, or is there a joint collection?—Each tenancy is separate and distinct. As a matter of fact, I believe it was only when Mr. Parr, of the Estates Commissioners, went on the lands for the first time that the nature of the tenants' interest in the fields was known; the Valuation Office knew nothing about it; neither did the agent of the estate, I believe.

45650. In the case of sales: suppose it was sold directly from the landlord to the tenant, how would these sub-interests be got rid of?—I don't see how you could vest them at all in any individual, good, bad, or indifferent. There is no sub-tenants on the portion I refer to.

45651. How long has this rundale been going on?—Years and years. I could not tell how long. I come now to the fish-curing. There are in the parish 446 men who usually fish. The number of families in the parish is 487, so practically one of each family fishes. There are in the parish 116 fishing boats, that is a fishing boat practically for every four men. There are about 265 men who usually fish in Dunmanus Bay and about 181 who usually fish in Bantry Bay. In Dunmanus Bay there are 66 fishing boats and in Bantry Bay 50; that is on the Bantry Bay side of my parish. The people of Durrus have partly to labour on the land, and unless they got the sea fishing developed one year's blight would mean a famine for them in many cases. The Congested Districts Board have expended on the improvement of piers in the parish the following sums:—At Tracloosh, £182; at Glenroan, £469; at Gortavalig, £455; and Dooneen, £1,534. They have expended on piers and roads, £4,346 17*s.* 10*d.* They have expended on roads, drains, fences, grants, and dwellings and other improvements about £1,700—that is, in improving their estates. They have expended on the lace industry, providing teachers, perhaps, £150; but I think this sum of money, about £6,000, would be, to a certain extent, uselessly spent unless things were carried a little further, and give all the places in the parish more fishing facilities, and what is more important still, give market facilities. Last year there was a big quantity of fish in Dunmanus Bay, but there was only one fish buyer. He was buying some of it at 1*s* 6*d.*, and more, in small quantities, at 2*s.* a

hundred. The result was the poor men had to fold their arms and let the fish pass by. They could not cure them, neither had they any market to sell them.

45652. CHAIRMAN.—Was this state of things represented to Mr. Green at all?—I could not say that it was. I would imagine that the Congested Districts Board or rather the Department of Agriculture would know it. They have boats going round the coast.

45653. Most Rev. Dr. O'DONNELL.—What should be done for the fishing?—To build piers along the coast at the places already named, and give transit facilities to markets. I have asked the Board for the last couple of years to build a pier at Lehane. It means a big sum of money—about £900. The Board had not sufficient funds. It was before the Board at its last meeting, and was postponed for want of funds.

45654. When you say the expenditure on piers, roads, etc., would be comparatively lost unless a certain thing was done, what is that certain thing?—Further developing the fisheries, giving landing facilities for landing the fish, and giving market facilities. What we want is to give a motor service, so as to supply the market quickly and conveniently.

45655. To bring the catch nearer the market?—Precisely.

45656. When the fish are caught you want to find a way to bring them to market?—Exactly. Now, with regard to the price paid for fishing, there are four fish-curing stations in the parish—Traghruane, Thawclooish, Lahane, and Traigathoumple. In Traigathoumple the average price paid for mackerel within the last four years was £573. In Traghruane, the average was £380. In Thawclooish, £600, and in Lahane, £700. The total paid yearly for the last four years for mackerel was £2,253; besides, at Lahane there were 600,000 herrings at 3*s.* a hundred, and in addition there are about 50,000 hawked about locally in one district, and in another 30,000; these are taken anywhere they can get a market. The average price paid for mackerel each month in one of these fish-curing stations was for the year 1902—August was 4*s.*; September, 5*s.*; October, 6*s.*; and November, 10*s.* to 12*s.*; December, 6*s.* to 14*s.* per hundred of 126 fish. In 1903—August, 5*s.*; September, 4*s.*; October, 3*s.* to 9*s.*; November, 4*s.*; December, 4*s.* In 1904—August, 4*s.*; September, 4*s.*; October, 4*s.* to 6*s.*; November, 6*s.*; and December, 6*s.* In 1905—August, 5*s.*; September, 5*s.*; October, 6*s.*; and November, 3*s.*; and December, 3*s.* In 1906—August, 1*s.* 6*d.* to 2*s.* 6*d.*; September, 1*s.* to 2*s.*; October, 1*s.* to 3*s.*; November, 10*s.* to 11*s.*; December, 11*s.* to 8*s.* In June, 1907, 8*s.* Besides the moneys earned on mackerel and herrings a good deal of money is earned on hake. Those who generally fish hake would earn about £12 a year per man.

45657. Most Rev. Dr. O'DONNELL.—The hake would not be exported, but would be sold inland?—It would be cured by the people and hawked round, and at Christmas would be sold at the fairs. The parish committee under the Congested Districts Board has done extremely good work, but the results are small for this reason: when the people saw that the Congested Districts Board were likely to buy the estates in the parish they did not care to avail themselves of the facilities offered by the parish committee. It was principally on estates where there were very pressing needs that they availed of the grants of the parish committees. However, we have built twelve new houses and repaired six old ones. We have built six new out-offices and repaired three. We have made some drains and roads and fences. The total amount of grants expended was £162 10*s.*, and the estimated cost of the work done was £814 13*s.* 6*d.*

45658. That is more than five times the amount of the grant you received?—Yes.

45659. CHAIRMAN.—Before you pass from the fishing I would like to ask you one point with regard to what you have said. You have told us that in your view piers ought to be built in a great many of these places?—Yes.

45660. You have told us that previously one of the chief difficulties of the fishermen was the want of market facilities?—There are four fish-curing stations, and one buyer has two stations.

45661. Do you think the erection of a great many piers would get rid of that difficulty. Would not it mean that there would be fish landed at more centres than now?—The more the better, provided the buying was centralised.

45662. That assumes a greater number of buyers?—Certainly; that is what we want—increased competition.

45663. Will you get more buyers by merely increasing the number of points at which to buy fish?—Fish agents are very easily got.

45664. They may be agents for one buyer?—Certainly, or may oppose one another.

45665. That is not increasing competition?—If you have rail facilities besides you would be sure to know what the demand will be.

45666. My point is this, do you not think that instead of increasing the number of spots at which fish are to be landed, in order to obtain greater competition and have a better price it would be better to do the opposite, and, as far as possible, concentrate the landing of fish in one or two places; because several buyers would come then and compete with each other?—I did mean to convey that. We want a good many small landing places and facilities for securing boats and taking nets up easily. We don't want big piers except in one or two places. We want to concentrate the sale of the fish, and have it sold in one or two places on the coast, and have them sold there only.

45667. But, as a matter of fact, in practice, is not the real demand which lies at the bottom of this desire for increased slips and piers in order to enable the men to land fish freely near where they live; is not that the real reason?—I would not say that was. They do not find much difficulty at all in rowing the boats from where they sell the fish to their own homes. They find very little difficulty in that; the difficulty is in taking a heavy boat of fish in there at night to the place where the fish are sold; then the trouble is to walk perhaps hip deep in water and shove the boat ashore.

45668. Then, when you advocate more slips and small piers you have in your mind this, the necessity of giving extra facilities for landing and hauling up boats?—Precisely; and giving access to develop the wealth of the sea.

45699. It has nothing to do with landing the fish at all?—No, nothing; except in a few places; I would say in Traghruane in Dunmanus Bay, and Lahane, in Bantry Bay, and Trawclooish, and Traigathoumple.

45670. Mr. SUTHERLAND.—Is the fishing increasing or decreasing of late?—I think it is holding its own very well.

45671. Has it increased lately?—Twenty years ago there was no such thing at all as fish-curing stations existing; the fish were all sold locally.

45672. But about the fish landed; has the amount of fish landed increased?—I would say it is about uniform for the past twelve or fifteen years.

45673. Therefore, there was an expenditure of about £4,000 odd for piers; has that expenditure increased the amount of fish landed in this district?—In some places it has. Fish is at present sold at Thawclooish. It used be sold previously in Bantry, and on the Dunmanus Bay side. They had to take the boat round Sheep's Head and sell it on the Dunmanus Bay side. That meant a great waste of time and energy besides. The number of fishermen are, unfortunately, growing smaller on account of emigration.

45674. Then, you asked grants for twelve more piers?—Three piers, and about ten small landing places.

45675. What would the cost be of each of them?—I really could not tell you.

45676. Taking the average of those built they would be about £8,000 or £9,000?—They would not cost anything like that.

45677. That would mean £10,800?—It would not mean half that amount

45678. It is a large sum of money to spend unless there is a corresponding increase in the amount of fish landed?—Yes, but we poor people smoke and drink tea, and pay taxes. The Treasury should give us something back. Tenants of uneconomic holdings have claims on them.

45679. Most Rev. Dr. O'DONNELL.—The small landing places would not cost much?—A couple of hundred pounds perhaps.

45680. When you said to Mr. Sutherland that the fish caught was not on the decrease in quantity what period did you refer to?—I would say the last eight or nine years.

July 18, 1907.

Rev. Timothy O'Leary.

45681. I think the object of the question was this, to find out whether in consequence of the sea works the take of fish had been increased?—I would say that it had been increased very considerably, because of the fish that was taken in recent years, the greater part would never have been caught only for these piers and slips.

45682. Therefore, you would say, to take from year to year that the catch is greater now than before these works were made?—Certainly; if the works did not exist the take of fish would not be at all what it is.

45683. Mr. KAVANAGH.—I saw in the papers that inquiries are being made by the Agricultural Department about potato blight; is there any appearance of potato blight in your union?—My curate, in his early potatoes, has not even a stalk for the last fortnight.

45684. Is that universal?—It is not, I am happy to say.

45685. Do they spray at all?—They do, and very carefully.

45686. Have they done so this year?—In most cases they have sprayed twice this year.

45687. Do they believe in spraying?—Certainly.

45688. Most Rev. Dr. O'DONNELL.—Does it require a dry day?—It is on a dry day they spray, at all events.

45689. It was not so easy to find a dry day this year?—It was not.

45690. Did your curate spray his potatoes?—At the time the blight appeared no one had sprayed. This was about the 1st June; they were just thinking of spraying at the time; immediately afterwards he sprayed, but it was too late.

45691. CHAIRMAN.—Are there many men about here who fish and do nothing else all the year round, or are they all practically men who fish and also farm?—Every man in the parish is a farmer.

45692. All the fishermen are farmers as well?—Every single one of them.

45693. Has it ever been contemplated to start a body of men such as you find in other places on the east coast and in Scotland, who are fishermen pure and simple?—Not there.

45694. At Bantry you have got a new harbour?—In Bantry itself there are fishermen pure and simple, but only in the town as far as I know; but you could not have fishermen pure and simple out there, because in the winter months unless they had large boats, mackerel boats, they could never take out yawls to sea.

45695. No, my suggestion assumes the possession of large boats?—I am quite sure of this; the consequence of building Dooneen pier, in my mind, was to give them landing facilities for large mackerel boats, but unfortunately there is such a craze for emigration, you cannot keep the people at home. There is a place called Kasper, near the Rocky Mountains; some of the people from Kilcrohane settled there, they are sending invitations broadcast offering £80 a year wages and a ticket, or £20 to pay expenses out; lately I heard of one man who got from his son an order if I may call it, for twenty-seven persons, giving them £20 apiece to go to America, and £80 a year wages. A short time before that there was an order for another batch of men who went out. One of the passengers who went to America on the strength of that order was not allowed to land in New York. He was not mentally strong, and the American people would not have him. It was his brother was to go, but the brother got a sore foot. This man was not weak-minded; he was not very bright, intellectually, and they would not have him.

45696. Mr. O'KELLY.—Is it the mining districts they go to in the Rockies?—No; it is sheep-minding; I understand the poor fellows sleep with revolvers by their heads to protect themselves.

45697. CHAIRMAN.—Don't you think the fishing is much more likely to be developed if you could induce a number of men to go into it seriously, and concentrate their energies upon it?—I am sure they could be easily induced.

45698. Don't you think there is a certain waste of energy and an unfortunate tie with the shore if men fish and at the same time attempt to be farmers as well?—I think myself it would be a very great blessing to have a bit of land attached to the fisherman's house, supplying him with vegetables, potatoes, and milk.

45699. That is a different thing; members of his family could look after them. Have not you found from your experience that so long as a man has his holding and fishes in conjunction with his land, that he gets his income partially from fishing and partially from the land, that ties him too near the shore, and that he won't go very far afield; that is what they call a longshore fisherman?—I would not say that so much at all. As a matter of fact at present there are two poor men and a fish buyer who are planning about buying a steam trawler. I suppose the respective rents of the poor men would be £3 or £4 each; the fish-curer's rent would be about £30. They want to borrow about £1,000 and to pay down a portion of the price, and go trawling with the steam trawler. I am quite sure that numbers of persons in a few years' time would be got who would take up these mackerel boats, and would go round the heads, and follow the fish all the year round. I am quite sure a number of persons in my parish are ready to do that in a couple of years' time if they had landing facilities.

45700. But landing facilities such as you describe would be no use to boats of that kind?—It would be an inducement to set them going, to enable them to come home and meet their friends, and rest with an easy mind, leaving their boats in safe anchorage.

45701. You could not pull up these boats?—At Dooneen pier you could moor them, but far more securely at the proposed new pier at Ahakista.

45702. Mr. SUTHERLAND.—Where would they get the fish from in that steam trawler?—I could not tell you, but probably round the heads.

45703. It would not pay if they remained there?—It would not, I suppose.

45704. Is not there a tendency on the part of fishermen to go in as far as their means permit for large boats?—Certainly there is.

45705. Therefore, there is a great deal in what Lord Dudley said, that if you were to spend money in erecting small slips by-and-by they would not be very useful?—I would not say that by any means. The small piers would be always utilised.

45706. That has occurred in other counties; the fishing development occurred so rapidly in a number of years past that the small works are practically useless, and they have to spend large sums now in building bigger piers; you see the point?—Yes, but I think the small piers would be always very useful and very productive.

45707. But the question is would they be the most profitable way of spending money?—I am afraid the Government would not give the money for the large piers.

45708. Would not it be better to give the people boats?—You must train the people gradually. Boats without piers are comparatively unprofitable.

45709. Would not it be better for you to get all at once the money for large boats that will fish from the piers?—There are only two places; they want very large piers, that would be at Durrus, and perhaps at Ahakista or Church Strand and Traigathoumple.

45710. That is a place where you could collect all the fish at a side of the peninsula?—You would collect the fish caught near the head. Church Strand would be the real place for the market, or Ahakista, with motor service.

45711. CHAIRMAN.—You have had fishing going on for years and years around Cork and Kerry for a very long time, and you have had prosperous fishing down on this coast long before there was any fishing at all up in Donegal and other places, so that the men are not learning the business; they are old hands at it?—Yes.

45712. Here in Bantry you have got a most beautiful, absolutely land-locked, bay where any boat can always lie with perfect safety. You have got a pier which apparently is a deep-water pier, and you can get alongside it at low water; what reason has prevented the people around Bantry from having a large fleet of big fishing boats such as they could use in Bantry Bay, and outside, and all around the coast?—The people near Bantry itself, along the coast, rarely fish, except the people in the town itself. The people are farmers, and have not time to fish; and if they did fish the landlords would get most of the profits in increased rents.

45713. That is my point; how would you train them; you have everything you ask for; you have got all the natural facilities—a good pier and a railway,

and a population looking to fishing for years?—The immediate neighbourhood of Bantry is not a congested district, and is not likely to be scheduled.

45714. That does not affect it—does it?—The people can live on the land; at least they can make a fair sustenance out of the land. They do not believe in further increasing the landlord's income out of their fishing industries.

45715. You would think the result would be that they would have started a little fleet long since?—I could not answer the question if all the lands were sold to the occupiers, but when the lands are bought I hope they will then go in for fishing very extensively.

45716. Is not it a remarkable thing that there are not more big boats in a place like this?—I think it is.

45717. Is not the fact that there is not a big fleet of boats a reason for making one wonder whether those who say that the mere building of piers in other places would bring that about, are right. It has not brought it about here; why should it bring it about in other places?—There is hardly any market at all except for mackerel here. There is no fair test. Bad land laws handicapped every effort.

45718. Mr. SUTHERLAND.—You have a railway behind you?—Look at the expense of the carriage, and the conveyance of the fish in Cork from one railway station to another, with the result that the fish is not in a condition at all when it goes to market in Dublin.

45719. Most Rev. Dr. O'DONNELL.—Bantry is pretty far in from the fishing grounds?—It is pretty far in.

34720. Is it your opinion that the men who are up near the fishing grounds, who are fishermen, must be provided with bigger boats, and trained to use them, and encouraged to take more out of the sea than they do at present?—Certainly.

45721. If they had such large boats they could bring the take up here to Bantry on one side?—They could, certainly.

45722. That would not apply to Dunmanus Bay?—It would not.

45723. Where should the fishermen of Dunmanus Bay bring their take to in order to send it up to market?—I would say Ahakista or Kilcrohane. Ahakista is twelve miles and Kilcrohane is fifteen or sixteen from a railway station.

45724. Is there a pier at Ahakista?—There is not.

45725. At the other point is there a pier?—There is not; there are only two piers in Dunmanus Bay, one of them near Durrus and the other near Dooneen.

45726. Most Rev. Dr. O'DONNELL.—Is the pier at Dooneen a serviceable structure?—It has not got a fair chance; the fish-curing stations are convenient to houses of the fish buyers who were opposed to a pier being built at Dooneen. I tried to get the Clyde boat when it was subsidised by the Congested Districts Board to call at Dooneen. They said they would if they got orders. I understand they were looking for orders, but could get none except from poor people; it would not pay the Clyde boat to call. The result was that Dooneen pier so far at all events is of very little use. They also say, whether it is true or not I don't know, that it was a mistake ever to have built the pier at Dooneen, because there is too much of what you call a draw there. You cannot safely moor a boat there the swell is so great—so the fishermen say—I don't know. The Congested Districts Board established the classes at Kilcrohane about March, 1905. They gave a teacher, and the numbers of pupils on the rolls, the last financial year, was fifty-nine. The earnings were £353 7*s.* 4*d.* for that year.

45727. CHAIRMAN.—That is not a very big sum for fifty girls?—I think it very big considering that some of these children travelled two, three, four, and five miles. What I wish to call attention to is that not a single girl who attended that school regularly, except one, emigrated. Three girls emigrated from the district; one of these had to walk across from Bantry Bay to Kilcrohane, across the mountain—a distance of four miles, which was probably worse than eight. Another girl had to walk a distance of seven miles; she also emigrated. The only girl who emigrated, and under ordinary circumstances could be deemed a pupil lived one mile from the school. She had friends in America who urged her to go. Three emigrated, but only one could be called a regular pupil.

45728. Only three out of fifty-nine emigrated?—Yes.

45729. You quote that to show that the establishment of crochet classes tends to keep the people at home?—Precisely.

45730. I know instances to the contrary in my mind. I know cases in Connemara where there were sixty girls in a class, and forty of them went to America?—Out at Sheep's Head there is a townland called Thooreen. There are four families living on it. It is the only townland in the parish where the population has increased since 1881. In 1881 the population was twenty-seven; in 1891 it was thirty-one; and in 1901 it was thirty-two. Only one emigrated from that townland for the last nine and a half years, and that man came back again and settled down near Thooreen. The valuation of that townland is £13, and the population thirty-two. These people are working the land, and they fish. They were isolated from the world. They were away from a public road—perhaps a mile and a half. These people live comfortably. The only want of comfort was that the houses were miserably wretchedly bad hovels. I mention that to show that if the poor people watched the sea and utilised it as these poor people do, there would be very little land hunger, and very little hunger at all. On these little lots they live very comfortably—four families. I am happy to say the Congested Districts Board has made a road through the land, and is building four houses for the poor people, giving them £20 each of a grant.

Mr. A. B. TURNER examined.

45731. CHAIRMAN.—You appear on behalf of the Landowners' Convention, and have also been nominated by the Bishop of Cork?—Yes. Before I go into my own evidence I wish to deal with one or two points referred to by the previous witness. One is with regard to the statement made by Mr. John Barrett that he was not the owner of a certain townland. That statement would appear to be contradicted by a receipt which was issued from our office. Mr. Barrett was right. Our office was wrong. The occupation of the townland did not revert to Mr. Barrett, but to another co-owner. Therefore, the mistake which Canon O'Leary fell into was caused by our office, and Mr. Barrett was perfectly right in the statement he made. Another matter that I wish to refer to is with regard to Mrs. Furlong's estate. It has been stated that Mrs. Furlong sold her estate to the Congested Districts Board at a certain price. She did, but that price was not agreeable to Mrs. Furlong. It was the price she was obliged to take. Her position was this. The tenants refused to pay their rents. She was a poor woman and unable to fight them. Therefore she took whatever she could get.

45732. Was there an absolute refusal to pay rent or did the tenants withdraw an amount equivalent to what they thought they would get if she were going to sell?—The tenants withheld the whole of the rents.

45753. What was the number of years' purchase?—I understand from Mr. Ellis that it was equivalent to an average of eighteen years' purchase all round.

45734. Most Rev. Dr. O'DONNELL.—Would not that be as much as the average paid under preceding Purchase Acts?—That is not a fair criterion. Old Acts were worked on higher rents.

45735. CHAIRMAN.—Was it eighteen years' purchase with or without the bonus?—Without the bonus.

45736. That would bring it up to twenty-one years' purchase with the bonus?—Yes.

45737. Most Rev. Dr. O'DONNELL.—That would be considerably more than the number of years under the preceding Acts?—I don't think so. You are referring now to the Ashbourne Act prices. I have sold estates under the Ashbourne Act at that number of years' purchase.

45738. But you seem to me to point to the fact that this lady sold under a certain amount of duress?—Yes.

45739. Don't you think that there is little room for that belief considering that she got as much for her property as property of that class used to go for under preceding Acts?—I don't think it is right to draw

July 13, 1907.

Mr. A. B. Turner.

any comparisons between the Act of 1903 and the preceding Acts. The Act of 1903 was founded on perfectly different grounds from any other similar enactment. It was brought about for the purpose of bringing about a great ameliorative change, and it was arranged at the Land Conference that the price should be increased in order that the transfer of land should be made.

45740. But was not it understood that under the Act of 1903 if the tenant paid about the same number of years' purchase as he paid under the preceding Acts there would be other inducements to improve the price for the owner. There was the bonus, and there were other inducements that I need not enumerate. I mention the matter merely because you said that this land was sold under pressure. My point is simply to call attention to the fact that the number of years' purchase for this property does not seem to be very small?—Mrs. Furlong has gone very carefully into all the circumstances of the estate. She had come to the conclusion as to the terms that she should obtain and yet not lose a very considerable portion of her income. They were considerably in excess of the terms which she did obtain, and afterwards took; but she had to do it.

45741. About the other matter; you would consider it a natural inference by Father O'Leary from the receipt given that the ownership was such as he described?—Absolutely.

45742. CHAIRMAN.—I take it that your point is that the prices that have ruled under the 1903 Act are necessarily higher than those that ruled under the Acts previous to 1903, because a different class of landowner has been tapped as it were; do I understand from you that in your view the majority of owners who sold under the Acts previous to 1903 were owners who, for one reason or another, thought it worth while, or were compelled by their financial position to sell at a sum which would not earn anything like their net income?—Precisely, and it was to meet that very class of vendors that the new scheme of finance which is embodied in the Act of 1903 was devised.

45743. The fact that under the older Acts the financial inducements were not sufficiently good to bring about a sale on an estate where the landlord looked to his rents as his sole menas of income?—Precisely. That is to say, in my own experience, which is a very wide one.

45744. Mr. SUTHERLAND.—We had it in evidence from a witness a few days ago that the object of passing the Act of 1903 was to increase the price of land; do you agree with that?—I do. It was found necessary to tap the class of whom Lord Dudley speaks. They were unwilling to sell. They could not see their way to sell. Selling has now, in Ireland, come entirely to a matter of business as distinguished from sentiment. To both sides it is a matter of business. I am concerned in the management of sixty-one estates in Ireland, and I do not think there is a single landlord for whom I am concerned who would not sell his property to-morrow.

45745. Mr. O'KELLY.—If they got their income?—Yes. It is the only thing they are looking for.

45746. How do you arrive at that?—I take, in the first instance, the rental of the estate.

45747. You have sold some properties?—Yes; not a very large number, but I have sold some.

45748. What was the procedure roughly between tenant and owner on the one hand, and you on the other?—I was approached in nearly every instance, either by the tenant direct or by a committee, or some of the clergy, or by a local solicitor, and they asked if the landlord was willing to sell.

45749. You say the landlords are willing to sell if they get their net income?—Yes.

45750. How do you place before the representatives of the tenants what the net income was?—I place before the landlord what the result of a sale on certain terms would be, and I have to explain to him what the result of a sale would be. I then offer to sell to the tenants at a price at which we can afford to sell.

45751. You say you are willing to sell sixty-one estates now if you get your net income; do you submit your books for examination to the representatives of the tenants?—Certainly not.

45752. Why not?—I don't see why I should.

45753. Most Rev. Dr. O'DONNELL.—Do they know the net income?—A tenant, I think, would be entitled to see his net income in my office.

45754. You say that this has come to be a matter of business?—Yes.

45755. You are willing to sell if you get your net income?—Yes.

45756. How are the tenants' representatives to know that you are not claiming more than your net income?—I don't see why the tenants should know. I think the tenants should be entitled to say "We won't buy at your price; we will leave it" and then you may be obliged to come down.

45757. But if, as you remark, it has come to be a matter of business between tenants and landlords, and you are willing to sell at your net income, then why should not you submit your books to show the net income?—I should take an individual tenant who came to me to treat on his own account. I could not treat with a lot of men and show them other people's business.

45758. What would be your object?—Simply to explain his position in the event of his purchasing at a certain price.

45759. Mr. O'KELLY.—Why would you not be free, frank, and open with the tenants and say, "Here are my books; my landlord is getting £10,000 net income from his property; give us a price that will give that." What is the meaning of concealment?—I should not at all object to that. I have here the rentals of the biggest estates in this country, and I am prepared to-day to place those rentals for inspection before the Commission.

45760. On any of those estates which you have sold, did you allow them to have access to the accounts?—I have never been asked for such a thing.

45761. Once the landlords admit that they are prepared to take their net income, and once the tenants say they are prepared to give the net income and do not wish to offer less, the business-like way of conducting negotiations in such a case would be for the landlord's representative to say, "Here are our books; this is what the income of the estate is; let us bring negotiations to a close in that way"?—I think it is an excellent suggestion, and what I would say in furtherance of the suggestion is let the books be submitted to the Estates Commissioners.

45762. That would suit you exactly?—I am quite prepared to submit my books.

45763. CHAIRMAN.—Suppose in a case of suggested sale and purchase the tenant were to say to the landlord or his representative—"We are perfectly prepared to pay a price that will assure the landlord in the future of his net income, but of course we are unable to know what the said net income is, and this being a matter of business, we are not prepared to take, offhand, the word of any party who may be a prejudiced party in the case, but if you will consent to have the landlord's books laid before an individual or an authority in whom we have confidence and who will declare to us what his net income is, we are prepared to abide by that and give it to the landlord," there would be no objection by you as representing the landlord?—No. On the contrary I think it a most valuable idea. I never heard it put so plainly before. I think the proper authority would be the Estates Commissioners, for they are really the purchasers.

45764. Most Rev. Dr. O'DONNELL.—You stated a while ago that your impression was that under the preceding Purchase Acts only land of a certain class had passed through the operation of the Acts from the owners to the occupiers: have you agencies all over the country?—Yes, my lord. My business is in twenty-seven out of the thirty-two counties.

45765. Would not you say that under the preceding Acts every class of estate, good and bad, was sold?—I think that probably you are right, but largely I think that the sales under the former Acts were by men who, as Lord Dudley described it, were forced to clear out, or were willing to cut their loss, as they said. That was one class, and another class was the man in the hands of the Landed Estates Court who had to sell. Those men were ruined.

45766. I know myself some of the owners who have sold and I have before my mind certain owners who sold and, as far as I know, invested the proceeds in building houses in Scotland and elsewhere. For instance, the Duke of Abercorn sold large tracts in Donegal, and of course he was not a necessitous landlord by any means. I mention that to illustrate what seems to me to be the general fact that estates of every class were sold under the preceding Acts?—I am

sure your lordship is right. I could only speak and would only speak about my own personal experience.

45767. Mr. KAVANAGH.—The very rich landlord and the bankrupt. Those were the two classes who sold under the Ashbourne Acts, as a rule?—That is what I say.

45768. CHAIRMAN.—Then you have got down to the man who is perfectly solvent, but who cannot afford to sell at a loss?—Yes.

45769. Who had only his Irish rents to look to for what has been called his family endowment, and it was necessary to provide a financial arrangement by which that man would be able to sell and retain his previous income?—Yes.

45770. Most Rev. Dr. O'DONNELL.—There was a very large estate in the West of Ireland, Lord Dillon's estate, sold to the Congested Districts Board. I doubt if the owner would belong to either of these classes. There was a pretty large rental and a great many tenants and the estate was sold by agreement with the Congested Districts Board at a very reasonable figure?—He has a fine place in Oxfordshire.

45771. CHAIRMAN.—Anyway it is not a new theory. It was the reason given practically in all the debates in the House of Commons for the promotion of the Act of 1903?—Yes. I think it would be a very useful thing if the Commission were able to bring some pressure which would initiate a system such as has been mentioned by some of the Commissioners of bringing the rent book to an independent body, such as the Estates Commissioners, and saying, "There is our income; there is what we want." Personally I don't see the slightest objection to it if the books have been properly kept.

45772. Most Rev. Dr. O'DONNELL.—You would have the incomings and the outgoings all produced?—Yes. I cannot see any objection to it if the books have been properly kept. If it would be agreeable to the Commission, I have before me the "Cork Examiner" of to-day, which gives an account of the evidence given at Castletownberehaven. Two estates have been mentioned, of which my firm are agents. One is the Leahy and the other is the Leigh-White estate. I should like to offer a little explanation as regards the former. The Leahy estate is in two divisions, one in the parish of Castletownberehaven and the other in the parish of Eyries. Both the clergymen who are connected with these parishes have given evidence and the facts are as stated by Canon MacDonnell. Terms of sale were arranged as between landlord and tenant. The tenants in the Castletown division were perfectly satisfied and the tenants in the Eyries refused to purchase. The Estates Commissioners were then approached. I think the evidence is that the Estates Commissioners were approached, but anyway it was decided that the estate should not be split up. It became then necessary to recover the rents. Canon MacDonnell came and said, "Are you willing to adjust the rents in my parish on the basis of the recent decisions of the Sub-Commissioners in the adjoining parish"? and I said, "Yes." That agreement having been come to further proceedings were averted and the rents were all paid. On the other division of the estate the tenants went into the Land Court. They had all rents fixed about a year ago. So I said to the landlord, "I think the best course is to accept all the rents, whether accrued before the fixing or after, at the newly fixed figure," but the tenants refused to pay any rent, so we were obliged then, of course, to resort to proceedings. I wish to make that matter known as widely as possible, as I think, at all events, that the idea has gone forth that the tenants were harshly treated.

45773. What was the consequence?—The consequence was that a great many paid. Some did not pay, and at present there is a state of great unrest in the Eyries division. All the tenants in Castletown have paid except one.

45774. Is there any proposition for the sale of that property?—Not at present, I should think. Now, in reference to the evidence of Father Harrington, of Glengariff, who appeared at Kenmare, I understand that he stated that a good deal of the best land in this division is embraced in the demesne of Glengariff and is in the hands of the landlord. With the exception of a small herd of fallow deer, all the cattle in the demesne are the property of the people in the glen. They are grazed at extremely reasonable rates, 2*s*. 6*d*. a month in the summer and 2*s*. a month in the winter, so that the people of the glen have the benefit of all the grass land in the glen. Mr. Leigh-White has not a beast there, except one horse.

45775. I think the chief point put forward by Father Harrington was that the demesne was hemming in the people there?—I don't think it does. There are two public roads going right through the demesne into the glens, and those roads are kept and maintained by the landlord. Father Harrington also spoke about a bridge over one of the rivers. An agreement was come to about three years ago between the landlord and the tenants through the intervention of Father Brown, who was then the parish priest of Glengariff, and it was agreed that the landlord should build the bridge and the tenants should make the approaches. The landlord built the bridge, but the tenants never made the approaches.

45776. Was not there a difficulty about the tenants doing their part owing to the fact that the property was private property and not public property?—The property was the private property of the landlord, and he had agreed to build the bridge if they would improve the approaches through his land.

45777. Was there any local contribution from the District Council?—No. There was to be no contribution.

45778. CHAIRMAN.—Was this bridge in connection with these two public roads?—In connection with one of them.

45779. I thought you told us the two roads were maintained by the landlord?—So they are, but they are dedicated to the public.

45780. If the landlord maintained the roads this subsequent arrangement is a kind of addition. You say in this case the tenants were actually to improve the roads?—It was an addition to it in this way. The tenants formerly crossed the river by a board as a footbridge. They asked that the bridge should be constructed to enable them to cross the river at all times without interruption from flood, and the bridge was built.

45781. Then if the roads to the bridge wanted improvement they must have been badly maintained?—There was a difference in height between the roads and the bridge which was proposed to be built, and what were required were approaches to the bridge and not new roads; simply approaches from the existing roads.

45782. How far?—Perhaps 100 yards. The bridge was put higher than the board had been. If you are returning to Glengariff you could not have a more agreeable walk than to go up and look at the bridge and go through the demesne.

45783. Most Rev. Dr. O'DONNELL.—Are those roads perfectly free to the public?—Yes. We have a gate, of course, but nobody is ever stopped. In fact, Glengariff demesne is used by the public of all classes, visitors and everybody else.

45784. CHAIRMAN.—Is there any other demesnes in Glengariff besides that?—Yes; Lady Ardilaun's, at Reenmeen, which is a very beautiful garden.

45785. Has not the landlord recently bought an addition to that demesne?—No. There has been an addition recently by the death of the Countess Ferrers. You could hardly call it a demesne. It is only forty acres. It is a beautiful garden. It is wonderful how tropical plants grow there. The old demesne was divided between the two sisters. There were only twenty acres each. By the death of the Countess Ferrers the twenty acres held by her have fallen into the hands of Lady Ardilaun. There is another little point in Father Harrington's evidence that I wish to touch upon: the want of a boat slip at Muccaragh. There has been a boat slip at Muccaragh for the last three years, to which the landlord contributed. The Congested Districts Board built the boat slip and invited the landlord to contribute, and he contributed.

45786. Most Rev. Dr. O'DONNELL.—My recollection is that he said that for want of a sufficient approach to Muccaragh the work did not give value for all the expenditure on it?—It is quite possible.

45787. Do you know anything of the approach there?—No. I have not been there since the slip was constructed.

Mr. Ellis.—It was not very good the last time I saw it.

45788. CHAIRMAN.—Will you proceed to your general evidence now?—I am a small landed proprietor and a large land agent, and have lived in Ireland nearly all my life. I am agent for a considerable property, embracing a very large area of the

July 13, 1907. — Mr. A. B. Turner.

scheduled districts of Bantry, Bere, and Berehaven. The land is, on the whole, poor and mountainous, but there are small portions of good land, which are found beside the rock and which yield a good return. The tenants also possess grazing rights over the mountains, and are generally well off for fuel. On the seaboard there are valuable fishings, but this subject has been so fully dealt with by Rev. Mr. Green that it would be superfluous for me to say anything about it, beyond expressing the opinion that, where such conveniences for fishing exist, they should be considered in fixing judicial rents.

45789. Do you mean to say that where small holdings lie on the seaboard and they have fishing facilities there that that holding should be rented higher than if there were no fishing?—Yes. I think there is a very good reason for it, too. I think that on those mixed holdings, of which we have been talking, the tenants very often devote more time to the wet ploughing than they do to the dry. That is, they are fishing when they ought to be looking after their farms.

45790. That assumes you fix a fair rent upon the holding, not upon the value of the holding, the produce it returns, but upon the mere power of the particular holder to pay rent?—Don't you think the question of economic rent comes in there, that by reason of the position of the holding it is worth more?

45791. Do you mean to say that if Mr. Rockfeller was to lease a house in London he should be charged £100,000 a year because he happens to have twenty-five millions?—No, but by reason of the position of the house. He would pay a great deal more for that house in Park Lane than in Bayswater.

45792. It would be very much more valuable?—And so these small holdings on the sea are made more valuable by reason of their position.

45793. Mr. SUTHERLAND.—Who is to get the benefit from the position?—I think the landlord is entitled to the position, because there are certain drawbacks, perhaps, which are taken into account in fixing the rent.

45794. To the landlord?—Yes.

45795. Where in Ireland?—Everywhere. Take up a pink schedule and you will find it included. Surely if that is to be taken in on one hand the other should be taken into consideration on the other hand.

45796. You think that on a holding of this kind there is a rent for value and a rent for accommodation as well?—Yes.

45797. You mean a rent by reason of the amenities which surround it, which in this case is the sea?—Yes. If you were conversant with the Act of 1881 you will see, "and the Land Commission shall take into account all the circumstances of the holding."

45798. Mr. KAVANAGH.—That means proximity to markets and soforth?—Yes, and proximity to fishing. That is a thing that is often lost sight of.

45799. Mr. SUTHERLAND.—The landlord is to get a return for what he gives?—Take another little point now as we are considering the question of economic rent. The farmers of Ireland until quite lately had the maintenance of all the roads in Ireland. Their ability to take road contracts arose from the fact that they were farmers and had horses which were idle at certain times of the year. That is another economic advantage of holding farms.

45800. Most Rev. Dr. O'DONNELL.—Would not you consider that it is the agricultural surroundings that have to be taken into account under the Land Act?—The instructions are to take all the circumstances of the holdings into account. I would respectfully recommend the members of the Royal Commission not to be unduly depressed by the rugged character of the country, or to form an erroneous opinion of the standard of comfort which obtains. The houses are, as a rule, substantially built, a large proportion are slated, the people are suitably clad, and the country is, in my opinion, worked in the manner most advantageous for the inhabitants.

45801. Would you apply that down towards the extremity of the Durrus peninsula?—I am not so well acquainted with the land there as with the Berehaven district, but I do think that there is a standard of comfort in Berehaven which is quite equal to the standard of comfort enjoyed in the poor parts of counties like Kilkenny and Carlow that Mr. Kavanagh is so intimately acquainted with. You will see just as good houses in Berehaven as you do in any part of Carlow. There are no considerable extents of pasture, nor land suitable for dividing up; the commonages are fairly and fully occupied, and the cattle offered in the late summer and autumn fairs of Bantry and Castletown are in good store condition. Some years ago the landlord was applied to to give bulls to certain districts. He gave them. They chose the cattle they thought best calculated to produce an animal that grew rapidly, with good weight, and matured at an early age, but he did not continue that since.

45802. CHAIRMAN.—On the question of cattle we were told in Kenmare—it may only apply to this particular part—that the people were obliged to keep their young stock until two and three years old, because there was practically no market for them as yearlings, or because the prices offered as yearlings was so small that it was not worth their while selling them at that—is that your experience?—I think it extremely likely that that is the case. These cattle running over very wild districts certainly don't come into profit as quickly as cattle in the big store-raising districts in Ireland. I quite agree with that.

45803. You think, as a rule, that they are kept by these small men until they are two or three years old?—Yes. They have immense conveniences both in the Kenmare and Berehaven districts for mountain grazing.

45804. If you go in for grazing and prepare your best, well, as a young animal, do you find it pays better to sell it as a yearling or to keep it for a year or two?—It depends on what line you are in altogether.

45805. If you are in dairying you want to get rid of it soon?—Yes. Year-and-a-half-olds go very well in the Longford district. They go to £7 and £8 and £9, when a two-year-old will go for £10, £11, or £12, and it often pays best to sell as a yearling.

45806. What will an animal under a year sell at?—They are not often sold then. They are then sold as calves, and will go at perhaps £3.

45807. Do you mean to say that in that district down there there are not many animals sold from the congested portions of South Donegal, Sligo, and Leitrim, at about six and seven months old, and so on?—I don't think so at all. If you are in a really big store country you don't see cattle as young as that. They are sold at home as calves.

45808. But as a rule they don't leave the country?—They don't.

45809. They pass between neighbours?—Yes, I think generally on the subject of emigration there is still much going away owing to lack of congenial employment and impatience of parental control. Emigration has lost much of its terrors since means of communication have been so cheapened and improved. Many emigrants return after a comparatively short absence, some to visit their friends—some to remain. These immigrants are the living witnesses of the earning powers existent in other countries; the young people are fascinated; wonder breeds knowledge; discontent breeds effort, and strengthens the resolve to be up and doing while there is yet time. I think there is a great deal of emigration. I think there will always be a great deal of emigration so long as the standard of wages is so low as it is. I have taken some trouble to go into this question with many people. Only about ten days ago I was staying with one of the most respected parish priests in the County Clare. He gave me that reason as one of the great facts in producing emigration. He said—"Saturday night comes, and the boys have worked hard the whole week, and there is nothing for them; everything goes into the hotch-potch common pot; but if a man away has to get five dollars on Saturday night he can do what he likes with it." I think until the standard of wages is improved in this country you will still have them going away.

45810. Mr. O'KELLY.—How does it make them go away?—It sets them thinking when they hear all these stories. At the same time many of them understand what people have gone through to get that well-nourished appearance they have when they come back; otherwise they would not go. There is another reason. When they go away Irishmen get on wonderfully well in the new countries. It was only the other day an American was telling me something I might tell you. When a man goes to America he

always obtains a civic position if he goes into a town or he gets a vote from the Town Council. It has been described by an American:

"There stood on the bridge a poor exile from Erin.
The dew on his raiment was heavy and chill.
Ere the steamer that brought him was quite out of hearin'
He was Alderman Mike introducing a Bill."

That is perfectly true.

48511. Most Rev. Dr. O'Donnell.—It is quite a tribute to the great country beyond the seas?—I think so. A small number of men go over to South Wales to work at smelting works in Swansea, and some few go to other parts as labourers. I think this form of temporary absence is particularly desirable. It has all the advantages of emigration without the pain of the long parting, which must be for years, and may be for ever. A man earns good money when away, and, as a rule, saves it; his mind is enlarged, he returns more tolerant, and more contented with his lot. The only industry existent in the Berehaven country, in addition to the fisheries is mining, at present carried on fitfully in the neighbourhood of Allihies and Ballydonegan, where the Berehaven Mining Company have their headquarters. These mines, which produce copper, were worked with most satisfactory results for many years; 1,300 men were employed, and good wages were paid. For some years past the working has not been profitable, but the lessees have not lost faith. Their experts assure them the mineral is there, but additional capital is wanted and is hard to obtain. Writing to me in April last on this subject, one of the principal shareholders says—"We find difficulty in getting the additional capital we want. Were the property situated in any other country but Ireland we would have no difficulty." This letter is explanatory of much that appears difficult to understand.

45812. Mr. O'Kelly—What is the explanation of what it is difficult to understand?—The restless condition of affairs in this country prevents men from bringing capital into it. They won't do it. These are hard-headed city men. They say to me, "Our men will put in no more."

45813. Because of the unsatisfactory condition of things pervading the country?—The restless condition.

45814. Unsatisfactory?—Unsatisfactory so far as capital is concerned. Nothing is more sensitive than capital.

45815. You think it desirable that a settled condition of things should prevail in order that these circumstances might be remedied?—Yes.

45816. How do you think they might be removed?—I should not like to offer an opinion on that.

45817. From your long experience and great knowledge you would be in a position to make suggestions?—My dear sir, you cannot tap me; I have no suggestions to offer; I have my own opinions.

45818. Mr. Kavanagh.—Do you think if there were a really good prospect of security that capital would be ready to come into this country at the present moment?—I think that capital is nervous about coming to Ireland at the present moment.

45819. But in the present case that you are quoting is not it rather nervousness about the earning prospects of the mine rather than the unsettled condition of the country, as you call it?—They did not give me to understand that in London, but at the same time I believe that that is what was at the back of their heads all the time.

45820. Mr. O'Kelly.—It did not frighten away the Chamberlain people from Arklow?—No. They are talking about going.

45821. Not because of any unsettled condition that prevails?—No.

45822. Don't you think that that fear is rather chimerical?—I do not think so. The fact remains you cannot get the money.

45823. Mr. Kavanagh.—That does not clear up the cause?—I don't know. I have another instance of a large property that is on sale. There is a very fine demesne. One of the leading members of the present Government came over to look at the place, and he said—"I would love to be the possessor of that place. I would buy it to-morrow if it were not for the disturbed condition of Ireland."

45824. Chairman.—I understand that these mines have been working for some time—is that so?—Yes.

45825. Therefore the people in London were people who have had some years' experience of the conditions in the Berehaven peninsula?—Yes.

45826. Has anything occurred since they originally started the mines which would make them think that their capital was in insecurity?—I don't think so.

45827. If that were so would not you think that the reason for telling you that they could put no more money into it was much more due, as Mr. Kavanagh suggests, to the fact that their experience has shown them that it was an industry which, perhaps, would not bear the addition of any more capital?—I think there is something in that, because the inquiries which they made were coupled with a request to us to reduce the royalties; so that would certainly bear out what you say.

45828. Most Rev. Dr. O'Donnell.—What was the royalty?—One-twentieth; that is only 5 per cent.

45829. If there were a prospect of the industry struggling to its feet again would you be willing to reduce the royalty?—Yes. We have already said that. The mines are on different estates. The estate I represent controls 11-21ths, two other estates control 4-21ths each, and another estate controls 2-21ths.

45830. You mentioned a moment ago that some member of the present Government would have bought an estate in Ireland were it not that he considered the country unsettled?—Yes.

45831. Would he have been a Cabinet Minister or someone else who was anxious to escape from the discharge of his duties to this country?—I believe he is a Cabinet Minister.

45832. Mr. O'Kelly.—This enterprising gentleman would come to Ireland but for the disturbed conditions that prevail. Could you indicate what those conditions are which frighten them?—Yes; the socialistic tendency of legislation. This is a very large and beautiful place, but he saw there was a possibility when he purchased it that some Act would come in by which he might be forced to relinquish perhaps half of it.

45833. And he is a member of the Government responsible for the socialistic tendency?—Yes.

45834. And he has voted on more than one occasion for the principle of compulsory purchase if he is a member of the present Government?—I cannot say. I don't think compulsory purchase has yet been before the House of Lords.

45835. Almost every Liberal member within the last five or six years has voted for resolutions in favour of the application of the principle of compulsion to Irish land; yet the moment it comes down to this gentleman's own case he shrinks?—You are perfectly right. He shrank so far that he declined to purchase the place.

45836. Do you think a great deal of weight should be attached to the views of a man who would be guilty of oscillation of this kind?—I have no right to criticise him. I would now like to speak particularly of the largest estate for which I am concerned in the district—that of Mr. Edward E. Leigh White. The area is some 65,000 acres, the average rent about £6, and the rental about £11,000. This estate is eminently fitted to be taken over by such a body as the Congested Districts Board, whom, for the purposes of my argument, I assume to be a benevolent despot, whose mission is to scatter plenty o'er a smiling land while keeping a close watch on classes who are the object of its care. What I mean is this—that the estate is largely occupied by small tenants, very tenacious of their rights and very fond of litigation; so if they were dealing with a body who were in a position to arrange the property and stripe all the holdings, and settle the grazing rights and things of that sort they would be likely to be much better off than they are at present; but they should have somebody in authority over them to make them do what they are told, and they should not be allowed to disobey regulations. I take a period of ten years, from 1895 to 1905. During that period the full rental was received, and only two ejectments were carried out. I put in the ordinary rentals of the estate for examination. Some years are missing, the rentals having been destroyed by a fire which burned down the estate office in 1902. I submit that, on the above statement, coupled with the evidence of sales of tenants' interests, of which I return 88 examples, the average working out at 28 years' purchase, it cannot be held that rents were exorbitant.

July 13, 1907.

Mr. A. B. Turner.

45837. Most Rev. Dr. O'Donnell.—I don't quite understand the 28 years' purchase?—28 years' purchase of the existing rents was paid for the occupation interest of existing tenants.

45838. By other tenants who acquired the tenant-right?—Yes. During the year 1906, a large number of originating notices to fix judicial rents were served, and at the hearings last winter rents were uniformly reduced all round by 25 per cent., the entire of this reduction falling on the landlord's margin after all outgoings of every description have been discharged in full. It is a point to be borne in mind that some of these farms had been sold at figures that more than doubled the rent on the purchaser. It cannot be a subject of surprise that the wholesale reductions all over the country, entirely uncalled for on the plea of any fall of prices, have made property owners distrustful of the fairness of the Land Commission. All the parties interested, both landlords and tenants, have come to the conclusion that steps have been taken to lower the generally accepted standards of value.

45839. At the same time I suppose that the cost of labour and the cost of living have gone up?—I don't think there has been any very great increase during the last few years in the cost of labour or the cost of living either.

45840. Would it be that the Land Commission had it in their mind that the cost of labour combined with the increased cost of living justified the reductions that they made?—I don't believe there has been an increased cost of living and I don't believe there is any appreciable increase in the cost of labour. Labour is certainly scarcer and would therefore command an increase.

45841. Mr. Kavanagh.—Surely the standard of living has increased?—Yes, but the cost of living has not increased.

45842. You think not?—No. I don't think so at all.

45843. Mr. O'Kelly.—Is there no relation between cost and standard?—There must be some relation between cost and standard.

45844. You state that the parties interested have come to the conclusion that steps have been taken to lower the generally accepted standards of value?—I have heard it stated that the tenants stated that the Land Commission were going to reduce rents more than ever before.

45845. Have you ever heard it suggested that during the long period of office of the Conservatives they departed from a practice Mr. Gladstone observed when he wished to hold the balance fairly between landlords and tenants and put gentlemen on the Land Commission who could not be considered very partial to the tenants?—I have certainly heard it suggested.

45846. Could you say that any other witness who has come before this Commission has said on the part of the Landlords' Convention that they were distrustful of the Land Commissioners?—I cannot say that, because I never read a single bit of evidence given before this Commission, but I can speak for a great many people in association with the land.

45847. Your evidence is that there has been wholesale robbery of the landlords?—Yes; I am quite of that opinion.

45848. And that for the last fifteen or twenty years they have been engaged in practices that would not commend themselves to fair minded people?—It is a very wide question. I am with you to a great extent.

45849. At present you are suggesting that the whole administration of this Commission has been a failure, is not that what your evidence amounts to?—I don't think so, quite.

45850. You say the wholesale reductions were entirely uncalled for?—I am speaking of the last two years. Remember I had previously brought you up to the Act of 1903.

45851. Mr. Kavanagh.—The reductions on the second terms?—On the second term rents within the last year or year and a half.

45852. Why would you say on the last year or year and a half?—Because additional Inspectors and Sub-Commissioners have been appointed who take a much lower standard of value. I think an unfairly low standard of value.

45853. Mr. O'Kelly.—Do I understand you to say that the fact that we have had new appointments has weakened the administration of the Commission?—I think that the Commission has been immensely weakened by the Act of 1903, which reduced the inspection from two Commissioners to one. They took a most unfortunate step in reducing the strength of the Commission when they want it to be strongest. Enormous sums are being spent both on salaries and on maintenance, yet the Commission is weakened. Bear in mind that 90 per cent. of the applications that are made to the Land Commission are made on one question and one question only—the question of the fair value. I think that two heads are better than one in going over a farm especially.

45854. That is from the numerical point of view, but from the point of view of fairness?—You have two men who will probably be of the same opinion.

45855. You would not mean any reflection on the Commission as appointed?—Yes, I would.

45856. Within the last two years?—Yes I mean a man now appointed may hold his appointment simply by reason of his services. If his service is not satisfactory to the powers that be they are apt to go.

45857. Do your remarks apply to the appointments made before the last one and a half years?—To some degree.

45858. Therefore there have been blunders by both Governments?—I am with you there altogether.

45859. Would you be surprised to learn that before all these Commissioners were appointed within the last two years they had to submit themselves to a most searching test as to their fitness for the appointment?—They were not obliged to go through the test that they were obliged to go through before that. We have been told that openly.

45860. Would your remarks that men are appointed simply because they are pleasing to the powers that be not more accurately apply to the appointments before one and a half years ago than to those appointed since?—No. I think the appointments made before that were very mixed. I think really they were impartially made. Remember the appointments were not drawn from the landlord class.

45861. Could you tell us anything that would justify the removal of some of these men?—I think I can explain it, though I cannot justify it: it was due to the exigencies of the political situation.

45862. Most Rev. Dr. O'Donnell.—Would you have any suggestion to make as to powers that would make them independent of satisfying the powers that be, the Government of the day?—I should like to see the privilege availed of which is not sufficiently well known, and that is, that the landlord and tenant can apply for the services of two Commissioners without any preliminary hearing or expense of valuing, and I know in plenty of instances that would be sufficiently availed of if it was sufficiently well understood. You are a landlord and I am a tenant. There is one subject of debate between us: what rent should be paid for a certain class of land? The law entitles us to ask the Land Commission to send down two valuers and settle the point at issue between us. If it was more largely understood and availed of you would not have the trouble and expense of going before the ordinarily constituted Land Court. Fully 90 per cent. of the cases that are heard before the Land Commission are heard on one point only—the fair rent question. What do you want with the legal Commissioner? In any case where there is a legal point it could be specially earmarked for the attention of the legal Commissioner, but we should have two lay Commissioners.

45863. For that to work out well you and I should have confidence in the two valuers?—Yes.

45864. How should we get the appointment of the valuers to secure that confidence?—Neither of the contending parties should have that power. That must remain with the Government.

45865. I understood you to say to Mr. Conor O'Kelly that it was a vice in the system that the men appointed look to the view of the Government in power. Would there be any way of getting men who would not?—I am afraid not. I am afraid a man must always look to his bread and butter. It is human nature. If I think I am going to lose my job at the end of the summer unless I please those who employ me I am apt to give every attention to their wishes.

45866. Mr. Kavanagh.—It is possible for landlord and tenant to apply to have valuers sent down now?—Yes. Generally when those applications are made they send down two.

45867. What if there is a disagreement?—They ould have the ordinary appeal.

45868. Then you are in as bad a position as you are t present?—In very few of these cases is there any ppeal.

45869. Mr. O'Kelly.—The Government lately in ower was supported by the landlords in Ireland?—nd very badly they treated them.

45870. I infer from what you say that the Commis-oners rather tried to please the Government in ower with the sympathy and support of the landlord arty?—I don't think I can go that far. In the Sub-ommission of what you call the Tory party there is very strong leaven of a democratic element from the orth of Ireland. The North of Ireland has been the upporter of Unionism all through this country——

45871. You mean certain constituencies in the orth-east corner. Bear in mind that the majority of he people in the North of Ireland are not in favour the Unionist position?—I would not say that.

45872. The majority of the seats are against them?—I know, but then I would say certainly the north-ast.

45873. The Nationalist party have sixteen seats out thirty-one in Ulster?—I should rather say that he party who do not support the landlords are in the ajority.

45874. It is a great mistake and one that people ten make to think that Ulster is pro-landlord?—o; it is pro-Union.

45875. Not pro-Union either. The majority of the eats of Ulster are against the Union?—It is a very ose thing. While the Tory Government were in ower they were obliged to consider the sympathies f the Ulster tenant farmer. Even the most rabid rangeman in the North of Ireland is just as strong s anyone else to get as cheap a rent as possible, but he remark applies on that—once you get it fixed he ill pay it.

45876. I think that that remark applies to all the ountry?—I wish I could say that. The Government ave, I hold, resorted to administrative persecution, measures of doubtful legality and manifest injus-ce, producing most embittering effects. Legisla-on has also been most one-sided. I would refer par-cularly to some provisions in the Land Acts of 1887 nd 1896. The first-mentioned gave lessees the right have their contracts broken, but not the lessors. he second-quoted Act refused to allow a holding pon which a judicial rent had been fixed in error, wing to any cause, to be reconsidered, as illustrated y the case Lefroy v. Goff, while permitting a tenant have his case re-heard, no matter what ruling was ade previously. I refer to the Act of 1896.

45877. You have referred to administrative preju-ices?—Yes. I had 100 land cases in one district. was making preparations for the hearing of these ses, going over the farms, and making the usual aluations and preparations. Three days before ese cases were heard they issued a supplementary st of forty-six cases to be taken before the 100. I id I could not possibly deal with these cases in me. They said—"No matter; whether you are ady or not we will go on."

45878. That may be due to defects in administra-on?—I say administrative persecution.

45879. How can you saddle the Government with at?—They are the Government's servants. That is hat happened. We made our protest, and said we uld not deal with these cases, and they said—Whether you can or not we will deal with them."

45880. Mr. Kavanagh.—It is rather far-fetched to lace that on the Government?—I will leave that ith yourself. I only tell you what happened.

45881. Most Rev. Dr. O'Donnell.—But taking your atement for what it is, must not you feel that it as very much more easy for a powerful body like e landowners to look after their own interests than r poor tenants from remote districts who know othing about law?—Those cases were to be all heard one district. We had already an enormous list f 100 cases in which we were the only landlord con-rned. We were wading through these cases—it akes a great deal of time to get over 100 farms—hen suddenly we had these forty-six farms of which e had no notice sprung in front.

45882. The procedure of the court is not known to e, but it would occur to me that a body of tenants nowing little about law or the means of defending their own interests would require more indulgence from the courts than others with trained intellects and the advantages of legal advice?—Possibly they would, but that question does not arise in this case.

45883. Mr. Kavanagh.—Probably the change of programme was as inconvenient to the tenants as it was to you?—Possibly.

45884. Mr. Sutherland.—I take it that your objection is to the whole trend of land legislation since 1881, by which the absolute power of the landlords was interfered with; am I putting it too generally?—I do not put it so strongly. I think there was a great deal in the Act of 1881 that was necessary.

45885. It was subsequent legislation you object to?—Yes. I think we have gone a bit too rapidly.

45886. Mr. O'Kelly.—Did not the Act of 1881 carry subsequent legislation with it?—I think the Act of 1881 was panic legislation at the time, and I think it might have been framed in a way that would not have made subsequent legislation necessary on the socialistic lines that have been developed.

45887. You mean by socialistic confirming the rights of the tenants in their holdings?—I won't say confirming, but establishing new rights. Can anything be more socialistic than the purchase of land on public credit?

45888. Mr. Sutherland.—Is your idea of socialism that the State would do for an individual what the individual ought to do for himself?—Yes. I am very largely of that opinion.

45889. You heard the evidence given to-day before this Commission, and that has frequently been given, with regard to making roads and piers and that sort of thing, which, in olden times, people would be let do themselves. Are not these socialistic proposals?—I have a good deal of sympathy with much that has been done in that way.

45890. You have sympathy with these proposals with regard to the State making things that previously people made for themselves?—I am afraid I must admit I have.

45891. That is socialism?—Yes.

45892. So, after all, you are a bit of a socialist?—We have poor people who are unable to do these things.

45893. Mr. O'Kelly.—Which would you prefer—socialism or confiscation?—Confiscation is a much larger word; I would prefer socialism.

45894. What is the socialism which obtains in Ireland at this moment doing but trying to undo some of the wrongs of the Cromwellian confiscation?—If you go back to that——

45895. Time is not right nor wrong?—No, nor do two wrongs make a right. With reference to the forty-six cases in which Mr. Kavanagh has raised the point that the tenants were just as much inconvenienced as the landlords were, these forty-six cases were put in the supplemental list at the request of the solicitor for the forty-six tenants, so that the tenants were at no disadvantage, for they were prepared.

45896. Most Rev. Dr. O'Donnell.—What exactly strikes you as socialistic in land legislation subsequent to 1881; are you in favour of land purchase?—Yes.

45897. Was that before your mind when you spoke of socialistic legislation?—To some degree. I feel that the trend of legislation has been unfair to the landlords. Take the Act of 1887. There you had an Act which enfranchised the leaseholders. Any man was entitled to go into court and break his contract.

45898. That was carried by Lord Salisbury?—Yes; it was a Conservative Government introduced that. If they had said a lessor was free to go into court I should have had nothing to say about it, but the lessor was bound, while the lessee was free.

45899. Whatever you say about socialistic legislation you are in favour of purchase?—Yes. Purchase is the only solution of the present deadlock. Matters have come to a deadlock in this country. I am in favour of it and willing to facilitate it as far as I can.

45900. Do you apply the term socialistic to that Act?—I think that the whole trend of legislation is socialistic.

45901. I suppose that there is a Christian socialism that can be approved of?—Yes. I am with you there. We are now dealing with this big estate here, and I will give you every facility to the Congested

July 13, 1907.

Mr. A. B. Turner.

Districts Board to take over this estate. They are at liberty to come into my office to examine the records of this estate for the last twelve years, and to see for themselves exactly what has been done during that time; that is the Bantry estate, on which we are sitting at the present moment. I have here a bundle of rentals which you might examine.

45902. I am perfectly sure that it would be very interesting, yet, for my part, what I would say would be this, if you were going into that at all I should greatly like to look by chance into any other of your estates?—That would be difficult—I have got seven offices.

45903. But what you state to us I shall follow with great interest?—I will leave them with the Commission if you wish. They go over a great number of years. They are the originals. I took them out of the safe to-day. The Congested Districts Board has done a lot of work in Berehaven, principally of the nature of improving means of communication, by making new roads, building piers, boat-slips, etc. The work has been of a most beneficial and practical character, and where experience has shown the arrangements made to be inadequate or unsuitable, the Board have taken steps to remedy the defects. I am informed the Board were offered at least one estate, the Puely estate, in Berehaven, but declined to purchase it, on the terms accepted by the tenants.

45904. The reason is that since this Commission began its operations the Board has not bought land, except where the land was particularly favourable for its operations?—The Board offered to purchase about 1,500 acres of what is known as the Bantry estate (Dursey Island), but the price was such as the owner could not possibly accept; and the property was subsequently bought by the tenants at a price agreed upon, practically 50 per cent. in excess of that offered by the Congested Districts Board.

45905. The tenants agreed to pay 50 per cent. more than what was offered by the Congested Districts Board?—Yes.

45906. Mr. KAVANAGH.—Is the purchase carried through?—It is not finished. We have been receiving interest for two years.

45907. Most Rev. Dr. O'DONNELL.—Will the Estates Commissioners have anything to say to the final arrangements?—They will. It is not a judicially rented estate.

45908. So they may go into an examination for value?—Yes. When the recommendations of the Congested Districts Board's valuer were submitted to me, I asked to be supplied with the detailed valuation, but this was refused. I most respectfully submit that this Star Chamber method of dealing is fraught with evil. It is calculated to engender suspicion. A man is convinced there is something wrong in the premises upon which the valuation is founded, but he is denied the opportunity of examining these premises, or the amplified conclusions to be drawn from them, and is simply told "These are our figures, take them, or leave them.".

45909. You have the correspondence?—No. I could send it to you if you wish. They sent me the total valuation of Dursey Island. I asked them to submit to me the figures on which the valuation was made, and they absolutely refused, and said, "No; you must take it."

45910. I think generally those figures are not submitted?—Now in the case of evicted tenants' holdings—I have very few of them, but we have four—we asked to have figures submitted as to how they arrived at their conclusion, and they would not give them to us.

45911. I think if you could see Mr. Doran that difficulty could be got over?—It was Mr. Doran made this valuation. I think it might have been better if I had accompanied Mr. Doran.

45912. Yes; probably it would be more likely to lead to business?—The same remark applies to the work of the various inspectors employed in the work of arranging for the re-instatement of the evicted tenants. Their valuations are tendered in bulk to the landlord, and the terms are frequently under the figures upon which the landlord has arranged to sell to his occupying tenants. I have, at the present moment, some cases of this description. I am most anxious to facilitate the re-instatement, but I am precluded from doing so by the terms offered, which would, if accepted, ruin my sale to the purchasing occupiers. A great ameliorative measure is brought in, but the machinery devised to work the measure is so clogged and hampered by niggardly administration as to render it very largely inoperative.

45913. Mr. KAVANAGH.—You must understand that the Estates Commissioners when they buy land to re-instate evicted tenants have to consider that they have to build houses, make fences, and stock the land?—There is where I think they go outside altogether. I quite well understand their coming to me and saying, "We have got this parcel of land; it will not be useful until we do certain things to it," but they have no right to take into consideration the question whether they have to make advances to the incoming tenants.

45914. Leave that out of consideration; but they have to build houses?—Sometimes; not always.

45915. Don't you think their offer would be more if there were habitable houses on the lands?—It ought. That is why I say if they would let me have figures, saying, for instance, they take £50 off because they have to build a house, that would be fair; but if they say—"We take off £100 because we have to lend money for stock" that is quite a different thing.

45916. But if he has to build a house, make fences, and perhaps drain the land?—I think the first two are the important questions.

45917. He cannot, under those circumstances, offer as much as you would expect for a fully equipped farm?—I am with you altogether there.

45918. Most Rev. Dr. O'DONNELL.—There are only four altogether?—Yes.

45919. There are no others on the places yet?—Not yet.

45920. It is a matter that can be arranged?—I hope so, and I hope it will be arranged. It is not on this estate at all. We have not a single evicted tenant on this estate.

45921. Lately the Commissioners are making large grants in the case of evicted tenants?—Lately I was invited to meet the Commissioners to confer with them, which I thought was a very valuable thing.

45922. So it may probably lead to the re-instatement of these men?—I think it most probably will.

45923. I have looked with interest over the list you supplied, showing the number of years' purchase of rent paid for the tenant-right by purchasing tenants, and I notice what I have frequently noticed before in other parts of the country, that the number of years' purchase goes up directly in proportion to the smallness of the holdings?—You are quite right.

45924. The smaller the holding the bigger the number of years' purchase?—Yes. There are more persons prepared to take and work small holdings than big ones. The market is wider. A man say he can stock ten or twenty acres. He could not look at 100.

45925. The land is the only industry they know particularly well, and the small holding is within their means, while to pay the money for a big holding is impossible?—That is altogether the case you will find all over Ireland. You may take the average for large holdings at something like eight years' purchase, and for small holdings of from twenty to twenty-five years' purchase.

45926. Mr. KAVANAGH.—Then, you would not agree with Mr. Finucane, that the small holder is worse security to the State than the large holder?—I think that the small holder is even better security to the State. I never yet knew any case in my experience where we have no combination that you cannot pull a small tenant round, but if a big tenant gets broke he is done for.

45927. Most Rev. Dr. O'DONNELL.—You said that although a certain class of people in the North of Ireland were exceedingly anxious to have their rents reduced, yet when their rents were reduced they paid regularly?—Yes.

45928. Take the district about here; is it not your experience that on your own estates in Cork, Kerry, and elsewhere the small Irish occupiers are, on the whole, very punctual in meeting their obligations?—My object to-day in tendering you these rentals was to prove to you exactly what you have said. A better class of paying tenants than those of West Cork and those parts of Kerry with which I am acquainted, and also of West Clare and West Galway there is not in the world, until there is trouble.

45929. You would not put any class of tenants in the North of Ireland before them?—They are splendidly paid. I am most anxious to tell you that

because we have heard it said that the rentals in the congested districts of Ireland were paper rentals. They are a splendid lot of fellows. I heard you were visiting that country which extends from Carrigaholt to Loop Head. I am agent for that district, and they are a splendid lot of fellows.

45930. Mr. O'KELLY.—I am interested in your statement about the 1,500 acres which the Board desired to buy, and as to which you say they refused to give particulars of their valuation. Who opened the negotiations—the Board or the landlord?—The position was this: Sir Antony MacDonnell sent for me and asked me would the owner be willing to sell the property in question to the Congested Districts Board, and I said yes.

45931. Then, I suppose they communicated that to the Congested Districts Board, and the latter sent down an inspector?—Yes.

45932. Have you any idea what the recommendation of the inspector was?—I saw his report. I saw only the price that they were prepared to give. "That is my recommendation; we will give so much for the island."

45933. Do you know that inspector to be a man of considerable experience in valuing property?—I don't know him. I met him once. I don't know anything about his experience.

45934. It is not likely that the Board would send down a man who had no experience; it is not likely that the inspector, knowing that the Board wanted to buy the property, would put an unfair value on it?—My reply is this: the rents on the property had been twice reduced, and the tenants were perfectly agreeable to give me the price I have named to you. It was fifty per cent. over the value of the Congested Districts Board inspector.

45935. So although the valuer of a public authority reports that an estate is not worth more than a certain sum another public authority is to advance to the tenants to buy their holdings a price 50 per cent. in excess of the value put on them by the other public authority?—Yes, but the other body who came in and said they were willing to do this was the tenants themselves.

45936. But the tenants are not the only persons interested. The ratepayers are the ultimate security. Do you think that that is a satisfactory state of things?—No.

45937. Are the zones responsible for this?—No. The zones have nothing to do with it. They were not judicial tenants.

45938. Do you think really it is satisfactory that after an official authority, a body such as the Congested Districts Board, has said that the property is worth, say, £1,000, that another body will advance upon the security of the ratepayers, say, £2,000, for that property?—I think that the people who pay the price were far better judges that the Congested Districts Board inspector. I don't wish to go particularly into this case beyond pointing out that there should have been conveyed to me in Dublin a detailed estimate, which I could have gone into, so as to be able to say, "You are right there, and you are wrong there."

45939. I think, personally, you should have all the information you desire?—I am obliged to you for that. We have a man sent down with a roving commission at present, who says, "I have nothing to do with the agent." That is the system which at present obtains in this country. You made a point that the rent offices should submit their records to the Estates Commissioners or the Congested Districts Board to examine their books. For that reason I produce these documents to-day.

45940. Most Rev. Dr. O'DONNELL.—What is the date of this Dursey Island transaction?—About two years ago.

The Commission adjourned.

NINETY-SECOND PUBLIC SITTING.

MONDAY, JULY 15TH, 1907,

AT 11.0 O'CLOCK, A.M.,

In the Young Men's Recreation Hall, Schull, County Cork.

Present:—WALTER KAVANAGH, Esq., D.L. (in the Chair); Most Rev. Dr. O'DONNELL; CONOR O'KELLY, Esq., M.P.; ANGUS SUTHERLAND, Esq.;

and WALTER CALLAN, Esq., Secretary.

July 15, 1907.

Mr. E. Roycroft examined.

Mr. E. Roycroft.

45941. Mr. KAVANAGH *(in the Chair)*.—You represent this division on the County Council?—Yes; the Schull electoral division and a portion of the Bantry union also

45942. Are there two County Councils in Cork?—No; one only.

45943. One for the whole county?—Yes.

45944. There are two in the County Tipperary?—The law enacted two for County Cork also, but afterwards the two Ridings agreed to have only one County Council. Consequently there is only one, composed of fifty-two members. The area of Schull Union is 57,666 acres. The area of the congested portion, 41,669 acres, and the area of the non-congested portion is 15,976 acres. The Poor Law valuation of the entire union is £15,607 15*s*. The average rating in the union is about £7 10*s*. The Poor Law valuation of the congested portion is £11,409 7*s*. The Poor Law valuation of the non-congested is £4,198 8*s*. The population of the entire union is 10,243. The popula- of the congested portion is 8,159; the population of the non-congested portion, 2,084. It is about three miles in length, by six in width. The population live principally by fishing, aided by tilling patches of land, on which they cultivate potatoes and other vegetables. The seaboard is very congested all along, the people living there on patches, the valuation of which is no more than £2 or £3 each. It would facilitate them greatly if more slips and piers were built along the seaboard. The pier at Schull would want to be improved and extended. It is quite inadequate for the coal business, and for the amount of food stuffs landed there. Practically all the food stuffs for the people of Schull and around it are landled there, and practically all the fish cured on this part of the coast are cured there. I therefore recommend that the pier be improved and extended, that a slip be put at the end next to the end of the pier, and some sheds erected with corrugated iron as a shelter in the curing season when curing fish.

45945. You say that the places adjoining the sea are the worst congested? Could you give the names of them?—Yes, the electoral divisions of Dunmanus, Goleen, Toormore, Crookhaven, and Schull. Those are along the seaboard. All these are congested, and the inhabitants principally live upon fishing, aided by other things. Some of them work in the mines, and more take their living from the sea. They go aboard boats, and they serve in them. Whilst on the fishing subject, I would draw your attention to this—I think it would greatly improve the fishing business if there was a close season against trawlers in the spawning season. Also there should be a larger mesh for the taking of mackerel, because any amount of immature fish are taken by the small mesh and destroyed, because quite worthless. The mesh is too small; it is no use, and besides it gives a bad name to the quality of the fish. They destroy a lot of fish taken in this way. It is no value, and is thrown overboard. The fishing will come to nothing unless something is done. The trawlers destroy the spawning fish. The small mesh catches the young fish, and these are destroyed.

45946. Mr. SUTHERLAND.—But they are not allowed to trawl inside the three-mile limit?—The steam trawlers over twenty tons are not, but the sailing trawlers are, and the steam trawlers under twenty tons are allowed in.

45947. What size do you think the mesh should be?—I would leave that to the Department's experts.

45948. Is it your opinion that they catch immature fish through the size of the mesh being too small?—Yes; if the mesh were large they would catch large fish, and when it is small they catch small fish.

45949. What is the smallest-sized fish caught by this mesh?—I don't know. I would leave that to the experts. I give what I think, from my own point of view.

45950. Why don't the fishermen themselves use the large mesh if the small fish is the worst?—Some of them would not do so unless it was compulsory. Some of them would do so, but others would not, and when one does it they all do it.

45951. You say small fish are worthless?—I mean mackerel.

45952. But small fish are not necessarily immature fish?—They may not be immature, but they would be very small, and consequently worthless.

45953. Most Rev. Dr. O'DONNELL.—Do you live in this district?—I do, my lord.

45954. What do you suggest should be done to the pier?—Mr. Bryce was here twelve months ago, and he promised every support to us, and he promised an elbow to the pier of about eighty feet facing the north-east. There is a slip and platform required for the curing of mackerel. Sometimes you would be surprised to meet a couple of vessels, a steamer and a couple of coal vessels at the pier waiting to unload. The fishermen cannot at present cure the fish when those vessels are in, or they should take it to the corner of the field.

45955. Where do you suggest the sheds should be erected?—At the corner of the strand.

45956. Why not the curers themselves erect the sheds?—If the pier were extended, and the platform built, they might do so.

45957. Your idea is that the sheds should be made for the curers?—The curers themselves might put up the sheds if everything was made all right, but they would prefer that the Congested Districts Board would do it for them.

45958. Mr. SUTHERLAND.—Of course they would. You speak of modern appliances?—Some of them have them, but others could not afford to get tackle. If these were provided they would be in a better position to compete with the Manx, the Scotch, and the French fishermen. If our fishermen had modern methods they would be able to compete with the foreigners and others. If the Congested Districts Board didn't get more modern tackle for them it would be a great pity, as they could never afford to get it themselves.

45959. You speak of boats and the need of fishing tackle?—Yes; I speak of boats and fishing gear; I speak of all apparatus for fishing; although we are very thankful to the Congested Districts Board for what they have done in the past. I have been County Councillor for eight years, and during my time they have spent £200; £150 for a small pier at Castle-island, £25 for a small quay at Rossbrin, and £25 for repairing a small pier at Dunmanus, and the

County Council gave an equal sum. I have no knowledge of more than that. But in a congested place, and in a very important fishing district like Schull, I think it is a small sum for the Congested Districts Board to give us. I think it is very little. There are other places requiring improved piers and boats for the fishing.

45960. Where do you send the fish? Where do you deal with them?—They sell them to the companies—the buyers.

45961. Then the steamer comes round and takes them to Liverpool or America?—Yes.

45962. Are all the mackerel cured, or do you sell any fresh mackerel?—It is only in the spring that they sell them fresh. In the autumn they cure them.

45963. When they are taken away fresh they are iced, I suppose?—Yes.

45964. And taken by rail?—Yes; to Liverpool or Milford. I cannot say where they are taken.

45965. Via Cork?—Yes; steamers at Valentia and other ports take them.

45966. You were talking of improved material for fishing; does that apply to mackerel alone?—All sorts of fishing; long-line fishing of every description.

45967. They catch mackerel with seine nets?—Yes.

45968. Two boats go with one drift of nets, one boat at each end?—In some places they do.

45969. And some places the net hangs from one boat and drifts about?—Yes.

45970. Which is the more common case?—Some of the boats allow them to drift. It depends on the size of the boats and the number of hands they employ.

45971. With regard to that, what improvement could be made; would you say that the better way of catching mackerel was by means of a drift net?—I am not a practical man in that business.

45972. Were you never out at the mackerel fishing?—I was often, but I don't live by that. I have nothing personally to do with it only I could tell how it is from the information that I received from the fishermen.

45973. Your constituents?—Yes.

45974. Most Rev. Dr. O'Donnell.—I see that to this pier in your district there was a pretty large contribution given by the Congested Districts Board?—That was previous to eight years ago.

45975. They gave £400?—It must have been previous to eight years ago.

45976. Is it a useful work?—Yes. There are two or three little slips they built, one at a place called Dunkelly, and another that I was looking at the other day that would require a little more, and there are a few little bits of roads as well.

45977. Mr. Sutherland.—Where are they?—In Goleen electoral division, some three or four miles to the north-west of a townland called Dunkelly.

45978. Does your constituency go to the north of the peninsula?—It does. I represent the six electoral divisions on the Durrus side. Father O'Leary is in the parish of Durrus. Five of these divisions are congested and one is non-congested.

45979. Most Rev. Dr. O'Donnell.—Was there anything done to the Schull pier lately?—Not for a long time.

45980. How long?—About a dozen years ago.

45981. Probably Father O'Connor will tell us when that was done?—He might know the date. I think there was £1,200 laid out on it at the time. The County Council paid the greater portion of it. They did not pay it all. I am not sure. They added about eighty feet to the head of the pier. I think I may also say that there are a few congested portions in which a few little bits of roads would be very useful. I know one place in particular between this parish and the parish of Goleen. From the main road at Dunbeacon to this place is a mile. There is a river passing there. There is no way of coming out unless by crossing the fields. When they have cattle to take to a fair, especially in the winter, they must come out the night before and take it to some friend's house, so as to be ready for the morning. It is in the Dunbeacon electoral division. There is another road going from the Goleen district and if they get a grant from the Congested Districts Board the two could be connected.

45982. Part of your constituents are not fishermen—they are inland?—Yes.

45983. No opportunity for fishing offers, and they don't depend on fishing?—Yes; the greater portion of them. I have here a return from the census of 1901. I find 671 fishermen returned on the census as belonging to the Schull rural district, and I presume that there are about 200 or 300 more since added. I would say that they have become from 800 to 1,000, people partly living by fishing in the Schull rural district.

45984. But still there is a certain number of people not fishing at all?—Yes.

45985. What would you recommend to improve their condition?—I should suggest a large scheme of tree planting on the waste lands. We have a great amount of waste land that would be available for tree planting, and it would give a lot of employment and afford shelter.

45986. What do you call waste land?—Waste, moory land.

45987. Land that you could not graze or till?—You could graze it partially, but you could not till it. You could graze it for dry cattle.

45988. It is grazed at present?—Yes. There were 100 acres planted on the townlands of Mount Gabriel cut down by the landlord six or seven years ago before the landlord sold to the tenants. The land was quite denuded. Out of what the tenants have in their possession I am sure they would be willing to give to the Congested Districts Board or the Department waste land if they wished to plant it. the landlord had 100 acres of wood, and he sold the wood before he sold the land to the tenants. The wood was exported to England as pit wood.

45989. Mr. Sutherland.—There is no wood on it now?—Yes.

45990. Who did that?—The late Rev. Mr. Hicks.

45991. Was the timber there?—Yes; it was planted seventy years before that.

45992. Your point is that the ground should be planted again?—Yes. We had another mountain belonging to Lord Bantry. Before he sold it to the tenants he offered it for sale to the County Council or any other body that wished to plant it.

45993. Most Rev. Dr. O'Donnell.—You suggest that the large dairy holdings and untenanted land should be divided among the small holders and cottiers?—Yes.

45994. There must be some better class of land than you were speaking of to the Chairman and to Mr. Sutherland?—Some of the holdings round Schull are very congested. Some of them have the grass of a cow or two cows. What I would suggest is that other big tracts in the country should be bought up by the Congested Districts Board, and these poor people migrated from here to these places in the Midlands.

45995. You are speaking of agricultural land?—Yes.

45996. Where would it be found?—That is what I don't know.

45997. Have you any tract of land in particular in view?—There are only two tracts in the locality—two small places that would be available. They are held by dairymen at present. One would be near Goleen and another near Dunbeacon. 300 or 400 acres of land might be available if the Congested Districts Board bought them out.

45998. Would they be pretty near the districts where the small occupiers are found?—Yes. The headland is so narrow that most people are not more than three miles from the sea.

45999. So if these farms were made available for the enlargement of holdings the enlargement might take place without changing the situation of the small occupier—he could have an enlargement across his own boundaries?—Yes; some of them could in that way.

46000. By accommodation roads probably the addition could be annexed to the existing farms?—Yes, they could; both ways. I may mention also that a good many tenants here have purchased under the Land Purchase Acts. Lord Bandon was the first that was kind enough to agree with the tenants, and two or three more of the large properties were bought. There are a few more properties in the districts, and we cannot make the landlords or agents budge. I don't know the reason of that, as they were offered better terms than were given to the others who sold. I would suggest that the Congested Districts Board should approach these gentlemen to effect a sale, and re-sell to the tenants. The tenants are quite willing to pay what is quite fair and equitable.

July 15, 1907.

Mr. E. Roycroft.

46001. Have the tenants in these dairy farms any interest in them?—They have not. There are no tenants on some of them. Most of them are held by the owners themselves, and are let to dairymen.

46002. So if these estates were bought up by a body like the Congested Districts Board these lands would be available right away for the enlargement of holdings?—They would.

46003. On what estates are those dairy farms?—One is on Mr. O'Grady's and another on Mr. Somerville's, and there is another on Captain Townsend's.

46004. Have these been sold yet to the tenants?—No.

46005. Are the tenants anxious to buy?—Very anxious. It is very hard on the tenants to be paying double the rent paid by their neighbours on the other side of the boundary.

46006. Have they applied to the landlord to sell? They have.

46007. The answers were not favourable?—No, although they offered them the same as the others who had purchased, yet they would not take it.

46008. When did their neighbours purchase—was it under the Act of 1903?—They purchased about two years ago.

46009. Mr. KAVANAGH.—In case there were lands available for enlarging these holdings, do you think would the people migrate?—I am sure you could get small little colonies to go if they had land available elsewhere, and you would get good prices for the little patches left behind, so that there would be no great loss to the Congested Districts Board if they got places for them somewhere else.

46010. I don't think that the holdings which they would vacate would be able to be put up for public auction, because they would be needed for the enlargement of the holdings adjoining. Suppose you migrate one out of every three you would want that holding for the enlargement of the other two, so it would not be put up for public auction at all; but at the same time they have a certain amount of interest in it; do you think they would migrate?—I am sure they would be only too glad to get a place with more room to cultivate. They are too confined and congested where they are. These poor men have only one or two little cows. The people in this district live by raising dry stock and pigs, and the poor men with one or two cows have no opportunity of bettering themselves.

46011. Would they go to another county?—Yes; they would go anywhere that they would get a reasonable living.

46012. That is to say, if a certain number of them were migrated together?—Yes.

46013. It would not be worse than emigrating, would it?—No. They would not look on it like going across the pond at all. Most of the Irish people would rather remain at home if they had some sort of a decent living; but in spite of themselves they are driven to go.

46014. I suppose that the fishing community in your district consists of half-farmers and half-fishermen?—Yes. They may have one or two cows. They have small plots, and might till half an acre of potatoes.

46015. They don't spend all their time fishing?—Some of them don't. Some of them are half-cottiers and half-fishermen. More of them live altogether by fishing.

46016. Would they go in for the improved modern methods you speak of if they became fishermen altogether?—They would to a great extent. They would fish with long lines. All the people who come over from the Isle of Man fish with long lines, and catch conger, ling, and all that. Very little of that is done here. If they had proper appliances the people here would turn to that at certain seasons of the year.

46017. Is there any herring fishing here?—Not on a very large scale. There is on the Bantry side.

46018. There was at one time? Yes. They don't look so much for it.

46019. How many years ago is it since there was a herring fishing?—About twenty years ago. There is herring fishing here still if the people were in a position to look for it.

46020. Why was it given up?—When the mackerel came in they turned more to the mackerel than to the herrings.

46021. Is that more profitable?—It would be. This part here is the best for the mackerel. They stick more closely to it.

46022. It is easier fishing?—It is. They get a better price for the mackerel and they get a better market. Together with the tree planting there is another matter I would suggest. If a bacon-curing factory were established between three or four of the unions I think it would be a great advantage to the farmers of the locality, and if it was worked on the co-operative style, say by the unions of Castletown, Bantry, Schull and Skibbereen, Dunmanway and Clonakilty, at some central place where railways would converge, if a bacon-curing factory were established there it would give a lot of employment, and afford a ready market for the people who raise pigs. This is a very good pig-raising locality—one of the best in Ireland. A great many people live largely by raising young pigs. They have to bring them a very long way. Perhaps they have to come from Mizen Head or Crookhaven to Schull, twenty miles away.

46023. Where do the pigs go to?—To Limerick. Limerick men come and buy the pigs here more than in Cork, whereas if we had a factory at home it would save the cost of transit, and the profit would revert back to the people themselves.

46024. Would there be a profit?—Surely there would be a profit. How do the Limerick people make a profit?

46025. Then why does not private enterprise take it up?—If it was started by the Congested Districts Board I am sure they would follow suit then.

46026. You think that it would want a few years subsidy?—Yes. If a building were put up and they sent an expert to start the thing, if it was initiated once they would go ahead all right. There is a great improvement required in the congested district between Crookhaven and Goleen at a place called Dough's Strand. A lot of the land is at present waste with the water coming in. The place is submerged there and the children are prevented from going to school, and on Sundays and holidays the people are prevented from going to worship. At a place called Lissagriffen there was some bank that prevented the water and tide from receding. It formed an island lake, and the roads around the place were submerged and in a very bad state. I had the county surveyor to go see it and he estimated that it would take from £600 to £700 to do anything; and we are in such a bad way in this district especially, and we are paying so much rates, and many charges that it would be very hard for a small rural district to take that heavy expense on itself, and I would suggest respectfully that the Congested Districts Board would assist us in trying to remedy that, otherwise there will be a lot of waste there, the roads will be taken away, and there will be a great drag upon the poor ratepayers if they have to do it.

46027. Mr. SUTHERLAND.—Is it suggested to cut through the bar?—One way suggested by the county surveyor is to tunnel, and the other is to take away the sand by the edge of the shore and then the receding tide would keep it open. We don't know which would be better. We would like an expert to examine it and report on it.

46028. Mr. KAVANAGH.—The county surveyor is an expert?—If the Congested Districts Board would assist us we would like an engineer to see the place, and we would point it out to him.

46029. Most Rev. Dr. O'DONNELL.—Would this serve congested districts if it was carried out?—Yes, and it would save 100 acres of land at the edge of the sea. The sea has risen so high that it has gone into the fields, and the sand has followed the sea in there.

46030. I think you conveyed to our Chairman that there would be a local contribution?—Surely there would; but they could not pay all. We are paying two heavy guarantees already in that congested district, 9*d.* in the £ for the Schull and Skibbereen tramway, and 4*d.* for the Bantry Extension, and until lately we were paying another guarantee for the Ilen Valley, which is happily wiped off now.

46031. Mr. KAVANAGH.—How long is this flooding going on?—For the last two years or so.

46032. Why was not it flooded before?—I could not tell you. There was a drift of sand. Some storm or other diverted it in places. There was a river course from the mainland into it. It stopped the

low of the river, and the receding tide, after high water, used to remain there.

46033. Most Rev. Dr. O'DONNELL.—What estate does this adjoin?—I think it is on Lord Clinton's estate.

46034. It is not sold yet?—I think not. If the Congested Districts Board would go into that place and see what they could do I think it would have the desired effect.

46035. Mr. KAVANAGH.—How much would the County be prepared to give, do you think; has it ever come before the Rural District Council?—Oh, yes, several times, and we made application to the Congested Districts Board, and they made us some promise that they would go inspect the place.

46036. Most Rev. Dr. O'DONNELL.—What is the name of the work?—Dough Strand, in the Crookhaven electoral division, Schull Rural District.

46037. Mr. KAVANAGH.—Does it only affect the road?—All round the seaboard there the fields are all submerged. Thousands of tons of sand are strewn over the low-lying land.

46038. They are useles now?—Yes, and the poor farmers are not getting any redress from the landlords. They have to pay the rent all the same notwithstanding that it is no benefit to them practically.

46039. Most Rev. Dr. O'DONNELL.—Has any estate been bought by the Congested Districts Board in this neighbourhood?—Not one that I know of.

46040. Was there the Longfield estate?—That is here in Long Island, and perhaps Mr. Jagoe would be able to tell you about it.

46041. Mr. O'KELLY.—Is Lord Clinton willing to sell?—I could not tell you.

46042. Has he been approached?—I believe he has.

46043. What was the answer?—They had no means of dealing. I suppose he was asking too much.

46044. Did negotiations take place?—The tenants told me they did.

46045. Did any difference result?—I could not tell you what the terms were.

46046. The negotiations were abortive?—They were not successful. They did not go through.

46047. What was the cause?—I suppose that the landlord wanted too much. That is what I heard them say.

46048. Do you know exactly what he wanted?—I think he would not give more than four shillings in the £, or something like that, whereas they wanted 7*s.* 6*d.* on first, and 5*s.* 6*d.* on second term rents.

46049. Have any estates in this district been sold in the past?—Three or four principal estates, Lord Bandon, Mr. Hicks, Colonel Spaight, and the Edinburgh Assurance Company. The principal estates have been sold.

46050. Approximately, what was the number of years' purchase at which these estates were sold?—Nineteen to twenty years' purchase.

46051. Under the Ashbourne Act?—No. Under the Act of 1903. There was one estate bought out here under the other Act.

46052. Were there any estates here sold under the Ashbourne Act?—There was one sold at from eleven to twelve years' purchase—two islands.

46053. Were there any estates on the mainland?—Not one that I know of hereabouts. In reference to the Schull and Skibbereen Tramway, with its sharp curves and steep gradients, great loss is caused to the ratepayers in keeping up the rolling stock. The curves are so short, and the pull is so much on the engines, that they wear out very quickly, and I would respectfully suggest that the Congested Districts Board should give us some little subsidy to improve this. It would be a great boon to the ratepayers. Some time ago the Congested Districts Board were giving £500 a year to the Clyde Shipping Company, and their steamer used to come in here, but they discontinued it. If they gave £500 a year to the Schull and Skibbereen Tramway they would help to improve it, and cheapen rates for the inhabitants around here.

46054. Mr. KAVANAGH.—What company is running this line?—It is run by a committee of management for the County Council. It belongs to the County Council.

46055. Most Rev. Dr. O'DONNELL.—Did the steamer come into Schull?—It used formerly, but not for the last twelve months or more.

46056. Do you know what was the cause of the discontinuance of the service?—The subsidy was withdrawn from them. They were getting £500 a year from the Congested Districts Board. I don't know exactly what was the cause, but it was withdrawn, and they ceased running. It is from Limerick that most of the people here are supplied with foodstuffs now. There is a steamer plying here from Limerick.

46057. Mr. SUTHERLAND.—All the way from Limerick?—All the way from Limerick.

46058. How frequently does it call here?—Once a week.

46059. Does it come and go in the one week?—Yes; it brings about a couple of hundred tons every week here.

46060. What is the principal cargo?—Meal, flour, and bran.

46061. Most Rev. Dr. O'DONNELL.—Between what termini used the steamer of the Clyde Shipping Company ply?—Cork, Schull, Bantry, Castletown, Cahirciveen and Dingle were the chief ports.

46062. I think you will find that it was not the Congested Districts Board brought about a cessation of that service?—That I don't know, but the cessation took place anyway. If the Congested Districts Board would be so good now as to give a subsidy on the light railway we would be able to cheapen the rates and compete better with the other people.

46063. How much in the pound are you paying now?—9*d.* in the pound. The ratepayers in the Schull rural district and the portion I represent in Bantry, 6 electoral division, are paying that guarantee.

46064. Mr. KAVANAGH.—You suggest that it was badly engineered?—Very badly. It was only built nine months or so when the line went to pieces. They ceased working, and the contractor went away with himself and boasted that he took £25,000, and wrote a pamphlet afterwards as to how he would suggest that speculators should come to gull the old Grand Jury. He said they had nothing to do but keep a pack of hounds and give good champagne dinners and they would get off nice and light.

46065. Mr. SUTHERLAND.—I suppose the standard is higher on the County Council?—Much higher.

46066. In constructing a light railway they are tied down to the road?—Yes. The greater part of it goes on to the road. £57,000 was spent on the building of this railway, whereas the contractor did not really spend £3,000 a mile on it.

46067. Mr. KAVANAGH.—If you leave the roadside it would be a very expensive work buying land to go through?—The land was so poor where he went through that he had very little to pay for it. He made it like a snail creep, and took every bad patch of land where he had not much to pay for it. In some parts, if it were not for the care he used in maintaining it and driving the engine slowly, it would be dangerous to travel over, as the curves are so sharp.

46068. Mr. SUTHERLAND.—How many trains a day do you run?—Two each way and sometimes three in the summer.

46069. Mr. KAVANAGH.—I suppose that it is guaranteed for ever?—Yes, guaranteed at 5 per cent.

46070. Mr. O'KELLY.—On what capital?—A capital of £57,000.

46071. Do you get back half of that from the Treasury?—The Treasury only pay two-fifths.

46072. They do pay something?—They pay two-fifths.

46073. Would you think 2*s.* 9*d.* in the pound on agricultural land was an excessive rate?—No; I would not complain altogether of the rate. The separate charges are what we complain of. We are doing our best to keep down our own rates as much as possible.

46074. What was the amount of the separate charges in connection with the railway?—I do not know. There are also separate charges for public health, water, and all that sort of thing, which are useful. Then there are the defective postal arrangements which we have here, which are a public scandal. We have only one mail in the 24 hours from Skibbereen along the whole way to Crookhaven.

46075. Mr. KAVANAGH.—We are very glad to hear anything you have to tell us, but we have absolutely nothing to do with the Post Office?—I wish to make a suggestion. The 2 o'clock mail delivered to-day in Skibbereen won't arrive here until 10 a.m. to-morrow morning, whereas in the villages to the south of Skibbereen they deliver two mails in the day and we get only one mail. The mails to all the neighbouring

July 15, 1907.

Mr. E. Roycroft.

villages from Skibbereen are started first, whereas they leave Schull, Crookhaven, Goleen and Ballydehob to the last.

46076. Does your mail go by the light railway?—No. We approached the authorities on that and they would not give us a proper subsidy to run the train. The mail car is running side by side along the road.

46077. Most Rev. Dr. O'Donnell.—The postal authorities would not give you a subsidy?—They would not give us enough.

46078. Was there any evidence given before the Railway Commission with regard to this light railway?—I was going to be summoned myself, but Mr. Burke, of Skibbereen, one of our members, went to London on other business and gave evidence.

46079. I think that that Commission has not finished its sittings?—It has not.

46080. Would not it be a good thing to have cases of that kind put before that Commission?—I sent on a précis of my evidence and heard I will be called later on. It is a sad state of things to see the mail car running side by side with the light railway. The ratepayers are paying for it and will not be facilitated.

46081. Would the times of your trains suit the Post Office?—The committee of mangement could make suitable arrangements if they got a fair subsidy.

46082. Mr. Sutherland.—It is all a matter of price?—Yes. The authorities here would be willing to accept any fair terms even if a little fell on the rates in order to facilitate the general public. The subsidy the Postmaster-General would give us would not light the fires for us.

46083. Those who carry the mails now carry them more cheaply than you would?—There are two parts. When they come here the mail car then goes to Crookhaven besides, whereas we would only make arrangements to carry them between Schull and Skibbereen.

46084. Do you travel more quickly than the mail car?—Twice as quickly.

46085. Mr. Kavanagh.—I should have thought that you could do it more cheaply?—We would have to have a special train for the mails.

46086. Most Rev. Dr. O'Donnell.—But then the service would be an improved service provided by the train?—Yes.

46087. Mr. Sutherland.—You would carry passengers also?—We could. I would also like to refer to the mineral resources of this district. In every electoral division of this district there are large deposits of minerals composed of barytes and some other minerals, and I would respectfully ask the Congested Districts Board to send down an expert to test the mineral resources of the locality and have an expert report thereon with a view to having them developed. We have four or five mines working at present in the locality. Several other parts of the locality have not been developed or tested yet and may be very rich in minerals. The promoters and the capitalists don't wish to go prospecting themselves. It would cost too much money. If there was a diamond-boring machine sent down, with a view to developing the minerals of the locality and testing them, I think it would have a very good effect in developing the mines from Skibbereen to Mizen Head. There is not a single electoral division in the Schull rural district that is not known to have these minerals.

46088. Mr. Kavanagh.—They propose that the Board should do the boring for them?—They should send a boring machine and an expert. We have an expert here, Mr. Wauchope, who has travelled a lot of the world and has got four or five mines here and is working them very well. Other people would do the same if they were sure of having good minerals in their locality. They would not like to invest their money without seeing what they were going to do.

46089. Are the copper mines working well now?—Yes, fairly well. £30,000 or £40,000 has been laid out on plant and they employ a lot of men.

46090. Do you think that the State ought to do what private individuals should do?—For the development of the mineral resources of the country the State should do something. It would give a lot of employment.

46091. How many men are working in the mines?—More than 100. One of the mines is within three or four miles of Schull.

46092. Is there an idea that there is more copper in the district?—There is plenty of copper in the district.

46093. Most Rev. Dr. O'Donnell.—Your idea is that some body like the Congested Districts Board should have an expert to test whether the mines are worth working in districts where the people are under the impression that the ore exists?—Yes, that is exactly what I mean. There are four mines working for copper.

46094. Are they long working?—Some of them are only working recently; others are working a couple of years, and there are some gentlemen looking out for other mines between this and Goleen. They are prospecting also, but capitalists are slow to step in until they see something underneath.

46095. Have any of the local people any money interest in the mines?—Not much. The money is not here.

46096. It is a good thing to have employment for the men?—Yes. 120 miners are working at present and earning very good wages, from 15 shillings to 25 shillings a week. If the mines were developed there would be employment for 600 men, and this in addition to what the fishing is doing would be a very great help to the locality.

46097. Mr. Kavanagh.—How is the copper carried away?—They have carried very little away so far. They sent some to Swansea, but they have plant now themselves. They are grinding it and they have concentrating tables.

46098. Mr. O'Kelly.—Do they do the smelting here?—No; they have not done it so far. Eventually they will. At Ballycumisky, three miles from here, they have put up plant costing £20,000 within the last six months. This was a mine that was worked before. They knew there was copper there. If they had like experience of other localities between this and Mizen Head they would act in the same way there. There is a barytes mine going on for the last twenty years. That is worked four or five miles from here. The copper mines were worked about thirty years ago. They stopped when copper got cheap. Now, when copper is gone up to three times the price it was then, and is now £90 a ton, they have started them again and they have found new mines. There are plenty of capitalists willing to work, but they don't like to go to the expense of boring too deeply, but if the State found minerals there capitalists would come in and put down the plant and work them.

46099. Mr. Kavanagh.—You are aware that boring is a very expensive process?—I know that, but at the last meeting of the Department in Dublin four months ago they gave us some encouragement that they would send a boring machine to this county to test the minerals. We trust that the Congested Districts Board will aid us in recommending that that be done; but it would be a great improvement in the locality, and would disburse a lot of money among the people who badly need it.

46100. Are you a member of the County Committee of Agriculture?—Yes.

46101. Could you tell us anything of the live-stock scheme?—Complaint has been made that the congested districts were not as well treated as the richer districts. In one half-year there was a distinction made between them, but I think that has been rectified now, and will be all right for the future.

46102. Is your Committee in favour of the half-bred sire that has been sent down to this district?—It certainly suits some mares. Others it would not. It is according to the class of mares.

46103. Did the Agricultural Department ask your advice before they sent the half-bred sire here?—They sent an expert, and he reported. They did not ask the advice of the Committee so much as that of the expert, and he sent the horse that he thought woud suit the locality.

46104. Has there been any complaint with regard to nominations?—The nominations are given on the basis of valuation. I think that the nominations ought not to be given on that basis in poor districts. They cannot so well afford to pay the nominations as the rich districts, and should have a lower standard.

46105. Are the schemes working well on the whole?—That is our opinion.

46106. Mr. O'Kelly.—What schemes are working best?—They sent us very good bulls. We are thankful for some of the bulls they send us. The live-stock schemes are working fairly well.

Mr. Patrick O'Brien examined. *July* 15, 1907.

Mr. Patrick O'Brien.

46107. Mr. Kavanagh.—You represent the Rural District Council?—The Board of Guardians and Rural District Council.

46108. What division exactly?—Of Ballydehob. I took an active part in negotiating the sale of an estate recently, and found the area of that estate to be nearly 3,200 acres. I found the average area of each holding to be about 33 acres, and the average poor law valuation to be about £9; and when you find 33 acres having only a poor law valuation of £9 that will give you an idea of the value of the 33 acres. I mention that for the purpose of showing what kind of land it is, because if the 33 acres were good land, all arable, the poor law valuation would be somewhere about £20, and the holding would, in my opinion, come under the heading of an economic holding.

46109. Is £9 the average valuation?—Yes. Now, I think you may take it for granted that exclusive of two or three electoral divisions the average area and valuation of the holdings in the Schull Union would work out almost in the same way. These holdings could be considerably enlarged and improved by having the cut-away bog and other kinds of wet land drained and reclaimed; and where holdings are cut up into small fields, oftentimes with crooked and wasteful fences, to have these fences levelled and straightened where necessary, the fields enlarged, and to have all new fences planted with white thorn. If this were done it would give increased shelter, and half the number of fences at present in existence would not be at all necessary, as they are almost useless for affording any shelter; whilst at the same time it would give increased facilities to the tiller of the soil to handle the holding. This draining and reclaiming and re-fencing where necessary would, in my opinion, increase the arable area of the holding for tillage purposes from 15 to 20 per cent. In many holdings the out-offices, and sometimes the dwelling-houses, are far from satisfactory—built in bad and unsanitary sites, in many cases which are almost incapable of improvement, and built with a total disregard as to how cattle could be fed or manure could be handled, and sites were chosen in most cases with a total disregard as to how the holding could be most economically worked. For improvement in all these matters I would have the Government advance cheap money at land purchase interest to any landholder who is willing to improve his holding on the lines indicated. Where he is willing to put up a new dwelling or out-offices an inspector should be sent down, choose a site, draw up a plan of the building, which building should be substantial, but at the same time as economical as possible. I would not be in favour of advancing any money on land that is not purchased. Agriculture should be taught in all the rural schools, and one of the reading books should be absolutely devoted to agricultural matters.

46110. Do you consider that these 33-acre holdings with a valuation of £9 are economic?—No. They are far from it. If the holding was good land the valuation would be about £20. That would be economic in my opinion.

46111. Could they be improved by better methods of agriculture?—That is what I believe.

46112. Do you think the same sized farms could be made economic?—I would not go so far as to say that.

46113. Taking the plot of land you have described as 33 acres with a valuation of £9, what would you consider an economic holding?—You should double that at least. That would bring the valuation to £18. From £18 to £20 would be the border line between an economic and uneconomic holding. My definition of an economic holding would be 33 acres of arable land, on which you would keep the tenant in comfort, and where the holding would pay its way.

46114. Taking the same class of land as you have described, what would you consider an economic holding?—You should have sixty acres of that class of land. That would be the smallest amount that you should have, anyway.

46115. That would be a valuation of £20?—From £18 to £20.

46116. Most Rev. Dr. O'Donnell.—That programme of yours of having money advanced at land purchase interest for the improvement of these holdings would after a time result in very considerable improvement?—It would. That is my belief. There is money advanced by the Board of Works at the present time, but anyone who knows anything about it regards it as impracticable, because the interest is too high, the expenses are too high, and the time for repayment is too short.

46117. Mr. Sutherland.—What are the initial expenses?—They send down an inspector, and the expenses are deducted out of the money before you get it at all.

46118. Most Rev. Dr. O'Donnell.—The system is not such as suits the people?—It is not.

46119. The limit of advance is too high?—Yes.

46120. The interest is too high?—Yes, 6½ per cent.

46121. And the machinery is not such as can be easily worked?—No.

46122. In pursuance of the questions put you by the Chairman, don't you think if a farmer had thirty-three acres of the land you have described, and had sons to help him, and were offered money at 2¾ per cent. on good security for the improvement of his holding, would not the sons have a tremendous inducement to remain at home and work the farm rather than go to America?—I am sure they would.

46123. Perhaps after a time, too, they would make the thirty-three acres an economic holding?—I would not go so far as to say that, but perhaps after a time they would make it economic, provided the holding had an economic rent. Of course a holding of any size would not be economic without a fair and economic rent as distinct from a rack rent.

46124. At all events, they would greatly improve the farm?—Yes. If you built a tariff wall to stop importation it would be an economic holding.

46125. Mr. Kavanagh.—Assuming we can never make it quite an economic holding, what would you suggest to improve their condition if you cannot get them 60-acre holdings?—Our Agricultural Committee give prizes to increase tillage, and they are giving most of the prizes to large holders of £40 poor law valuation, who ought to be able to take care of themselves. If a return to tillage is going to be the salvation of our people, the great thing would be to get hold of the small holders, and double the prizes at least. That would have more effect. The men who would enter would believe they would have a chance of getting the prizes.

46126. Most Rev. Dr. O'Donnell.—Why does the Committee not take the line of helping the small ones?—That is the point.

46127. Don't the small ones require three times as much help?—Yes. In my opinion most of the prizes go to farmers with a valuation of over £80, and I think they ought to be able to take care of themselves. The great thing would be to get the small holders to move first on tillage lines.

46128. Mr. Kavanagh.—What prizes are you talking of?—Prizes given by the County Committee of Agriculture for the increase of tillage.

46129. Would you describe that system?—I think they are not given by any other Committee except the Cork Agricultural Committee. The Bishop of Ross is very much interested in this return to tillage, and the prizes are given to encourage tillage. No one is eligible for a prize who has not at least one-fifth of his holding under tillage. It seems to me that the man who will get the prize is the man who will have most tillage according to his valuation, provided that his cultivation is fairly good.

46130. The prize is for the best cultivated farm, provided that he tills one-fifth of the arable land?—Yes.

46131. A small man could win a prize under those conditions?—They are not offered for the small men.

46132. Mr. Sutherland.—If it is a proportionate basis the one-fifth of a small holding is as large as the one-fifth of a large holding?—Small holders are not eligible at all. Persons with valuations of from £15 to £40 are one class; those from £40 to £80 are another class, and those over £80 are another class.

46133. Mr. Kavanagh.—Is there no class below £15?—Yes, but it does not belong to the County Committee. It belongs to the Munster Agricultural Institute. The number of prizes is very small, and the County Cork is very big.

46134. Most Rev. Dr. O'Donnell.—Probably there would be this explanation, that the idea underlying

July 15, 1907.

Mr. Patrick O'Brien.

the scheme is get more of the land in the hands of large holders which has gone out of tillage brought into tillage again?—That is the very thing.

46135. The scheme is rather one for increasing tillage all round than for helping any one class in the community?—That is right.

46136. That is the justification of the scheme?—It is.

46137. Therefore, although it does not give as much help proportionately, perhaps, to the small man as he would require, yet, from the point of view of getting the land of the country under tillage, there is a great deal to be said for the scheme?—There is.

46138. Mr. KAVANAGH.—In your experience, has it increased tillage?—It has. This is the first year.

46139. It is a very good suggestion. I have never heard it before?—It is. I am sure there could be a considerable increase of tillage with advantage in the way of growing more food for home consumption.

46140. Mr. SUTHERLAND.—Why do you say you would not be in favour of advancing money on land that has not been purchased?—Because the landlord never took any interest in the improvements, and never lost a drop of sweat or a farthing of money over them, and did not care about them except for extracting his rent. He did not care whether the tenant begged, borrowed, or stole the rent, so long as he got his rent.

46141. That would limit the operations of the Congested Districts Board to lands purchased by the tenants?—Yes. It would increase the letting value of the land for the landlord in the first place. I remember when I was a young fellow on my father's holding, there were three or four acres of cut-away bog. I remember when I was a young fellow that this cut-away bog was wholly or partially covered with water. I often travelled through it with my shoes off and my pants tucked up beyond my knees looking for wild birds' nests. You would not put on it at that time a rent of a shilling an acre. I remember my father drained it, and afterwards I worked in the drains myself, with my shoes off and my trousers tucked up beyond my knees. That holding was put into court afterwards, and the Land Commission came down and put a rent of eight shillings an acre on it. They allowed for the tenant's interest four shillings an acre, and the landlord's interest went up from one shilling to four shillings an acre. When a tenant goes into court the landlord strains every nerve to get the tenant's improvements confiscated.

46142. So that is why you make the suggestion; lest any money spent improving the place should go to the landlord?—I am prejudiced against landlords altogether, but there are honourable exceptions, such as Lord Bandon and Mr. Doherty. If landlords were all like them you would not have any land question to settle, or any evicted tenants question to solve.

46143. Most Rev. Dr. O'DONNELL.—You say that agriculture should be taught in all the rural schools?—Yes. When I was going to school the best part of my time was spent in learning geography and grammar, and how Warren Hastings governed British India, or something like that. The first lecture given under the County Committee of Agriculture in my district was in 1905. I attended the lecture, and found myself totally at sea as much as if I had been brought up in some other business, such as shoemaking, instead of in the business of farming. I had never heard or read of the words "nitrogen" and "potash," the two principal elements in plant food. Such instructions as I suggest would cultivate a taste for agricultural pursuits.

46144. You would like the boys in National schools to get something more than a theoretical education in agriculture?—A plot should be attached to each school for the purpose of teaching the pupils the different kinds of soils, the names of the different kinds of grasses and weeds; for the purposes of demonstration, and for teaching practical agriculture in a small way, which teaching should include a practical knowledge of tree-planting and fruit-growing. This subject of teaching agriculture in the rural schools should be made compulsory for teachers and children.

46145. You could scarcely expect the present generation of school teachers to give the class of instruction you require. They have not been trained in it?—They have not.

46146. You suggest that there should be an agricultural side to the colleges for training teachers?—Yes.

46147. Or that there should be a distinct body of men teaching agriculture in the rural schools?—Yes. That occurred to me too. For instance, an agricultural teacher could attend two or three schools in the district in the week.

46148. These are possible ways for devising the desired instruction; what your evidence is conclusive about is your own strong conviction that there should be agricultural training in the National schools from an early age?—Yes. If you wait for the young people to go to the agricultural colleges it will take a long time.

46149. You spoke of the taste developed?—Yes.

46150. You think they would have a greater inclination to remain on the land if they had an early training in agriculture?—I am sure they would.

46151. Mr. KAVANAGH.—You would recommend an experimental plot attached to the school, I suppose?—Yes.

46152. Not all theoretical teaching?—No. That is not of great value at all I think. I tried to grow white thorn from the seed according to what I saw in books and I could not do it. It was a failure. I tried three or four times.

46153. Has the agricultural instructor got any experimental plots in the district?—Yes, a few.

46154. Are they doing good?—I think so. The great thing would be to get the people to take an interest in this business.

46155. Most Rev. Dr. O'DONNELL.—Do you think that the absence of such practical instruction in connection with Irish National schools since the institution of the system has a close connection with the fact that unfortunately Irish emigrants to America did not go upon the land but kept to the towns?—I am sure of it. I would also be in favour of fruit-growing, as I believe there are many parts of the district suitable for such a purpose. To my own knowledge the supply is not equal to the local demand, not taking outside markets into consideration at all. In this case I would have the experts from the Department to locate the proper plots and the trees to be planted under the personal supervision of the experts, which supervision should be at the expense of the Department. I remember reading a letter in the Agricultural Press from a man who had been twenty years in Tasmania, and he saw the very same apples that grow in Australia bought in Dublin afterwards, although there was finer land for growing fruit in Ireland than in Australia; and he said that for the cultivation of fruit in Australia they had to pay thirty shillings a week for men; and as we could get men much cheaper in Ireland we should grow that fruit at home. It would grow very well on small holdings. Bounties or premiums should be given in order to induce small farmers to start planting orchards, and these bounties should be continued until the system is well established. All holdings should be inspected before sales are concluded, even where a Land Commission second term fair rent is fixed; but under no circumstance should money be advanced, or a sale concluded, where landlord and tenant agreed outside of court; because, in many cases, when the tenant's first term rent expired, some concession is dangled before his eyes by the agent, such as wiping off a little arrears with the offer of, say, 15 per cent. off his first term rent to make it a second term, and the bargain is struck. Cases have come under my notice where if the tenant went into court he would get 25 per cent. reduction, perhaps, instead of 15 per cent. To my knowledge the average tenant has no knowledge of the Land Commission fair rent per acre put on by the Commissioners on the different qualities of land, and then, to avoid expenses and weary waiting for years by going into court, the average tenant takes what is offered. A very glaring case in connection with that came under my notice. A tenant, whose first term rent was £17 10*s*., was, in 1898, when he was about to go into court to get a second term rent fixed, offered £3 10*s*. reduction by the land agent, which would reduce his rent to £14. The tenant would not take it because he thought he was entitled to a little more. But just at the same time the Land Commissioners were not giving as good reductions as they had been giving for two or three years previously. Then the landlord's offer went up from £14 to £14 10*s*., and the tenant,

hen he said he would take £14, would not get it. hen he went into court, and he got his rent reduced rom £17 10s. to £10 9s. by the Land Commission, or nore than the full length of the zones in the Wyndam Land Act. Then he bought afterwards at 5s. 9d. n the £. If he was waiting for the Land Act of 903 where would he be?

46156. That is within your knowledge?—Yes. I e many cases where there could be good reductions ot from the Land Commission; but in my locality here I come from the Land Commission put fourteen r fifteen shillings an acre on the best wheat-growing nd. That was in 1899. In 1900, nearly two years fter, another Land Commissoiner comes down. He as a landlord, and had evicted tenants too. This ommissioner put eighteen shillings an acre on the ery same kind of land, beside the fourteen shilling nd; so that that rent fixed by that Land Commissoner is a fraud, a delusion, and a snare. But at he same time I would rather have them fix the rent han the land agent or anyone of the rent office. hen, in buying, the future, fee-simple, or anything lse, is not taken into consideration, but simply he present advantages that are looked at, such s wiping out a little arrears, adding arrears to the urchase money, etc. The tenant doesn't mind hether his agricultural grant is threatened, or hether his land is security for the money advanced; he average tenant only looks to the present advanage, and on these grounds I think all holdings should e inspected that are settled outside of court.

46157. Mr. Kavanagh.—I asked you about the deription of land you referred to at first, the 33 acres ith the valuation of £9, and I asked you what would ou suggest for the improvement of that class of ersons, because, of course, you cannot have 70 acres or them all?—No. I have suggested that in these 3 acres there is a great deal of bad land.

46158. You say that it can be improved, but can ever be made an economic holding; is that so?—I aid that if the 33 acres were all good land, in my pinion, the valuation would be about £20 and then would come under the heading of economic holding.

46159. But you say that the 33 acres, although apable of improvement, could never be brought up to he standard of an economic holding?—I would not o so far as that, and if I did say that it could not e made economic I would withdraw that statement.

46160. You think it could be improved and made conomic?—Perhaps it could.

46161. Mr. O'Kelly.—What kind of land are you eferring to when you speak of this 33 acres?—A poor uality of land, with a valuation of £9.

46162. Would it be mountain land?—Mountain and and cutaway bog, with some arable patches mong them.

46163. Do you say that 33 acres of that land is eally valued at £9 in the County Cork?—Yes. That s how the average valuation worked out on the estate have talked about.

46164. Is it all bog land, mountain land, and eather?—Portions of it are all bog, and at the mariime portions there is a great deal of good patches f good wheat growing land.

46165. Is this 33 acres to which you refer tilled?—'ortion of it is tilled, of course.

46166. What would be the proportion?—I should ay one-fourth of all the arable land.

46167. What would be the proportion of the arable and to the non-arable land?—I have a holding before ny mind at the present time. The number of acres s 52, and 24 acres are arable.

46168. What would be the valuation of those 24 cres?—I suppose about 11s. to 13s. an acre on the est wheat growing land; boggy land or land of a eaty nature would not be nearly so high, even hough it may be suitable for tillage.

46169. Would not you think that £9 valuation of 3 acres of mountain and cutaway bog land is rather xcessive?—In that place you would find some wheatrowing land, perhaps two or three acres of it.

46170. You say you would regard an economic holdng as one valued at £18?—From £18 to £20. If hat would not be an economic holding it would be at east on the border line.

46171. Would such a holding be all arable land?—Yes.

46172. Are you aware that it has been generally onceded that holdings of arable land valued at £10 nay be regarded as economic?—I am not aware of that at all. That is not the Department's definition.

46173. What is the Department's definition?—That you should have at least 50 acres of arable land.

46174. Where do they make that definition?—In one of their leaflets. Then they reduce it to 30 where it would be extra arable land and where two farmers would come together and join their horses to one another for ploughing.

46175. I take you as describing what the Department say, but are you aware that they differ profoundly from the Congested Districts Board who have more to do with this particular class of work than the Department of Agriculture. The Congested Districts Board regard 25 acres of arable land as an economic holding?—I suppose they would not be far out there. The Department say they should have at least 50 acres, but they reduce that to 30 acres where two farmers lend each other horses. I am a practical farmer myself, and I am only giving my idea of what an economic holding would be.

46176. Mr. Kavanagh.—I suppose you have a great many small holdings under £5 valuation?—Yes. They vary from 3 acres to 117 acres in the estate I am speaking about.

46177. What would you suggest to improve the condition of these small holders. Would they migrate to other parts?—I think they would.

46178. Would they go far?—I am afraid that many of them would not be anxious to go too far away.

46179. Is there any available land for enlarging holdings in your district?—Very little. There is a little dairy land where a dairyman is. He has no interest in it at all. He has it only from year to year. He pays so much rent to the man who has it. He has it for twelve months. I suppose there are twelve cows in the dairy. It would be from £6 to £8 a cow. The man who has the land must supply the cattle and everything.

46180. Is he a local man, as a rule?—Yes. This dairy system is dying out. There were twice as many dairymen ten years ago as there are to-day.

46181. Are there any creameries in this country?—No; no creameries. Most of the holders are getting these hand separators.

46182. And make the butter themselves?—Yes.

46183. Is the price of butter good?—No, the price is poor.

46184. Is there any parish committee in your district?—No.

46185. Have you ever applied to the Congested Districts Board for a grant for a parish committee?—Yes. I must say I found them fairly soft. Although they complain of them in other places they were not very harsh to me. They gave me money twice when I applied to them for it, but I did not ask them for very much.

46186. Mr. O'Kelly.—Through what medium did you apply?—As a District Councillor. I am member for one of the electoral divisions. I got part of the money from the Board and part from the District Council.

46187. Most Rev. Dr. O'Donnell.—I should like you to explain a little further a point which has remained somewhat in obscurity. I am sure you had at the back of your mind what is the state of the case, but it requires a little more elucidation. In reply to some of us at the start you said that probably the 33-acre farm, to which you referred, could scarcely be made an economic holding; then you had a little hesitation about it afterwards. Is this the state of the case; is it a fact that all those 33 acre holdings cannot be reclaimed?—That is a fact.

46188. That is the cause of it?—Yes.

46189. If you had a 33-acre holding and the 33 acres by a good process could be all reclaimed and made tillage land, then what would you say about it?—Then I would say that it came under the heading economic holding.

46190. Your reason for saying that the 33 acres would not be economic probably was this: you had before your mind 33 acres which could not be reclaimed?—Yes.

46191. I daresay some of it is craggy?—Yes; some of it has no surface.

46192. Mr. Sutherland.—It is a loose unscientific way of speaking about holdings to refer to them as economic; the question of rent and the question of the quality of the land enter into it?—That is right.

46193. So that if you increase the good quality of

July 15, 1907.

Mr. Patrick O'Brien.

the land and decrease the rent a small holding may be made economic?—Yes.

46194. Mr. KAVANAGH.—Have you any live stock scheme in this part of the County Cork?—Yes. I think the Congested Districts Board was looking after it, but then the Department took over the work. In my locality there is not a pure bred bull within three or four miles. That was not the case when the Congested Districts Board had the work.

46195. Now it is worked by your County Committee?—Yes.

46196. Have not you a representative from this locality on the County Committee?—Yes.

46197. Does not he look after your interests in this way?—These are my own individual opinions, because I am afraid that the majority of the people hardly go in at all for the improved scheme of horse-breeding or of stock.

46198. You pay a penny in the pound?—Yes.

46199. Surely you ought to look after your own interests so as to try to get back some of that into the district?—With the present scheme you should have at least £12 to buy a pure-bred bull. The Congested Districts Board used to give the bull in a much easier way.

46200. This is a great horse-breeding county?—Yes.

46201. Are not the stallions down here?—Yes. The Congested Districts Board introduced the hackney. That was an injury rather than a benefit. The veterinary surgeons tell us we have a very fine class of mares in the County Cork for breeding hunters.

46202. But the hackneys disappeared?—Yes. I think the Department have sent down a half-bred to Bantry and Schull this year and last year, and I think that is a mistake, and that it should be a pure-bred anyway. I think they should send down a pure-bred draught horse and a thoroughbred. The class of mares are there for them, and they would be better than a half-bred.

46203. Would your mare suit thoroughbred horses?—Lots of mares would, because the veterinary surgeons tell us so. I remember reading in a paper a report of a meeting of veterinary surgeons in Cork and they said there was a very good class of mares around Schull for thoroughbreds.

46204. But the Department sent down a half-bred into the congested districts?—Yes.

46205. Most Rev. Dr. O'DONNELL.—It would be your opinion, I think, from what you have stated that the poorer districts would require special treatment, and that schemes which suit down to the ground richer districts scarcely suit poor districts?—Yes.

46206. It would be also your opinion that the poor districts proportionately would require more help from a public department than richer districts?—Yes.

46207. Is not there a disposition on County Committees to give to localities sums proportionate to the rates that are raised there?—I think there is.

46208. I don't know whether that is the case in Cork. I know other parts of the country where that is the disposition; that would tell adversely on the poor districts?—Yes. I will give you an instance. There were only thirteen nominations of mares allowed for the Bantry and Schull rural districts. There was no sense in that at all for two large districts. The value of the nomination was worth £3. If the farmers with mares who got the nominations were made to pay half the money it would double the nominations from thirteen to twenty-six. In any case, thirteen was no number for from Berehaven to Cape Clear.

46209. Would it come to this, that the poor districts would require schemes specially to suit them, and whether it comes out of the general funds of the county or not they would require more public aid proportionately than the better-off districts?—Yes.

46210. Mr. KAVANAGH.—I suppose the small man of £5 valuation has not got the class of mare to suit a thoroughbred horse?—No. In fact, many of them have no horses at all.

46211. And in the same way with the premium bull: he has not got the class of cattle to suit the thoroughbred bull?—I think he has.

46212. Mr. O'KELLY.—A former witness spoke about breaking up large dairy farms; you say that those dairy farms are breaking up themselves; the number you have now is not as large as the number you had a few years ago?—No, it is not.

46213. What is the cause of that?—Very little money is made in it, and the dairymen were not able to make the money on the land and could get nobody to go security for them. Now the farmers are going for dry stock where they have these outside farms and are running them on these lines.

46214. So in substitution for the dairy system you have now the ranching system?—Yes. There are very few dairy farms round here. I mean land outside like that.

46215. They are not let on the 11 months' system?—Not at all. The system is hardly in any part of Ireland. A tenant has two small farms. He will let one to a dairyman. He may be a labourer or anybody else. He goes in and takes that land with from four to eight cows. He takes it at £6 or £6 10s. a cow, and gets it only for 12 months.

46216. Then the farm that is let you would describe as a non-residential grazing farm?—Yes.

46217. Your view is that that farm should be taken up for the enlargement of small holdings?—Yes.

46218. Would you have many holdings of that kind available?—Very few.

46219. Would you have a sufficient number to make any appreciable improvement in the congestion?—It would be a great help anyway.

Rev. JOHN O'CONNELL examined.

Rev. John O'Connell.

46220. Mr. KAVANAGH.—You are Parish Priest of Schull?—Yes. The evidence I have to give will be very brief. In fact I may just say I have been listening to Mr. Roycroft's evidence, and agree with everything he has said with regard to this district. Of course the principal industries here are fishing and the mining works, and if there could be anything done by the Congested Districts Board to forward those two industries it would be a great advantage to the district.

46221. Most Rev. Dr. O'DONNELL.—You consider the pier would require the extension to which Mr. Roycroft referred?—Yes, and also that there should be some sheds made on the sea-shore for curing the fish, in the autumn especially.

46222. What was the improvement that took place some years ago?—The pier was extended about sixty feet.

46223. Who were the contributors?—The State contributed half, and the county the other half; £1,200 was the estimate; but it would require another extension of sixty feet at least—from sixty to 100 feet. It is very inconvenient sometimes when there are a couple of steamers there—the colliers—they have not room enough there for the traffic, especially during the fishing season, when there are hundreds of barrels of fish and salt on the pier. The place is quite congested and very inconvenient. Also, with regard to the remote islands; they require these boat-slips very much, one or two of them, especially one on the West Calf and another on the Middle Calf.

46224. Mr. KAVANAGH.—I suppose that most of the people round here depend a great deal on the fishing?—Yes.

46225. Has there been any increase in the fisheries lately?—Not at all; on the contrary, I am sorry to say. A strange thing occurred last year; the principal season was in December, coming on to Christmas; some of them did very well during November and December.

46226. Have you been long in the parish?—A little over twenty years.

46227. Can you remember the herring being prosperous in this part of the country?—It was before my time.

46228. It is only mackerel since?—Only mackerel; also there is a great deal done in the way of trawling for turbot, sole and plaice.

46229. Most Rev. Dr. O'DONNELL.—These islands would require landing places?—Two of them.

46230. I suppose these landing places would not cost very much?—No; very little boat-slips merely for dragging up the boats. It is very hard to protect the boats there in bad weather.

46231. Mr. SUTHERLAND.—Are the coast islands inhabited?—They are.

46232. Have they a large population?—No; on the West Calf there are only two families; on the Middle Calf four; and on the East Calf only two.

46233. They all have boats, I suppose?—Yes.

46234. Most Rev. Dr. O'DONNELL.—There is no Parish Committee here?—No.

46235. Mr. KAVANAGH.—Don't you think it would be a desirable thing to have one?—I think it would be a very desirable thing to have one, if they attended to the wants of the district.

46236. Mr. SUTHERLAND.—Are there any particular difficulties in the way in this place?—I don't think there are; unfortunately our people are not very persevering; they take up a thing and let it drop soon again; they don't persevere.

46237. Most Rev. Dr. O'DONNELL.—The lace class has begun auspiciously?—It has; we expected we would have it last January. Mr. Walker was down here and promised to send us an instructress at once, but for some reason she did not come until two or three weeks ago. Since then the thing has been going on very well. There have been thirty or forty girls in the school doing very well, and we expect to do better. It is in this hall we have been located at present. There is plenty of room there. There is one other matter I wish to bring before you. It is a want that has been felt by this district very much for some years past. They feel they are not sufficiently represented on the Congested Districts Board; and they are most anxious that some local person—a suitable person—should be appointed on the Board who would look after the interests of this place, who would be conversant with the wants of this part of the country, and help them to get these things that they require. When I say this I don't at all deny that the Congested Districts Board has done a great deal for this part of the world, but at the same time it is of course only natural that the people of the locality should feel that they are not represented on the Board. There was a vacancy on the Board some few years ago, and they were quite sure then that Dr. Kelly, the Bishop of Ross, would be a most suitable person, but he was not appointed.

46238. You feel here the local representative would know the local wants?—Yes, and would put these wants before the Board better than could be done otherwise.

46239. He would have local knowledge, and he would know the proper time at which representations could be made?—Quite so.

46240. Mr. KAVANAGH.—In the matter of Parish Committees, you don't require any representative on the Board to start them; you have only got to write to them, put your case before them, and they reply to it?—I am not quite up in the matter of Parish Committees.

46241. Passing through the country we see enormous improvements in out-offices and soforth, where there are Parish Committees; I think it is a pity you don't try to start one here?—Can help not be got without Parish Committees?

Mr. KAVANAGH.—It is not too late to start a Parish Commitee yet.

Most Rev. Dr. O'DONNELL.—There are not many in the County Cork yet; the system came into the County Cork some time after it was started in other places; so it is quite time enough to apply in case the people wish to avail of the opportunity which the Parish Committee supplies.

46242. Mr. KAVANAGH.—You think the fishery is capable of development?—I think it is, but there is very little competition between the buyers; in fact there is rather a monopoly, and it has been suggested that the Congested Districts Board might send down a buyer themselves.

46243. Is there enough fish brought in here to warrant more than the two buyers who come already?—Not in the spring season, but during the autumn season I think there would be a great deal of fish brought in here and cured here on the spot.

46244. One of the witnesses recommended a close season for trawling?—I would go in for that certainly; it would be a very good thing.

46245. And larger meshes; he said that so many small worthless fish were caught; I would have thought the fishermen would have done that in their own interests?—Yes; plenty of them would be able to make these meshes themselves, that would be suitable. With regard to the post, the idea of the post being brought here from Skibbereen on an outside car, and running alongside the tramway is the most ridiculous business in the world. There is not such a thing would happen in any other part of the world—on account of a few miserable pounds of subsidy to enable the tramway to bring it.

46246. How much a year is the present contractor getting to run the post?—I think only about a couple of hundred pounds a year.

46247. What did the railway company offer to do it for?—I believe £250.

46248. Naturally the post office did not accept it?—No; there was only a difference of some £50 I believe between the post office and the tramway company. You cannot run a tram from Skibbereen for less than 30*s*. The post does not arrive here until about half-past nine, and the tramway leaves here at half-past nine; so that people travelling from Skibbereen to Cork and elsewhere cannot have their letters here before starting; whereas if they were sent out by tramway they could have them here at eight o'clock, if not at half-past seven every morning.

46249. Have you ever made representations to the post office authorities about it?—We have several times; they think it too much to pay to the tramway people.

Mr. ABRAHAM JAGOE examined.

46250. Mr. KAVANAGH.—You have been nominated by the Bishop of Cork?—Yes.

46251. Please tell us what evidence you wish to bring before us?—The principal thing is the development of the mineral resources of the district.

46252. Are you a landowner?—To a small extent I am.

46253. You are resident in the county?—Yes; I have been suggesting for some time past to the Department that they should get one of these diamond drills for the purpose of ascertaining where payable copper and minerals are to be found. I believe there is a large deposit in this district extending from Skibbereen to Mizen Head, and on towards Bantry, and I would like to see it utilised. Several mines are working at present, and a great lot of employment is given, and it is a great benefit to the district.

46254. Are they paying at present?—None of them have shipped any ore yet; they are concentrating at Ballycumisky; some of them are only prospecting, and clearing out old mines.

46255. I understood one of them has been going on for twenty years?—The barytes mines have been working for fifty years, and are not in a very prosperous condition at present—I don't know why. The copper mines were working many years ago; they were abandoned owing to the low price of copper. They are now going on again owing to the high price of copper; most of the work is clearing out the old mines.

46256. You could not say whether they are paying?—Nobody knows whether they will pay.

46257. Would not it be better to see whether they will pay?—With the improvements in machinery for getting the metal out, and treating it when out, and the paying price of copper, no doubt they have a much better chance.

46258. Mr. SUTHERLAND.—Is the price of copper at present likely to be maintained, or is it contributed to by manipulation of the market?—No, I think there is not much chance of its going down again to what it was.

46259. You know how low it was a few years ago?—Yes; £30 or £40 a ton.

46260. Do you know the speculation that there has been in copper; is the present high price not the result of these manipulations?—Not from what I could gather from the papers. They say the use of iron has increased to such an extent, that copper follows it; and that it is not at all like a jump up, as if there was a corner in copper or anything of that kind; but that it is more in use. Electricity has helped to bring it more into use. You must have a certain amount of copper in all electric works.

46261. It is a fact that it has changed its price two

July 15, 1907.
Mr. Abraham Jagoe.

or three hundred per cent. in the last few years?—Yes; permanently changed it, I believe.

46262. On what is your opinion founded that there is copper between here and Skibbereen?—There are so many surface indications, I cannot be persuaded that all the copper was taken out of the mines, and that they exhausted the supply, and there must be other places where payable copper is to be found. There is great expense in sinking shafts, but boring machinery would be cheaper.

46263. Is it associated with sulphur?—Sometimes with copper sulphates, and sometimes with carbonates.

46264. But with sulphur itself?—No.

46265. Mr. KAVANAGH.—Who did the boring at the beginning of it?—There has been no boring done here at all.

46266. How have the mines been discovered?—Limited liability companies simply leased the property and put down shafts.

46267. Mr. SUTHERLAND.—Is there a geological survey of this district?—Yes, I have seen that.

46268. Mr. O'KELLY.—Is that altogether to be relied on?—I have heard some of the mining people say it is very accurate indeed.

46269. Mr. SUTHERLAND.—Is there any Mineralogical Society in Dublin?—I have only known Mr. Lyburne, who is connected with the Department of Agriculture. It was with that object I went up to see Mr. Gill and Mr. Lyburne; they gave me no encouragement whatever; they said there was no money available for the purpose. I thought it was a good thing to develop the resources of this district. I am told it would cost about £600 or £700 for one of the drills, and they would have to send an expert to work it.

46270. The expenses would be caused by renewing so frequently; they get worn out; but if it were not through very hard rock it would not be so very expensive. What is the rock here?—Slate formation.

46271. Soft or hard?—Soft. I believe they prefer hard rock, because the borer goes down and deviates in some way in soft rock, and it is more difficult to work than through a hard rock.

46272. Mr. KAVANAGH.—I can understand your request if these mines were going concerns paying large profits, but where the profit is almost trembling in the balance I don't see that it would be in the power of a public department to go in for prospecting all over the country?—My suggestion was that a drilling machine should be provided by the State, and that prospectors might pay a certain small fee for boring, instead of sinking a shaft, which is a very great expense. In the case of a friend of mine it cost £1,000 to sink a shaft 120 feet. If there had been a boring machine it would have been done for one-tenth of the cost.

46273. Mr. SUTHERLAND.—From whom did he get the place?—He leased the mining rights of the property.

46274. You know what prospecting rights are—leave to explore—has he done more than that?—He gets the mining rights under the lease.

46275. There are two separate things—one the right to look for minerals?—That is what we call an option for six or twelve months.

46276. During that time the man who has the option makes the explorations himself?—Yes, and then he can throw it up at the end of six months or so. My own experience is: I let the option of a certain mine for six months; before the option expired they threw it up; they never got to the bottom at all; it was an old mine that had been worked fifty years ago. I gave them the option for £50 for six months, and they were to give me a £100 a year if they worked it.

46277. Mr. O'KELLY.—Is there congestion in this part of the country?—There is.

46278. There is very little untenanted land available for the purpose of remedying that congestion?—I don't know of any in that neighbourhood.

46279. The Congested Districts Board is in the habit of spending money upon industries other than agricultural elsewhere?—Yes, I believe so.

46280. Would not it be as perfectly legitimate for the Congested Districts Board or for any other public body to spend money in providing the machine to which you refer, and in making the investigations which you have indicated, if in this district, in that way alone by tapping the mineral wealth of the country, congestion can be removed?—I think so; it would tend considerably towards the removal of congestion, by giving employment to the people and bettering their position.

46281. Most Rev. Dr. O'DONNELL.—None of the mineral has been shipped yet?—None.

46282. Where would it be shipped from?—Most probably from Schull pier.

46283. Schull pier is scarcely as well suited as you would desire it to be for shipment?—No; it is not big enough; we would want more additions to it.

46284. Other witnesses to-day indicated certain improvements that would be desirable; do you concur in their recommendations?—Quite.

46285. What has been done already in the way of improvements?—An addition of 60 feet was put on to it. About the last act of the Grand Jury before the County Council came in was to give £600 in addition to £600 from the Congested Districts Board, and that sum was expended on that extension. It wants still a further extension.

46286. If there was a good prospect, as there seems to be from what you state, of the mineral wealth of the surrounding district being developed, there would also seem to be a good prospect of improving the people by the outlet of trade?—I think so. Another point is, a thing we want at present. If you can do anything for us it would be a great matter for the district. We are very badly served here. At one time the Grand Jury was working the tramway, and I was on the Committee. We approached the Treasury for £100 in addition to what at that time they were paying for the contract to enable us to run a mail train out here in the morning, as it would cost nothing to take the mails in in the afternoon, because the mails leave at the time the tram does—about 4 o'clock. We failed to get a penny from them. £100 a year was all we wanted. Mr. Roycroft said they would do it for less now, but at that time they found £100 necessary. You would have to run the mails here, and then send on other mails to Rock Island. If there was a subsidy of £100 it would be a great matter to run the mails out here in the morning. We did not feel justified in putting that £100 a year on the ratepayers to be spent, and therefore the service remains as it was.

46287. There is not much passenger traffic at that time?—Not much; a few people would avail of it.

46288. You think it would cost £300 a year?—£100 a year in addition to what they are paying at present.

46289. But they are paying £200 on the contract now?—I am speaking of what occurred eight or nine years ago.

46290. You wanted £100 a year in addition to the £200 they are paying under the contract now?—One extra train in the morning; it would cost nothing extra in the evening.

46291. If you got the contract it would help the rates greatly?—Considerably.

46292. Would you have any additional delivery of letters?—That would, of course, follow. Persons leaving here in the morning cannot get their letters before they leave, as they only arrive here about the time the tramway starts. With regard to fishing, I don't know much about it, but I know the Congested Districts Board started two or three times in regard to the growth of early potatoes and vegetables in this district. I offered a ten-acre plot, on which the little house you saw now was, as an experimental plot. I was trying to impress upon them that there was no use in sending an inspector here unless they had an experimental farm as a sort of depot, to show the people how to grow these early potatoes and vegetables, and then buy them from them and send them in bulk, because the people could not grow a great quantity. No man could send away the produce of one acre on his own account. If the Congested Districts Board had a depot they could buy from these people and send them all away in bulk. If they had a working loss on it for a short time I don't see why it should deter them from helping the district.

46293. What would be the route of transit?—By rail to Cork, then to England, London, anywhere; wherever they found the best market.

46294. A through service to Cork would be a great advantage?—A great advantage.

46295. Is not it almost indispensable?—It is indispensable for early vegetables, fruit and potatoes.

46296. You consider that the district around Schull is pre-eminently fitted, as far as Irish districts are concerned, for that class of culture?—Quite so; about

early a place as there is round about. I have had rly potatoes in my own garden on the 23rd May on e occasion without any sprouting or anything like at, but just ordinary culture.

46297. You don't suffer from late frosts?—Not ich.

46298. What vegetables would you put on the Lon- n market?—Early potatoes especially, and early getables—cauliflowers; they grow them at Clona- lty. I consider we have far better climate facilities r growing them down along the seaboard. The ngested Districts Board sent me down early pota- es, as an experiment, two or three times to dis- ibute among the people here. They did grow them. me were a success and some were not. I had some them myself—lovely potatoes, and early ones, too.

46299. But you are of opinion that a quick service ould be a necessity of the case?—Yes, and also to struct the people and to buy from the small holders, nd they should have a depot somewhere here, if ey could get the land. I don't know where they uld get it now. At that time I did offer them a n-acre plot, with a house on it, for an experimental rm.

46300. Mr. KAVANAGH.—How do the fishermen get d of the fish here?—They send it by rail to Cork— e mackerel they cure here. They don't bring in e spring fish here; they bring them to Baltimore. hey have an ice hatch and send away direct from e harbour, but they cure a lot of fish here at the me season, and the owners generally have their own eamers to come in and take it off. One man, a iverpool merchant named Flynn, has a cold store re and owns steamers, and takes away the fish for ipment to American market.

46301. They don't go on your tramway at all?—Not e cured fish; the fresh fish go that way, whatever ttle they have here to send.

46302. What are the principal goods on this tram- ay?—A good deal of mill stuffs—bran, flour, etc., comes in a steamer from Limerick. The remainder comes by rail. The Cork people send a good deal, but it is the bulk of the stuff comes from Limerick.

46303. Mr. SUTHERLAND.—The shopkeepers will be supplied from Cork?—Not all of them. Russell's, of Limerick, supply a great deal of meal and flour here. Groceries come here from Cork, but the steamer that comes in here is owned by a firm of millers from Limerick and brings his own goods.

46304. They run their own ships from Limerick and distribute the goods along the coast by means of small vessels?—They get direct cargoes up the Shannon to Limerick from America.

46305. Then they distribute them up and down the coast in their own steamers?—Yes; the vessel is in here sometimes once a week, and sometimes once a fortnight, according as they require the stuff. They get through a lot of stuff.

46306. Does that steamer carry passengers?—No; it belongs to a private firm.

46307. Are there many such steamers on the west coast of Ireland?—I don't know of any others. Plunkett, of Cork, send down their steamer sometimes, but I don't think it comes to Schull; I think it goes to Goleen sometimes. They are another firm of millers.

46308. That is a very healthy form of traffic?—Yes.

46309. It is native and spontaneous and requires no subsidy?—Yes. The Clyde Shipping Company had a subsidy from the Congested Districts Board.

46310. It did not keep on after the subsidy was withdrawn?—I don't think it was paying them; they had always plenty of freight to Schull, but the northern portion of the trip was not paying them. They were competing with the Great Southern Company. The withdrawal of the subsidy was only part of the reason for ceasing it.

46311. Mr. KAVANAGH.—It made the loss more acute?—Of course it did.

Mr. RICHARD DALY examined.

46312. Mr. KAVANAGH.—Are you a farmer?—Yes; reside at Dinitragh, Ballydehob. I have twenty- x acres, and my gross valuation is £7 15*s*.

46313. How much tillage have you got in that?— s much as I can, but that is very limited, because it very rocky.

46314. Have you an acre?—I have and more. I ad a family one time, but they had to emigrate. he object I have in coming before this Commission s to impress on the Government the desirability of ressing on this Mineral Bill as far as possible, be- ause I believe that next to Home Rule nothing is ore necessary than employment, to start industries herever it can be done, and I believe it would facili- ate the English Government considerably if we had ny industries. It comes next to Home Rule in my ind. If men have small holdings and large families ow are you going to stop emigration if you cannot nd employment for the people? This Mineral Bill as introduced, and passed its first reading on the 6th February last, and I believe nothing has been eard of it since.

46315. Most Rev. Dr. O'DONNELL.—Is it passing hrough Parliament now?—I don't know.

46316. It has not got a second reading yet?—I hink not. Now, as regards tenants who have got inerals on their lands, that is the principal point. hat is what I want to impress on the Commission, ecause in former years, when our land was bought n 1852 by the late Dr. Hicks, he bought the land, nd immediately sold it to prospectors, who came in nd dug up the surface. He bought the mineral ights. If the Government of that day was justified n selling mineral rights, surely the Government of o-day would be more justified, because they have he tenants who have to meet them for 68½ years, let he wind blow high or low; and what the Govern- ment did in 1852 the present Government would be quite justified in doing. The man who has to meet ll demands is entitled to the biggest share if he appens to have minerals on his land. Nothing is more needed for this country than to give employment or the people, and nothing is done in this district except a little mining going on at present.

46317. You seem to indicate that when the land s sold to the tenant the tenant should have the minerals?—Yes, but if the Government thought fit to make a small claim let them sell to the tenant. We understand that the Land Purchase Act was to do away with dual ownership. If there are two owners of mineral rights then that goes back to what we are doing away with.

46318. The way they manage it now is when there are minerals they go to the Land Commission?—That would not do for the tenant who has to meet all charges.

46319. Mr. KAVANAGH.—Could you explain to us what the Amending Act is exactly?—I don't know what it is exactly, but I believe it was this—to give the Land Commission power to restore these mineral rights free, whatever terms they would be under.

46320. Mr. SUTHERLAND.—I think it is more limited than that, and that it is merely to give power to lease the working of it to other people?—Suppose they do—who is more entitled than the man in possession. If you have two owners again you will be returning to as complicated a state of affairs as ever.

46321. Who is the proprietor of the minerals at present before the sale?—The landlord.

46322. Then a purchasing tenant buys this landlord's whole rights and interests?—Yes.

46323. And this right is kept back from him?—Yes.

46324. And your point is that that is unfair?—Yes, exactly. They have to remember the variable climate of ours; very often bad years come, when they would not be able to meet the Land Commission's demands, so the way would be to make a deduction for the supposed value of the minerals from the purchase price, or to give the mineral rights over to the tenant entire?—Quite so.

46325. I think that is unanswerable?—When this man bought the land in 1852, then he bought the mineral rights from the Government.

46326. Where did the landlord get the mineral rights?—He bought them for £200.

46327. He bought them along with the land in the ordinary way. When a landlord bought land before that he bought it with all that was on it?—There was some land exempt from that.

46328. Only by special contract?—Yes.

July 15, 1907.

Mr. Richard Daly.

46329. Mr. KAVANAGH.—Did he buy it in the Encumbered Estates Court?—Yes. The point I would make out is this—the urgency of passing the Bill and setting these minerals free.

46330. Mr. SUTHERLAND.—I think that Bill only gives power to the Land Commission to lease them out to people who will work them, and does not give them back to the tenant?—And the tenant is to have nothing for them?

46331. Mr. KAVANAGH.—Except compensation for damage done to the land?—Why should not the Government do what is fair to the tenant. The tenant would be prepared to buy his own mineral rights at a fair price; why should he not get them. They gave them to the landlords formerly; they have a greater interest in being fair to the tenant now than to the landlord then.

46332. Most Rev. Dr. O'DONNELL.—That is the point that Mr. Sutherland put to you. He asked you whether a tenant in buying did not buy out everything the landlord had to sell, including mineral rights; and whether in consequence the tenant had not a claim to the advantages derivable from working the mineral rights?—The tenant would be prepared to buy if he got the option of buying. I expected every right and title the landlord held both under and over the surface.

46333. Does not he, as a matter of fact, buy out the whole interests of the landlord?—He does.

46334. Mr. Sutherland's point is the tenant buys all the interests of the landlord, which includes the minerals, but the minerals are vested in the Land Commission without respect to his interest—that is his point. I understand that is largely your complaint also?—My complaint is—if there are minerals on my land, if I could not get them free from the Land Commission I would be prepared to buy them.

46335. Mr. SUTHERLAND.—Have you not bought them already if you have purchased?—We have purchased, but I think these are not included. I understood they would be vested in the Land Commission. I was under the impression I bought all the landlord's rights and interests therein.

46336. Mr. KAVANAGH.—I am afraid this Amending Act will not restore them to you, but will only give the Land Commission power to lease out the mineral rights to other people?—Why not lease them to the tenant in occupation?

46337. He could hardly work them himself?—He might find a way to do it.

46338. Mr. SUTHERLAND.—You might get an amendment moved that the return should go to the tenant?—What has been done before should be done again.

46339. That the Land Commission should hold in trust for the people who buy the land?—Yes, and it is a terrible condition if it is otherwise.

46340. Most Rev. Dr. O'DONNELL.—In these cases where the tenant had paid for them don't you think under the existing provisions of the law it would be always open to the tenant to represent to the Land Commission that he was quite capable of working the mines, and then to ask the Land Commission to facilitate him in doing so?—That would be quite acceptable.

46341. Therefore the tenant could claim to have an equitable right and title to work these minerals?—Yes.

46342. Would you think it fair in the Legislature on the whole that the tenant purchaser should not have a hold on the mineral wealth on his holding to this extent, that whether he liked to work the mineral resources or not he could hold his property undeveloped until he did like?—I would not go for that—I would be prepared to have them developed.

46343. IT is only where the tenant purchaser is willing to develop the minerals, and to show his capacity to develop them that you think he has first claim?—Yes; and for that I would go.

46344. Mr. SUTHERLAND.—The Act provides that for a sale under the Land Purchase Act of any land by the Land Commission, or any land comprised in an estate by the owner of an estate there shall be reserved, in the prescribed manner to the Commission, the exclusive right of taking minerals and searching for minerals on or under that land, and the said rights shall be disposed of by the Commission in manner to be hereafter provided by Parliament. His point was that Parliament has not yet prescribed how that should be done; so now is his opportunity of getting an amendment put before our Commission?—That is why I came before you.

46345. You should take a more powerful means of doing it?—I think this would be a very powerful means, through a representation to the Government as to the necessity of expediting the business.

46346. At present the Bill is before Parliament; you are represented in Parliament, and you know how to apply for what you wish?—I applied, from my interest in the business. It is quite necessary to stop emigration; if we have no employment emigration will go on.

46347. Are there many men from Ballydehob engaged in the mines?—Yes, there are a few working in the mines.

46348. Were you ever working in one yourself?—No, but I have one myself.

Mr. FLORENCE M'CARTHY examined.

Mr. Florence M'Carthy.

46349. Mr. KAVANAGH.—Where do you come from?—From Crookhaven; I am a trader and farmer, and Jack-of-all-trades.

46350. What particular point do you wish to bring before us?—I want to know the exact scope of this Commission. I have had experience of Royal Commissions, Boards, and Departments, that we are so blessed with in this country. Whether this is going to be an exception remains to be seen. As far back as 1883 I had a direct interest in the fishery on the coast here, and I tried to get the Piers and Harbours Commissioners, which was then the body dealing with fisheries on the coast, to do something, and I have in my possession letters from these gentlemen at the time. I placed before them some projects which I knew would largely contribute to the development of the fisheries of the district and promote the welfare of the poor people, seeing, as I did, French, Scotch, Manx, and English boats coming on our coasts, and making thousands of pounds out of the fish caught at our very doors, while our poor people were obliged to look on in helplessness at the whole thing.

46351. What did you suggest to them?—That they should improve the piers, and make boatslips and roads thereto. There was one in Crookhaven in a sad condition. We have one of the beautiful advantages of dealing with an absentee landlord. The place is owned by an English Lord, Lord Clinton, who takes as much interest in his serfs there and a great deal less than the slave owners took in the niggers in the Southern part of the United States. So long as he was given his rent he did not care if the people died of famine. I took some steps to point out that there was a possibility of improving their prospects. I was one of a deputation that went up to Dublin some years ago and waited on Mr. Balfour. Subsequently Lord Zetland himself, Sir West Ridgeway, and members of the then Government came down. I was present at Crookhaven when Lord Zetland nearly met with a fatal accident in the year 1891, owing to the dangerous condition of the pier. Crookhaven is west-south-west from here, about fifteen miles away. Lord Zetland was present; and asked Sir West Ridgeway, then Under-Secretary, to take a note of the fact that the pier at Crookhaven was to be extended, and he promised distinctly to use his influence with the Government, seeing the necessity for that at the time. As a matter of fact he almost had a serious accident at Crookhaven, because the pier was washed away nearly; a few stones remained standing on top of each other; the day he arrived was one of the most inclement; the boat had to be run in on the top of a wave; when about landing he put his hand on a large overhanging stone, five or six cwt. It was near crushing him. He had personal experience of the necessity for the repair of the pier. I was the cause of having two fishing companies formed. I laid some projects, both of which would help in the improvement of the conditions of the fishermen on the coast generally, and in the development of the district, before two gentlemen who were very largely interested in the fishermen on

he coast, Sir Thomas Brady and the late Father Davis; but I regret to say the influence of some other districts, and the personal influence of Father Davis, which he admitted to me in Baltimore, prevented his assisting me in some projects which would undoubtedly have had some splendid results. Unfortunately I found not alone did they not throw themselves into the projects, but Father Davis actually prevented some of the people round Baltimore and Cape Clear, and the islands down there, from putting down the small sums of money necessary to make this thing into a co-operative fishing company. I need not point out that the fishing is altogether in the hands of a few English buyers. They simply give whatever they please for the fish; they treat the fishermen worse than slaves. They prevent, actually, the bountifulness of Providence being availed of. They keep the fishermen inside frequently. It ought to be possible to spend portion of the money, spent on various Boards, Departments, and Royal Commissions, all this time, in a more practical way; because I had experience myself—travelling expenses, hotel bills, steam yachts, actually used in connection with them—the money would be more usefully spent in the improvement of the people. Nothing has been done during the entire time. I can show you letters from Mr. John A. Blake, and Sir Thomas Brady, as far back as 1883 and 1884, saying they believed the projects were good, but that they had not sufficient money available. Later on the very same thing applied in the matter of the Congested Districts Board. I got a loan from the Congested Districts Board to provide a boat. I got the boat; I called that boat a name which most of you may remember. It was that boat that effected the rescue of the Fastnet Light keepers when they were starving some years ago; when the steamers sent down for this job could not do it. We effected the rescue. I called my boat the "Self-Reliance," with the object of trying to introduce some little self-reliance into our people—not to be so dependent as they are on outsiders. That loan I had from the Congested Districts Board I paid off. I got also small loans out of a private fund that Sir Thomas Brady had for helping fishermen—some funds placed at his disposal by some American or Canadian philanthropist. These small loans have been very useful. The fact is that while our people are looking on at all this thing, the Manxmen, Frenchmen, and others come round this sea coast. Surely it ought to be possible to take some practical steps to keep our people at home, and not have them emigrating as they are. Crookhaven was once the most prosperous place in Ireland for its size, or in the United Kingdom. It was ten times its present size. Nearly all the people have emigrated. Now there are only about 150 or 160 people, and at one time the population exceeded 1,600. Of course it was not altogether owing to the want of fishing appliances, because other causes contributed. It was formerly a port of call, where ships came for orders. Of course every modern improvement—cable wires, the telegraphic conveniences, provisions, preserved meats, &c., all contributed to ruin all the ports of call in the United Kingdom as well as Crookhaven; but Crookhaven suffered most, because it was the most important port on the coast where ships called. With regard to other things unfortunately in the year 1890, very great distress prevailed on the coast. A deputation of local gentlemen, including the Catholic clergymen and the Protestant Rectors at the time, went up to Mr. Balfour in Dublin Castle. I started the Committee. The late Captain Morgan, and Mr. Thomas Downes, and other persons were on the deputation, and pointed out some practical things that might be done for the people on the coast. I hope there will be no more of these periodical famines, which have been too frequent. They pressed very much on him to make small piers in the various districts for the people all round the coast here. A number of small piers might be built for the people, that are not built, and the improvement of the small roads, and of the roads or boreens, as they call them, leading thereto and to the houses would be a practical work of great benefit for the people who would be able to get to their fishery. With these small piers built at several of the places where they are not built of course the fishing would be developed. Another thing, unfortunately the distress was so great in 1890 that so-called relief works were started. The bulk of the money, a sum of £5,000 nearly, was spent on the so-called relief, at a place called Dough and Lissigriffin. The result of these relief works and the mode of management was this. They actually compelled starving people to walk twelve or fourteen miles, men, women, and girls, and sit down on the side of the road breaking stones, and indulging in works of no practical value. On the contrary instead of being valuable they were quite the other way. They went about widening a road that was already too wide for the traffic. It was a disgrace to go and spend money on that place. The local Rector and the two priests of the parish, and myself waited on the officials in charge of the work, and pointed out that instead of being of practical assistance, it was quite the opposite; and we pointed out the cruelty of compelling these people to come twelve or fourteen miles for relief works, which might have been more practically and usefully started in their own immediate neighbourhood. The result was, instead of doing what we asked, whatever we asked was the very thing they did not do, and with that pig-headedness which is associated with the Board of Works and every other public Board in this country, the works carried out are a monument of the bungling associated with everything connected with the Board of Works in Ireland and have been the means of costing the district a lot of money. Over £200 special grants had to be made some years ago, and the contractor had to be relieved of his work; the road is continually flooded, and the lives of the children are continually in danger going to school. These children have to wade through the flood, which is caused partly owing to the action of the persons charged with the relief works at the time. Instead of carrying out the works we wanted they placed in charge of these relief works a number of men with large salaries. They had a lot of sappers and miners; and I was personally witness of an incident that, only I was restrained, would, at all events, have impressed itself very forcibly on the minds of one of these gentlemen. One of the unfortunate girls who had to seek relief was sitting down at the side of the road at these relief works. Portion of her legs was exposed. The chaps in charge of these relief works started to make use of language that was simply shocking to any female, but particularly so to a pure Irish maiden.

46352. You consider what this district most wants is small piers and roads?—Not alone that; the people would also want a mode of cheap carriage of fish. I placed a project before the Cork and Bandon Railway and the Great Southern and Western Railway some years ago which would materially have assisted the fishing. The Government should be able to give sufficient funds to erect curing stations, salt and ice stores, and have the fish taken from the coast to various places where a supply of ice was to be had.

46353. You have a tramway?—This is fifteen miles away and twenty-one miles from another part of the district that I am speaking of.

46354. There was a motor project, I understand, but the County Councils would not expend the money on the roads?—I am very much afraid that the roads leading from here to there would require a little expenditure before they would be in a condition to accommodate motors.

46355. Mr. SUTHERLAND.—Have you thought of extending the tramway to Crookhaven?—It was one of the things we pressed on Mr Balfour when we waited on him in 1890.

46356. It would be a practicable way of collecting the fish?—Yes, but there was a much larger scheme on foot, of which the general public were not aware. I am now perhaps revealing a secret, to a certain extent, but a very large body of people told me they had £3,000,000 at their back and intended carrying out a line of railway to Crookhaven from Durrus, in connection with the carriage of the mails. As a matter of fact, I have in my possession a copy of that railway scheme. Of course, owing to the change that has taken place in consequence of the increased speed of steamers that has fallen through.

46357. That is practically a scheme like that by Blacksod Bay?—Quite so.

46358. It would look a very practical thing if you wanted a method of collecting the fish all the way down to Crookhaven to extend the line down there?—Yes, but if this was extended *via* Dunmanus Bay it would tap Dunmanus Bay and be a decided advantage, and it would help to relieve the ratepayers of

July 15, 1607

Mr. Florence M'Carthy.

the district, who pay about £4,000 a year in connection with this tramway, because that railway was built under a guarantee. The capital was £57,000, and the guarantee was 5 per cent. Those shares are principally held by gentlemen in London and Dublin. There is a syndicate in both places. The shares stand at from 27 to 28 shillings in the market.

46359. Are these £1 shares?—Yes.

46360. And the holders are guaranteed 5 per cent. dividend?—Yes.

46361. They are lucky shareholders?—Yes, and the unfortunate people in this district are liable for this. I don't know whether you saw that a friend of mine, Mr. James Burke, gave evidence before the Railway Commission in London. The Schull and Skibbereen Railway, or the "S. and S." railway, is known among local wits as the Sick and Sore railway. The guarantee of 5 per cent. on the capital of £57,000 is a perpetual guarantee. I was Chairman of the Railway Committee for a time when I was on the County Council. It would be possible if the public weal were of more importance than the interests of a few capitalists if necessary to pass a short amending Act to compel them to sell those shares and sell them at par, and lend the money at 3 or 3¼ per cent. That would relieve the ratepayers of the district very considerably, and ought not to be outside both the scope and the power of the Government.

46362. What was the cost of construction?—£57,000, about £4,000 a mile. As a matter of fact, the cost was considerably more, because the railway got into the hands of a London contractor.

46363. You think it could have been made cheaper?—Yes. Portion of the thing did not cost £1,000 a mile. The distance from Skibbereen to here is 14¾ miles. There was a short extension some years ago to Schull Pier at the cost of the ratepayers, which would be, if the fishing was developed on the coast, a great source of revenue. The London company man, with the cunning of his race, took a large mansion, got up a pack of hounds, and a great many of the members of the Grand Jury, who in those days were not mindful of the interests of the ratepayers, were continually feasted by Mr. Avigdore, with the result that in the carrying out of the railway the work was scamped, and he provided a lot of second-hand engines and wagons newly painted up and varnished, and with that beautiful complacency connected with the Board of Works or the Board of Trade a gentleman came down to see that this railway was properly completed. It appears that there was a plentiful supply of champagne of the finest brand. When that pioneer came along the railway was passed. In less than six months the whole thing broke down and a large amount of expense was put on the unfortunate ratepayers again in addition to the 5 per cent. by providing some new wagons. They were not able to buy new engines. They had to hire them. That continued for a number of years. The engines used to refuse to work occasionally and the passengers had to shove the engines instead of the engines taking the passengers. For twenty-five years I have taken a great interest in tree-planting. On the County Council some years ago I pushed it on as far as possible. We got as far as advertising for any suitable land in the County Cork. One gentleman, with a great deal of patriotism and practical desire to help the people—which he followed up later in connection with the incurable hospital—offered 3,000 or 4,000 acres alone. Lord Bandon also offered some. This suitable place, Mount Gabriel, which is now denuded of trees, but was formerly beautifully planted, and which if planted would make Schull one of the most beautiful spots in the kingdom was also offered. I think we got from 10,000 to 15,000 acres in the county alone offered for tree-planting. That is six years ago. Then we found that the Department of Agriculture and Technical Instruction stepped in and informed us that we had no power to do anything in connection with this tree-planting scheme. There was also another project which I have a practical knowledge of, being practically engaged in the fish business. At the time I had three large boats and several smaller boats which gave a good deal of employment. I pushed on that project and the County Council facilitated it in every way. We got as far as that we would be prepared to offer a system of bounties to the fishermen on the coast to make them more industrious, to give the boats that secured most fish a bounty as an encouragement, and a bounty nearly as good to the boats that fished as often as the boats that caught most fish. I received communications from Protestant, Catholic, and Presbyterian clergymen and from gentlemen of experience round the coast complimenting me on the projects. When we wanted to carry that out practically and the County Council were prepared actually to levy a rate with that object——

46364. With the object of supplying a bounty for fishing?—Yes. The Department stepped in and told us we had no power to have anything to do with fishing, but they have power to get up creameries to ruin our villages and towns and to have incompetent men careering through the country, while more competent men remained unemployed at home, or are forced to emigrate.

46365. The value of creameries is a matter of opinion?—Quite so, but a great many are of opinion that they are not an unmixed blessing. At all events, they are not a blessing to the villages and towns in the country.

46366. You had not an opportunity of testing the bounty system?—No. We urged the Department to give us a little latitude, but they seemed more anxious to prevent us from doing anything practical.

46367. Mr. KAVANAGH.—You favour re-afforesting?—Certainly. It would give a great deal of employment and improve the climate. A number of local and home industries cannot be started until you have woods. The value of timber is increasing every day in connection with new discoveries and industries, and we will never be able to avail for cottage industries of that instruction, which is costing so much, until we have the country planted with trees.

46368. Mr. SUTHERLAND.—Do you import timber into Schull?—In a small way; not directly. It comes in a very roundabout way, and there are two or three profits, whereas if this place were properly equipped cargoes of timber might be imported direct.

46369. Do you import any foreign timber?—There is no importation direct into Schull. Whatever is got is got in a very roundabout way.

46370. Is foreign timber used here—pine?—Yes, pitch pine, red pine, American elm, and ash.

46371. All these are imported?—Yes, in small quantities. I wish to refer now to my experience in a small personal matter. After 1891, when Lord Zetland visited Crookhaven, two Manx co-operative companies formed by myself, which were fishing there, threatened to leave owing to the condition of the pier. I being anxious to facilitate them and having an interest in the place, spent £53 12*s.* 6*d.* on the improvement of the pier at Crookhaven. From that day to this that money has not been refunded to me. They availed of a little quibble, quite worthy of a pettifogging lawyer, as an excuse. I sent a photograph of the condition of the pier beforehand and the condition of the pier when built, and asked the local police sergeant and the local coastguard officer to see the amount of money expended on the thing. When it was done I applied for £53 12*s.* 6*d.* From that day to this I am without my money. They availed of it not being formally sanctioned.

46372. Most Rev. Dr. O'DONNELL.—Would not you think that a public body ought to insist on that requirement?—Yes, but there ought to be exceptions; in this case where we had several special trips of the fishing steamer down, where there was a sum of £120 contributed by a public body and it was falling through if I could not get a small contribution of £50. I applied to the Congested Districts Board, pointing out that if that small sum was not given the contribution of £120 would fall through. So they had ample time, over four months, to make up their minds. I explained that if this were not done when the presentment came before the Grand Jury it would be rejected. I got a telegram from the Secretary to the Grand Jury to say that the £50 which should have been lodged by the Congested Districts Board as a condition of getting the grant was not lodged. I telegraphed to the Congested Districts Board again, but from my experience of boards and departments it occurred to me that it would not be very safe to rely on them to send that money in time and I took the precaution—it was a sort of inspiration; I was at prayers at the time on Sunday when the thought occurred to me, and I wrote to the Mansion House

committee, and asked them to contribute, as I feared the dilatoriness of the Congested Districts Board would block the proceedings. That was what happened.

46373. What happened?—The Mansion House Committee telegraphed to the Cork Grand Jury contributing the £50.

46374. Did you get the money from the Mansion House?—I got the £50 from the Mansion House on condition that it should be refunded if the Congested Districts Board would contribute the amount. I got a letter from the Congested Districts Board on the Friday —that is three days after it should have been lodged —to say it would be considered at the next meeting. How beautifully they do things!

46375. Whom was this project intended to benefit?—The fishermen.

46376. How?—There was no pier where the boats could come alongside safely.

46377. What happened when the £50 was granted?—The bulk of the money was made up.

46378. And the work went on?—The work was completed.

46379. Where?—At Crookhaven.

46380. What class of work?—The pier. I spent £53 12*s.* 6*d.* out of my own pocket to keep those companies in the place and provide employment for the people.

46381. How far is it from where your business stands?—The pier runs out just beyond my place.

46382. Would not it be a good business for you yourself to expend that money?—I think that private individuals with not too much capital should not be expected to do public works.

46383. Would not you take it all back again?—We cannot afford that, but in this case we had to do that. I don't think it was very encouraging.

46384. Was not that a speculation of your own?—It was not intended to be a speculation of the kind. I did it to keep those two large companies which had threatened to leave and gave a large amount of employment, because the people would be in a state of semi-starvation only for the employment of those two companies—the Manx Company and the Peel Fishing Company—which I was the means of forming.

46385. Don't you think that a public Board should be very cautious in a thing of this sort where an individual makes an application, and he himself is interested. Ought not the public body look more to the general public, and go for schemes in which the general public is immediately interested?—I quite agree. Undoubtedly they should, but I think in that case, where I had been from the year 1883 up to that date—that is over ten years—trying to get the Piers and Harbours Commissioners, the Fishery Commissioners, and the Congested Districts Board to improve the piers, that something should have been done.

46386. You will find that the public will approve of a great deal of red tape in those cases?—I quite agree; but in this case, to show you what interest was taken, when this work was actually under weigh and portion of the pier improved we had down in Crookhaven harbour in very beautiful weather the Congested Districts Board's steamer with two or three of the members on board. The local rector and the parish priest and the curate told me to ask them to do something in connection with the projects locally. That steamer arrived at Crookhaven unadvised in a fog, and was about leaving when I went aboard her. They came ashore to see the work. When they arrived on the beach at Crookhaven when the pier was being built they were fully under the impression—and so I left them—that they were actually doing this thing themselves. That showed the interest they took in the fishing, and the object of this trip round the coast. I asked them to wait, as the local rector and parish priest and curate wanted to see them with regard to the various projects which they wished pressed on. They were in too great a hurry. I succeeded in getting them to go round to Mizen Head. I drove them in my trap. They had no time to go to Dunlough Bay. They could not go up to Dunkelly. Meantime, I had sent for the parish priest and the rector to meet them, but they were in too great a hurry. The secret of their hurry I learned afterwards was that they had an appointment to dine with some gentlemen at Glengariff. That is indisputable.

46387. Mr. Sutherland.—The complaint is that the Congested Districts Board did not homologate an expenditure made by you. You cannot expect a public Department to pay for what they were never consulted about?—They were consulted.

46388. Did they consent?—No, but I pointed out that those companies had threatened to leave.

46389. Would you conduct your own business on these principles, and if a man without authority incurred an expenditure would you afterwards pay it up?—Certainly, I think in that case where several trips were made by the steamer, where a number of gentlemen came down to see the necessity of this pier, and where a large amount of money was spent on travelling expenses, they would have carried out the work, or refunded a most useful expenditure.

46390. Your point is you spent a certain amount of money without their consent, and afterwards they did not refund it?—That is not strictly accurate. I had been pressing the necessity of improving that pier for ten years.

46391. Granted all these things, your good intentions and the good work, could you expect business to be conducted in that way?—I pointed out that the companies would leave if the pier was not improved, and further that if they did not do these things at once the companies would not come there the ensuing season.

46392. Would not it have been preferable to have obtained their consent before then?—I was trying for ten or eleven years.

46393. Then you did not get it?—No; as a matter of fact we have never got a penny from the Congested Districts Board for the development of this district.

46394. You would not expect them to carry on business in that way?—I think they might strain a point for work like that.

46395. Have you considered that they cannot strain it, as they are acting under an Act of Parliament, and are held responsible for all money that they spend?—I think that money is spent in other ways more illegitimately and more uselessly.

Rev. Francis Rogers examined.

46396. Mr. Kavanagh.—In what district is your parish?—Goleen, ten miles from Schull, near Crookhaven.

46397. What particular point do you wish to bring before us?—A pier and road should be built at Goleen. I think a consent has been very nearly granted by the Board to build a pier there. I hope it will be carried out, because things are very awkward as they are now, and great inconvenience is caused, as no boat of any size can land. Mr. Furlong's steamer and a steamer from Limerick come down now. They have to anchor outside the harbour, and little row boats have to go and bring the stuff in from the steamer. All this could be avoided if a pier and road were made.

46398. There is a small pier at present?—It is no use except for row boats, and is quite dry in low water.

46399. Most Rev. Dr. O'Donnell.—The vote has been actually made?—I think so.

46400. £400?—I don't know the amount, but I think it is actually made.

46401. How far is it from Crookhaven?—Five miles if you go by road, but only two if you go over by the ferry.

46402. The Board has voted £400?—Yes, but there is a short bit of a road that will have to be made.

46403. Mr. Kavanagh.—How much will that cost?—I have not heard. It would be a great boon to the people, and is a most necessary work.

46404. Are there any fishermen round about there?—There are a good many lobster fishing and that kind of thing. It would be useful to them and useful to the people of the country. I got some things the other day, and row boats had to be sent out to the steamers for them.

July 15, 1907

Rev. Francis Rogers.

46405. Mr. SUTHERLAND.—The great benefit would be that the steamers could come alongside?—Yes.

46406. That would obviate transhipment?—Yes.

46407. How often does the steamer call there?—About once in three or four weeks. Another point is that the roads are greatly flooded on the strand, and sometimes it is impossible to pass owing to the floods on the roads. It is a terrible state of things.

46408. Mr. KAVANAGH.—About two years ago it became flooded?—Yes, owing to the sand choking it up.

Mr. TIMOTHY MAHONY examined.

Mr. Timothy Mahony.

46409. Mr. KAVANAGH.—Where do you come from?—From the village of Goleen. I am a farmer, and have a little to do with the curing of fish. I wish to give my evidence on that point.

46410. How do you farm?—I have a farm that keeps about twenty cows.

46411. What is the extent of your farm?—About eighty acres.

46412. What do you want to bring before us?—It would be a very necessary job if that pier at Goleen were constructed, and a little approach road, not much of a road, should be made. It would be only a few perches. It would be a great thing for the fishermen.

46413. Most Rev. Dr. O'DONNELL.—What is the total estimate?—I heard it is £400.

46414. The Board is giving £400?—Yes, but £200 more is wanted. It is a stumbling block. I am afraid they won't get it from the County Council. I don't know why £200 should be given to the road, because it is not more than eighty perches altogether.

46415. Mr. SUTHERLAND.—You think it is a fair estimate?—Yes, except that the thing should be done after a very elaborate fashion, and that they would fill up a lot of roads in the passage, and make a pier of it. I think if the Congested Districts Board would do the whole thing they would do it better than a road contractor. A road contractor doing it by contract would try to do it as cheaply as he could.

46416. Who would carry out the contract in the ordinary way?—The County Council.

46417. Is not the County Council quite capable of supervising the contractor?—It is very hard to get it done right. A contractor would be trying to regulate it in the best way he could.

Mr. KAVANAGH.—They would have to get a contractor.

46418. Most Rev. Dr. O'DONNELL.—The Board have been in the habit of acting in two ways, doing it either departmentally or through contractors?—I think departmentally would be the best. Contractors are apt to get out of a thing as cheaply as possible.

46419. Latterly the way the Board proceeds is this: it offers a contribution to the County Council, leaving it to the County Council to have the work done?—I don't say our County Council would not be as energetic as any other one, but I don't know if we would get £200 from them.

46420. Not very many of the county councillors have seen the place?—I suppose not. Then another work that will have to be grappled with is the cutting of that sand bank that has been referred to. It is believed it will cost at least £500, and £500 and £200 on the ratepayers of the rural district of Schull will be a very heavy tax on them.

46421. Would there be any chance of that district passing through the Congested Districts Board?—There might be a chance. I think the agent is a pretty sharp man. I don't know would he be inclined to deal with the Congested Districts Board. I suppose if he got as good terms from the Congested Districts Board he would.

46422. Mr. KAVANAGH.—The pier would develop the district?—It would to a great extent. It is almost impossible for fishermen to carry on their business as the matter stands at present.

46423. Would not it be worth their while to be taxed for a thing that would develop the industries in that part of the world?—I am thinking it would pay the ratepayers, but this £200 coming on suddenly if it were on the county at large would not be a big thing, but if it were on the rural district it would be too heavy.

46424. You could not expect a road like that to be on the county at large?—Hardly. But I asked Mr. Longfield, the County Surveyor for the West Riding, and he said it would be the best thing if the £200 could be got to go on to the Congested Districts Board, and let them carry the whole thing through. He thought the contractor would not do it properly.

46425. Mr. O'KELLY.—Is not that rather a reflection on the contractors of West Cork?—I suppose he should be able to form a fair judgment on what they have done for him.

46426. Most Rev. Dr. O'DONNELL.—Would it be difficult to get a contractor for marine works over at Goleen?—I don't think there are many contractors in the district would take up the work. Plenty would be got to make the road. Our point is that the making of the road and the cutting of the sand bank would be very heavy to throw upon the ratepayers of the district all at once, and the cutting of the sand bank might be done for us, whatever way it is done. As regards the fishing, the only thing I wish to say is that additional accommodation is required. This pier at Goleen would be a great help, and then at Dunkelly, another place in Dunmanus Bay, they want a pier.

46427. Is it near Gortduff?—Within a mile.

46428. Was there a pier built there?—Yes, the Congested Districts Board made a pier and contributed half towards the making of a road. £180 was the cost, and they contributed £90.

46429. Is the pier a useful work?—A very useful work. It has done a lot of good to the place. It is on the opposite side of the promontory from Goleen. I don't know if the Congested Districts Board do anything like building curing sheds.

46430. It has been suggested that they should be built and let to curers?—They should be built and let at something like a fair rent to curers, so that they could cure and store their stuff there.

46431. Mr. KAVANAGH.—There are some curers here?—I don't know many who are resident in Schull. I cure fish myself on my own account.

46432. Most Rev. Dr. O'DONNELL.—Have you met any officer of the Board in reference to these projects of yours?—I met Mr. Green about ten or twelve years ago; and Sir Horace Plunket came into Goleen on the steamer and saw the necessity of the work and the difficulty of landing there, and having to land on a dark night, because the place is very craggy and rough; and if a boat of fish is brought in, say, at six o'clock in the morning there is no way of taking it to where it can be cured except on the back.

46433. They gave you an opportunity of stating your views?—Yes, but I saw no work done since; but Mr. Oliver went out there some months ago. It was all talk before that, but the work is going to be done now, and he led us to believe that the Congested Districts Board was going to make the road and pier.

46434. Mr. SUTHERLAND.—Mr. O'Brien said he was not exactly sure about spending money on the improvement of property that had not been transferred from the present owner to the tenants: would you agree with that?—Yes, but I don't see why that would come in with regard to those piers.

46435. Don't you think it would considerably enhance the value of a place if you spent this money?—Yes, but I don't think the landlord would reap any benefit from that.

46436. Take the case of the work that you are wanting here, for opening this through drain here, if there is any work in the world that a landlord is entitled to do it is that. It is improving land for which he gets rent from the tenant?—I think if there was a good landlord he would contribute to the doing of it, but the agent of that estate would not do anything except take the rent.

46437. How does it happen that here, where an act of nature has destroyed the land, the landlord is still receiving rent for it?—You mean to say it is covering some of his land?

46438. Yes?—It is not covering much of his land of great value. It is stopping the outlet of some drains, but his point is that the county authorities would have to do it; that it is a public road.

46439. Is there a sand bank on the public road?—It is open to the public to take sand from it.

46440. It was not they who put the sand bank here. It is the act of nature?—Yes.

46441. Is there any of the land for which he is receiving rent destroyed by it?—There is a little, not very much; but in that way the tenant would suffer, not the landlord. He is getting his rent.

46442. Surely, if he did not do the whole of it, he ought to contribute something?—You will find if you try that you won't get very much.

46443. If you agree with Mr. O'Brien it carries you a long distance?—I agree that in justice the landlords ought to do it, but they won't do it.

46444. Mr. O'Brien's proposition would carry you a great deal further; if the Congested Districts Board spends money on a property which the tenant afterwards will buy, the tenant will have to buy the improvements made by the Congested Districts Board?—I know this place pretty well, and I don't think it would add anything to the purchase price of the holding. The cutting of the strand is a public necessity. The road is availed of by tenants on several properties besides the property on which the individual occupiers reside, and I don't think it would add much, if anything, to it, but there is a great deal of valuable manure left by the sea there.

46445. You think there is no danger of tenant purchasers being asked to buy back improvements made by the Congested Districts Board?—I don't think they would pay anything for what would be done there. I heard some evidence given with regard to a close season for fishing since I came in here. I don't know what to think about it. I don't know what months they would suggest to have a close season for.

46446. Mr. KAVANAGH.—Only for trawling?—I understood it was to be for mackerel. There was something about a smaller mesh also. The seacoast is principally fished in the autumn here. They must use a small mesh. If they used a large mesh all the fish would get meshed, and then they could not lift the seine, but what I would suggest is if they catch small fish they should let them go again. Fish are alive in the seine until they are taken into the boat.

46447. Mr. SUTHERLAND.—I suppose you think you would be entitled to take the mackerel whenever they appeared?—Yes.

46448. They are capricious enough in the times when they come?—I think I got mackerel on the 28th of this month two years ago as good as ever they were. It is a great hardship to stop a fisherman when he has a chance of making money, provided he does not do any harm.

Mr. TIMOTHY COGHLAN examined.

46449. Mr. KAVANAGH.—Are you a farmer?—Yes. I have 87 acres. My valuation is £28 9s.

46450. What district do you reside in?—Goleen.

46451. What particular point do you wish to bring before us?—I wish to refer to the Dough Strand and the closing up of the estuary of the river.

46452. That is what we have heard of recently?—Yes. There are several properties concerned there as well as the Clinton estate. The farmers in our district all take coral sand off this strand, while it was exposed. They mixed that sand with the earth and it formed very good manure. The small farmers have no means of making any manure on their small patches of land. It is very injurious to them to have the sand covered up with the tide as it is. The roads are flooded in winter, and they cannot attend the National school, and the people cannot go to any place of worship. Last December they were not able to go to any place of worship. They should go all round the country and travel all over the land.

46453. Is this road under contract?—Yes. There are three roads, public roads, under contract. There is one right across Dough Strand, one by the National school, and another to Dunmanus Castle from Dough Strand. The three roads are submerged for six months in the year to a depth of three feet. They used to walk on the fences. Now the fences are down. Now they have stepping stones on the road. Small scholars cannot go to school.

46454. Is it too deep for a car to go through?—Yes, after a heavy rain. I remember when a horse could not go there.

46455. How much of the roads is under water?—About a mile between the three roads. There is a small opening going through the loose sand and flowing into the sea. I believe it was the action of the sea that closed the estuary.

46456. Mr. SUTHERLAND.—When did it occur?—About two years ago. I think it was a pile of wrack weed that first gathered near the western shore. The sand was blowing. There was no tide going at that time of year. The current was removed into the loose sand. Now the place is closed up altogether. Twelve small farmers in that place got a seine two years ago. Now they are not able to do anything. They have to bring this seine through this loose sand into a field. They are scarcely able to do anything. Before when the strand was open they used to come up after the tide and dry the seine in a man's field, and bring it down to the boat to fish with.

46457. Mr. KAVANAGH.—Would it be flooded at this particular time of year?—Yes, in one particular portion. I saw it yesterday, but as soon as there is rain again it will be flooded.

46458. How does the road contractor keep up his contract?—He does nothing to that portion. The County Surveyor was out there and saw it, and estimated that £300 would open it. Several representations were made to the landlord, and he would do nothing.

46459. There are three or four estates concerned?—Yes; because when the sand is flooded they cannot take the coral sand to make manure; that place is on one estate, Lord Clinton's, whom we never see in the place.

46460. Mr. SUTHERLAND.—You have communicated with the County Council about it?—We lodged an application with the District Council to open it. It was passed that the Rural District Council should give £100, and the Congested Districts Board £100, and the County Council £100. They struck out their £100. They said they had no power at all. I believe our County Councillors did their best. The majority of the votes are in East Cork, and they don't wish to give us anything but what they cannot help. The Goleen pier is very necesssary. There are two steamers that come with merchandise. They come once a month, one from Russell's, of Limerick, and the other from Furlong's, of Cork. In winter time they have to go away again and leave the place without provisions sometimes. The place is very rough and it is very dangerous to land boats there.

46461. Mr. KAVANAGH.—I believe the Congested Districts Board is at present contributing to that?—Yes.

46462. It seems to me the difficulty is that the ratepayers should come forward. They cannot expect the Congested Districts Board to do everything?—Yes, but they are so overtaxed. They will have to open the Dough Strand. If the Congested Districts Board would make the pier and road I would undertake the people of the parish would open the Dough Strand.

46463. Don't you think that £400 is a very generous contribution from the Congested Districts Board to do the work?—Yes. I think so. I think £100 thrown in would not be too much.

46464. It would come back to you in a few years?—Yes, but we are so heavily overtaxed already.

46465. Most Rev. Dr. O'DONNELL.—Your point is, the contribution is made difficult because they will have to cut through the sand bank?—Yes, they will have to do that.

46466. Mr. O'KELLY.—You have referred to the overtaxation of the ratepayers?—Yes. We are paying on the Schull and Skibbereen Railway and the Bantry Railway.

46467. Don't you think it would be reasonable for the County Council to give you some contribution?—Yes.

46468. The rates on the whole County Cork are low?—Yes; on the rich portion they are low, but in the congested districts they are heavy.

46469. They are high in Schull, but your valuation is exceedingly low?—Yes, but we have no good land. It is all rocks and waste.

46470. The Cork County Council has a large

July 15, 1907.

Mr. Timothy Coghlan.

balance to its credit—about £30,000—are not you aware of that?—Yes, but unfortunately we don't succeed in getting anything from them.

46471. Are you aware that in the County Mayo the whole County of Mayo is giving a guaranteed contribution of £1,500 in case certain expenditure was carried out in connection with marine works, although only an isolated portion of the county was going to benefit, and unfortunately in the County Mayo we are not so wealthy are you are in Cork?—They are more liberal than we are.

46472. I don't know; but they take a broader view?—There is a seine in Goleen. Others may try the experiment, but they say that those who have the seine are not successful. They have no way of bringing the fish to market. They must remain until high water to come up to where the pier is at present.

46473. Mr. SUTHERLAND.—This Goleen pier is in a fair way of being carried out?—I hope so, because it is very necessary.

46474. Most Rev. Dr. O'DONNELL.—If you could connect the two projects and get them on simultaneously it would be a great matter?—Yes, but I am afraid we cannot do it in that way. If the Congested Districts Board did this pier we would not trouble them with the opening of the strand.

46475. There would be no fear that the strand would remain as it is?—No. I believe the ratepayers would be willing and anxious themselves to open it. We tried before, but it was through the loose sand, and we could not do it. It must be opened on the land side.

46476. Mr. KAVANAGH.—If you opened it could you prevent it from closing again?—I understand that the Council would employ a man to keep the obstructions out, and I think they would not allow it to close again, because they are very anxious to keep it open.

46477. Would one man be able to prevent it filling again?—One man and his family, if they had a boat. They did not know the value of it until this happened. If it was opened now it would be kept open for the future.

The Commission adjourned.

NINETY-THIRD PUBLIC SITTING

TUESDAY, JULY 16TH, 1907,

AT 11.0 O'CLOCK, A.M.,

In the Courthouse, Skibbereen, County Cork.

Present:—WALTER KAVANAGH, Esq., D.L. (in the Chair); Most Rev. Dr. O'DONNELL; JOHN ANNAN BRYCE, Esq., M.P.; ANGUS SUTHERLAND, Esq.; CONOR O'KELLY, Esq., M.P.;

and WALTER CALLAN, Esq., Secretary.

Mr. TIMOTHY SHEEHY examined.

July 16, 1907.

Mr. Timothy Sheehy.

46478. Mr. KAVANAGH (*in the Chair*).—You represent the County Council for this district?—Yes, for the Skibbereen division. I wish you would permit me to make an opening statement. To be candid, we are not enamoured of Inquiries down in this part of the country. It was only a few weeks ago there was an important inquiry affecting a very important branch of our deep sea fisheries, held in this courthouse. It was presided over by Mr. Green, the Chief Inspector of the Irish Fisheries.

46479. Was that on behalf of the Agricultural Department?—Yes; it was on a resolution I had proposed and which had been unanimously adopted by the Council of Agriculture in favour of a brand for our Irish-cured mackerel. I regret to have to say here to-day, that the Inquiry, although it was held at all the principal fishing stations along our seaboard, ended in smoke. Mr. Green, in his report, after that Inquiry, pooh-poohed the idea that Irish mackerel should be branded or inspected on leaving the shores of Ireland; but he made no suggestion whatever as to how the great injury that was already done to our Irish-cured fish in America could be remedied. Before going further I wish to hand into you the valuation of the congested area in the Skibbereen electoral division—the valuation, the area, and the population. The area of the congested portion is 28,620 acres; the valuation is £10,191 12*s.*, and the population is 6,769. In the non-congested area within the Skibbereen electoral division the area is 83,746 acres; the valuation is £32,988 19*s.*, and the population is 15,218. I think I am right in including the Urban District of Skibbereen, because that is a portion of my division. The entire area, including that, is 115,395 acres; the valuation is £49,245, and the population is 25,195. The importance of the fishing down in this district may be gauged when I say we have registered in the port of Skibbereen eighty-six large mackerel boats and 825 yawls, and the amount of capital invested in the purchase of these boats, and providing gear amounts to over £40,000.

46480. Are they all Irish boats?—All local boats—not a single foreign boat included in that. The port of Skibbereen may be said to extend from the Galley Head to the mouth of the Kenmare River. That will clearly show how deeply this part of the country is involved in the fishing industry. There are three causes at the present moment encroaching on the most important branch of our deep sea fisheries, that is, the curing of mackerel for the American market. The first cause is the excessive tariff which the American Government levy on fish sent from Ireland into the United States. They levy eight shillings per barrel on every barrel of Irish-cured fish; and last year we sent from the shores of Ireland 70,000 barrels of cured Irish mackerel, and into the Treasury of the United States the large sum of £28,000 went out of it. If that £28,000 could remain at home in the pockets of our people—hard-working Irish fishermen—what a fillip it would give to the industry! The reason why I introduce this to-day is that I consider the present a most opportune time to raise the question. At this moment the Government of the United States and that of England are in international communication over the fisheries along the coasts of Newfoundland and Canada. The Newfoundland people and the Canadians are resisting the inroads of the American fishermen into their fishing grounds. They consider it is perfectly unfair for the American Government to send up their boats, and then, when the Canadians and the Newfoundlanders send down their fish, that that fish is taxed on them into the United States. The question is of so much importance that at the late Colonial Conference in London it was raised by Sir Robert Bond, the Premier of Newfoundland. As I introduced the question of the Colonial Conference, is not it extremely remarkable that when England invited all the countries under her sway to send their Premiers and representative men to a Conference in London, poor Ireland, as usual, was left out in the cold? As regards this important question of the fisheries, what did all the Colonies and their representatives send to England for? They sent them to get new markets for their wares, and to show where they could dispose of the products of their industries in a profitable manner; and here is Ireland, that has the produce of all these Colonies dumped on her shores, and not a single word about her at that Conference.

46841. The tariff is eight shillings per barrel; how much is the price of a barrel?—Last year unfortunately the price fell to eight and a half dollars, whereas the price of Norwegian fish went up to fourteen. Eight and a half dollars is thirty-six shillings for a barrel of Irish fish, and if you take fourteen shillings for the barrel for the salt and other expenses, and eight shillings to pay the United States Government, what have you left for the Irish fishermen?

46482. Most Rev. Dr. O'DONNELL.—You are exceedingly anxious that that large sum of money which goes to America for import duty should be expended in Ireland for the advantage of the fishermen who catch the mackerel?—Yes; I introduce the question because it is on the verge of settlement. At the present time there are negotiations going on between Sir Edward Grey, the Foreign Secretary, and the American Government on this point, and I want to say that if they give the privileges to the Canadians and to Newfoundland fish to enter duty-free, we are bound to get the same privilege. Sir Robert Bond, in his speech, said that when the prohibitive import duty is removed the restrictions imposed by the Bait Act of 1887 will cease to be enforced by Newfoundland; and if free access is given to the American market to fish from Canada and Newfoundland, Newfoundland will give the fishermen of the United States free access to her unrivalled bait supplies, but that that would not be done as long as Newfoundland and Canada were debarred from the American market by prohibitive tariffs. Now, I may add, this is the time to raise the question with the Government. They cannot say that at the present time our mackerel is not British fish, and they should make some effort to induce the United States to extend to Ireland whatever facilities are given to Newfoundland and Canada.

46483. You think that any demand which the Government makes on behalf of the Colonies should be made *pari passu* for Ireland?—Certainly.

46484. Would not you think that we have some

July 16, 1907.

Mr. Timothy Sheehy.

reason for considering that the Irish demand rests on stronger grounds. Could you not say to America that Ireland imports a great deal of meal without any duty, and a great deal of machinery without any duty, and consequently is entitled to get a remission of the duty on such an Irish product as mackerel?—There is no doubt you are right; but considering the commercial position of America, we have only to try and get for Ireland the best we can. They would not, I suppose, yield to a direct appeal, though I believe they should. We here, in Ireland, contribute greatly to the American Markets, and if for no other grounds alone they should consider the claim of the Irish fishermen on this point.

46485. And they might also consider the claims of the country from which the blood and sinew came to build up America to such a large extent; you consider the Government should press that point?—Yes.

46486. Mr. KAVANAGH.—Suppose you brought it before your members of Parliament?—It is only within the last few days I was able to get the facts so as to be able to put them in an intelligible form before this Commission. I thought it right to raise this question here. I have no doubt whatever it is a question which should be taken up by the Irish members and by everybody having an interest in the country, or in one of the few existing industries that we have. The next cause is the unfavourable conditions under which the fish is cured. At present it is almost impossible to have quality, when the fish is cured along the open pier head. What I would ask of this Commission would be, if you have not the money at your disposal, to press the Government to give a grant to fix on all our fishing centres suitable sheds whereby the fish can be properly cured, and under sanitary conditions. That is one important adjunct of the fisheries, because if the fish in the first stage is badly handled it is impossible to have a good article afterwards.

46487. If the fish trade pays why does not private enterprise do all that?—There is so much uncertainty in connection with the fishing business, but at the same time I do not think there would be any risk in doing what is asked, as I have no doubt, from my knowledge of the small buyers, that they would be only too happy to pay for such accommodation. At present the cost of labour, the cost of barrels, and the tariff to America are so great that if you put on any more expense there will be scarcely anything left. The third cause, and I consider the most important point, if we are to preserve our trade with America, is the absolute necessity of having a brand and inspection for our fish.

46488. That is the point you brought before this Inquiry, was not it?—I would like to read an extract of evidence which was given before this Commission down in another part of Ireland, by Mr. Green. Mr. Green said that some curers had unfortunately sent across stuff so badly cured that it gave a bad name to the whole of the Irish fish, while there were others who sent fish to the American market as well cured as it was possible. Are we to let the same uncertainty arise that was in America last year—cablegrams flashed across—it was utterly impossible to dispose of the Irish mackerel. Thousands of barrels remained unsold. I don't want to take up the time of the Commission to-day by recapitulating the case I made out when I moved that resolution at the Council of Agriculture in Dublin, which was unanimously adopted, and was supported by representatives from Donegal, Clare, Kerry, Waterford, and Cork; but I hand in as portion of my evidence, the statement made before the Council of Agriculture.

46489. What was the reason Mr. Green over-ruled this application?—I carefully studied the four paragraphs where he summed up the result of his inquiry; and I can find really no reason. For the information of the Commission, as you did not see this perhaps, I will read them out. Summing up the result of the whole inquiry, Mr. Green said it would seem clear, first, as regards herrings the Scotch herring brand does not furnish any precedent applicable to herrings cured in Ireland, which have got a reputation in foreign markets, and usually fetch higher prices than herrings branded or unbranded from other places. That is not really a fact, because in the great herring county of Donegal I find that evidence was given in favour of this brand. It is a question here affecting thousands of people. If this American fishing industry should go to the wall our workhouses along the sea will be filled with old people, and the young people will have to emigrate. In Donegal you took evidence from one gentleman. I will only quote one paragraph—the evidence of Mr. James O'Donnell, J.P., given at Burtonport. He states—"In proof of the good quality of the Donegal herrings it may be mentioned they fetch by far the highest price in all foreign markets, and this being the fact that this fish from Donegal, when sold under a disadvantage, as they are sold, without a Government brand, which is a guarantee of quality, secured over the fish that is market, the top price, all the curers round our coast are most anxious to submit our fish to Government inspection, and to have them thus branded." That certainly shows that the curers of herrings up in Donegal are as anxious as the bulk of the curers of the mackerel are to have them branded. The second paragraph of Mr. Green's report is this: As regards mackerel, the advantages, if any, to be derived from a Government system of branding Irish mackerel, would be, at best, slight, and might even then result in certain disadvantages. Three:—That any advantages that might be gained could be equally well secured by the voluntary adoption by the trade of a system of grading the fish in packing, according to size and quality. Four:—That the Irish mackerel trade would not be prepared to meet the cost of the system, as is done by the herring trade in the case of the herrings branded in Scotland. As far as that is concerned there is no doubt whatever that the curers along the seaboard would be prepared to pay a share. They stated so in evidence here. In going through this project you will find that they did not altogether object, but they looked naturally to the Government for assistance in this respect; that they considered it the duty of the Government, with a great industry such as this, capable of further development, to assist it financially. They consider, on this question, that the Government should provide a great portion of the funds. If Mr. Green would not recommend them to give all that money, why did not he, for experiment's sake, as he said fourteen years ago he was in favour of branding Irish mackerel, why did not he test it, and say—"We will have a brand, and give an opportunity to those who wish to have a Government brand; then the buyers will consider they will do better when they are branded up, once they knew they had here Government supervision of the packing and branding of the fish, and warranting them with the official brand, before sending them to America." I have no doubt whatsoever, if that were tried, they would adopt the brand, because when the article is good it would command the market. Why do the Scotch stick to the herring brand? It was established in 1809; from that day to this the branding of herrings has gone on. Ireland got the privilege of branding in 1819; it was taken away in 1829. From that up to the present the fishermen of Ireland are permitted to look out for themselves, and to knock about from one Board to the other—The Board of Navigation, the Board of Inland Revenue, and at this moment, without any disrespect whatsoever, they are under the care of two Boards, and I for one would prefer to remain under the care of one Board.

46490. Did they know what the cost of branding per barrel was?—It was held out by Mr. Green as a sort of bogey towards the buyers; but I say that it is the duty of the Government—say we had 100,000 barrels of mackerel leaving Ireland—that would not be too much, considering that we had over 70,000 last year—and at 4d. a barrel, that would realise £1,666; add to that a couple of thousand pounds, and the difficulty would be met. Since 1829 we have not had a technically trained inspector. All the Irish inspectors we had were resident magistrates, or somebody else—people that knew nothing whatever about the industry. Only for the blessing of God we would not have had any fisheries left to-day.

46491. Mr. O'KELLY.—A few years ago you got a grant of £5,000 under the Marine Works Act?—Yes.
